Mr. McManus: Your Honor, could I ask one question? Is that the last chart you have in your book?

The Court: I have something here called "Comparison of glass container plants east and west of the Rocky Mountains for the years 1920 to 1938, and January 31, 1960." Are you going to tell me about that?

Mr. McManus: Mr. Finn will.

The Court: I mean Mr. Finn.

The Witness: Well, this tabulation shows by states the glass container plants that were in existence in 1920, those [fol. 2798] in existence in 1938, and the number on January 31, 1960.

You will note on page 2 here that the source of this information is from the Temporary National Economics Committee publication, and for the year 1960 the data is from American Glass Review, Glass Factory Directory. On this page also we have some modifications of the data that is contained in this source material. We also have included plants that are now under construction or in the planning stage.

By the Court:

Q. Where does the data come from—plants now under construction or in the planning stage?

A. Well, it appears that I have neglected to put that in, your Honor. That came from the publication entitled "American Glass Review."

Q. In other words, the American Glass Review, you say, has plants under construction or in the planning stage listed also?

A. Periodically they put a——

Q. An addendum, sort of?

A. An addendum, sort of.

Mr. McManus: Your Honor: if I could interrupt at this time, I would like to show Mr. Finn the map so [fol. 2799] that he can——

The Court: Yes, let's find out what states we are dealing with now.

Mr. McManus: Will you name them to his Honor?

The Witness: The States of Washington, Oregon, California, Idaho, Nevada, Utah and Arizona, they are all the states that are——

The Court: Yes, I see. They are the states that are west of the Arizona-Utah-Idaho border—Eastern border?

The Witness: Eastern border.

The Court: We will take a brief recess at this point.

(Short recess.)

Mr. McManus: Your Honor, those are the tables which Mr. Finn compiled. We will now go to Exhibit 800, which was put together by Mr. Tolton.

(Witness excused.)

JULIUS H. TOLTON, called as a witness by the government, being first duly sworn, testified as follows:

Direct examination.

By Mr. McManus:

Q. Mr. Tolton, by whom are you employed?

[fol. 2800] A. I am employed by the Antitrust Division of the Department of Justice.

Q. And for how long a period have you been employed by them?

A. Approximately 12 years.

Q. And what is your title in that division?

A. My title is business economist.

Q. And do you have any major economic degree?

A. Well, I have an undergraduate degree which included economic study.

Q. Now, are you familiar with Government's Exhibit 800?

A. I am. I compiled it.

Q. And was that exhibit prepared under your direction?

A. Yes, it was under my supervision.

Q. And did you——

The Court: You had a staff working with you on that?

The Witness: I did, your Honor.

The Court: But you directed the staff?
The Witness: I did, yes, your Honor.

Q. And you took the basic data from the footnotes and applied it in chart form?
[fol. 2801] A. I did.

The Court: From the what——
Mr. McManus: Referred to in the footnotes; the basic data referred to in the footnotes.
The Court: I see.

By Mr. McManus:

Q. Much as Mr. Finn did with the tables?
A. I did, yes.

Mr. McManus: Your Honor: we would like to qualify Mr. Tolton merely on the same basis that we qualified Mr. Finn; just that he——.

By the Court:

Q. Well, tell me this: what has been your general experience in the compilation of charts or translating figures into chart form?
A. Well, your Honor, going back, in college I took several courses in statistical——
Q. Where was that?
A. University of Washington. And following that time, or shortly thereafter, I was employed by the Department of Justice, and I have dealt with you might say, figures and industry studies and various things which took into account much statistical work for the past 12 years.
[fol. 2802] Q. Have you testified in court with respect to charts?
A. I have previously.
Q. How many times?
A. Well, previously in the Brown Shoe case.

By Mr. McManus:

Q. And that was the United States v. Brown Shoe Company that was tried out in St. Louis, Missouri?

A. It was.

Q. And you compiled much of the statistical data for that case?

A. Yes. I have compiled statistical data that was used in court prior to that time, but never testified to it.

Q. I see. But in that case you compiled much of the statistical data and also testified with respect to it?

A. Yes.

Mr. McManus: Your Honor, we would like to follow the same procedure with Mr. Tolton as we did with Mr. Finn, if there is no objection.

The Court: All right.

Mr. McManus: The pages in Government's Exhibit 800 are numbered, starting with the index, from 1 right on, [fol. 2803] through.

By the Court:

Q. First of all, Mr. Tolton, let me ask you: are your charts based on figures in the tables that were testified to by Mr. Finn?

A. Most of them, yes.

Q. Will you point out to me the instances in which they are not?

A. Yes. The first page is the index page, as previously described, and the second page—well, it defines some terms, I guess would be the briefest way to explain it.

Mr. McManus: Would you speak up just a little bit, Mr. Tolton.

The Witness: Yes.

A. (Continuing) Page 3 starts into the section "Glass Container Shipments Into the United States," and page 4 begins the first chart.

This chart, called the glass container shipments, 1955, "Total Domestic," "Leading Four Companies" and "All Others" and "Hazel-Atlas Share," is material that conforms with Mr. Finn's statistical book A, table 1 A. It conforms to that in its entirety.

[fol. 2804] Q. I take it the same thing can be said—now you come to narrow-neck and wide-mouth, or you come to the various breakdowns of the types—"Glass Shipments." Is that glass container shipments?

A. Yes, that's right, your Honor. I would rather hold up going into that because the following chart, which is "Total Narrow-Neck," actually is part of 1 A of the statistical tables, because Mr. Finn combined both narrow-neck and wide-mouth together, so to that extent it does not conform in its entirety as to the statisical tables.

Q. You have taken the figures out of his total figures of wide-mouth and narrow-neck, you pulled the narrow-neck figure?

A. Yes, your Honor, both the Census Bureau and the GCMI figures were broken down in the same categories, broken down into the areas of narrow-neck and wide-mouth, and these conform in that respect to the Census Bureau and the way the GCMI figures were broken down.

The second chart deals with total narrow-neck, the same sources as have been previously expressed with the tables.

Should I continue on, your Honor?

[fol. 2805] Q. Yes.

A. Page 6 is the next table, which deals with food, narrow-neck, as the category was expressed in both the "Facts for Industry" and the Census, and the Glass Container Manufacturers Institute figures.

Page 7 deals with medicinal and health supplies, narrow-neck.

Page 8 deals with chemical, household and industrial, narrow-neck.

Page 9, toiletries and cosmetics, narrow-neck.

Page 10, beverages, returnable.

Page 11, beverages, non-returnable.

Page 12, beer, returnable.

Page 13, beer, non-returnable.

Page 14, liquor.

Page 15, wine.

And then we get into the wide-mouth category. Total wide-mouth is on page 16, and, as I expressed before, this would be part of the table A 1 A, if I may express it that way. That is page 16.

Then food, wide-mouth, page 17.

[fol. 2806] Page 18, medicinal and health supplies, wide-mouth.

Page 19, chemical, household and industrial, wide-mouth.

Page 20, toiletries and cosmetics, wide-mouth.

Page 21, dairy products. And that is the end of that section 1 dealing with glass containers under those categories.

Page 22 has the title page "Metal Container Shipments in the United States."

Page 23 expresses the data for American Can, Continental Can and National Can, named in each of the charts in group 2, was secured individually from the above firms.

Page 24 begins the metal can shipments series. The title is "Metal Can Shipments, 1955, Total Industry, Leading Three Companies and All Others, Continental Can's Share."

Now, this incorporates all of the tables, all of the table 2 A B that Mr. Finn dealt with previously, and we have the same source that Mr. Finn's tables show.

Should I continue?

Q. Yes.

A. All right. Page 25 is fruit and vegetables, including [fol. 2807] juice.

Page 26 is evaporated and condensed milk.

Page 27, other dairy products.

Page 28, meat, including poultry.

Page 29, fish and sea food.

Page 30, coffee.

Page 31, lard and shortening.

Page 32, beer.

Page 33, pet food.

Page 34, oil, open top, one-quart and five-quart.

Q. Oil, open top—what sort of oil is that?

Mr. Johnson: Motor oil.

The Court: Motor oil. Thank you. It is just called oil—petroleum, presumably.

Mr. Johnson: Substantially. I wouldn't say 100 per cent.

A. (Continuing) Page 35, soft drinks.

Page 36, all other food, soup and baby foods.

Page 37, all other non-foods.

And page 38 we go to the chart book, series 3. The title is "U. S. Metal Container Shipments and Continental Can Participation by Regions, and U. S. Glass Container Ship-
[fol. 2808] ments and Hazel-Atlas Participation by Regions."

Page 39, the first chart in this series, total metal container series and Continental Can participation for 1955, all types; total U.S., billions of units, and we have the same sources as were previously, expressed by Mr. Finn. This follows the A book in the tables, table 2 A B in its entirety.

Page 40, total metal container shipments and Continental Can participation, all types, west of the Rockies, and this conforms to tables in the B series, 4 A. It is on a unit basis.

Page 41 that follows is the description, or the notes applicable to the chart previously mentioned, page 40.

Q. Isn't that in essence a duplication of the notice which was submitted on his charts?

A. Yes, certainly in substance, and it may be pretty much word for word.

Page 42 is total metal container shipments and Continental Can participation in 1955, all types, east of the Rockies, and this conforms to the table series B 3 A.

Page 43 is the notes applicable to the previous chart, page 42.

[fol. 2809] Page 44, total metal container shipments and Continental Can's participation, 1955, for food. This is the total U. S. in billions of units, and this conforms to our table series A, table 2 C.

Page 45, total metal container shipments and Continental Can participation for 1955, food, west of the rockies. This conforms to the table B series, 4 B, the individual table.

Page 46 is the notes applicable to the chart on the previous page, 45, as it applies to the chart.

Page 47, total metal container shipments and Continental Can participation, 1955, food, east of the Rockies, and this conforms to the table series B, table 3 B.

Page 48 is the notes applicable to the chart previously mentioned on page 47.

Page 49, chart, total metal container shipments and Con-

tinental Can participation, 1955, non-food. This is the total U. S., and this conforms to table series A, table 2 B—2 F. I am sorry.

Page 50, total metal container shipments and Continental Can participation, 1955, non-food, east of the Rockies, in billions of units, and this conforms to our table B series, the [fol. 2810] 3 E table.

On page 51 are the notes applicable to the chart on the previous page, 50.

Page 52 we go into the total glass container shipments and Hazel-Atlas participation, 1955, all types; total U. S. in billions of units, and this—well, this is part of B 7 A in the table series, and the sources—the sources here are from the Facts for Industry and interrogatory 13 by the Hazel-Atlas Company.

Now, page 53, total glass container shipments and Hazel-Atlas participation, 1955, all types, east of the Rockies. Now, this conforms to the table series B, table 5 A.

Page 54 is the notes applicable to the previously mentioned chart on 53.

Page 55 is the total glass container shipments and Hazel-Atlas Glass participation, 1955, all types, west of the Rockies, and this conforms to the table B series, table 6 A.

Page 56 is the notes applicable to the previous chart on page 55.

And page 57, also—well, it lends itself, or assists in the making up of the chart on page 55. That is source data.

[fol. 2811] Page 58, total glass container shipments and Hazel-Atlas participation, 1955, food, total U. S., billions of units, and this is part of the B table series, 7 C.

Page 59, total glass container shipments and Hazel-Atlas participation, 1955, food, west of the Rockies. This conforms to the B table series, table 6 C.

Page 60 and 61, I might say, are the notes applicable for the sources of the chart previously mentioned on page 59.

Page 62, total glass container shipments and Hazel-Atlas participation, 1955, food, east of the Rockies, and this conforms to the table series B, table 5 C.

Page 63 is notes applicable to the previously mentioned chart on page 62.

Page 64, total glass container shipments and Hazel-Atlas

participation, 1955, non-food, total U. S., and this conforms in part to the table series B 7 F.

Q. Where does the rest of the data come from?

A. Well, your Honor, I would have to look at that. It [fol. 2812] would only take me a moment to distinguish as to what portion it was. In other words—well, no, I shouldn't say that until I have looked at the tables themselves. Would you like me to do that?

Mr. McManus: What table does it conform to?

The Witness: Well, it is part of table B 7 F. I think I have a copy.

A. (Continuing) Your Honor, table B 7 F shows not only glass container shipments but also metal container shipments, and then combines them, and we only use that portion which pertains here to glass container shipments.

Q. All right.

A. Page 65, the chart is total glass container shipments and Hazel-Atlas participation in 1955, non-food, east of the Rockies, and this is the B chart series, table 5 F.

Page 66 is the notes applicable to the previously mentioned chart on page 65.

Page 67 starts a different grouping, group 4, and this is historical growth of metal and glass container shipments expressed as index numbers and shown as a trend.

[fol. 2813] The chart on page 68 has as its title "Historical growth of metal and glass container shipments expressed as index numbers and shown as a trend" for all types of glass and metal containers. The years 1939-1958, and the index 1939 equals 100 for those numbers expressed on the right and left, the right and left side of the chart.

The numbers at the bottom are the years 1939, a midbreak, 1948, and 1958, with the intervening years shown only as a dashed line there at the bottom.

The source for these was the glass containers, the totals, U. S. totals, 1939 through 1956, is from GCMI—well, I guess an annual report—1957, page 47, and the 1958 is from the Bureau of Census glass container summary, 1958, series M32G.

The metal cans for the U. S., totals, 1939 through 1956, from the Can Manufacturers Institute, I'd say annual sum-

mary, March, '49, page 6, and their 1947-1956 CMI—well, summary, I'd better say it that way—page 12, 1948, and then they had another summary, which was 1948 to 1957, and we used page 10 there. The 1958 was from the Bureau of Census, metal can summary, 1958, series M34D.

And page 69 is the supporting data—well, supporting [fol. 2814] data that was extracted and developed in order to make the chart on the previous page, and I think the same—the sources there expressed are the same as those mentioned on the previous page.

On page 70 we have "Historical growth of metal and glass container shipments expressed as index numbers and shown as a trend" for food, the food line, 1940-1958, in glass containers. That was expressed—and also in metal containers. This chart has on its left and right side the index numbers, ranging from below a hundred here to—it is up to 340. At the bottom of the chart are the years 1940 to 1958, with a dashed line showing—representing each year in the series.

The following page gives the supporting data for the chart mentioned on page 70, and we have as our sources for glass containers and food, 1940 to 1956, from GCMI summary data, and it is page 47.

Mr. McManus: Excuse me, your Honor.

The Court: Yes.

Mr. McManus: Much of this data is just the chart form of the tables which were explained to you, and I don't want to interrupt, but I thought that perhaps you would like it if Mr. Tolton would just explain the rest of them, the ones [fol. 2815] that are different from the chart forms.

The Court: I think that is true in all these other ones.

Mr. McManus: Well, some of the others are taken from different surces, and those I thought would be better if he explained to you.

The Court: Mr. Tolton, if you will refer to the ones that come from different sources than from Mr. Finn's tables, if you will give us the data regarding those, I think it would be better.

The Witness: Yes, your Honor.

Now this is a different series. This is a different data,

certainly different from what appears in the tables—well, I guess substantially, anyway.

By the Court:

Q. All right, point out where you use data different from those that are set forth in the tabulation?

A. All right. Well, as I expressed, the data for the glass containers was from the GCMI—1940-1957 was from the GCMI manufacturers. Glass Containers Manufacturers Institute, I guess it is, annual summary of 1957, page 47, and 1958 data was from the Bureau of Census' glass container [fol. 2816] summary of 1958, series M32G.

Metal cans, food, was, in 1940 to 1951, was from the quarterly containers and packaging, in the spring 1952 issue, page 36, table 16. 1952 to 1958 is from the Bureau of Census of metal can summaries, 1952 to 1958, series M34D.

Q. In other words, quarterly containers and packaging is Bureau of Census material, again?

A. Yes. Let me say this: At least it is Department of Commerce, which in part, I presume, was broken down and made up by the Bureau of Census. It has the imprimatur at least of the Department of Commerce.

Well, the following page expresses the source data that was previously mentioned, primarily.

Now we are going over to chart, series V, metal and glass container shipments, and this whole series, if I may look at it and note it a moment here, conforms to Mr. Finn's tables, so I think we can eliminate that for the time being.

Q. Yes.

A. Now, series VI was not derived from any of the tables, so I will go into that presently.

[fol. 2817] On page 84 is the title for this chart, series VI, "Continental Can Metal Division and Hazel-Atlas Division Common Customer Sales."

Page 85, the first chart of this series is "Continental Can Metal Division and Hazel-Atlas Division Common Customer Sales 1956-1957 total common customers," and the source for this chart was in answer to Government's interrogatory.

Q. What do you mean by "common customer"?

A. In which both Continental Can Metal Division and

Hazel-Atlas Division sold items of glass and cans in their respective organizations to the same customer or the subsidiary within the firm. In other words, there would be listed the firm name and there might be subsidiaries, but we included any of the subsidiaries in the whole firm name.

Page 86, "Continental Can Metal Division and Hazel-Atlas Division common customer sales 1956-1957," and this was the value of the common customer sales, and this is from the answer to the interrogatory.

Page 87, "Continental Can Metal Division and Hazel-Atlas Division common customer sales 1956-1957 (percent of common customer sales), and that includes——

[fol. 2818] By Mr. McManus:

Q. Mr. Tolton, would you explain what that percentage is, per cent of what?

A. Well, that is the——

Q. What does the 81.4 per cent relate to in column 1957?

A. Well, in other words, the total common customers would be a hundred per cent, of which the value—at least on a value basis, as you see on page 86, previous page, if you added the total value as in 1956, the $147,437,000 represents 81.4 per cent of the total sales within that period, while the $33,000,000 represents 18.6 there.

Does that answer it?

Q. Yes.

A. Chart, series VII is also—does not appear in the tables, and this is titled on page 88 "Tin can and other tin-ware industry." Now this expresses the tin can and other tin-ware—excuse me. Page 89, going to the first chart, "Tin can and other tin-ware industry," the number of firms and gross sales of industry by groupings, based on the firm asset classification.

By the Court:

[fol. 2819] Q. Where did you get the data for that?

A. This, your Honor, came from the Internal Revenue Service, in their Division of Statistics, which we have here.

Q. Internal Revenue Service?

A. Yes, your Honor. They have a Division of Statistics, of which they—well, they compile a series of statistics—that is, it is a Division of Statistics.

Q. How do they go about compiling those, and where do they get the data? I haven't heard about those before.

A. Well, basically, your Honor, from the——

Q. Tax returns?

A. —from the tax returns, in which the firm not only makes its tax return, but it also incorporates balance sheet and profit and loss data.

Mr. McManus: Your Honor, in the room back there we do have copies of the basic data. They are under the blue seal, and all that kind, but if you would like to look at it when Mr. Tolton is almost finished, we can get it.

The Court: I won't look at it at this point.

Mr. McManus: We will be glad to make it available.

[fol. 2820] The Court: I think you had better put up a red flag at least on this one.

Mr. McManus: Yes, your Honor.

A. (Continuing) Well, utilizing that data, we were able to make this breakdown from that, the information furnished by the Internal Revenue Service.

The first chart dealt with number of firms and gross sales of industry, and that was page 89.

The second chart in this series has as its title "Tin can and other tin-ware industry number of firms and gross sales of industry by groupings based on firm asset classification," and this was also part of the information derived from the Internal Revenue Service, or at least compiled from data from the Internal Revenue Service. That is page 90, and that concludes that series.

Page 91 we began the chart series VIII, which has to do with domestic acquisitions of Continental Can Company in the container and related product field. On page 90—I beg your pardon—page 92 was the chart, of which its title is "Domestic acquisition of Continental Can Company in the container and related product field," and on the left is the product field, and going from left to right [fol. 2821] at the top indicates the decade within which the acquisitions were made, and the source for these, for this chart, was the submission of Continental Can Company in connection with FTC study of acquisitions, which I think is Government's 785 and 786, Government exhibits; and then we also used the annual reports of Continental Can Company, Moody's Industrials, and the Continental Can

proxy statement of October 26, 1956, to compile that chart.

On page 93 we begin chart series IX, "Shipments of commercial closures of vacuum and non-vacuum types, screw thread, lug and crown caps in the United States."

I might say, your Honor, these follow our statistical tables, conform to them, I should say.

The next two tables—charts on page 94 and 95 are part of the tables, series C, of Mr. Finn's, and that concludes the charts.

Mr. McManus: Your Honor, that would be our presentation before the offer, and I assume that probably because the tables are basic, if any cross-examination would be done we would start probably with Mr. Finn.

The Court: Yes.

Mr. McManus: Also, before we get into this, I understand [fol. 2822] that Mr. Austern has a question.

The Court: Excuse me, Mr. Austern.

Mr. Austern: With your Honor's permission, neither Mr. Goldberg nor I have been seeing these charts, we have been hearing the testimony, and we should like respectfully to have inquiry made to clear up something that we couldn't understand simply by hearing.

Section 2 on the metal charts, on pages 25 through 36, we heard the witness testify to what I believe to be a breakdown on metal can shipments, U.S., showing Continental's share, and then it said "by three companies." May we respectfully ask that inquiry be made as to whether each of the three companies are shown on those charts, which we haven't seen, or whether the aggregate of the three companies?

The Witness: It is the aggregate, Mr. Austern. There is no individual data shown for American Can or National, individually.

Mr. Austern: Well, in the light of the understanding as between the Government and American, and, as I understand, between the Government and National, there was to be an aggregation of the various census categories, such as lard, shortening, pet food, and so forth. As I under- [fol. 2823] stand what the witness said, your Honor, there is an aggregation within the census category of American and National's share.

The Court: There is some in the chart.

Mr. Austern: I haven't seen the chart, your Honor.

The Witness: The aggregate would have all three, American, Continental and National.

Mr. Austern: Then you show, as I understood your testimony, Continental's share?

The Witness: Yes.

Mr. Austern: So that one could readily deduce——

The Court: What the total of American's and National's share is.

The Witness: Yes, as a total. You wouldn't, individually, as a company.

Mr. Austern: May we, with your permission, consider whether that is a rather oblique approach to something that I am not sure I understand. I should like to study it until tomorrow. I now understand what his Honor means.

The Court: All right.

Mr. McManus: Did you want Mr. Finn to now take [fol. 2824] the stand?

The Court: I think, in the light of this, do you want to postpone the cross-examination until tomorrow?

Mr. Johnson: It would be more convenient, if that suits your Honor,

The Court: It does seem to me that we have gone through this stuff this afternoon, and I cannot imagine that we will very much profit by 15 minutes this afternoon.

Mr. McManus: Also, your Honor, if we could use those 15 minutes in just discussing with you in chambers, as I explained before?

The Court: Yes, you can come in.

Mr. Austern: Without burdening your Honor, may I inquire of the witness whether on those charts, to which I adverted, beginning on page 25, Section 2, are there any categories in which either American or National alone manufactured the can?

The Witness: Well, I would have to look at the basic data before I could give you a concrete answer.

The Court: No, we are not talking about the basic data at the moment. We are talking about the *basic data at* [fol. 2825] *the moment. We are talking about the* chart.

The Witness: Well, there is nothing on the chart that would show.

The Court: Is there anything on the explanatory data annexed to the chart which would show?

The Witness: There would not be.

Mr. Austern: Is there anything on any of your own other data which perhaps might indicate as any one of the blocks or boxes that you have in your charts that American makes it and Continental doesn't?

The Witness: No, not at all.

Mr. Austern: This is somewhat different, sir.

Mr. Goldberg: May I ask one question?

The Court: Yes, Mr. Goldberg.

Mr. Goldberg: Those particular charts that Mr. Austern was referring to, are they reflected in the tables in, is it B?

The Witness: Well, A or B, whichever——

Q. A or B. In other words, this is the—the chart merely pictorializes the actual data that is shown in table B; is that it?

The Witness: Well——

[fol. 2826] Mr. Goldberg: Or do you go beyond what is in the table?

The Witness: I don't know how to answer that. Well, just for instance, I mean, to cite you an example, if I might, we have on page 25 "fruit and vegetables, including juice," of which we have the leading three, American Can, Continental Can, National Can, and we have then an aggregate there, then "all others"; then Continental Can's share. Now this does take in part of the A table series, table 2C.

Mr. Goldberg: May I put it another way? Are there tables in either A or B or C, whichever this is derived from, that would be broken down into the fruits and vegetables, as such?

The Witness: I think not as such.

Mr. McManus: They are not tables that were broken down.

Mr. Goldberg: I see. Then this is a further splintering of the tables that were there.

The Witness: To that extent, yes.

Mr. Goldberg: As to these groups of charts that Mr.——

The Witness: What I am saying is, these follow primarily the census categories, I mean, as such.

[fol. 2827] Mr. Goldberg: That I know, yes, sir.

The Witness: Well, Mr. Finn's tables in many instances.

do not. They follow more of what we might call a line of commerce, or something like that.

Mr. Goldberg: No, Mr. Finn's tables cover the four aggregates, four categories or groupings that Mr. Austern referred to.

The Witness: Yes.

Mr. McManus: That is correct.

Mr. Goldberg: And this then is a splintering of a breakdown of those tables into the census categories.

The Witness: Yes, that's right.

The Court: But not beyond the census categories.

The Witness: No, not beyond it; that's right.

Mr. Austern: Excuse me. Just so——

The Court: As I understood if, gentlemen, there was no objection to overall figures for the year based on the census categories, and provided it is not broken down regionally beyond east-west.

Mr. Austern: May I suggest, sir——

The Court: Is that correct, or am I wrong?

Mr. Austern: I think not, sir. The understanding between the Government and these two non-parties to the case [fol. 2828] is that the material in the census data may be aggregated by food, beer, soft drink and non-food, and each of those, United States and east and west. What appears to have happened here is that that understanding has been completely honored in the statistical tables. Now, whether it has or has not been fully honored in the charts adverted to, which we haven't seen, I am not quite clear. I am clear that the category of food, if the Court please, has been broken down and fragmented into at least four categories, and I am equally clear that the category of non-food has been broken down into three segments. Now what I have to parse out, and I would like not to burden the Court, but do it overnight, is whether the breakdown of the agreement——

The Court: Is detrimental.

Mr. Austern:—is detrimental when we are married to this other company as a total. I'm not quite clear on it, but I simply want to be clear as to what was on the chart we haven't seen.

The Court: You might bear in mind I have no matrimonial jurisdiction.

All right, gentlemen, we will take a recess to tomorrow [fol. 2829-2846] morning. In the meantime, I will see counsel in the robing room with the reporter.

Good night.

* * * * * * *

[fol. 2847] Leo V. Finn, resumed.

The Court: I think it would be just as well, Mr. Clerk, to lock the door.

Now, you have been sworn, sir. You remember you are under oath.

The Witness: I do, sir.

Cross-examination.

By Mr. Johnson:

Q. Mr. Finn, your work in preparing these tables was not purely mechanical work, was it?

A. No, sir, not purely mechanical.

Q. It involved the selection of statistics, did it?

A. Yes, sir, it did.

Q. It involved organization of them?

A. Yes, sir.

Q. Some adjustments of them?

A. Yes, it did.

Q. And it involved an appraisal of the statistics?

A. To some extent.

[fol. 2848] Q. And it involved analysis of the statistics, did it not?

A. Yes.

The Court: Involved what?

Mr. Johnson: Analysis.

A. Yes.

Q. You said you had been with the Department of Justice in the Antitrust Division, I believe, for 22 years.

A. That's right.

Q. How long, sir, have you been a business economist for the Department of Justice?

A. When I first started in in the department, that title wasn't used. They had a title called "expert."

The Court: That is a very good title.

A. That was a Civil Service Commission title as distinguished from a Department of Justice title. I was an expert for about five years until I was——

Q. During that period of time what did you do?

A. I worked on cases and investigations, and for a good part of that time I was assigned to the temporary National Economic Committee.

Q. What happened after the five years?

[fol. 2849] A. I was sort of drafted for the administrative section of the department, another division, and I spent probably 12 or 13 years as an administrative officer for the——

Q. What did you do there?

A. Well, I was in charge of all the housekeeping chores of the division, principally for the budget, the finances of the division, the non-professional personnel, under the supervision of the administrative agency; just a ramification of duties that we seemed to take all the duties that did not belong to the legal section.

Q. During that period of time, then, you did no investigation nor statistical work for the division; is that correct?

A. Only in connection with the budget.

Q. It was purely a housekeeping aspect?

A. That's right, sir.

Q. That account——

The Court: Let me ask you this, Mr. Finn: during that period, did you have under your supervision gentlemen who were called experts or business economists or held titles of that nature?

The Witness: Not while I was in the administrative [fol. 2850] —an administrative officer.

The Court: You did not supervise that work?

The Witness: Not the type of professional personnel that you speak of.

The Court: All right.

The Witness: No, sir.

By Mr. Johnson:

Q. Then, after that, did you become a business economist?

A. Yes, I did.

Q. And when was that?

A. It was about 19—the latter half of 1955.

Q. And that is the work you have been doing since?

A. That's correct, sir.

Q. What did you do, sir, before you joined the Department of Justice?

A. I was employed in an ice cream company.

Q. In Washington, D.C.?

A. In Washington, D.C

Q. Were you doing accounting or statistical work there?

A. Yes.

Q. Which?

[fol. 2851] A. Statistical work.

Q. Statistical work?

A. Yes.

Q. Did you take formal statistics courses in school?

A. I didn't major in statistics, no, sir.

Q. Did you take any statistics courses?

A. Yes, I did.

Q. Do you remember what textbook you used?

A. No, I do not.

Q. When did you take such a course?

A. 1932, '33.

The Court: Where did you say that you got your university level or college level education?

The Witness: I got it at the school that was then called Columbus University in Washington, D.C., which is now, as I understand, a part of the Catholic University. It is no longer in existence.

Q. Have you ever had anything published in the field of statistical analysis?

A. No, I have not.

Q. Are you a member of any professional statistical association or society?

A. No, I am not.

[fol. 2852] Q. Mr. Finn, are you familiar with a little

book by Darell Hough entitled "How to Lie with Statistics"?

A. I have heard of it.

The Court: How to what?

Mr. Johnson: "How to Lie with Statistics."

Q. Whether you are familiar with it or not, will you agree with me that in the handling of statistics, it is often possible to get different results from the same set of statistics?

A. A different interpretation of them, yes, sir.

Q. And do you know that professional statisticians have developed a body of disciplines that attempt to make the presentation of statistics less misleading?

A. I don't know that.

Q. You are not familiar with the statistical disciplines whatsoever; is that right?

A. That's right.

Q. So you are saying that you never heard of the problem of full disclosure in captions on tables; is that what you are saying?

A. Irrespective of whether I have heard of it or not, that is what I always attempted to do.

[fol. 2853] Q. So you know——

A. To give a clear and concise caption at the top of the table.

Q. So you know of the problem, then?

A. Yes.

Q. Do you know that rules have been developed with respect to full disclosure of sources of tables?

A. There perhaps are. I have never read anything on the subject particularly, but any time that I make a table up I try to give, there again, a clear and concise source of the table.

Q. Do you know that standards have been developed with respect to the full disclosure of all adjustments made in statistical tables?

A. There perhaps are. I am not familiar with that.

Mr. Handler: Will the witness speak up, your Honor. It is awfully hard to hear.

The Court: Yes. Will you talk up, Mr. Finn.

Q. And will you agree with me that if a full disclosure of adjustments is made, the tables can be misleading?

Mr. McManus: I object, your Honor. This is getting a [fol. 2854] little far afield, and that is such a general statement that I object as to form.

Now, if Mr. Johnson could be a little more specific I would have no objection, but that is like asking how far does the sun shine.

The Court: Well, I don't know if he is in a position to disagree or not.

Mr. McManus: I am not sure that anyone is in a position to understand it, your Honor. That is why I object. It is so broad in form.

The Court: Let me say to the witness right now that if at any point he doesn't understand a question or feels unable to answer it directly, he may say so.

Mr. Johnson: I withdraw the question.

By Mr. Johnson:

Q. Do you know that professional statisticians have developed rules with respect to consistency in comparisions, so as to avoid comparing dissimilar items?

A. I don't know.

Q. Do you know that rules have been developed with respect to the consistency and definitions of universals use?

A. I don't know that.

[fol. 2855] Q. When you prepared these tables, you intended that the Court should rely on them, did you not?

A. Yes, I did.

Q. And you did not intend that the Court should go back into the background material and determine for himself what you had done, did you?

A. No. As I mentioned earlier, I tried to make the tables as clear and as concise as possible.

Q. When did you start preparing these tables?

A. I don't remember the date.

Q. Do you remember the year?

A. It was after receipt of the material from GCMI.

Q. You don't remember what year that was?

A. No, sir.

Q. Was it as much as two years ago, three years ago?

A. I don't remember the date.

Q. You just don't remember. Did you prepare all of these tables yourself?

A. I had assistance on it.

Q. Who assisted you?

A. A statistical clerk we have in the section.

Q. One clerk?

[fol. 2856] A. One clerk.

Q. You and one clerk prepared all of it; is that correct?

A. Oh, from time to time we had temporary help.

Q. Who asked you to prepare it?

A. Mr. McManus.

Q. What were your instructions?

A. Well, I didn't particularly get instructions.

Q. What were you told to do?

A. To prepare these tables and show the can and market shipments, and the combined shipments of both. Also the——

[fol. 2857] Q. Of both what?

A. Of cans and glass, and the breakdown of the east-west market of cans and glass, and consolidation of those. Also, the tabulations that are found in folder C.

Q. Were you told, in words or substance, that you were to try to get Continental Can's share as high as possible?

A. No, sir; I was not.

Q. Did you try to get it as high as possible in the preparation of these charts?

A. High as possible? I used the figures as I found them.

Q. You used them just cold, without paying any attention to what the results would be; is that correct?

A. We—we didn't alter the figures any to get any higher percentage.

Q. Did you select figures to get higher percentage?

Mr. McManus: Your Honor, I object to that. I don't know how you can select figures to get any different percentages than what they are. I always thought 2 and 2 added up to 4 and 4 and 4 added up to 8. He said he didn't alter the figures.

[fol. 2858] The Court: But 4 and 2 add up to 6.

Mr. McManus: That is correct, but there has been no

showing he made any arbitrary slection. He is asking him if he has changed them around.

The Court: Mr. McManus, that is what Mr. Johnson, I presume, is getting at, whether he made any arbitrary selection or exclusion of given items which might affect the result.

Isn't that what you are asking?

Mr. Johnson: Yes, sir.

Mr. McManus: Your Honor, I can understand that on specifics, if he wants to ask about specific tables, on that I have no objection, but you ask a man who has prepared a hundred tables if he has arbitrarily excluded——

The Court: Mr. McManus, this gentleman is an expert witness, or offered by the government as an expert witness, on the question of the preparation of these statistics.

Mr. McManus: That is correct; in preparation of these statistics.

The Court: He is not a witness who is likely to be trapped, and if any witness in my court is likely to be trapped I am probably not going to let him be trapped. He is an intelli-
[fol. 2859] gent witness. He can take care of himself. If he can't answer the question I am sure he will say so. If he can answer it, I would like him to.

Mr. McManus: All right, sir.

The Court: I will overrule the objection.

Mr. Johnson: Would you read the question to the witness?

(Question read.)

A. I didn't alter the figures at all to get the percentage.

Q. You said that. I asked you if you selected the figures to get a higher percentage?

A. I don't know how to interpret your question, particularly the word "select."

Q. You are saying now that you can't answer that question; is that right?

A. That's right.

Q. Were you asked to get figures relating to California, figures of any kind relating to California?

A. Yes, we attempted to.

Q. What did you do to get those figures, or in an attempt to get those figures?

A. We couldn't get them out of the Bureau of Census.

[fol. 2860] Q. What did you try to get from the Bureau of Census?

A. We tried to get the shipments of metal cans and shipments of containers on California.

Q. How long did you spend in this project?

A. Well, we spent some little time. We never gave up.

Q. But the end result of your effort was that you did not get any material on California; is that correct?

A. That's right, sir.

Q. Did you try to get separate statistics relating to hermetically sealed heat sterilized food?

The Court: I didn't get that last. Is it hermetically sealed what?

Mr. Johnson: Hermetically sealed heat sterilized food.

A. Yes, we made a lot of efforts in that direction.

Q. Just what did you do?

A. Oh, we sort of investigated about every source we could think of.

Q. What were the sources you could think of?

[fol. 2861] A. Well, principally, it was in the National Canners Association, we had the discussions with them. I talked on the phone with them quite a bit. We—there again we tried to get the material out of Census. They had none. There were any numerous sources. We even tried to—I don't recall what other organization we tried to get material out of, but it was—we made every effort.

Q. You finally concluded that there were no such figures to be had; is that correct?

A. That's right—not to my knowledge.

Q. And you concluded that after this extensive investigation that you have described?

A. Yes, sir.

Q. Did you try to get any figures relating to frozen food containers?

A. No, I did not.

Q. Why didn't you?

A. I was only concerned with cans and glass.

Q. I see. Your instructions specifically excluded everything except cans and glass; is that correct? And I should add the closures to which you have referred in your tables?

A. Yes, after our conversations on the staff level, my [fol. 2862] instructions were to prepare the cans and glass statistics.

Q. So you never tried to get any statistics on anything other than cans and glass and the closure material; is that right?

A. Well, let me say this: We sort of explored everything about Continental Can that we could.

Q. Did you try to get figures for rigid aluminum foil containers?

A. No, we didn't.

Q. Did you try to get figures for folding boxes for food?

A. I don't recall whether we got that information through a set of interrogatories or not.

Q. And if I understand you correctly, you made no attempt to get information relating to containers for frozen food; is that correct?

A. That's right.

Q. Will you turn your attention, Mr. Finn, to table 3C?

A. What folder?

Q. 3C.

The Court: You are now referring to folder C?

Mr. Johnson: It is page 4 in 803.

[fol. 2863] The Court: 803, yes. All right, I have it. It is entitled "1956 production and shipments of vacuum, screw thread," and so forth.

Mr. Johnson: Yes, that is the one.

The Court: All right.

Q. I understand from the caption on that table, Mr. Finn, that that is limited to closures made from tin mill products; is that correct?

A. Yes, sir.

Q. Why was it so limited?

A. Well, in these years 1956 and '57, the top sealed vacuum closures with a lug thread were included with the vacuum type caps.

Q. Yes, I realize that.

A. Yes.

Q. My question was——

A. Well, I was attempting to compare the White Cap production and shipments and Hazel-Atlas to what was shipped by the entire industry that made tin mill products.

Q. What did you understand was meant by "tin mill products"?

A. Well, closures made out of tin, as commonly known.

[fol. 2864] By the Court:

Q. Well, now, wait a minute. What do you say tin is commonly known as, tin plate?

A. Tin plate; and they have—I don't know whether black plate is used to make closures or not, but there are——

Q. Black plate would have been included as a product of a tin plate mill?

A. That's right.

Q. When you say "tin mill products," you really mean tin plate mill products; is that right?

A. That's right, sir.

Mr. Johnson: Will you mark that for identification, please?

(Marked Defendants' Exhibit U for identification.)

Mr. McManus: Do you have another copy?

Mr. Johnson: No, I don't.

Mr. McManus: Could you tell me, are you going to refer to one specific part or all?

Mr. Johnson: I will refer to several parts of it.

Mr. McManus: Well, your Honor, I don't know how I am going to follow it. He has got a thousand figures on that [fol. 2865] thing. Doesn't he have another copy? I always thought we were supposed to have two copies when we were going to discuss exhibits.

The Court: That is right.

Mr. McManus: Two copies of every one.

The Court: That is what I thought.

Mr. Johnson: Let me say that this is indicated as a source material for this chart, and I would have assumed——

The Court: Is it? Let me see what it is.

Mr. McManus: Your Honor, we have no objection to it. I just need a copy.

Mr. Johnson: Well, I would assume that the government would have available the source material here. They knew this cross-examination was coming on.

Mr. McManus: We obviously do, your Honor. But——

The Court: Well, isn't this referred to, "U. S. totals for Department of Commerce, Bureau of Census, series M34H-07"? That is referred to right on the chart.

Mr. McManus: That's right, your Honor. All I am asking for, will he give us a copy or will he give us time to get [fol. 2866] our own copy?

The Court: Where is your own copy?

Mr. McManus: Probably in the back.

The Court: Have you got a copy here?

Mr. Tolton: I think we have one.

The Court: All right, let's have one.

Mr. Johnson: This problem will keep on arising.

The Court: In other words, it may be your intention, Mr. Johnson, to refer to any of the source material that is described here.

Mr. Johnson: Yes, sir.

Mr. McManus: All right.

The Court: And Mr. McManus should be prepared to have that source material available.

Mr. McManus: All right, sir.

The Court: All right.

By Mr. Johnson:

Q. Is this document, Defendants' Exhibit U for identification, the document referred to as the source for this table 3C?

A. Yes, it is.

Q. Now, your table 3C shows a line "total U. S.," does it not?

[fol. 2867] A. Yes, it does.

Q. Now, is that total the sum of lines 4 and 9 of the Facts for Industry Report, which I showed you, which is Defendants' U for identification?

A. What year are you speaking of?

Q. Either '56 or '57. Let's look at '57. It is line 4.

A. Line 4.

Q. It is entitled "tin mill products," is it not?

A. That's right.

Q. And line 9 is entitled "vacuum friction types."

A. That's right.

Q. And that total then for 1957 is the sum of lines 4 and 9; is that correct?

A. That's right.

Q. And it does not include anything referred to in line 5, which is headed "aluminum," is that correct?

A. That's right.

Q. Does not include anything that is referred to in line 10, "other types," is that correct?

A. That's right, sir.

Q. Does not include anything that is referred to in line 13, "molded plastic caps"?

A. That's right, sir.

[fol. 2868] Q. Does not include anything that is included in line 18, "milk bottle closures," is that correct?

A. That is correct, sir.

Q. Does not include anything that is referred to in line 24 as "home canning closures for glass containers," is that correct?

A. That is correct, sir.

Q. Why did you select those two lines?

A. For the comparability of the tabulation.

Q. Comparability of what?

A. In comparing the closures of White Cap and Hazel-Atlas to the total U. S.

Q. Why did you think they were comparable?

A. Well, we—White Cap, we understand, did not make any of these other types that you have been mentioning here.

Q. You understood that; is that correct?

A. Yes, sir.

Q. Did you know? Had you made inquiry as to whether they did or did not?

A. Well, I think perhaps in all of this document somewhere we had that information.

Q. How about Hazel-Atlas? Did it make any of those?

[fol. 2869] A. We knew that Hazel-Atlas made screw lug types.

Q. Did you know that in the Census reports, to which you refer in your footnote, that Hazel-Atlas had reported aluminum closures?

A. Had reported—no, I did not.

Q. Did you know that in those Census reports, to which

you refer, that Hazel-Atlas had reported home canning closures, I might say in large quantities?

A. You speak of home canning closures?

Q. Yes, sir.

A. As distinguished from tin mill products and what other products?

Q. Home canning closures, as referred to in this Facts for Industry on line 24.

By the Court:

Q. What do you understand "home canning closures" includes in Facts for Industry?

A. Well, home canning closures are largely made of tin mill products. I presume they are made of others.

Q. Those would be the screw on tops for various types of home canning jars; is that right?

A. That's right, sir.

[fol. 2870] Q. Are there any other types included within the home canning closures there, that you are aware of, besides the screw on tops?

A. I think Hazel-Atlas made some out of some different type of metal. I am not too sure about it.

By Mr. Johnson:

Q. Now, why did you exclude from your table plastic closures?

A. Well, plastic closures, from the information we had, were not made by White Cap or Hazel-Atlas.

Q. So you were trying only to relate this to the closures made by White Cap or Hazel-Atlas; is that what you are saying?

A. That's right.

Q. So when you have on your table 3C a per cent of U. S. total, and you give a figure for 1957 of 20.6 per cent, that per cent is nothing except of the parts that are made by Hazel-Atlas and White Cap?

A. That is correct, sir.

Q. So that percentage has no relation to the total United States production of closures; is that correct?

A. That's right.

Q. And is it not fair to say, sir, that you have arbitrarily

[fol. 2871] excluded from this table plastic closures, milk bottle caps, home canning closures, all of these other things except lines 4 and 9 only?

A. We have excluded those items. We made only comparison with tin mill products.

By the Court:

Q. Did you exclude them arbitrarily?

Mr. Handler: Exclude what?

The Court: "Arbitrarily," I think was the phrase in the question.

Q. Did you exclude them arbitrarily or not?

A. We made this chart for comparability of comparisons.

By Mr. Johnson:

Q. Well, having excluded all of those other things, what do you think this chart shows?

A. This chart gives you an idea of the volume of closures made from tin mill products that Continental now enjoys.

Q. Now, in table 4C, the following table, you have made similar selections, have you not?

A. Yes, sir.

Q. As I understand it, on table 3C you added together screw thread and lug types and vacuum types, but you [fol. 2872] didn't add them together on 4C, is that correct?

A. That's right, sir.

By the Court:

Q. Let me ask you this, Mr. Witness: The phrase or the line in 4C, which is "U. S. production and shipments of vacuum type closures," what relationship does that line, regardless of year, bear to the figure "total U. S." on chart 3C?

A. Your Honor, in 1956 and 1957 the Bureau of Census lumped together all the top seal vacuum closures, the lug thread and various other types. In 1958 they changed their method to include merely the vacuum type closures. They eliminated or placed in some other category the lug thread and screw threads. So that for '58 we were able to

get a better figure for the vacuum type closures, and in making comparison between U. S. total and White Cap.

Q. Well, if you are going to make chart 4C project chart 3C into chart 4C, why are there available in the Bureau of Census, Facts for Industry, that you used here, the figures on screw thread and lug types made from tin mill products for the year 1958?

A. Your Honor, I think on line 3 here we have "U. S. production shipments of screw thread and lug type closures." [fol. 2873] Q. I see. All right.

A. The top figure, the "U. S. production and shipment of vacuum type closures," have been—are recorded separately in this particular year.

Q. So here you compare the White Cap production under "vacuum type tin mill products" with the total U. S. production and shipment of all vacuum type closures, and you compare the Hazel-Atlas with screw thread and lug type closures, tin mill products, total U. S. production; is that right?

A. That is correct.

By Mr. Johnson:

Q. And that is all you do in that table, is it not, in those percentages?

A. I didn't understand your question.

Q. And that is all you do, that is it. The percentage reported for White Cap under that table is simply a total of the amounts reported on line 9, that is, under the heading "vacuum cap," in Facts for Industry?

A. That's right, sir.

Q. And the heading, Hazel-Atlas percentage and U. S. total is simply the percentage referred to in line 4, that is, [fol. 2874] screw thread and lug tin mill products, is it not?

A. That's right.

Q. And if you had added any of the other different types of closures, referred to in this Facts for Industry, you would have gotten different percentages, wouldn't you?

A. That's right.

The Court: All right, Mr. Johnson, have you completed your examination on these two exhibits?

Mr. Johnson: I have one detail question I want to ask him. Then I will be through.

The Court: Well, I think we will take a brief recess at this point.

(Short recess)

[fol. 2875] Q. Mr. Finn, would you look at table 3 C again, right in the middle of the page. There is White Cap Company, and following that are figures, and then there is another line "Reported under vacuum (friction) type."

A. Yes, sir.

Q. Do you know what that second—what the figures on the second line represent?

A. Second line?

Q. The line that says "Reported under vacuum (friction) type."

A. That is terminology from that report that they found in the Bureau of the Census.

Q. But as far as you know, both of those lines represent vacuum closures, do they not?

A. Yes, I think that's correct.

Mr. McManus: Excuse me. I would like to object to the form. Both of what lines? Would you state specifically?

Mr. Johnson: The line that is captioned "White Cap Company" and the line that is captioned "Reported under vacuum (friction) type."

The Court: In other words, the figure for 1956 production, 460,597, without any explanatory words, and 1,747,483, [fol. 2876] "Reported under vacuum (friction) type"; is that right?

Mr. Johnson: Yes, sir.

By Mr. Johnson:

Q. Do you know the difference between the various types of closures that are referred to in this Facts for Industry bulletin?

A. I have a general knowledge, sir, which I gained from working on the case. I am not a real technician.

Q. You say you are not a real technician?

A. I am not a technician.

Q. Do you have any background in closure manufacture at all?

A. I didn't get the first part of the——
Q. Do you have any background in closure manufacture?
A. No, I do not.
Q. Or selling closures?
A. No, sir.
Q. Or cans?
A. No, sir.
Q. Or glass containers?
A. No, sir.

[fol. 2877] Q. Did you notice the physical exhibits that Mr. Danbom produced here the other day, those that were on the table here for several days?
A. I did.

The Court: They are still here, in the bookshelves.

Q. Those that are in the cabinet?
A. Yes, sir.
Q. Did you by any chance notice that the majority of those containers which have screw type closures on them were closed with plastic containers?
A. I didn't take particular notice of that——

Mr. Handler: Pardon me, plastic closures.
Mr. Johnson: Yes.

Q. You had not noticed that, had you?
A. I didn't take particular notice of it.
Q. Would you turn, Mr. Finn, to section 1 of folder A, the caption of that table. What do you mean by "shipments"?
A. Shipments generally mean completed sales or—and would include perhaps in some instances consignment sales or, in the glass industry, it generally means that when it is shipped from a plant to the warehouse.
Q. You think it does include shipments from plants to [fol. 2878] warehouses; is that right?
A. I think it does.
Q. Do you know whether it does?
A. I am not too clear on it, no, sir. I don't recall at the present time.
Q. Does it include exports?
A. We have tried to exclude exports.
Q. Have you excluded them from this table?

A. To the best of our knowledge, we have excluded them, yes.

Q. So you think they are excluded from this table; is that your answer?

A. Yes, sir.

Q. In the caption of that table, you refer to leading manufacturers.

A. Yes, sir.

Q. When you say "leading manufacturers," do you mean leading in assets?

A. No. As used here it would mean the amount that the leading manufacturers of glass containers—the volume of glass containers.

The Court: The volume of production?

The Witness: The volume of production, the volume of shipments. Either one.

[fol. 2879] Q. So it doesn't mean dollar sales?

A. No, it doesn't.

Q. And it doesn't mean in assets?

A. No, sir.

Q. Now, sir, would you tell me which company you regard as the fourth leading manufacturer in the industry as you have defined it?

A. The fourth leading?

Q. Yes. You have listed here three. Could you give me the fourth?

Mr. McManus: Your Honor, I would object to that. We are going way beyond the scope of the tables. I am sure that Mr. Finn has other data that he could probably produce which would show, or at least attempt to show, what is the fourth.

The Court: It seems to me, Mr. McManus, that if you have selected three manufacturers here, Owens, Anchor and Hazel-Atlas, it is perfectly legitimate cross examination to find out what he considers the fourth. I will overrule the objection.

A. I think it is perhaps Knox. I might add one other company that is near Knox, and through the years they have sort of been jockeying back and forth between who is fourth and who is fifth.

[fol. 2880] Q. What company is that?

A. I wouldn't be too sure, but I think it is Brockway.

Q. Where did you get your information as to which were the leading companies as you have defined it?

A. From GCMI, the statistical data we obtained from them.

Q. From GCMI itself; is that correct?

A. That's right.

Q. No other source?

A. No, sir. If I may add, the word "leading" is my terminology.

Q. I appreciate that it is your terminology.

Now, what did you intend his Honor to gain, what impression did you intend him to gain, from the use of that term?

A. I didn't—I had to use something in the titles, and I picked this.

The Court: Your definition of "leading" as used in this chart, 1 A: Largest in terms of volume, of production? Would that be your definition of "leading"?

The Witness: Yes, a combination of production and ship-
[fol. 2881] ments.

Q. A combination of them; is that what you say?

A. Yes, sir.

Q. When you saw the figures from GCMI on which you based your decision as to what you thought were the leading manufacturers, did you see any figures for Wheaton Glass Company?

A. No, Wheaton doesn't report to GCMI.

Q. Did you see any figures for Armstrong Cork Company?

A. No; they don't either.

Q. Do you have any idea whether Wheaton Glass Company or Armstrong Cork Company is as large as or larger than any of the three companies named here?

A. Well, from our study and general knowledge of the industry that we were able to gain and what we have read about it, we felt that Armstrong—neither Armstrong nor Wheaton were as big as the three I have included here.

Q. So your decision to name these three, then, was based on your feeling; is that correct?

A. My general knowledge.

Q. You have never seen any figures of Wheaton or Armstrong, have you?

[fol. 2882] A. Production figures on glass containers, no, I have not.

Q. So, except for your feeling about them, you have no information as to whether or not they are larger or as large as any of the three companies named here; is that correct?

A. I have never seen any figures on Wheaton or Armstrong, no, sir.

Q. Does the number of containers sold by a company in any way reflect the size of the containers?

A. No, sir.

Q. Does it in any way reflect the dollar volume of containers sold?

A. These tabulations do not reflect any dollars.

Q. You have a line here "All other manufacturers." Do you know how many other companies are included in that caption?

A. Not precisely. I would say between 35 and 38.

Q. That would be your estimate; is that right?

A. That is my estimate.

Q. From your work in this case. You base your estimate on your work in this case?

A. That is right.

[fol. 2883] Q. Going back to Armstrong and Wheaton, did you ever look at the material furnished to the Department of Justice by Emhart Manufacturing Company and introduced here in June?

A. Oh, I probably did look at it, yes.

Q. You did not observe that Armstrong and Wheaton were among the larger in terms of number of glass manufacturing machines of Emhart make?

The Court: That what?

Mr. Johnson: That they are larger in terms of the number of machines, forming machines.

Mr. McManus: Your Honor, I would like to object to that question, and to another question asked, since in a number of questions here Mr. Johnson is assuming facts not proven. And in this question, I object to the form. He talks about larger. I don't know if he means the size of

the machine or number of the machines, and I think the question is totally unclear and ambiguous.

The Court: I think I would reframe it, Mr. Johnson.

Mr. Johnson: All right.

Q. Did you know that the material submitted by Embart Manufacturing Company to the Department of Justice [fol. 2884] showed that Armstrong was the fourth in the number of IS sections, glass container machines, and that Wheaton was the fifth?

A. I took no particular notice of that, no, sir.

Q. So that you did not consider that at all in determining which were the leading companies?

A. No, I didn't, for this reason: I couldn't tell from that document how many of these machines were in actual operation.

Q. Nor how much they produced?

A. Nor could you tell the production efficiency of those machines. So I did not consider it at all.

Q. Looking at the line headed "All other manufacturers," in the percentage reported of 45.8 for 1957, can you tell how much of that percentage is accounted for by the fourth leading company as you have defined it?

A. The fourth company?

Q. Yes.

A. Not precisely, but I would say roughly about 5 per cent.

Q. On what do you base that estimate?

A. I am thinking in terms of Knox Glass.

Q. You are thinking of Knox. You are not thinking of [fol. 2885] Armstrong or Wheaton?

A. No, sir.

Q. Are Armstrong and Wheaton included in that "All other manufacturers"?

A. Presumably they are, because that figure there is the difference between the total U. S. and the three companies I have listed here.

Q. Now, you used the term "All types of glass containers." What do you mean by that? What does it include?

A. It includes all of those in the categories that are published by the Bureau of the Census.

Q. Does it include vials?

A. I don't think it does include vials.

Q. Are Kimble Glass Company's figures included with those of Owens-Illinois?

A. I have no way of telling whether a subsidiary of Owens like Kimble is included in the report that they make to the GCMI.

Q. You just plain don't know?

A. Presumably—I have no way of telling, no, sir.

The Court: Do you know whether or not Kimble made a separate report to GCMI?

[fol. 2886] The Witness: I do not know, sir.

By Mr. Johnson:

Q. Are packaged tumblers included in your category "All types of glass containers"?

A. Yes, sir.

Q. Are re-use tumblers included?

A. Re-used?

Q. Re-use tumblers.

A. You mean the initial manufacture of a tumbler?

Q. Yes, sir.

A. They are, too.

Q. Home canning containers, are they included?

A. Yes, sir.

Q. Are carboys included?

A. I presume they are. I have no knowledge as to all types of containers that are reported to GCMI by the various manufacturers.

Q. Again, you just don't know; is that correct?

A. That's right.

Q. Are salt and pepper shakers included?

A. I don't know.

Q. Is scientific glassware, such as Erlenmeyer flasks, included?

[fol. 2887] A. I don't know.

Q. Are glass piggy banks included?

A. I don't know.

The Court: Glass what?

Mr. Johnson: Piggy banks.

The Court: Piggy banks.

Q. Are wine and liquor decanters included?
A. As distinguished from wine and liquor bottles, sir?
Q. Yes.
A. I don't know that.
Q. Are nursing bottles included?
A. I presume they are.
Q. Again you don't know?
A. I don't know.
Q. Would you turn, sir, to table 1 B, the next table? Apparently something is omitted from this table that is in the preceding one; is that correct?
A. Yes, sir.
Q. What has been omitted?
A. Omitted from this table are wine and liquor bottles.
Q. You don't call wine and liquor bottles beverage glass [fol. 2888] containers; is that right?
A. They are in a separate category.
Q. Why were they excluded from this table?
A. There wasn't—well, they are included in the preceding table.
Q. They are included in the preceding table?
A. That's right.
Q. Why were they left out of this one?
A. Well, this table is a consolidation of the food, non-food, beer and beverage category.
Q. Yes, that is what it says.

By the Court:

Q. Let me ask you this: What is the significance of food as you understand it, food, non-food, beer and beverage, with wine bottles and liquor bottles excluded?
A. Your Honor, this table here is merely a consolidation of the food, non-food, beer and beverage tables.
Q. You did that because that is what you were told to do; is that right?
A. I did that because I thought it would be clear to understand this entire tabulation if I had a total in here for the food, non-food, beer and beverage.
[fol. 2889] Q. Well, let me ask you this: Presumably, then, on the first line on table 1 A, if you deduct the first

line on table 1 B from table 1 A, you get the number of wine and liquor bottles; is that correct?

A. That's right.

Q. Which would amount to roughly 2,120,000-odd; is that right?

A. That's correct.

Q. Not two million. Two billion.

A. Two billion.

Mr. Johnson: I don't know if I still have an answer to my question.

By Mr. Johnson:

Q. Why did you exclude liquor and wine from this table?

A. Well, it ties into other tables that we have in there, and they are in the metal can field. There are no items of cans.

Q. Oh, that is the reason why you exclude them; is that right?

A. That's right.

Q. Did you leave out milk bottles?

A. No, milk bottles are there.

[fol. 2890] Q. Are there milk bottles included in this table 1 B?

A. Milk bottles are in table 1 B.

Q. Are catsup bottles in 1 B?

A. Catsup bottles are in 1 B.

Q. Are toiletries and cosmetics containers in 1 B?

A. They are in 1 B too.

Q. So you left out liquor and wine but included these others; is that correct?

A. Liquor and wine are left out of 1 B but are included in 1 A.

Q. Do you know what the purpose of table 1 B is?

A. I think I mentioned it. It is merely a consolidation of the tables which follow.

Q. Why is it offered? Perhaps I should address that question to counsel, why it is offered.

The Court: I think that is a question that is addressed to counsel and not the witness. It is not the witness' func-

tion to testify as to why it is offered. If you want to ask Mr. McManus, you may ask him.

Mr. Johnson: May I ask Mr. McManus?

The Court: Surely.

[fols. 2891-2892] Mr. McManus: Your Honor, as I testified here before—I did not testify—as I outlined before in our case, we admitted that whiskey is not sold in a metal container. Actually I said that it is against the law to do it. Frankly, I am wrong. But we are still sticking by that statement of mine that there is no whiskey sold in metal containers. The law does not specifically say you can't, but to our knowledge there has never been any whiskey sold, legal whiskey, I should say, your Honor, in metal containers.

There is probably a lot of white lightning, with which I am somewhat familiar, being from the South, sold in metal containers. That is the reason we excluded it and that is the reason we excluded the alcoholic beverages, including wine.

Now, in the other areas here, food, non-food and beverages, we argue that these products are in competition with metal cans. That is the reason we excluded wine and liquor.

The Court: All right, then, Mr. Johnson. We will take a recess at this point until a quarter after 2. We will check at that time.

(Recess taken until 2:15 p.m.)

[fol. 2893] AFTERNOON SESSION

2:25 P.M.

LEO V. FINN resumed.

Cross-examination Continued.

By Mr. Johnson:

Q. Just before lunch, Mr. Finn, we were talking about table 1B. I think you said that you had eliminated wines and liquors from this table because you regarded them as not interchangeable with metal containers; is that right?

A. Yes, that's right.

Q. And you also said that you had included containers for fresh milk in this table; is that correct?

A. Yes, sir; that's right.

Q. Would you tell me what container, what metal container, you regard as interchangeable with a glass container for fresh milk?

A. Well, perhaps there isn't any. We put all of the items, food for human consumption, in the food category.

Q. Does that complete your answer?

A. Yes, sir.

Q. Do you know of any estimate as to what per cent of all glass containers made in the United States are [fol. 2894] made for wine and liquor?

A. What per cent?

Q. Yes.

A. Offhand, I don't know, sir.

Q. Looking at table 1C, this table, I understand from your heading, is designed to include all glass food containers; is that correct?

A. Yes, sir.

Q. And this table is not limited to containers for products that are heat sterilized, is it?

A. No, sir.

Q. And it is not limited to containers for products that are vacuum sealed, is it?

A. No, sir.

Q. Are home canning containers included in this table?

A. Yes, they are.

Q. Do you know of any metal container that is interchangeable with home canning containers?

A. No, I do not, sir.

Q. Look at table D. Here, if I understand correctly what you have done, you have added together both returnable and non-returnable beer bottles; is that correct?

[fol. 2895] A. That is correct, sir.

Q. Does the Bureau of Census add those types of containers together?

A. No, they are reported in separate categories.

Q. If I understand the effect of this table, you are adding together bottles which are used only once with bottles which are used 20 or 25 or more times; is that correct?

A. That is correct.

Q. And the total of those bottles would be two, one bottle used once will count for one total?

A. That's right.

Q. And the bottle that is used 25 or more times will count for one, will it not?

A. That's right.

[fol. 2896] Q. And on table 1 E, on the following page, you have done the same thing, haven't you?

A. The same thing, yes.

Q. Does the Bureau of the Census do this?

A. No. They have two categories.

Q. Now, you called this "beverage containers." What do you include in the term "beverage containers"?

A. Well, it is principally soft drinks.

Q. Anything else?

A. Carbonated and non-carbonated beverages.

Q. Water?

A. Carbonated water?

Q. No; just plain drinking water.

A. Plain drinking water? I have never seen any plain drinking water.

Q. You have never seen plain drinking water sold in a glass container?

A. In a beverage container?

Q. In any glass container.

A. We are speaking of beverage containers, aren't we.

Q. My question, sir, is drinking water, sold in glass containers included in your table E?

A. I have seen them in carboys yes.

[fol. 2897] Q. Would they be included in your table 1 E, whether they are gallons or half gallons or carboys or what?

A. Oh, I don't know the size, sir.

Q. Are they included?

A. I don't know.

Q. How about apple juice?

A. Apple——

Q. Is that included in your table 1 E?

A. I don't know.

Q. Grape juice?

A. I don't know that.

Q. Now, looking at table 1 F: does that table contain

everything that is left after you have taken out 1 C, 1 D, 1 E and wine and liquor?

Mr. McManus: Your Honor, I would like to object to this question only on this ground: I think the source data indicates what it includes, and I object to having to call on the witness' memory, if it excludes something that may or may not be in there.

The Court: Overruled.

The Witness: Could I have the question?

Mr. Johnson: Would you read it, please.

(Question read.)

[fol. 2898] A. 1 F is all non-food glass containers. Yes, sir, that is exclusive of those preceding tables.

Q. Would you turn now to folder B—I am sorry. I want you to go instead to section 2 of folder A. That will be the table following the one we were last looking at.

A. Yes.

Q. Table 2 A——

The Court: I may say, for the benefit of counsel for American Can, that the second section of A deals with metal cans and the figures concern your client.

Mr. Austern: Thank you, your Honor. That was the table, I believe, we were privileged, Mr. Goldberg and I, to look at on Thursday. And, with your Honor's permission, if I can look at it again, it would be helpful.

Mr. McManus: Could he come down here for the moment and sit with us, your Honor?

Mr. Handler: I will sit with him.

By Mr. Johnson:

Q. The caption in table 2 A B refers to all types of metal containers. What do you mean, sir, by "metal containers"?

[fol. 2899] A. I mean by "metal containers" what is spelled out in the Facts For Industry. I just forget the exact wording, but it is a metal container that is less than, I think it is, 28 gauge tin.

Q. Does it include aluminum containers?

A. No, it does not.

Q. Does it include metal collapsible tubes?

Q. No, sir.

Q. Does it include pails?

A. Pails?

Q. Yes.

A. Some types of pails.

Q. Is there any limit on the size of the container that is included in this table?

A. I don't believe there is. Well, I withdraw that. I am not—I don't know, sir.

Q. You mean there is no way that we can tell from this term "metal containers" what you included within it; is that right?

A. Are you speaking about size?

Q. About anything. You have said it does not include aluminum. Does it include any other type of metal container?

A. Well, I don't think it includes a heavy gauge steel [fol. 2900] container.

The Court: You mean steel drums?

The Witness: Steel drums.

Q. It does not include steel drums?

A. No, sir.

Q. When you say "metal containers," you mean something, but it is not clear from the table what you mean; is that right?

A. Well, it is the generally accepted type of container that is mentioned in the Facts for Industry.

Q. Generally accepted by whom?

A. I presume within the industry.

Q. Would you expect that his Honor would determine that from the fact of this table?

A. No, not from this document, sir. Perhaps from the underlying data, though, the source material.

Q. And I think you said this morning, in answer to my question, that you would not expect his Honor to go back and examine the underlying material, didn't you?

A. I don't recall that.

Q. Are captive manufacturers included in this table?

A. In the totals, yes, sir.

[fol. 2900a] Q. Captive manufacturers are included?

A. Yes, sir.

Q. Now, in the heading of this table you refer to leading manufacturers in the industry, and I suppose by "the industry" you mean whatever this concept of metal containers is; is that right?

A. That's right.

[fol. 2901] Q. And since the term "metal containers" isn't clear, why, we can't tell any more than that what the industry is that you're talking about?

A. Well, as I mentioned before, the Bureau of Census defined somewhat the industry is.

Q. This table doesn't even say that it is taken from the Bureau of Census' definition of the industry, does it?

A. No, sir.

Q. Now you refer to the leading manufacturers. You name three companies. How do you determine that those were the leading manufacturers in whatever this industry is?

A. Well, one, it is generally accepted knowledge in thinking that American Can, Continental and National Can are the three leading manufacturers in the industry.

Q. And that is all you have to go by, is some generally accepted knowledge?

A. Well, there is a lot of writing, been a lot of writing on it, yes, sir.

Mr. McManus: Your Honor, I hope now that the defendant is not going to cross-examine Mr. Finn on things that he has already answered in his answer to the government's complaint, in which he admits that Continental [fol. 2902] is the second largest producer of metal cans in this country.

Q. You have nothing other than what you call "generally accepted knowledge" to determine what are the leading companies in this industry that you are talking about?

A. That's right.

Q. Do you know how large, in terms of volume of production, Campbell's Soup Company is?

A. No, I don't.

Q. Do you know whether they are as large or larger than some of the companies referred to as the leading manufacturers in your table?

A. Yes, I have heard.

Q. What have you heard?

A. Well, I have heard that they are probably larger than National Can Company.

Q. So you know or at least you have information that these are not the three leading manufacturers, as you have used the term?

A. These are the three leading companies, to my knowledge, that have cans for sale.

Q. And that we are supposed to learn from the face of this table; is that correct?

[fol. 2903] A. No. I think perhaps other—there may be other documents in the record.

Q. You had set some percentages up here.

A. Yes, sir.

Q. To show that these companies have the percentages of the leading companies of the industry. Now you say that perhaps other companies would go in there; is that right?

A. I didn't say that; no, sir.

Q. Well, what did you say about Campbell Soup?

A. I said perhaps they are larger than National Can.

Q. How about Sherwin Williams Paint Company, are they larger than National Can?

A. From all I have heard, I don't think they are.

Q. How about Carnation Milk, are they larger than National Can?

A. Same would be true there, from all I have read.

Q. Have you ever seen any figures of Campbell's Soup, Sherwin Williams, Carnation Milk or Pet or Borden's?

A. I haven't seen any volume of production of canned figures. I have seen dollar volume figures.

[fol. 2904] Q. Dollar volume of their entire business; is that right, sir?

A. That's right, sir.

Q. But you wouldn't be able to say now whether they are larger or not as large as National Can; is that right?

A. Which ones do you speak of?

Q. Any of those I have named, are they as large as——

A. I think I said that Campbell's Soup was larger than National Can.

Q. How about Crown Cork and Seal? Have you ever seen their figures?

A. I haven't seen their recent production or shipment figures on volume of cans, no, sir.

Q. You wouldn't have any idea where they would rank in size; is that true?

A. Except in general knowledge and what I have read, that they're fourth largest.

Q. Fourth largest what?

A. Can company.

Q. We are now getting confused. A moment ago I thought you said that Campbell's Soup might be the third largest. But then you put Crown after Campbell's Soup. [fol. 2905] A. Perhaps I should qualify my statement by saying fourth largest can company that has cans for sale.

Q. How about Sherwin Williams, do they sell cans?

A. I think to some extent they do.

Q. What do you mean by "some extent"?

A. Well, they used some production, I understand, for paint, their own production for paint.

Q. Then they sell outside, also?

A. Yes, they do.

Q. Do the figures on this table include exports?

A. There are no figures given in the Bureau of Census statistics for export cans, that I know of.

Q. So you are saying they are not separated out?

A. They are not separated out, yes, sir.

Q. So if there are any exports, this table includes them; is that correct?

A. That would be a fair statement.

The Court: But you did deduct the Hawaiian Islands shipment?

The Witness: Yes, sir.

The Court: Why is that?

The Witness: We tried to confine this table strictly to [fol. 2906] continental United States. Those cans that are made out there are used out there. With respect to were there any cans, I think, that are made in the United

States and shipped elsewhere, for instance to Puerto Rico, I have—we have no knowledge of that.

Q. Well, did you deduct cans that were shipped from the United States to Hawaiian Islands?

A. No, we did not.

By the Court:

Q. Tell me about this Hawaiian Island deduction. I don't quite understand that. What did you deduct with respect to Hawaii?

A. These deductions made from Hawaiian Islands were —excuse me, your Honor, what book are we looking at?

Mr. Johnson: Looking at 2AB.

Q. 2AB, as I understand it. I see a footnote here: "Source Bureau of Census," and so forth, "less Hawaiian Island shipments."

A. Oh, yes, sir. Those shipments from Hawaiian Island are for the American can companies that are located in Hawaiian Islands. We deducted those from the total United States figures to get a continental United States total.

[fol. 2907] Q. In other words, those were the cans manufactured by American Can in Hawaiian Islands?

A. That's right, sir.

By Mr. Johnson:

Q. Now, during this period cans were manufactured in Hawaii by at least one company for its own use, were they not?

A. What year do you speak of, sir?

Q. 1957, at least.

A. I think that's right.

Q. And probably '56?

A. Perhaps in '56, too.

Q. Did you deduct those?

A. I can't recall whether we did or not. I would have to refer to my work papers. I don't recall.

Q. You know you deducted the American cans.

A. Yes, I know we did that.

Q. You can't recall whether you deducted the local self-manufacturer?

A. I can't recall we did. I assume we didn't though, because we didn't——

Q. You did not?

A. Did not.

[fol. 2908] Q. You know you didn't, don't you?

A. Well, I would say—I would like to look at my work papers first—I feel sure that we didn't. I say that because I don't think we had any volume for any self-manufacturer in Hawaii.

Q. Did you try to get them?

A. I don't recall.

Q. Continental Can does not have plans in Hawaii, does it?

A. No, it does not.

Q. So the effect of deducting Hawaiian production, for whatever reason you deducted it, would increase Continental's share of the balance, would it not?

A. If we eliminated Hawaiian Islands?

Q. Yes.

A. Yes, sir.

Q. Is that why you deducted Hawaii?

A. Oh, I would say the reason why we deducted Hawaii, we made these tables, Continental United States, to show principally in the areas in which Continental does business.

Q. Why didn't you deduct the State of Maine?

A. We don't have any statistics on that.

Q. How did you get the Hawaiian Islands statistics?

[fol. 2909] A. From American Can Company.

Q. Couldn't you get the State of Maine figures from the same place, from the companies involved?

A. Well, I didn't know all the companies that were manufacturing cans in the State of Maine.

Q. What I am trying to get at is your rationale in deducting the Hawaiian Islands. You say that you wanted to limit it to the continental United States?

A. That's right.

Q. Why did you want to limit it to the continental United States?

A. To the area that Continental Can sells cans.

Q. Do you know whether Continental Can sells cans to Hawaii or not?

A. It is my understanding they did not.

Q. Do you have any reason to believe that it doesn't?

A. Well, the only reason I have to believe that they don't is the cost of shipment of cans from continental United States out to the Hawaiian Islands would practically forbid it.

Q. Forbidden by whom?

A. Not forbidden. The costs would be excessive to ship [fol. 2910] cans out there.

Q. That is a determination you made; is that right? You really don't know anything about it, do you?

A. No, I said I was not a technician at this. I am trying to give you the best answers I can.

Q. You have given me now the best explanation you can give for deducting Hawaiian Island figures; is that right?

A. I gave you, yes, sir.

Q. Mr. Finn, would you look at the note on table 3AB, referring to source, sources given, United States total, from the Bureau of Census?

A. 3A?

Q. I am sorry. 2AB, the same table we have been looking at.

A. Yes.

Q. The source says, "United States total from the Bureau of Census, facts for industry." The totals given, I understand it, are those in the first line of the table for 1957, 41 million figure?

A. Yes, sir.

[fol. 2911] Q. Now, that is not literally true, is it, that you found that figure in the Bureau of the Census Facts for Industry?

A. No, that is not.

Q. Now, these tables, all together, contain a great number of figures, thousands of units of metal containers, do they not?

A. They are all in units.

Q. All through the tables there is a great number of them?

A. Yes.

Q. Will you agree with me that every one of those tables,

without exception, is an estimate made by someone other than the United States Department of Commerce; every one of the unit figures——

A. Every one——

Q. —referred to in these tables is an estimate?

A. I think that is perhaps right.

Q. And they are not estimates made by the United States Department of Commerce?

A. You were walking away, I didn't hear you.

Q. They were not made by the Bureau of Census or any part of the United States Department of Commerce?

A. The unit figures, no, sir.

[fol. 2912] Q. Will you tell me where those unit figures come from? You can concentrate, if you like, on the total volume figure for 1957.

A. You are speaking about the 41 million?

Q. 41,529,266,000.

A. Your question was how——

Q. Where did that figure come from?

A. Well, that figure is from the Can Manufacturers Institute.

Q. Is it from the Can Manufacturers Institute, or did you create it?

A. No. That is from Can Manufacturers Institute.

Q. Maybe I have misread your note, and I didn't read that as being a reference to Can Manufacturers Institute. There is an explanation there of how it is done. Do you say that you just copied that note from some Can Manufacturers Institute material, or did you do something else?

A. These total figures—I would like to refer, your Honor, to a document that I have here, if I may.

The Court: Yes.

A. I can't recall.

The Court: I see no reason why the witness cannot re-
[fol. 2913] fresh his collection from a document.

Mr. Johnson: No, I don't either.

The Court: Assuming that these documents were used by you or referred to by you in the course of the preparation of the tables.

I think if you can find the rest of that source material, you might save yourself some time.

A. Yes. That figure is derived by us, because we had to subtract the Hawaiian Island shipments.

Q. How did you get that figure?

A. By conversions. We converted the short tons of steel in Hawaiian Islands—well, we used an overall conversion figure for the continental United States in arriving at that figure.

Q. Well, I am not sure if we can understand what you mean when you talk about a conversion figure. Do you know how the production of metal container companies is reported to the Bureau of the Census?

A. Yes.

Q. In what units?

A. Yes. Generally they are on the base boxes of steel.

Q. Do you know what a base box of steel is?

A. Well, it is a base box of tin plate. It has various [fol. 2914] weights.

Q. It has various weights, you say?

A. It has various weights.

Q. Do you know the range of weights of a base box?

A. No, I am not familiar with all this.

Q. Do you know how many sheets of tin plate are in a base box of tin plate?

A. No, sir.

Q. All right. You say that the companies report in base boxes, and your figures here are clearly not in base boxes, are they?

A. No, they are not.

Q. All right. What happened to those base box figures?

A. They are converted into tons.

Q. On what basis are they converted into tons?

A. Well, there are various converting figures used, depending on the categories in which the tin is used.

Q. Well, at this point, Mr. Finn, maybe you would tell us what categories the companies report to the Bureau of the Census in? Will you do that?

A. Yes.

[fol. 2915] The Court: You remember we got a Census report that would give that, the various categories. What about that form you produced the other day; do you remember?

Mr. Austern: Off the record, I left it on your desk, sir.

A. The categories are fruits and vegetables (including juice), evaporated and condensed milk, other dairy products, meat, including poultry, fish and seafood, coffee, lard and shortening, soft drinks——

The Court: Let me ask you this, Mr. Witness: I show you a green form. Does that contain the categories the Census Bureau uses, that you are just referring to?

The Witness: Yes, sir, it does.

The Court: All right. Let's have that marked in evidence at this point so we know what we are talking about. This is courtesy of Mr. Austern.

(Defendants' Exhibit V received in evidence.)

By Mr. Johnson:

Q. All right. With that, then, Mr. Finn, may we go back to our problem of converting these base boxes into something else.

The Court: Just so we understand one another here, [fol. 2916] Mr. Finn, I take it there are 13 different categories in the Census reports; is that right?

The Witness: I believe that is right, sir.

The Court: All right. Those are the 13 categories shown on Defendants' Exhibit V.

By the Court.

Q. Now, will you try to take this conversion factor and explain precisely what you did?

A. Well, your Honor, it wasn't necessary for me to convert the base boxes of steel into tons of steel. The Can Manufacturers Institute does that for you in their publication. So I used the tons of steel as outlined in their book, which is identical to the conversions used by the Bureau of the Census, that is to say, even though the Bureau of the Census statitistics are reported on the base boxes of steel —base boxes of steel, they also give you a conversion factor there so you can convert it into tons. This was done for us by the Can Manufacturers Institute.

Q. Well, I will tell you: what I would like to know is precisely what the method or the process is by which you come out with—I presume that on 2A and B, the figure

[fol. 2917] of all types of metal containers, 41 billion-odd, under 1957, that means individual units of containers, is that right?

A. That's right, sir.

Q. Now, what I want to know, not being a mathematician or a statistician, but being a simple-minded fellow, what happens when you get this base boxes of steel consumed in the manufacture of cans out of, let's say, the Census reports, and you want to arrive at how many cans that is? What do you do?

A. Well, as I mentioned before, the Can Manufacturers Institute puts out this publication in which they give you all of the tons of steel used in making cans in each of these categories. They not only give you that but they give you——

Q. Wait a minute. You have got to go a little more slowly, because I am not following you.

A. Yes, sir.

Q. Just what is this publication of the—you see, I have never heard of this before except looking at a table. Mr. Johnson studied it, counsel for both sides studied it, and you are familiar with it. But I have come to this with a blank mind, and all I know is that I see certain figures. I [fol. 2918] know there are certain figures regarding base boxes, or whatever the name is—base boxes of steel—and I suddenly find here 41 million metal cans.

Now, you hold my hand and take me gently through this and show me what happens. Will you do that?

A. Yes, sir.

Q. All right. You start off with base boxes.

A. You start out with base boxes of steel——

Q. Now tell me, first off, so we get this plain, what are base boxes of steel?

A. They are sheet steel shipped to the can companies by the steel companies in boxes.

Q. I see. Bit sheets of steel in boxes?

A. That's right.

Mr. Johnson: In varying——

Q. How many sheets are there in a box?

The Court: Does anybody know?

A. It depends on the weight.

Mr. Johnson: The number of sheets depends on the weight?

The Witness: No, I think the number of sheets are the same. I just don't know what—how many there are the present time.

[fol. 2919] By the Court:

Q. You see, I am a funny fellow. I like to picture something.

Now, how big are these things?

A. I don't know.

Q. Would they be as big as the counsel table or would they be as big as this book?

A. I think a description, if I may—as I say, I am not a technical man, but I think they are a couple of feet square at least.

Q. A couple of feet square at least?

A. Yes, sir.

By Mr. Johnson:

Q. But you have never seen one; is that true?

A. No. I have seen pictures of them. I have never actually seen them.

By the Court:

Q. Let me ask you this: How much would a base box of steel for the purpose of making cans weigh? A base box of these sheets.

A. Well, they weigh from 88 pounds up.

Q. Up to how many?

A. I don't know, your Honor. I would say about 250 pounds. I am not too sure.

[fol. 2920] By Mr. Johnson:

Q. Do they range downward, below 88 pounds, also?

A. Oh, I think they do make some below 88 pounds, but generally——

Q. So you have a considerable range of weight?

A. Yes. Yes. Well, if I may go on, these base boxes——

By the Court:

Q. Now, I have already got another question.

Here is a report of base boxes of steel. Now, if the base boxes of steel vary in weight from 88 to 200 pounds, how do you arrive at any normal base on which to build?

A. Well, we——

The Court: If counsel think these questions are silly, why, just tell me.

Mr. Johnson: No, sir, they are not.

Mr. McManus: Perhaps, your Honor, I could help, if I may. I don't want to testify, but I have a copy of Facts for Industry here which indicates on the front—and this was the source data—that they collect this data on base boxes of steel and they convert it to short tons even on their own report, and on the front it says, "Base boxes for short ton of steel," and then it says "Fruits and vegeta-
[fol. 2921] bles," and the sum is 21.4. If we are sort of talking in the dark, if you would like to take a look at this——

The Court: Oh, I am talking in the dark.

Mr. McManus: You may want to take a look at this.

The Court: I have never seen this material.

Mr. McManus: Yes, your Honor.

By the Court:

Q. In other words, see if I have got this now, Mr. Finn, there are different weights of base boxes of steel that are used for different kinds of cans; is that right?

A. That's right, to make cans.

Q. So that if you took your fruit and vegetable category, you would get 21.4 base boxes of steel per short ton of steel, whereas if you took pet food, you would get 24, let's say. I am reading from this pamphlet.

A. That's right.

Q. All right. Well, now, tell me what you do then? You first take the base boxes of steel, and, if you have a fruit and vegetable category, you take the number of base boxes and you divide it by 21.4; is that right?

[fol. 2922] A. That's correct, sir.

Q. And then you get the number of short tons of steel?

A. That's right.

Q. Now, having the short tons of steel, how do you get the next step, which I hope is the next step, which is how do you translate that into units?

Mr. Johnson: Before we go on to that, may I ask a couple of questions at this point?

By Mr. Johnson:

Q. Do you know where the Census gets their conversion factor?

The Court: No, no, Mr. Johnson. Let me finish this, and we will go back to that. I just want to get the complete process in my mind, and then you can go back.

Mr. Johnson: All right, sir.

By the Court:

Q. All right. We have got the short tons of steel. Now, how do you take the short tons of steel and translate it into actual items, can items?

A. Well, as I mentioned, the Can Manufacturers Institute gives you an estimate of the actual number of cans [fol. 2923] which might have been produced from each of these categories. So——

Q. In other words, if you took a short ton of steel, it would, according to these figures that you have got from the Can Manufacturers Institute, produce so many fruit and vegetable cans, it would produce so many evaporated and condensed milk cans, etc., etc.; is that right?

A. Yes, sir. That is their estimate. I mean, they are able to estimate how many cans were used from that tonnage.

Q. In other words, what do they say, for instance, with respect to fruits and vegetables? How many cans, that is, units, individual cans, would a ton of steel make for fruits and vegetables?

A. Well, we figured 93—9,399 cans. 9,349 cans.

Q. That is what they say. Is that what the Can Manufacturers Institute says?

A. That is our figure, your Honor, by taking the tonnage in that category and dividing it into the estimated number of cans they say was produced, so we come out with an average.

Q. Oh, I see. In other words, the Can Manufacturers [fol. 2924] Institute doesn't come up with a figure in which he says one ton of steel will manufacture 9,000 cans plus. What you do is take the number of tons in the category and divide it into the total number of units in the category; is that right.

A. That's right.

Q. Yes.

A. And I come out with an overall average of cans in that particular category.

Q. And you do the same thing for evaporated and condensed milk, coffee, beer, the various categories; is that right?

A. Well, since we merely have a food category, we take the total food. In other words, it would include for fruit and vegetables, evaporated and condensed milk, other dairy products, meat, fish and seafood, lard and shortening, and we found out that a total of so much tonnage was used to make those cans. Then we go to——

Q. Wait a minute. The tonnage you got from converting the Census base box figures into tons of steel; is that right?

A. That's right.

[fol. 2925] Q. That is where you got the tons.

Now, where did you get the individual can units?

A. The estimate—the individual can units are from the Can Manufacturers Institute.

Q. I see. The individual can units are from the Can Manufacturers Institute?

A. That's right, sir.

Q. Well, let me ask you—one minute, now. Just let us take 2 C, "Metal food containers." According to this figure, according to this table, taking the year 1957, there are 25,379,000,000-odd metal food containers?

A. Yes, sir.

Q. Can you find that figure anywhere in the Can Manufacturers Institute reports?

A. Not that precise figure.

Q. What figure do you find there for that category for the year 1957?

Mr. Johnson: Well, there isn't any such category, is there?

The Witness: Total food?

Mr. Johnson: Yes.

The Witness: There is a category for total food, and in [fol. 2926] that, your Honor, we included coffee. There is a total actual number of cans made for food that is furnished by can manufacturers.

Mr. Johnson: You say a total number actual?

The Witness: It is called the actual numbers of cans which might have been produced from the amount of steel consumed.

By the Court:

Q. Well, now, what is the figure—I take it that you do that because the category food in the Can Manufacturers Institute does not include coffee; is that right?

A. That's right, sir.

[fol. 2927] Q. Whereas the Census people do include it as coffee, do they, or they don't—I see, you just included it as coffee under food?

A. We put coffee under food.

Q. All right. Now what is the figure that the Can Manufacturers Institute has for total volume of food containers produced in the United States for the year 1957?

A. They have for total food, they have 24,936,310,000, and to that we added coffee, which was 904,438,000. We come up with a figure of 25,840,748,000.

Q. Now that would be the Can Manufacturers' estimate of the number of individual food containers, metal food containers, so-called, produced in the United States in 1957.

A. That's right.

Q. Now——

A. If I may say something, your Honor?

Q. Yes, sure.

A. Now, we know the tonnage that was made, that was consumed in making those cans.

Q. Yes.

A. So we merely divide the tonnage into that estimate of those 25 billion cans and we come out with a figure of [fol. 2928] so many cans per ton.

Q. Yes. But this is the tonnage, the tonnage is taken

from the Census reports, isn't it, or is a translation from the base box figures in the Census reports, in tonnage?

A. Well, your Honor, I have really two sources. It is really the Census or the Can Manufacturers Institute, and they use the same figures.

Q. That is what I am getting at. What I want to know is, is this the Can Manufacturers Institute figure in here, or is it the Census figure? Because it doesn't seem to me —I may be wrong on this—that the Census figure can be translated into actual units of cans without referring directly to the Can Manufacturers Institute figure, which estimates the actual number of cans produced anyway. Am I right on that?

A. Your Honor, the tonnage that you can convert from the Census base boxes of steel by those conversion figures into tons are identical with the tonnage figures that are given in the Can Manufacturers Institute report. But they go a step further. They take that tonnage and convert it into actual number of cans which might have been produced from that tonnage.

Q. Well, look, now let me follow. If the Can Manufac- [fol. 2929] turers Institute took the Census tonnage or the Census tonnage converted from base boxes——

A. Yes.

Q. —and translated it into so many units that might have been produced, why is their figure different from yours? It would seem to me, Mr. Finn, that by a simple mathematical computation the figures would have to come out the same. I don't understand the difference. I grant you, the difference isn't all that enormous. I am just trying to understand this.

A. Well, we have excluded the Hawaiian Islands from our figures. They haven't——

Q. Oh. So if you took the Hawaiian Islands tonnage that you have excluded and added it to the 25,379,074,000, then you would come out with the same figure that the Can Manufacturers Institute comes out; is that right?

A. That's right.

Q. All right. So that what we are really doing here is taking the Can Manufacturers Institute estimate of what the total units produced in the United States were for 1957; isn't that right?

A. That's right.

[fol. 2930] The Court: We will take a recess at this point.

(Recess)

The Court: All right, Mr. Johnson.

Cross-examination Continued.

By Mr. Johnson:

Q. Shall we go back over some of this, Mr. Finn? Going back to the first conversion, the conversion from base boxes to short tons, I think in referring there to fruit and vegetables, you said a factor of 21.4 had been used, as shown by this Facts for Industry sheet; is that correct?

A. Yes, sir.

Q. Do you know where that figure of 21.4 came from?

A. Bureau of Census.

Q. Do you know what assumptions it is based on?

A. No, sir.

Q. It is based on some assumptions, is it not?

A. I am not——

Q. Well, you don't understand it to reflect an actual number of tons, do you?

A. No, I wouldn't think it would.

Q. And when the conversion is made from base boxes, which you have said varied in weight, to short tons, a [fol. 2931] figure is reached which is an assumed figure, is it not?

Mr. McManus: I object, your Honor. We are offering it as a Bureau of Census figure, not an assumed figure. That is what is in the Bureau of Census.

The Court: Well, Mr. Johnson is trying to find out, as I understand it, on what basis the Bureau of Census arrived at this conclusion. Now, if nobody knows——

Mr. McManus: And the witness says he doesn't know how they did it.

Mr. Johnson: He says he didn't know, and I am pressing him as to whether or not he doesn't understand it is an assumed figure?

A. I presume it is an assumed figure.

Q. Could it be anything else than an assumed figure?

A. Well, it is an assumed figure that has been used for many years.

By the Court:

Q. Don't you suppose, Mr. Witness, that at some time somebody sat down with a pencil and paper, or went to a plant, or did something to arrive at a probable figure? [fol. 2932] Anyway, they didn't pull this out of the air, do your suppose?

A. No, sir; they did not. I think this figure was arrived at back in the second World War, before the War Production Board. Now I am not too sure of this. Historically speaking, I think it was either the Can Manufacturers Association or the can companies in conjunction with the government figured out that maybe this was a figure to arrive at, to get the amount of steel needed during the war by these companies when they were allocating steel.

Q. When the problem of steel allocation was of some considerable importance.

A. That's right. And it has been used in existence for some number of years. I haven't checked it to see whether or not they are identical, but I think they are.

The Court: All right.

By Mr. Johnson:

Q. And it has been used for quite a few years?

A. Yes, sir.

Q. As far as you know, has it been adjusted to give effect to changes in common sizes or weights of containers?

[fol. 2933] A. As I mentioned, I haven't checked that at all, going back a number of years.

Q. All right, sir. Now getting a tonnage of steel used on this assumed basis, do you know how Can Manufacturers Institute gets its estimate of number of cans which might have been produced from that estimated number of tons of steel consumed?

A. No, I don't know how they arrived at that.

Q. Somehow they get an estimate.

A. Yes, sir.

Q. But you don't know what it is based on; is that correct?

A. No, sir.

Q. You don't know whether it assumes certain sizes or whether it assumes certain amount of weight?

A. No, sir. I have never delved into that with them at all.

Q. Now looking again at 2AB, the table we have been working on——

A. 2AB?

Q. Well, sir, I believe we probably do better by going to table 2C, the next following one. There you will see in the first column for 1957 a figure for Continental Can. Will you tell me how you got that figure?

[fol. 2934] A. We multiply the tonnage for Continental Can by the conversion factor that I previously mentioned we arrived at through the Can Manufacturers Institute.

The Court: Are those Continental Can figures out of their Census report?

Mr. Johnosn: Continental Can, like other companies, reports its base boxes.

The Court: In other words, it is a base box—let me ask you this: As far as the Continental figures are concerned, you take the base box figure shown on their Census reports, do you?

The Witness: Yes, sir.

The Court: And then you convert it to short tons, and then you apply the Canners Institute conversion factor.

The Witness: That's right, sir.

By Mr. Johnson:

Q. Well, is that quite right? I want to focus on that last conversion factor and how you got that. Did you not take the sum of all of Can Manufacturers Institute's converted figures and add coffee, and then create a conversion factor from that?

A. Yes, that's right.

[fol. 2935] Q. So that you aggregated them and created a conversion factor from that?

A. Yes.

Q. And you aggregated them without regard to the company's product mix?

A. That's right.

The Court: Without regard to what, Mr. Johnson?

Mr. Johnson: The company's product mix.

Let me try again to clarify it.

The Court: Yes, I understand. It is clear to me.

Q. Do you know if Can Manufacturers Institute ever followed that procedure?

A. No, I do not.

Q. Do you know that they didn't ever follow that procedure?

A. No, I do not.

Q. Do you think that procedure is statistically sound?

A. It is the best available.

Q. Is that the answer to my question?

A. It is the best available. That is all I could find.

[fol. 2936] Q. You agree with me you are taking things of different weights and creating an average out of them, aren't you?

A. I am taking the reported statistics from the Bureau of Census and reported statistics from Can Manufacturers Institute, and as I mentioned, I get a conversion factor, and I have applied it to the various reports made by each of these companies.

By the Court:

Q. Well now, just let me take an example. Let's suppose—I am not saying this is a fact—but let's suppose for purposes of this discussion Continental Can made in their food products nothing but baby food. If I remember the baby food tin, the baby food tin is a small tin, as compared with, let's say, the tomato, the canned tomato, or the canned peas. Would you say that if Continental Can Company produced nothing but baby food tins, this conversion factor of the Institute would be appropriate to determine the number of units that Continental Can produces?

A. No, I wouldn't, your Honor, because you got, you got to really apply a little reasonableness to your statistics. These companies, first two companies, we know make

all kinds of cans. If they just made baby food, I don't [fol. 2937] think I'd use this.

Q. All right. Then what you are saying, I take it, Mr. Finn, is that in view of the fact that as you consider that Continental Can Company made a general line of food containers, you thought that the conversion factor—a line which was generally representative of the industry, you thought that that conversion factor would be appropriate; is that right?

A. I do, sir; that's right.

By Mr. Johnson.

Q. And in doing that, Mr. Finn, you added in to this aggregate a figure relating to, for example, other dairy products, which is 148 billion units, estimated by CMI?

A. Dairy products are in the food category, yes, sir.

Q. So that becomes a factor in your conversion rate?

A. Yes, sir.

Q. Then you used a conversion rate so built up to compare American Can and Continental Can and National Can; is that correct?

A. That is correct.

Q. Regardless of whether those companies might have [fol. 2938] made containers for other dairy products, or evaporated condensed milk or not?

A. That is very true.

Mr. McManus: Your Honor, we have been referring to the CMI book so much, do you think we could make an offer of that document for the purpose of underlying data? Mr. Hughes refers to it and the witness.

The Court: I certainly wouldn't mind looking at the thing. I think it ought to be marked for identification at least at this stage. I would like to see one of them.

Mr. McManus: All right, sir.

Would you please mark this with whatever the next Government's Exhibit number is.

(Marked Government's Exhibit 1202 for identification.)

Mr. Johnson: Are you offering it?

Mr. McManus: Yes, I am.

The Court: I will reserve on this offer, just as I am reserving on this whole line of testimony.

Mr. McManus: Yes, sir.

The Court: As this is being marked for identification, have you got a copy for me?

[fol. 2939] Mr. McManus: Yes, sir.

The Court: Thank you.

All right, you go ahead, Mr. Johnson.

By Mr. Johnson:

Q. You will agree with me, will you not, that this conversion that you have made is one which you have never seen anyone else use?

A. Yes, sir.

Q. Something that you created for your own purpose, isn't it?

A. I haven't seen it anywhere else used.

Q. Why did you add coffee to the food list as set up by CMI?

A. Well, we had staff discussions on that particular question. We determined or felt that for the purpose of making these comparisons, that coffee should be in food. It was—some people take coffee as a food and some people say it's a beverage. So for the purpose of these statistics we merely put it in the food line.

Q. Did you include pet foods?

A. Pet foods?

Q. Yes.

A. No, sir.

[fol. 2940] Q. Why didn't you include those?

A. Well, I think I mentioned earlier that food, the food category we used was food for human consumption.

Q. I want to go on now to table 3A, and before I get into that, Mr. Finn, can you tell me how the glass container companies report their figures to the Department of Commerce, Bureau of Census?

A. You are speaking about categories?

Q. Yes, can you list the categories in which they report?

A. Yes. They have food, bevera[illegible]e——

Q. Well, they don't start that way, do they? Don't they have a broader category?

A. You want the—the categories are first given all types, a total. Then you have direct exports, and then you have domestic. Then you have domestic by type, and they start with narrow neck first, and they give you food; medicinal and health; household and industrial; toiletries and cosmetics; beverage returnable; beverages non-returnable; beer returnable; beer non-returnable; liquor; wine; and then they start with wide mouth total, and under that they have food, which includes fruit jars and jelly glasses; medicinal and health; household and industrial; toiletries and [fol. 2941] cosmetics; dairy products; and packer's tumblers.

Q. Now, those categories are very different from those that we saw used for metal containers, are they not?

A. Very decidedly, sir, yes, sir.

Q. Now looking at table 3A, as I understand it, this purports to be a combination of glass container shipments and of metal container shipments, to show the total glass and metal container shipments; is that correct?

A. That is correct, sir.

Q. And those unit figures have been built up, as you have described it here this afternoon.

A. That is correct, sir.

Q. Did you ever see any other attempt made to compare glass and metal container shipments in the United States?

A. I never have.

Q. The Bureau of Census doesn't do it, does it?

A. No, sir.

Q. And as far as you know, no trade association does it?

A. That is correct.

[fol. 2942] Q. Something as that, that as far as you can tell that no one ever saw the point in doing before?

A. I have never found any statistics on that at all.

Q. Look at table 3D, will you, sir? There you have made an attempt to compare shipments of glass and metal beer containers for the several years, and after Continental Can Company in the year 1957 you have a percentage of 38.6; do you find that figure?

A. Yes, sir.

Q. Would you conclude from that figure that 38.6 per cent of all beer that was sold in containers in 1957 was sold in containers manufactured by Continental Can?

A. In glass and metal containers, sir?

Q. Would you conclude that?

A. This—I wouldn't conclude it was all beer sold, no, sir.

[fol. 2943] Q. What does that figure stand for?

A. This beer—this figure shows that all the glass and metal containers sold to——

The Court: You are excluding beer in cans and draught beer, are you not?

Mr. Johnson: Yes, sir.

The Court: Well, that is what you were about to say?

The Witness: That, your Honor, and, in addition to that, as Mr. Johnson framed his question, beer is sold in bottles that were sold in years previous to this particular year. In other words, returnable bottles are used many times over, so therefore beer sold in this particular year——

The Court: All right. I think you have got a point there, and I think you better reframe your question.

By Mr. Johnson:

Q. Did you conclude from that figure that 36.6 per cent of all beer sold in containers in 1956 was sold in containers manufactured by Continental Can Company?

A. No, sir. This 38.6 per cent shows the containers sold [fol. 2944] in this particular year for beer purposes.

The Court: It has nothing to do with the returnable beer bottle which is used a number of times?

The Witness: That's right.

The Court: So that as far as the returnable beer bottle is concerned, Continental Can might, for all one knows, have sold 20 million of those and they were all in use 20 times, so you would yet 400 million of those that wouldn't figure in this at all.

The Witness: That's right, sir.

The Court: Or 380 million, anyway.

The Witness: Yes, sir.

By Mr. Johnson:

Q. Had it occurred to you, Mr. Finn, that that might be the reason why the Bureau of the Census has all these years carefully separated into returnable and non-returnable bottles?

A. Well, they perhaps were separated for somebody else's use. These statistics are used by a lot of people.

Q. The Bureau of the Census has never added them, has it?

A. Never added them, no, sir.

Q. You set about to add them?

[fol. 2945] A. I consolidated them, yes.

Q. And then you get a percentage out of that consolidation?

A. Yes.

Q. Now, will you agree with me, Mr. Finn, that with respect to all of these section 3 tables I could get different totals and different percentages by using different conversion factors?

A. Oh, yes, sir.

Q. That I could get different totals and different percentages if I used different leading companies?

A. I don't understand that question.

Q. Well, you have separated out here six companies which you call the leading six companies. If I used other companies and called them the leading companies, like Campbell's soup, for example, I would get different totals and I would get different percentages, wouldn't I?

A. I think you would.

Q. And I would get very different totals and different percentages if I made different assumptions with respect to the average size of containers also, wouldn't I?

A. Yes, if you had those statistics, yes.

[fol. 2946] Q. Going back to this beer figure on table 3 D, if you had used an assumption of the number of times returnable beer bottles were used and included that, the figure attributable to Continental would be far lower than it is, would it not?

Mr. McManus: I object to that, your Honor. Is he stating a fact there?

The Court: Well, he is asking whether or not that is a fact.

Mr. McManus: All right.

A. I can best answer that question by saying that we don't—nowhere in these statistics do we take into consideration the re-use of a container after it has once been filled. Beer bottles returnable would fall in that category. These bottles are sold or shipped or shipments made during this particular year.

The Court: Gentlemen, since we have marked for identification this annual report of steel and tin consumed in metal cans, I think we ought to have one, at least, of the Facts for Industry marked for identification. We have referred to it a number of times.

Mark it as a government's exhibit.

(Marked Government's Exhibit 1203 for identifica-
[fol. 2947] tion.)

By Mr. Johnson:

Q. Well, sir, what does that figure of 38.6 per cent mean to you?

A. Well, it means that the containers, both glass and metal shipments for that particular year that were sold for beer purposes—that is how many Continental—the percentage of Continental's share of that particular market.

Q. Turning now to folder B, would you tell me, first, what you attempted to do in preparing those tables?

A. The folder B is very similar to folder A, and, in addition, it has a breakdown between the East and West markets; at least, the glass and metal containers sold east of the Rockies and metal containers sold west of the Rockies.

Q. Now, I understand you eliminated Hawaiian can shipments from these tables; is that correct?

A. That's correct.

Q. Did you eliminate Hawaiian glass shipments?

A. Are you speaking about shipments made from the continental United States to the Hawaiian Islands?

Q. Or manufactured in Hawaii, if any were manufac-
[fol. 2948] tured there?

A. If the glass were shipped to the Hawaiian Islands, we assumed that it was not exported.

Q. That it was not exported?

A. Yes, that's right.

Q. Not exported from where?

A. Well, it wasn't included in the total. It wasn't included in the total of exports of glass shipments, as referred to in the sentence.

Q. Let me see if I understand you. There are breweries in Hawaii that use glass containers, are there not?

A. Yes.

Q. And they get those glass containers from somewhere, which may be the United States?

A. Yes, sir.

Q. Now, as I understand what you have done, you have excluded cans which might have been used in the Hawaiian Islands but have not excluded glass containers used in the Hawaiian Islands; is that right?

A. We excluded cans made in Hawaii.

Q. You attached some magic to the fact that they were made there?

A. If a can was made in the United States and shipped [fol. 2949] to the Hawaiian Islands, they would be included in my figures.

The Court: Let me ask you this: That would depend on which set of figures they were in; that is, whether they were east or west of the Rockies would depend on the plant that made the shipment; is that right?

The Witness: That's right.

The Court: But if they were shipped from, let's say, St. Louis to the Hawaiian Islands, it would be included in the east figure. If they were made in San Francisco, let's say, and shipped to the Hawaiian Islands, they would be in the west figures?

The Witness: That's correct, sir.

By Mr. Johnson:

Q. Well, I am still somewhat mystified at what you have done here. You are trying to compare cans and glass, trying to compare can and glass shipments, and, as I understand it, you have for some reason that I have not yet got, eliminated cans that were manufactured in the Hawaiian

Islands but not eliminated glass containers that were used in the Hawaiian Islands, is that right?

A. It is a distinction. The cans were manufactured in [fol. 2950] Hawaii. The glass were not.

Q. Is that the reason you eliminated the cans and did not eliminate the glass?

A. The cans—we included in our glass shipments all, irrespective of where they went, exclusive of those in the category of exports. Now, they could have gone—some could have gone to the Hawaiian Islands. That glass is made on the West Coast.

Q. And, in fact, you know that some of it did go there?

A. Probably did. Probably.

Q. I am having some trouble with this. What I still don't understand is why you would eliminate those cans which were made in Hawaii and did not eliminate those glass containers which were made by manufacturers in Hawaii. You did not eliminate those cans which were shipped into Hawaii and did not eliminate glass containers which were shipped into Hawaii. I understand that you say you eliminated cans because they were made in Hawaii. Why did you?

A. Well, I think the cans made in Hawaii were not shipped over to the continental United States in an empty fashion. They were shipped in here filled, and Continental [fol. 2951] had had no plants in the Hawaiian Islands. We eliminated the Hawaiian simply to cover the territory that is served by Continental Can.

Q. Going back to my earlier question, you know, do you not, that Continental Can has no can plant in the State of Maine, don't you?

A. Oh, I didn't know unless I referred to some list.

Q. But that didn't occur to you, to take that into consideration?

A. To eliminate——

Q. To elimimte the State of Maine?

A. No, I had no knowledge that Continental does not sell in Maine.

Q. I must say I am still in the dark as to why you eliminated the manufactures by American Can in Hawaii. Let me try something else.

The Court: Now, the question is, it is now 4:30, Mr. Johnson. How much longer have you with this witness?

Mr. Johnson: I have quite a bit more.

The Court: In other words, if I took another 15 minutes tonight it would not help us too much?

[fol. 2952] Mr. Johnson: No, it wouldn't, I am afraid, sir.

The Court: Now, gentlemen, I think this is fairly slow stuff, and I think it would be well if we took a recess now.

When you say "much more," Mr. Johnson, on the basis of your experience today, how much longer will you take? You not only have this witness but you have the chart man, too.

Mr. Johnson: Well, I suppose it would take the forenoon with this witness, and, if we can speed it up with the next one, I don't know——

The Court: All right. Gentlemen, we will take a recess until 10:30 tomorrow morning.

(Adjourned to October 11, 1960, at 10:30 a.m.)

[fol. 2953] New York, October 11, 1960, 10:30 a.m.

Trial resumed

The Court: This morning, the same rules will apply as applied yesterday in connection with the closing of the courtroom except for those whom I named yesterday, but I want to be sure that Mr. Austern arrives, gets in if he arrives.

Mr. Hughes: I was going to say that our three delegates haven't arrived either.

The Court: All right. Well, if you will keep an eye on the situation, Mr. Clerk, we will leave the door open for the present.

LEO V. FINN resumed.

Cross-examination Continued.

By Mr. Johnson:

Q. Mr. Finn, when the Court rose last evening, we were discussing the matter of the exclusion of certain Hawaiian [fol. 2954] figures, and I wasn't getting too far as to why they had been excluded, so I should like to ask a few more questions on that.

As I recall it, sir, you said that figures that were excluded were those of American Can Company; is that correct?

A. That's correct.

Q. However, the figures for cans produced in Hawaii by others than American Can were included; is that correct?

A. They are included, yes, sir.

Q. And the principal——

The Court: In other words, that, as I recall it, 92 million units or number of units for 1957 was only American Can, and there were other cans produced in Hawaii by corporations other than American; is that correct?

The Witness: That's right, sir.

Q. And the principal producer other than American out there is Hawaiian Pineapple, is it not?

A. I understand it is.

Q. Hawaiian Pineapple is one of the biggest fruit packers in the world, is it not?

A. I think so.

[fol. 2955] Q. And so we are not talking about anything insubstantial here. We are talking about the containers for substantially the whole pineapple pack, isn't that correct?

Mr. McManus: Your Honor, he is testifying to facts that have not been proved here, and I am not sure that that is actually a fact. If he is asking him a question——

The Court: He is asking him a question based on a supposed statement of fact: is this the fact?

Mr. McManus: If it is understood that he is not testifying here——

The Court: Well, if he is testifying here, I am not going

to take his testimony, so you don't have to worry about that.

Mr. McManus: Fine.

By Mr. Johnson:

Q. In any event, anything that Hawaiian Pineapple produced for its own use is included in your figures?

A. Yes, they are.

By the Court:

Q. Have you got any idea, Mr. Witness, in rough terms, round them, how many units of cans Hawaiian Pineapple [fol. 2956] produced in the year 1957?

A. No, sir, I do not.

Q. Do you know whether it was larger or smaller than the number of cans produced by American Can in Hawaii during that year?

A. As to the exact figure, I do not know, but I feel very sure it is much smaller.

Q. Much smaller?

A. Yes, sir.

Q. When you say "much smaller," would it be half as much?

A. I have no way of determining.

The Court: I see.

[fol. 2957] Q. What is the basis for your understanding that it is much more?

A. American Can has three plants out there. I am under the impression that Hawaiian Pineapple only has one.

Q. So you are measuring it by the number of plants?

A. That's right.

Q. Do you know anything about the size of the plant?

A. No, I do not.

Q. Did you try to get figures from Hawaiian Pineapple?

A. I don't recall whether we did or not.

Q. You were just content to include Hawaiian Pineapple in the figures and exclude American Can; is that correct?

A. Well, we didn't have—I didn't have figures for the other company out there.

Q. Did you try to get them?

A. As I say, I don't recall. I am not—I was not the only one on the staff. I think we tried to get off a lot of figures from a lot of different sources and have been unsuccessful in variou places we tried. I just don't recall that particular [fol. 2958] incident.

Q. So the best you can do on this is that you do not know whether you tried to get Hawaiian Pineapple figures or not?

A. I don't recall.

Q. Would you turn back, Mr. Finn, to folder A, table 3E?

A. 3E?

Q. Yes. Can you tell from that table what percentage of soft drinks, beverages, packed in the United States in any year, were packed in containers made by Continental Can Company?

A. Well, no, sir, you couldn't tell from this statement.

Q. In the last column on that table, after Continental Can Company, there is a figure of 6.2

A. Yes, sir.

Q. What does that figure represent?

A. That figure represents the glass container shipments and the metal container shipments as a per cent of the total soft drink and beverage container shipments in the United States during that year.

Q. Under the heading "metal container shipments," after Continental Can, for 1957 there is a figure of a hun- [fol. 2959] dred million, is there not?

A. That's right.

Q. Are those returnable or non-returnable containers, do you know?

A. The metal can shipments?

Q. Yes.

A. Well, generally speaking, they are not returnable.

Q. You say "generally speaking." Is there any exception in that? Why do you qualify your answer?

A. There may be some returnable. I don't know enough about that, if they are. But generally speaking, I think they are all throwaway metal cans.

Q. If you look in the first column under "glass container

shipments," there is a figure following Continental Can of 8,640,000.

A. Yes, sir.

Q. Do you know whether those are returnable or non-returnable bottles?

A. Well, they would include both.

Q. They would include both?

A. Yes.

Q. So here again you have added containers that are used once with containers that are used many times; is that [fol. 2960] correct?

A. We have added these together, yes, some of the containers, returnables and non-returnables.

Q. Would you look down under 1955 to Hazel-Atlas Glass Company?

A. Yes, sir.

Q. Do you find the figure 576,000?

A. Yes, sir.

Q. Do you know whether those are returnable or non-returnable bottles?

A. Offhand, I don't know.

Q. Now, will you look in the last column. After those figures for Hazel-Atlas Company in 1955——

A. Yes, sir.

Q. You have a blank.

A. Yes, sir.

Q. Why the blank?

A. Well, I think the figure will come out less than one-tenth of 1 per cent.

Q. The percentage is just too small to be shown; is that correct?

A. Yes.

Q. Is it correct then that that figure of 6.2 per cent, shown for Continental, would be substantially the same whether [fol. 2961] Continental Can's manufacture of glass bottles for beverage purposes was included or not?

A. I don't believe I understand your question. That 6.2 per cent represents both the glass containers and the metal can shipments.

By the Court:

Q. All right, the question is quite simple, really. How much would the percentage be reduced if you eliminated glass?

A. Well, it wouldn't be reduced too much.

Q. How much do you think it would be reduced? Work it out for me so I can follow.

A. I think it is about 6 per cent,

Q. In other words, it would be two-tenths of a per cent, roughly, more or less?

A. Roughly speaking.

The Court: Yes.

By Mr. Johnson:

Q. For the year 1955, the sum of the percentages attributable to Continental Can and to Hazel-Atlas Glass Company would be absolutely unchanged if you left out Hazel-Atlas would it not?

A. That's right.

The Court: As a matter of fact, you did leave out Hazel-[fol. 2962] Atlas in '55.

Mr. Johnson: Hazel-Atlas is included in the list.

The Court: Yes.

Mr. Johnson: But not in percentages.

The Court: Yes, but it isn't included in the percentages.

Mr. Johnson: But there is no percentage.

By Mr. Johnson:

Q. Of the 8,640,000 containers, glass containers, shown for Continental Can in 1957, do you know what percentage of those were returnable bottles?

A. Offhand, I do not. It is consolidated here.

Q. If this table shows anything, it shows that Continental Can's production of glass containers for soft drinks in 1957 was greater than Hazel-Atlas' production of soft drink containers in 1955, does it not?

A. Yes, it does.

Q. Turn back for a moment to the preceding table, which is 3D.

The Court: 3C?
Mr. Johnson: 3D.
The Witness: 3D.

Q. Here in 1957 the figure given for Continental Can [fol. 2963] metal beer containers was three million six, is it not?

A. Yes, sir.

Q. Were all of those non-returnable containers?

A. I would say definitely, yes.

Q. In the first column you have a figure of 17 million glass containers for beer; do you know whether those were returnable or non-returnable?

A. Offhand, I don't know, sir.

Q. The figure in the last column, following Continental Can, for 1957 is 38.6. I wonder if you could do the same for me as you did in the preceding table? Tell me how much that percentage would be changed if you left out glass containers?

A. Well, I can tell you offhand. It wouldn't be very much. There wouldn't be very much change there.

Q. Very tiny change; would it not?

A. Yes, very tiny change.

Q. Now, sir, would you look at table 3B in that same book.

The Court: D?
Mr. Johnson: B.

Q. Will you tell me what this table purports to be?

[fol. 2963a] A. Yes, sir. This table is consolidations of table 1B and 2AB.

[fol. 2964] Q. Yes. And what does it contain?

A. This is the glass and metal, food, non-food, beer, soft drink and beverage containers for 1955, '56 and '57.

The Court: Let me ask you this, Mr. Witness: What is excluded from this table, if anything?

The Witness: The wine and liquor bottles, sir.

The Court: The wine and liquor. I see.

By Mr. Johnson:

Q. Is that the only thing that is excluded from it?

A. Yes. That's the only thing that is excluded.

Q. So this table, as I understand it, represents all metal containers, however you define them; is that correct?

A. That's right.

Q. And it includes all glass containers except those that were used for liquor and wines?

A. That's right.

Q. And from that you draw a percentage; is that correct? [fol. 2965] A. That's correct, sir.

Q. Did you know that Hazel-Atlas Glass Company was a substantial producer of wine and liquor bottles?

A. Wine and liquor bottles?

Q. Yes.

A. I think they are.

Q. It shows from the Census materials you had, doesn't it?

A. I don't recall the exact figures, but they do make a substantial number of wine and liquor bottles, yes, sir.

Q. I am somewhat confused about this. I wish you would tell me again why you exclude wine and ilquor bottles.

A. Well, there is no comparable category in the metal cans to wine and liquor bottles.

Q. Do you know that Hazel-Atlas Glass Company was not a producer of milk bottles?

A. I think that's right.

Q. That also showed in the Census materials you worked with, didn't it?

A. Yes, sir.

Q. Now, let us see what you have done here. You have excluded one type of glass container that Hazel-Atlas [fol. 2966] made, and you have included a type of glass container that Hazel-Atlas did not make. You have made your comparisons on that inclusion and exclusion; is that correct?

A. Mr. Johnson, I have made the comparisons of all foods, non-foods, beer and beverages. I did not single out any particular or exclude any particular thing.

Q. In other words, except wine and liquor, which you singled out for exclusion?

A. Well, there were no comparable categories in the metal cans.

By the Court:

Q. Let me ask you this, Mr. Finn: Turning to 3 A, 3 A includes everything, doesn't it?

A. Yes, sir, it does.

Q. So there is a table here including all the containers?

A. Yes, there is.

Q. Including milk bottles and beer bottles and wine and liquor bottles and everything else?

A. Yes, sir.

Q. As far as you were able to ascertain?

A. Yes, sir.

[fol. 2967] Q. Now, on table 3 A down in '55, I assume that you included all the production, or shipment, rather, by Hazel-Atlas of milk bottles, wine and liquor bottles and everything that they shipped by way of glass containers; is that right?

A. Yes, sir, in this table are all types, metal, glass and plastic, irrespective of their end use.

Q. All right. Let me ask you this: Take table 3 B. Do you know how the figure of 25.5 per cent next to Continental Can, listed against Continental Can for the year 1957, would be affected if you included in the totals of glass container shipments all the wine and liquor, which would bring it up to 20,153,088, and included in that, in the Continental Can figures, all the wine and liquor glass bottles that they sold through the Hazel-Atlas Division?

A. Well, your Honor, on page 3 A we have included the wine and liquor bottles, and it does show a difference in the percentage of those glass and cans. When I have excluded——

Q. I see. In other words, what you have done on table 3 A is just what I said?

A. Yes, sir.

Q. I see. And that would change the percentage ascribed [fol. 2968] to Continental Can from 25.5 to 24.8, or a total of 7/10 of a per cent?

A. That's correct, sir.

The Court: I am frank to say, Mr. McManus, I don't see what table 3 B is supposed to establish as compared with table 3 A or what possible significance it can have.

The Witness: Your Honor, may I answer that?

The Court: Of course. Surely.

The Witness: Your Honor, 3 B was really put in here because there is a consolidation of these other tables. It makes——

The Court: In other words, this is the first table of a series of breakdowns?

The Witness: That's right. It makes it easier to follow through these tabulations.

The Court: I see. All right.

By Mr. Johnson:

Q. Now, 3 A, like your other tables where you made these consolidations, has added returnable containers and non-returnable containers, has it not?

A. Yes. We have added them both together.

Q. Mr. Finn, the Court yesterday asked you some questions with respect to the makeup of these unit figures for [fol. 2969] cans, and asked you to suppose that Continental Can was making only baby food cans, and asked you if your formula would be appropriate on that assumption. As I read the transcript last night, it seemed to me that you did not entirely get the point of his Honor's question, and I would like to go over again just what you did to get a figure using the figures—for example, the figure on table 3 C.

The Court: What page is that, Mr. Johnson?

Mr. Johnson: 18.

The Court: No, the transcript page.

Mr. Johnson: In the transcript, page 2936.

Q. I would like you to look at the first figure under the heading "Metal container shipments, food containers, 1957" on page 3 C, the figure of 25 billion-and-something.

A. Yes, sir.

The Court: 379 million.

Mr. Johnson: Yes, sir.

Q. Now, first, I think you will agree with me that you did not get that figure from Can Manufacturers: is that correct?

[fol. 2970] A. That's correct.

Q. Then, if I remember what you said, you took Can Manufacturers Institute's figure of the number of containers which might have been made from the tin consumed in all of the several Census categories to which you referred, those being the food categories plus coffee; is that correct?

A. That's correct.

Q. Then you divided that total by the total number of tons of steel consumed by all of the reporting companies for all of those categories; is that correct?

A. That's correct.

Q. And all of the reporting companies in this instance included companies making cans for their own use, including Campbell's Soup Company, Borden's, Pet Milk, Carnation, did it not?

A. Yes. You are speaking now of the total?

Q. Of the total.

A. Yes, sir. You are right.

Q. Still talking about that figure at the top of the column?

A. Yes.

Q. Now, the cans made by those companies, Campbell's [fol. 2971] Soup, Borden's——

The Court: You are talking about these captive companies?

Mr. Johnson: These particular captive companies, Campbell's Soup, etc.

Q. Those cans are smaller than the fruit and vebetable cans, are they not?

A. I think they are.

Q. Now, as a result of your division as you have explained it, you got a conversion factor, and you applied that conversion factor, I think you said, to the tons of steel which Continental had used and those tons of steel had

previously been converted from basic boxes; is that correct?

A. That's correct.

Q. Now, isn't it true that the larger the number of small cans which were made by companies other than Continental, the larger would be the estimate of the number of cans made by Continental?

A. I don't believe I follow your question.

The Witness: Would you read it again, Mr. Reporter.

Mr. Johnson: All right, sir. This gets a little complicated.

[fol. 2972] Q. Let me give you an example. Assume for the moment three companies. One company, A, made 10 cans out of one pound of steel. Company B made 10 cans out of one pound of steel. And company C made four cans out of one pound of steel. What would be your conversion factor in that case?

A. Well, the conversion factor——

Q. Can you answer that question?

A. —would be the total——

Q. Can't you answer that question?

Mr. McManus: I think he was getting ready to answer it, if you will leave him alone.

The Court: He was going to answer it.

Q. Go ahead.

A. We would use the conversion factor for all three companies, if we were interested in an industry total.

Q. Well, if I understand what you did, and you have just agreed with me that that is what you did, you would add together the number of cans made by those three companies, would you not?

A. That's right.

Q. And so you would get 24 cans made through three pounds of steel, wouldn't you?

[fol. 2973] A. Yes, sir.

Q. And your conversion factor would be eight, the way you have done it here, wouldn't it?

A. That's right.

Q. Now, just change the assumption a little bit. Take the same three companies. The first company made 15 cans out of one pound of steel, and the second company

made 15 cans out of one pound of steel, and the third company made six cans out of one pound of steel. What would be your conversion factor in that case?

A. Well, we would do the same thing.

Q. What would your conversion factor be?

A. Well, it would be the total of the three companies divided by three.

The Court: Twelve?

The Witness: Twelve.

By Mr. Johnson:

Q. So don't you agree with me that the larger the number of small cans that are included in your conversion factor, the larger will be your conversion factor?

A. Yes.

Q. And so the larger the number of small cans that you have included made by others than Continental, the [fol. 2974] larger will not be the unit figure assigned to Continental, will it not?

A. Yes.

The Court: Now, wait a minute. That is——

Mr. Johnson: I am sorry, your Honor. It is a little bit——

The Court: Wouldn't that be assumed? I think you have got to redefine your question. Let me have the question.

By Mr. Johnson:

Q. Isn't it true that the larger the number of small cans which were made by companies other than Continental, the larger will be the number of cans assigned to Continental?

[fol. 2975] The Court: Only, I think, Mr. Johnson, assuming that Continental doesn't make even smaller cans than the other fellow.

Mr. Johnson: Yes, I agree with that. He has already indicated, however, that the cans of the companies included within his totals were manufacturers—of small cans.

The Court: Were some manufacturers of small cans.

All right, go ahead.

By Mr. Johnson:

Q. Now, those companies, the milk companies and the soup companies——

Mr. Handler: Was the question answered?

The Court: Well, I think that what happened was, I broke in and we had a colloquy between Mr. Johnson and myself. I think we will consider the question withdrawn momentarily.

Mr. Johnson: Well, I am sure this becomes very important. I am afraid I will have to go back.

The Court: All right, I was just trying to get the record straight so that you can move forward from there.

Q. If you assume, as his Honor said, that the cans [fol. 2976] manufactured by the soup companies and the milk companies are smaller than those manufactured by Continental, then is it not true that the more of those small cans which are included in your formula, the larger will be the estimate of the number of cans made by Continental?

Mr. McManus: Your Honor, before he answers, I would like to know is there any proof going to be offered on this? I mean, I don't mind him going off in this never never land and discussing these theoretical problems with Mr. Finn. But if that is——

The Court: Mr. McManus, if he has been going into the never never land, I haven't been there with him.

Mr. McManus: All right, sir, I will be quiet then.

Q. Can you now answer that question?

A. Mr. Johnson, these figures I have, these conversion factors I have taken, came from the Can Manufacturers Institute. They worked up these.

Q. Mr. Finn, these conversion factors do not come from the Can Manufacturers Institute. We established that yesterday. You have added together some aggregates used by Can Manufacturers Institute, have you not?

[fol. 2977] A. The units are from Can Manufacturers, and so is the tons of steel that was consumed to make these cans. We merely did a division, one into the other, and came out with a conversion figure, which was applied in this case.

Q. And you——

A. Now, I don't know all the ramifications that the Can Manufacturers went into to arrive at these figures. I so stated that yesterday. I don't know whether some companies make large cans or small cans or what size particular cans they make. I think I testified here yesterday that the three companies that we have in here make a general line of cans.

Q. Yes, but that has no bearing on this problem.

The Court: Well, now, look, don't get into arguments with the witness, Mr. Johnson. You ask him questions.

Mr. Johnson: All right, sir.

Q. Let me get the answer to this question: Is it not true, Mr. Finn, that the conversion formula that you created out of the CMI figures is a formula which is not used by CMI?

A. That's right.

Mr. Johnson: I wonder if we could go back and have [fol. 2978] the reporter read my last phrasing of the question with respect to the inclusion of small cans, to which I don't believe I have an answer as yet.

(The question was then read as follows:

"Q. If you assume, as his Honor said, that the cans manufactured by the soup companies and the milk companies are smaller than those manufactured by Continental, then is it not true that the more of those small cans which are included in your formula, the larger will be the estimate of the number of cans made by Continental?")

A. It may change the total or the percentages in some manner.

Q. You can't answer the question yes or no?

A. No, I can't.

Q. Will you refer to G1202 for identification? I want to refer you to page 11. In the center of the page you find the total food 24,000,900,000, do you not?

A. That's right, sir.

Q. And to that figure you have added coffee.

A. Yes.

Q. In the following line. And that is the figure from which you worked in order to establish a conversion

[fol. 2979] factor for your all good table; is that correct?

A. That is correct.

Q. And in so doing you used the aggregate of each of those categories rather than the individual conversion rate for each category; is that correct?

A. That is correct, sir.

Q. Now page 11 is headed, is it not, "Actual number of cans which might have been produced from the amount of steel consumed"?

A. That is correct.

Q. Now, will you look at page 10? That page is headed, is it not, "Number of No. 2 cans which might have been produced from the amount of steel consumed"?

A. Yes, sir.

Q. And that page has a similar set of categories—the same set of categories as page 11, does it not?

A. Yes, it does.

Q. Now, if you will look——

The Court: Tell me this: What is a No. 2 can, if anybody knows that? What size is that? Roughly, is it the standard sort, the can I always think of primarily as a can of tomatoes, is that a No. 2 can, or a can of peas, is [fol. 2980]that a No. 2 can? Or is that over-simplifying it?

Mr. Johnson: I understand it is roughly in the neighborhood of a pint.

The Court: All right.

Q. Now, would you agree with me that from these two tables the number of cans which might have been produced has been calculated in two different ways?

A. Yes, sir.

Q. If you look on page 11, following the fruit and vegetable category for 1957, you see a figure of thirteen billion nine for the so-called actual number of cans.

A. Yes, sir.

Q. And on the other page, on the computation of No. 2 cans, there is a figure of just over 13 billion.

A. Yes, sir.

Q. Would that indicate to you that the fruit and vegetable cans, referred to on page 11, are fairly close to the size of a No. 2 can?

A. Yes, it would.

Q. All right, sir. Now, if you look at the next figure on page 11, the figure following evaporated and condensed milk, you find a figure of three billion some-

[fol. 2981] thing?

A. Yes, sir.

Q. On page 10, following evaporated and condensed milk, you find a figure of less than two billion; is that true?

A. That is correct.

Q. Would that indicate to you that the evaporated and condensed milk cans were substantially smaller than the No. 2 cans?

A. Yes, it would.

Q. Now the same thing is true with respect to other dairy products, is it not?

A. I think the opposite would be true.

The Court: The opposite is true.

Mr. Johnson: That is correct.

Q. Now, except for the fruit and vegetables and all other food, evaporated and condensed milk is the largest item that goes into that total, is it not?

A. Yes, sir; it is. It is the third largest item.

Q. Have you seen Mr. Tolton's charts on the amount of evaporated and condensed milk containers manufactured by others than American, National and Continental Can?

[fol. 2982] A. I have seen them, but I don't recall the details, or anything like that.

Q. I refer to the third table under category II in Government's Exhibit 800 for identification.

The Court: 1955 evaporated and condensed milk?

Mr. Johnson: Yes, sir.

Q. That table indicates, does it not, that over 80 per cent of the containers for evaporated and condensed milk were manufactured by others than American, Continental and National Can?

A. Yes, sir.

Q. And those are the small containers that we are referring to on page 11 of Government's Exhibit 1202 for identification; is that correct?

A. Yes, that is the figure of 3,181,207,000.

Q. So that by including those small cans in the aggregate figure from which you obtained your conversion figure, you have increased the number of cans assigned as manufactured by Continental Can, have you not?

The Court: Will you answer that question?

A. In that particular category, we have.

Q. And that is the same category that you have used [fol. 2983] all through these tables to get this hypothetical figure of number of cans manufactured, is it not?

A. When I spoke of category, I meant the evaporated milk category.

Q. It affects all of the figures, does it not?

A. Yes, it would.

Q. It affects every one without exception?

A. Yes, it would.

Q. I think you indicated yesterday that you had some reason to believe that Campbell Soup Company might be the third largest can company in the United States; is that correct?

A. That's right, sir.

Q. Now you know that Campbell's Soup Company manufactures these small soup cans in practically endless quantities, don't you?

Mr. McManus: Your Honor, I object to that terminology.

The Court: Sustained.

Q. You know that they manufacture more soup cans than any other type of can, do you not?

A. They put out a lot of soup cans, yes. They manufacture a lot of them, products.

Q. You know that the soup can is smaller than the [fol. 2984] No. 2 can, do you not?

A. Yes, sir.

The Court: There are various sizes of soup cans.

The Witness: I think what Mr. Johnson was referring to was Campbell's Soup can. They generally are of the same size, but there are other can manufacturers—other soup companies that put them out in various size cans.

Q. Just so we clear up one minor point: The Can Manu-

facturers Institute, whatever else they do, does not compute any figures for individual companies, does it?

A. I have never seen it.

Q. In the published material that we have been working with?

A. No, sir.

Q. Now looking again at Government's 1202 for identification, which is the Can Manufacturers Institute Bulletin from which you have computed some of your formulas, did you observe the rather odd way in which the Bulletin's table was headed, "Actual number of cans which might have been produced from the amount of steel consumed"? [fol. 2984a] A. Yes, sir.

Q. Did it occur to you to wonder why it was phrased that way?

A. Well, it would indicate to me that it was an estimate. [fol. 2985] Q. Did it indicate to you that it was an estimate?

A. Yes, it does.

Q. Is it not true that there is no estimate of number of cans in any category produced in this document?

A. It indicates to me it is their best estimate.

Q. Doesn't it indicate simply that that is the number of cans which might have been produced and that it is not even an estimate of the number that were produced?

A. Well, I would say it is still an estimate.

Q. You find no difference between a statement of a number which might have been produced and an estimate; is that right?

A. The terminology is different, but I think that you can read into either one of them that it is an estimate.

Q. Well, are the computations on page 10 an estimate? That is headed "Number of No. 2 cans which might have been produced from the amount of steel consumed."

A. Well, that is an estimated assumption that all steel was consumed and placed in No. 2 cans. It is still an esti- [fol. 2986] mate.

Q. So you would say that that is an estimate, that it was an estimate on page 10 of the number of No. 2 cans which were produced; is that right?

A. Can I see that a minute? I mean, I am confused—you are referring to the table on page 10?

Q. Page 10, that's right.

A. It is still an estimate of the cans which might have been produced from the amount of steel consumed, No. 2 cans.

Q. An estimate of those which might have been produced, yes.

A. Yes.

Q. It is not an estimate of the number that were produced, is it?

A. That's right.

Q. Nor is page 11 an estimate of the number that were produced, is it?

A. To that extent, no, it is not.

Q. In short, there is no estimate in this book as to the number of cans that were produced, is there?

A. That were produced?

Q. Yes.

[fol. 2987] A. No, sir.

The Court: All right. We will take our morning recess.

(Short recess.)

The Court: Before you resume, I have a couple of questions I would like to ask Mr. Finn.

By the Court:

Q. Mr. Finn, on table 2C, in folder A, you will first note—wait a minute. We have got them mixed up. I will take mine, and this is yours.

I note on the last line of that note you say unit shipments were estimated on the basis of 9,237 food cans per ton for '55, 9,254 food cans per ton for '56, and 9,248 food cans per ton for '57. Can you account for the variation in those three years between the number of food cans per ton used? Why should it be different from year to year?

A. I presume, sir, the Can Manufacturers Institute changed their computations from year to year. We divided those out and we got that variation each year.

Q. But you have no explanation for that variation?

A. No, sir.

Q. You don't know how it came about or what caused the [fol. 2988] variation?

A. No, sir, I did not delve into that with the Can Manufacturers Institute.

Q. Now let me ask you another question: Is there any reason why you could not have prepared these tables in terms of base boxes?

A. Well, your Honor, I couldn't very well compare base boxes of steel to units of glass containers.

Q. Well, certainly with respect to the cans that is, the canning part, is there any reason why you couldn't have prepared the tables dealing with canning on base boxes of steel so as to show, for instance, a comparison between what might be called the three or four or five leading people in the industry?

A. I think, your Honor, you will find that in our chart tabulations, where both the metal cans are by tons of steel and the glass containers are by gross of units. So we have done that in the chart tabulations.

Q. But the reason why you went through this conversion process was in an attempt to get figures which could be compared with and were of the same general unit as in the glass industry?

A. That is correct, sir.

[fol. 2989] The Court: All right.

By Mr. Johnson:

Q. You gave one possible explanation of why these conversion figures varied from year to year, and you attributed it, as I understand it, to possible changes in the methods of the Can Manufacturers Institute.

A. That's right.

Q. Is there not another possibility, that that change results from your using a statistical method that Can Manufacturers Institute never uses?

A. Well, I used the same method in each of the three years, and I came out with a different conversion factor for each of those years.

Q. Yes, you did, and you added together all of these aggregates. You added together all of these categories?

A. Yes, sir.

Q. And you got from that a conversion factor?

A. Yes, sir.

Q. And that is a method, I understand from your earlier answer you agree with me, that Can Manufacturers Institute never uses?

A. No; the conversion factor, no, sir, they never use it.

[fol. 2990] Q. So the change in figure from year to year can be the result of a different product mix, can it not?

A. I don't know what to attribute the difference to.

Mr. Johnson: Your Honor, during the recess I have picked up from some of the defendants' proposed exhibits Defendants' Exhibit 113 for identification, which is a No. 2 can. I am informed it holds approximately 22 ounces.

The Court: That would be the normal can of peas, wouldn't it, or something of that sort? It is a very common fruit and vegetable container.

Mr. Johnson: Defendants' Exhibit 105 for identification is a soup container, that we have referred to, which holds about 10 ounces.

The Court: For instance, that would be, as you understand it, roughly what Campbell's soup would be packed in?

Mr. Johnson: Yes, sir, that is what I believe from their use of the term as a typical Campbell's soup can.

And Defendants' Exhibit 122 for identification is a can of evaporated milk, holding about 13 ounces.

[fol. 2991] The Court: Of course, a condensed milk can is much smaller than that.

Mr. Johnson: Yes, sir.

The Court: Or one type is, anyway.

Mr. Johnson: One type is much smaller than that, yes, sir.

The Court: All right. Thank you.

Mr. Johnson: During the recess, my colleagues asked me to go back to table 3D once more——

The Court: All right. That is the beer container?

Mr. Johnson: That is the beer containers.

The Witness: 3B?

Mr. Johnson: 3D—showing the percentage, the caption

says, of leading manufacturers of beer containers for 1955, '56 and '57.

By Mr. Johnson:

Q. Now, in the last column under the heading "Per Cent" following "Owen-Illinois Glass Company," you see the figure of 5.6 per cent?

A. For Owens-Illinois Glass?

Q. Yes.

A. Yes, sir.

[fol. 2992] Q. Now, Owens-Illinois is the largest glass container manufacturer in the United States, is it not?

A. Yes, sir.

Q. And large quantities of beer—a large quantity of beer is sold in glass containers in the United States, is it not?

A. That's right.

Q. Now, sir, I ask you what relation that 5.6 per cent for the largest glass container manufacturer bears to the 38.6 per cent indicated for Continental Can?

Mr. McManus: Your Honor, I think we are getting repetitious here. He has stated, I think a number of times, that this chart indicates the initial sale of either a metal can or a glass container. He is not concerned with what Schlitz Beer does when they get the bottle back from the consumer.

Now, if the defendants want to put a chart like that in, that is all right with us. We will point out the errors in that. But he has stated repeatedly this is the initial sale by the manufacturer of this container to the consumer. That is all that chart shows.

[fol. 2993] The Court: I understand. Go ahead. Will you answer the question, please?

The Witness: Yes.

A. This is the initial sale of beer bottles sold in this particular year, 1957, by Owens-Illinois. It has no relation to the quantity of beer that is——

The Court: That wasn't what he asked you. As I understand it, he asked you what relation this bore to the beer container sales of Continental Can.

Isn't that right?

Mr. Johnson: That's right.

The Court: It is the relation that 5.6 per cent bears to 38-some-odd.

The Witness: That's right.

The Court: What percentage is 5.6 to 38, roughly?

The Witness: Well, it's about a seventh.

The Court: About 1/7.

By Mr. Johnson:

Q. Would you conclude from that that Owens-Illinois beer container production was 1/7 that of Continental Can?

A. Yes, it is 1/7 of the containers.

Q. Do you find any meaningful relationship in those [fol. 2994] figures?

A. I did, yes, sir.

Q. What meaningful relationship do you find there?

A. Well, the meaningful relationship that I find there is that during that particular year, of the containers sold for beer, Continental sold 38.6 per cent and Owens-Illinois sold 5.6 per cent of them.

Q. Now, if you were to apply a usage factor——

Mr. McManus: Your Honor, I am going to object to applying any usage factor. He didn't do it. We didn't do it and we have been over it.

The Court: No. I will overrule the objection.

By Mr. Johnson:

Q. If you were to apply a usage factor to beer containers manufactured by Owens-Illinois Glass Company, what would happen to the per cent attributable to Owens-Illinois?

A. Well, I presume it would be way up, but I have no way of telling. I haven't done that in this particular case.

Q. Not as a matter of presumption that it would be way [fol. 2995] up, is it?

Mr. McManus: Your Honor, he doesn't know.

The Court: I don't understand how the usage factor can be applied to Owens-Illinois. Owens-Illinois sold so many bottles. It may be that the particular volume of Owens-Illinois sales, because they were selling a re-usable bottle, was very much larger than this percentage indicates.

Mr. Johnson: I am trying to point out the fallacy of comparing returnable containers with non-returnable containers.

Mr. McManus: I object to that, your Honor. There is no fallacy at all. We are talking about initial sales here.

The Court: I don't know whether there is a fallacy or not. I intend to find out. We are exploring that fact.

Will you tell me, Mr. McManus, what the cost of a reusable beer bottle is as compared with a can?

Mr. McManus: I believe I can—well, I can say this, your Honor. It is my impression—I would have to check it and I think I could—that the can is more expensive.

The Court: Then the reusable beer bottle?

[fol. 2996] Mr. McManus: That is my impression. Now, I could be wrong.

The Court: All right.

Mr. McManus: I don't know. I would have to check.

The Court: If that be so, I don't know how the can people stay in business in the beer industry, but maybe they do. If you get a bottle which is re-usable 25 times and your can costs just as much as the re-usable bottle, the economics of this whole deal rather puzzle me.

All right. We are dealing with economics.

Mr. McManus: I am not arguing that, your Honor.

Mr. Johnson: I suggest, sir, that the matter of markets and customer preferences have something to do with that, as I have indicated in my pretrial statement.

Mr. McManus: Your Honor, if he wants to put that in his case, that's fine, but I don't think it is appropriate at this time.

The Court: All right.

By Mr. Johnson:

Q. Will you turn, Mr. Finn, to folder B. I think we had [fol. 2997] started to look at this last evening, and I may have asked you this question and, if I have, I am sorry I have to ask it again: to what the general approach of folder B is.

The Court: Oh, we have been through that a number of times, Mr. Johnson.

Mr. Johnson: Have we, your Honor?

The Court: I think that is quite clear.

Mr. Johnson: There is a division east and west of the——

The Court: Oh, no. I thought you were talking about 3B in folder A.

Mr. Johnson: No, sir. Folder B.

The Court: Folder B. I beg your pardon.

A. I mentioned yesterday that folder B was similar to folder A but was a breakdown between east of the Rocky Mountains and west of the Rocky Mountains for both glass and cans, and the combination of those two.

Q. Looking at table 1A of folder B, the caption of that, I gather, relates to all types of glass and metal containers east of the Rockies for 1955?

A. Yes, sir.

Q. And under the heading "Glass container shipments," [fol. 2998] there is a figure?

A. Yes, sir.

Q. A figure of 17 billion-odd?

A. Yes, sir.

Q. Will you tell me how you got that figure?

A. Well, the Bureau of the Census gives metal can shipments by tonnage in various geographical areas of the United States.

Q. Well, I was directing my attention first to the glass container column.

A. Oh, I am sorry, sir. Well, this data was obtained from the GCMI material for those companies who had plants operating on the West Coast. In addition to that, we sent out a letter and received letters from other companies who were either not members of the GCMI or who do not report to GCMI, and they furnished us material with respect to the shipment of glass containers from their West Coast plants. We totaled those figures, and attributed all that production to plants located west of the Rocky Mountains. We subtracted that from the census of the total figure for the continental United States and arrived at the total figure for the east side of the Rocky Mountains.

[fol. 2999] Q. All right. Then the figure in the next column, the figure of thirty billion-odd, under the heading

"metal container shipments," will you tell me how you got that figure?

A. The Bureau of Census report metal can statistics on tonnage basis, and they also give you geographical areas in which these shipments are made. By adding the Pacific and mountain states areas together, and from that we took the Hawaiian Islands—I should say that the Pacific area also includes Hawaiian Islands—from that we subtracted the Hawaiian Islands, plus the plants of American Can and Continental Can located in the State of Colorado, which is one of the states in the geographical area of census in the mountain areas.

Q. When you say you subtracted Hawaiian Islands, you subtracted the same portion of the Hawaiian Islands that you were referring to before; is that correct?

A. That is correct.

The Court: Only the American Can production.

The Witness: Only the American Can production.

A. (Continuing) By subtracting the Hawaiian Islands for the American Can, and the American Can's production in Colorado, and the production of Continental Can in the [fol. 3000] same state, we arrived at a figure for that west coast area in the United States. We took that figure and subtracted from the continental United States figure all metal cans and arrived at the east of the Rocky Mountains area. That is briefly what we did.

Q. How did you get units out of it?

A. By applying the same conversion factors where appropriate.

Q. In other words, you went through the same process that we have been discussing here this morning, did you?

A. Yes.

Q. Will you turn to table 2A in folder B. This table purports to relate to all types of metal and glass containers west of the Rockies for 1955, does it not?

A. Yes, sir.

Q. Under the heading "metal container shipments," following the name Continental Can, there is a figure of two billion two hundred seventy-seven million; do you see that figure?

A. Yes, sir.

Q. How did you get that figure?

A. Well, that is the figure for those plants of Continental [fol. 3001] Can operating in the west of the Rockies, less that Colorado plant I spoke of.

Q. What Continental Can plants did you regard as west of the Rockies? Can you name them?

A. I can't name them.

Mr. Johnson: Your Honor, I am sorry to have to go into this figure, but the difficulty I have here is that I am not able from any material that we have to reconcile this figure. I would like to ask that the witness be directed to bring in his working material so that we can find out what this figure came from.

The Court: Have you your work papers here, any of them?

The Witness: I have some of them out there, your Honor.

The Court: In other words, this type of figure, which relates to Continental, the defendant here, is of some significance, and I am going to permit Mr. Johnson to go into the question of how this was arrived at. If you want to get any data now together I will be glad to give you an opportunity to do so, Mr. Finn.

Mr. McManus: May I ask a question, your Honor.

The Court: Yes.

[fol. 3002] Mr. McManus: We have a little bit of a problem here, as I see it, in that at least at the present time Mr. Finn should be warned that in this chart there are work papers that might include American or National.

The Court: I understand that. I would gather that there would be that possibility, and we can deal with that problem.

Mr. McManus: Fine, your Honor.

The Court: But I think the work papers ought to be here, and he may be able to refresh his recollection and go through them, so as to inform Mr. Johnson as to how he arrived at this figure of 277,000,000, for example.

Mr. McManus: Yes, sir.

The Witness: Yes, sir; I will be glad to.

The Court: All right, we will take a brief recess now and give you five minutes to get those papers together. Or

would you rather—all right, what we will do, if it is going to take you a little time to assemble——

The Witness: Your Honor, I don't know how far they want to delve into this thing. I hate to do this thing under pressure.

[fol. 3003] The Court: Well, you have got to do it under pressure, because the pressure is on.

But in any event, what I will do now, I will take a recess to 2 o'clock, give you a chance to go through some of your papers and try and prepare yourself on this.

Mr. Austern: Your Honor.

The Court: Yes, sir.

Mr. Austern: If the Court please, as I heard this discussion, if these questions are going to relate to where the witness attributed the base box reported shipments from a particular plant of either company, geographically, in other words, if it is going to deal with where did you put plant X, east or west, and will not get into the numbers of the plant, I don't think there will be any difficulty as far as these work sheets are concerned.

The Court: Very good, very good. Thank you.

But in any event, you will get this material together and we will resume at 2 o'clock.

Now once that is done, Mr. Johnson, where do we go from here, and where do you envisage a terminal point?

Mr. Johnson: I have a fair amount of material left on [fol. 3004] this witness. It has gone much slower than I thought it would this morning.

The Court: Well, it seems to me that at the rate we are going, if you have a lot of material, I have got to rise at 4 o'clock this afternoon because of the Trinity religious service on the courts.

Mr. McManus: Do you want that on the record?

The Court: Yes, nothing wrong with that.

Mr. McManus: Fine.

The Court: It isn't as if I was saying I was going out to a corner saloon.

Mr. McManus: I realized that after you said it, your Honor.

The Court: So that I would like it, if you can finish with this witness this afternoon, Mr. Johnson, before 4 o'clock.

Mr. Johnson: I will make every attempt to.

The Court: Very good.

(Luncheon recess to 2 P.M.)

[fol. 3005] AFTERNOON SESSION

2 P.M.

COLLOQUY BETWEEN COURT AND COUNSEL

Mr. McManus: Your Honor, before Mr. Johnson starts, there are two matters that I could take up with you that will only take a moment.

The Court: Fine.

Mr. McManus: We do have this problem, in that, as I told you, there is a Dr. Hughes from Wesleyan University, who is going to attempt to put four of our plastic charts in evidence, and apparently we have stipulated them, I understand, with the defendants about the basic data, what the people if called would testify to. He has come down a number of times, and we have been unfortunate in not being able to get him on.

What I would like to do, if we could agree upon a time certain to put him on—because I have taken him away from his——

The Court: All right. We will put Dr. Hughes on at 10:30——

Mr. McManus: Unfortunately, your Honor, Thursday is such a bad day for him. He has apparently got a faculty meeting or something. I don't know if they think Mr. [fol. 3006] Tolton's time will run over Thursday——

The Court: I will ask Mr. Johnson. How much besides Hughes have you got on Thursday, Mr. McManus?

Mr. McManus: I would think, other than Dr. Hughes, it would be an hour at the most. It would be an offer of documents, which I think wouldn't take over an hour. It might be less, but I would think not over that.

The Court: I would say that we are going to take the rest of the afternoon with this gentleman. I would not think that Mr. Johnson would be occupied all day with the man on charts. Maybe he would.

Mr. Johnson: I don't know. I would hope not, but I don't know.

The Court: Well, I would hope not, too, Mr. Johnson.

Mr. Johnson: Some of this is pretty slow.

The Court: But if you've got an hour, let's say, and Mr. Johnson takes the chart man, I have then got to rule on these various charts after I hear them all. I suppose we can say, although it seems to me we are proceeding at a more leisurely pace than I had hoped we would here.

[fol. 3007] Mr. McManus: That is right.

The Court: —if you could have everything finished but Hughes, then we could put Hughes on on Friday morning. But I am not going to have then, if we do that, I am not going to hear argument on Friday, because Mr. Handler has asked for a day, and I propose to give him an uninterrupted day. The subject matter is of that importance. So we will go as long as we can on Friday, as long as we've got material to occupy us, and then we will start arguments on Monday.

Mr. McManus: All right, your Honor.

Mr. Johnson: While we are talking about time, your Honor, when would you like to hear argument on the open question of the documents relating to prior acquisitions?

The Court: Well, I would presume that we could hear that on Friday. In other words, my theory is that between now and Friday, we ought to have the plaintiff's case complete, with all the rulings that are necessary to make it complete, and if there is argument on that subject, on the prior acquisition question, it would seem to me that we can probably hear that on Friday.

Mr. McManus: Yes, your Honor.

[fol. 3008] Mr. Hughes: Your Honor, I think it would be helpful, too, if the government would let us know in advance which of the remaining documents they intend to offer, because just the mechanical task of getting them out and refreshing ourselves on them takes a little time, and it would expedite it if they would give us some indication.

The Court: I think that is a reasonable request.

Mr. McManus: Yes, sir.

Mr. Hughes: When could we have that?

Mr. McManus: Will someone be in your office tomorrow morning?

Mr. Hughes: Yes.

Mr. McManus: If I can't get it to you before tonight, I

will give it to you early in the morning. Will that be satisfactory?

Mr. Hughes: Yes.

Mr. Handler: Your Honor, this is a minor matter that you might want to take off the record or not—I don't know—but this has to do with the argument.

The Court: I don't think we need this on the record.

(Discussion off the record.)

[fol. 3009] The Court: Back on the record.

Mr. McManus: Mr. Finn went back and checked some of his basic data and came to the conclusion that in certain of the charts west of the Rockies there probably is an understatement of Continental's position. Now, I don't think that should really seriously hamper the further cross-examination of Mr. Finn, because he will explain, and I assume the defendants want to know, how he arrives at these figures, and we returned these figures over to defendants, as you recall, last May, one of the purposes being so we could get together on errors of this nature, or at least I understood that to be one of the reasons. They apparently missed it, or at least did not call it to my attention. So if it is possible, if we could continue on with Mr. Finn on cross-examination, and any errors that might be made we would be glad to correct them and give them to the defendants tomorrow, which I understand is an off court day.

Is that satisfactory?

The Court: I take it you will have some redirect of Mr. Finn?

Mr. McManus: Yes, your Honor.

The Court: All right.

[fol. 3010] Mr. Johnson: Well, do I understand the suggestion to be that at this point we are going to get another set of amendments to these tables?

Mr. McManus: Your Honor, as I said, my understanding was that you did not want to concern yourself with additions or subtractions, or errors in additions or subtractions, and that was one of the reasons you directed me to give these tables to the defendants. The defendants have never called to my attention any error that he might have made in addition, and we made two obvious ones, one previously which we corrected in these tables, and this one,

which they should have noted, and I think probably have, but have not called to my attention.

Now, we don't intend to change the approach to these tables or the basic tables. We do believe that we have in the west coast understated their position, which may affect the east coast. I am not sure. But we would like to at least have the tables accurate, and that is what we would propose to do.

The Court: Let me put it this way: If you desire to make corrections of the tables because of mathematical errors in the table, then I think that you ought to have prepared [fol. 3011] some sort of piece of paper which illustrates precisely what the correction is and what the net result is on the particular figure, and see that the defendant gets that tomorrow morning, and then take it up on redirect with the witness.

Mr. McManus: All right, your Honor.

Mr. Johnson: I want to call your Honor's attention to the fact that we did have a certificate of a Certified Public Accountant furnished to us, stating that these computations were correct.

The Court: Well, I am unable to judge at this point just what the nature of the error which Mr. McManus is.

Mr. Johnson: I understand that, but I did want to call that fact to your attention.

The Court: All right.

Mr. Johnson: With that then, some of the lines of questioning that I intended to go into will have to go over until I see what the nature of these corrections are.

The Court: No, I think we will go right ahead.

Mr. Johnson: I will go ahead on other things.

The Court: No, I think you will go right ahead. I want [fol. 3012] to know if there are any errors in these charts, and I think if you are prepared to bring out any errors in there I wouldn't change my procedure one jot or one tidbit.

Mr. Johnson: All right, sir, I can go a certain distance.

The Court: I would go just as far as I would before, myself.

Mr. Johnson: All right.

LEO V. FINN, resumed.

Cross-examination Continued.

By Mr. Johnson:

Q. Mr. Finn, we were looking at table 2A in folder B, and we were looking at the figure of two billion, two hundred seventy-seven million, under "metal container shipments." Would you tell me which plants of Continental Can you took into consideration in arriving at that figure?

A. Yes, sir. The plants at Portland, Oregon; Oakland, California; Stockton, California; Wallawalla, Washington; Los Angeles, California; San Jose, California; Seattle, Washington; and Sacramento, California.

Q. That is all?

A. That is all.

Q. You did not include the plant at Terminal Island, in California?

[fol. 3013] A. No, we left that one out.

Q. Is that the nature of the mistake that Mr. McManus was talking about?

A. That is the error.

Q. Were the figures for Terminal Island left out entirely, or were they put east of the Rockies?

A. No, they were left out of the west coast.

Q. They were left out of the west coast?

A. Yes, sir.

Q. But were they added to the east of the Rockies?

A. No, sir.

Q. Do I understand you to say then that in correcting these figures there will be no changes made for the east of the Rockies?

A. Mr. Johnson, I naturally haven't had a chance, an opportunity, to look over all the figures in east side. The west side is, as I say, we left out a plant there. It might affect the east. At the present time I don't think it does, but I would like to have an opportunity to recheck that.

Q. Now, Mr. Finn, in making the computations relating to American Can and National Can, you have done the same form of computations that you did with respect to Continental Can; is that correct?

[fol. 3014] A. Yes, sir.

Q. With respect to those, I think you are aware that I have never seen the basic figures from which you worked? Do you know this arrangement under which we have been working?

A. Yes, for American Can and National Can.

Q. Can you tell me, Mr. Finn, any way by which I could ascertain from this material whether you might have made the same kind of mistake or other mistakes on the American Can or National Can material?

A. If you didn't have the basic material, no. I don't see how you could.

Q. And the accountant checked it out and said everything had been done right?

A. The accountant checked my figures. He didn't go beyond or back of my work sheets.

Q. Your figures are now disclosed to be wrong.

A. Yes, we left out plant there on the west coast.

By the Court:

Q. Well, let me ask you this: Take American Can. As I understand it, you have got figures from the Census Bureau on American Can which were disclosed; is that right?

[fol. 3015] A. Yes, sir.

Q. And did the accountant, the impartial accountant, who did the checking, did he have access to those on a confidential basis, too?

A. Well, no, sir, he checked my work sheets, sir.

Q. Let me ask you this: what are your work sheets? I don't understand it.

A. My work sheets show the plants that we used to arrive at the west coast market. With due respect to the accountant, he did not go beyond my work sheets.

The Court: Let me ask you this—this is a general question—am I correct, gentlemen, in assuming that everybody knows what plants American Can has in various parts of the country? There is no doubt about that, is there?

Mr. Johnson: No secret about that, I believe.

The Court: So we are not treading on dangerous ground when we find out how many plants American Can has in a certain number of western states, are we?

Mr. Austern: Excuse me, sir. Perhaps I can solve your problem very quickly.

Mr. Johnson: Before you do, Mr. Austern, your Honor, I wonder if this isn't a matter that we should talk to you [fol. 3016] about in chambers?

The Court: All right, maybe it would be just as well. As a matter of super precaution I suppose so.

(The following took place in the robing room.)

COLLOQUY BETWEEN COURT AND COUNSEL

The Court: I take it, Mr. Johnson, for instance, you are anxious to find out what plants he included within the American Can total for the west, are you?

Mr. Johnson: I have a more difficult problem than that. I assumed that the witness would testify that he included in the west those plants which are in the west. I believed that he would have testified the same thing this morning with respect to Continental Can, and it was only because I had some means of checking—at least if not means of checking, of inability to reconcile the figures—that I could determine that there was something wrong with that.

The Court: Mr. Johnson, you can't tell me that Continental Can Company does not know where all the plants that American Can has on the west coast are.

Mr. Johnson: I do, sir. I think you probably missed my [fol. 3017] point. It is easy to determine where the American Can plants are, but there is no way that I can tell from these figures whether he has actually treated American Can plants west of the Rockies or not, as distinguished from his saying he has.

The Court: I see.

Mr. Johnson: His table purported to show that he had treated all Continental Can plants west of the Rockies as being west of the Rockies. I could determine——

The Court: Then you asked him for a list of plants, and he listed the plants, and you said, "Where is the Terminal Island one?" And he said, "It isn't here." All right.

Mr. Johnson: He said that because I focused on the problem of there being something wrong with it. I am not able to focus on the American Can plants.

The Court: Suppose you asked him what American Can plants he included in the west coast figures.

Mr. Johnson: I would get a figure which I would have no way of checking.

The Court: All right. It seems to me that there is a perfectly simple way of checking, and that is to take this [fol. 3018] data, cover the parts that contain any figures at all and simply see what the list of plants is.

We are not dealing here, it seems to me, Mr. Johnson, with a fellow who is deliberately concocting figures out of the air.

Mr. Johnson: I am not so much concerned at this point about his concocting figures as to what he has done by being able to check this one point. I disclosed that his figures were wrong and that he had not done what he said he had done, that is, he had not treated all Continental Can plants which are west of the Rockies as east of the Rockies.

The Court: As west of the Rockies.

Mr. Johnson: As west of the Rockies. I am sorry.

The Court: What is your proposal? What do you desire to do with respect to the cross-examination?

Mr. Johnson: I dont know how to solve the problem short of seeing American Can's figures.

The Court: I am not going to let you see American Can's figures. That is out. So you better devise some other system.

Mr. Johnson: I don't think I have anything else to offer. I think, however, that the best I can do, then, is leave the [fol. 3019] inference that there is no reliability in these figures.

The Court: That may be. I think you can also proceed to find out what American Can plants be included.

Mr. Johnson: I can do that, yes.

The Court: And I think that you can also ask him to show on his notes, on the work papers that he used on this thing, where all those plants are listed, and I think that can be done without disclosing anything, except the names of plants which you already know, and it will not affect American Can at all.

Mr. Johnson: The method by which he has arrived at these figures is too complicated to make that feasible. I can never state from these sheets what he has done, as I understand it.

Here are the west coast plants, starting with Los Angeles.

Maybe there is no purpose being served putting this on the record, since it won't show——

The Court: All right. Let us go off the record.

(Discussion off the record.)

Mr. McManus: Your Honor, if we could go on the record——

The Court: All right.

[fol. 3020] Mr. McManus: I would like to state one thing which may be of some help. Mr. Finn grabbed my arm before I came in and said he wanted to make a correction in one of the answers that he had given, I believe to either Mr. Johnson or you, in which he was asked if the Certified Public Accountant, Mr. Hook, had seen the basic data from American and National.

The Court: Yes. I asked him that question.

Mr. McManus: Yes. And he said, no. And he grabbed me by the arm when we came in, and he said he wanted to correct his statement, that for American and National he had handed the basic data, and the Certified Public Accountant had worked off the basic data for him, but not for Continental, and the reason he had given him his work sheets for Continental was because he had the work sheets, and they could check, as obviously they had here, and made an error on their computation.

So the addition that was done by Mr. Hook for American and National was done by the Certified Public Accountant.

The Court: That has been checked, in other words, by the Certified Public Accountant.

Mr. McManus: From the basic data.

[fol. 3021] The Court: And certified—from the basic data—that it is correct mathematically.

Mr. McManus: Yes, your Honor.

The Court: All right. That only means, then, it seems to me, the problem is whether the proper basic data was included, and if we are going into that, then plainly Mr. Johnson is entitled to ask him whether or not, in the basic data, what plants did he designate as west coast plants.

Mr. McManus: He will be glad to answer that.

The Court: He will be glad to do that. He can show them on the work sheets, without trespassing as all, as I see it—and I am waiting to hear an anguished protest from

you, sir (addressing Mr. Austern)—without trespassing on the toes of American Can Company.

Mr. Austern: As has been amply illustrated uptown, your Honor, the role of a non-partisan neutralist is difficult.

First, this is not my problem alone but also that of Mr. Goldberg, who unfortunately is not here. Secondly, up to this last explanation, I was baffled. I had understood that your Honor had directed that the use made of the data furnished by Continental and American was to be independently checked.

[fol. 3022] The Court: That is right.

Mr. Austern: Now, so long as they had made a division, east and west, I had assumed up to a few minutes ago that the division of these factories and their numbers, east and west, had been done. Now, as I understand the statement of counsel as opposed to that of the witness, it had not been done. I am not clear on that.

The Court: Yes. As I understand it from Mr. McManus, it has been done. Now, we will re-verify that under oath by the witness and permit him to correct his answer, if that is appropriate.

Mr. Austern: By that same token, I appreciate my brother Johnson's problem that having checked something by additions and subtractions both horizontally and vertically and through this tortuous conversion, he has ascertained to his own satisfaction that something was in the wrong place, and I sympathize with that problem.

I know of no way in which he could perform that same operation on either National's or American's figures without having the numbers and adding them horizontally, vertically, aggregating and going through this conversion. That presents the dilemma.

[fol. 3023] I have only this suggestion, and that is that somebody reexamine what this accountant is supposed to have done, and if his certificate does satisfy your Honor that——

The Court: Is there a certificate from the accountant?

Mr. McManus: Yes, your Honor.

The Court: Let me see it.

Mr. Austern: I have never seen it.

The Court: Let us have a look at the accountant's certificate right now.

Mr. Austern: Off the record——

(Discussion off the record.)

The Court: Back on the record.

According to the accountant's audit opinion, which is going to be marked for identification, at least, because we may be referring to it, the accountants, Messrs. Samuel R. Hook & Company of Washington, say:

> "We had for basic first information schedules submitted by the American Can Company and National Can Company to the United States Government, listing shipments from various plants in the continental United States and Hawaii, in quantity of base boxes and by type of can for each of the years 1955, 1956 [fol. 3024] and 1957. We assume that the base box figures for Continental Can had been furnished to the government and are as shown in the plaintiff's statistical tables."

So there is a difference between the accountant's knowledge of the Continental figures, which come from the papers shown to them by the government, and the American Can and National Can Company figures which result from the basic data itself.

"We did not have similar schedules"—as the accountant says—"from Continental Can as were furnished by American Can and National Can."

So it seems to me that if one is prepared to say that the CPA, an independent CPA, did a competent, professional job, there are various ways on cross-examination of dealing with the question of groupings of figures or plants or types of categories and plants, without ever going to the figures themselves, because assuming that the grouping is correct, then it follows a fortiori that the mathematics are correct. Now, is there anything wrong with that?

Of course, per contra, if the groupings are incorrect, the mathematics are a fortiori incorrect also.

[fol. 3025] Mr. Johnson: Well, sir, I will ask the witness a couple of questions about this, and we will get on as best we can.

The Court: All right.

Now, we will do this when we go in. I will have the clerk mark this. You gentlemen, of course, have copies.

Mr. Johnson: I have a copy. I think it may be in the file.

Mr. McManus: If not, I think we have another one, if you need it.

(The trial thereupon resumed in the courtroom.)

The Court: Gentlemen, I hold in my hand what is the original of a report by Samuel R. Hook & Company, Certified Public Accountants, Washington, with respect to certain audits that they did at plaintiff's statistical tables, including an analysis of shipments of metal containers east of the Rockies and west of the Rockies for the year 1955. Do you want to mark that as a government's exhibit for identification?

Mr. McManus: That is perfectly satisfactory, your Honor.

(Marked Government's Exhibit 1204 for identification.)

[fol. 3026] The Court: Now, Mr. Witness, I asked you before we took this recess or adjourned to the robing room whether Samuel R. Hook & Company had had before them in checking your statistical tables the schedules submitted by the American Can Company and National Can Company to the United States Government, listing shipments from various plants in the continental United States and Hawaii in quantity of base boxes and type of cans for the years 1955, '56 and '57. Your answer to that, as I recall it, was no and that they only had before them your working papers.

Is that a correct answer?

The Witness: No, your Honor. I was under the impression that you had mentioned Continental Can. They did not have the data that was obtained by the government in response to a subpoena. They did have the underlying data from American Can and National Can.

The Court: Those were the so-called Census reports that you are talking about?

The Witness: Yes, sir.

The Court: For the three years, 1955, '56 and '57; is that right?

[fol. 3027] The Witness: That's right. Yes, sir.

The Court: All right. Go ahead, Mr. Johnson.

By Mr. Johnson:

Q. Mr. Finn, looking at table 1A in folder B, under the heading of metal container shipments, there is a figure relating to American Can Company shipments of metal containers east of the Rockies. Do you see that figure?

A. Yes, sir.

Q. How was that figure arrived at?

A. Do I understand you mean totals, sir?

Q. No. The figure relating to American Can Company.

The Court: 12,056,000,000.

Mr. Johnson: Yes, sir.

A. Oh, that's from the basic data of American Can.

Q. Now, this——

A. And applies only to the plants located east of the Rocky Mountains.

Q. How were the plants of American which are east of the Rockies selected?

A. By their geographical location.

Q. Was this figure arrived at by building up the totals [fol. 3028] of the American Can plants east of the Rockies or was it arrived at, as I thought you testified this morning, by deducting the figures relating to the west?

A. No. The totals are the plants, plants east of the Rockies and by plants west of the Rockies.

Q. I understand that, sir, but I was under the impression—and I may be wrong—that you said this morning, with respect to Continental Can, that the total for east of the Rockies was obtained by deducting the production of shipments of plants west of the Rockies from the total. Is that what you said this morning?

A. I could have, but there would be two ways that you could obtain that.

[fol. 3029] Q. Which did you do?

A. I don't recall. I think we did it by plants.

Q. You think you did it by plants?

A. Yes, sir.

Q. Would you look at the note in the front of folder B? I direct your attention to the third paragraph, under the heading "note applicable to the metal can tabulations in sections 3 and 4 of folder B."

A. Well, I have to stand corrected, sir.

Q. Having read that note, you conclude, do you, that the figure for east of the Rockies was arrived at by subtraction process?

A. Yes.

Q. I understood from the audit report, referred to as G-1204 for identification, that the audit report, or that the audit, in checking material, says that it was done the other way. Will you look at the first full sentence on page 2?

A. Yes, sir. He, I think, was applying, was referring to American Can and National Can, which he has audited here.

Q. But your note at the beginning of these tables refers to all of the companies, does it not?

[fol. 3030] A. Yes, there is no qualification on the companies in my note, sir.

Q. Am I to conclude, sir, that you did it one way and the auditor checked it another way?

A. That could be possible.

Q. Would you tell me which of American Can's plants you regarded as west of the Rockies?

A. They have a plant in Stockton, San Diego, Harbor, California; Oakland, Los Angeles, California; San Jose, Pacific, which is located in California; Portland, Sacramento, Seattle—I think that is all.

Q. Salem? Do you treat Salem as east or west?

A. Salem? I don't find a Salem listed on my list here?

Q. You don't find Salem on your list?

A. No, sir.

Q. The ones you have listed are the only ones that you treated as west of the Rockies; is that correct?

A. That is correct.

Q. Which of National Can's plants did you treat as west of the Rockies?

A. Sunnyville, California; Los Angeles, California; San Leandro, Modesto. They have a plant listed here for [fol. 3031] Stockton, but they produced no—at which they produced no cans in 1955.

Q. What did they produce at Stockton?

A. Sir?

Q. What did they produce at Stockton?

A. I say, they listed no cans produced at Stockton.

Q. They listed no cans?

A. That's right.

Q. Now, Mr. Finn, since apparently you constructed these figures one way and the accountant constructed them another way, I have no way of checking whether you were working on the same thing, have you?

A. You have no way of checking?

Q. Yes.

A. No, I don't suppose you have.

The Court: You mean apart——

Mr. Johnson: Absent seeing the underlying material, yes, sir.

The Court: No, absent seeing the underlying material and absent the accountant's report.

Mr. Johnson: I have just established with the witness that the accountant did it one way and he did it another.

[fol. 3032] Mr. McManus: Your Honor, I think it appropriate at this time that we know what the results were. Did they check out the same? I think that is important.

Mr. Johnson: I am prepared to accept the answer that I have. The witness agrees with me that I am not able to check from this material whether material was accurately done or not.

The Court: You mean whether the accountant did it accurately.

Mr. Johnson: The witness——

The Court: All right, I think we will accept that you can't tell whether the accountant did it accurately or not.

Mr. Johnson: The witness agrees with me that the accountant did it one way and that he did it another.

Isn't that correct?

The Witness: Yes, that could be correct.

Mr. McManus: Your Honor, I don't know why we are

playing here. What we are trying to find out is did they both come out the same? I mean, you can check figures six different ways, and presumably if they both come out the same the figures are accurate. I don't know why [fol. 3033] we have to beat around the bush.

Q. Do you know whether American Can has a plant in Salem or not?

A. At the present time?

Q. At the present time or at the time of these figures?

A. I said it didn't appear on my—on this particular list here.

Q. So therefore it is not included in your west, at any rate; is that correct?

A. That's right.

Q. And if American Can has a plant in Salem, wherever Salem might be, it does not appear with your west of the Rocky figures; is that correct?

A. That's right.

Mr. Johnson: Excuse me one moment.

The Court: Can counsel for American Can tell us where, which Salem, if any, American has a plant at?

Mr. Austern: Is this for the information of the Court or am I testifying? I am somewhat embarrassed.

The Court: The Court will take any information of that nature that you can give us.

[fol. 3034] Mr. Austern: The only Salem that I know of, sir, in which a can plant exists is Salem, Oregon.

The Court: Salem, Oregon.

I take it counsel for neither of the parties are inclined to question.

Mr. McManus: The only thing is, would he further mind telling us how long that has been in existence?

The Court: Do you know that?

Mr. McManus: And was it on his original list?

Mr. Austern: I find it on the list of '56, furnished to the government. I find it on the list of '57. I find it on the list—not on the list of '55.

The Court Thank you very much.

Mr. Austern: My role as a witness is an unaccustomed one, your Honor.

The Court: You are doing all right.

Mr. McManus: Could I have a clarification of what period of time Mr. Johnson was asking about when he asked about Salem?

The Court: No, not at this time. If you want to bring that out on redirect, that is your privilege.

[fol. 3035] Mr. McManus: All right, Judge.

By Mr. Johnson:

Q. How did you treat the plant of American Can Company at Ogden? Did you treat that as east or west?

Mr. McManus: Your Honor, could we have a time period, please?

Q. In the preparation of these totals we are talking about?

Mr. McManus: But for what period of time? These tables refer to different dates.

The Court: Well, he is asking about the tables, generally. If there is some exception to be made with respect to different years, the witness can tell us about it.

Mr. McManus: All right.

A. The Ogden plant is located in the mountain area states, and the Ogden plant would also be in the west market.

Q. That is in addition to the list you gave me earlier; is that correct?

A. Yes, sir; that is correct.

Q. Are there any other plants you want to add to that now, or subtract from it?

A. There is another plant located in the mountain area, [fol. 3036] Denver, which was——

Q. Which I think you told us earlier you had subtracted from the west?

A. Yes, that is included in the east.

Q. I so understood. Mr. Finn, would you now turn to table 2A?

The Court: Before you leave that, Mr. Finn, you testified that you did not have on your list of plants west of the Rockies a plant in Salem, Oregon; is that correct?

The Witness: That's right, sir.

The Court: Did you not have that on your list for any of the three years these tables cover here?

The Witness: No, sir. It is on a list for 1956 and 1957.

The Court: But not on the list for '55.

The Witness: No, sir.

By Mr. Johnson:

Q. Will you look at table 2A, Mr. Finn? This is a table for all types of glass and metal containers west of the Rockies for 1955. Under the heading "glass container shipments," there is a figure of 2,109,000,000. Are the shipments of Gallo Wine included in that figure?

[fol. 3037] The Court: On which table? Excuse me.

Mr. Johnson: This is 2A, in folder B.

The Court: Thank you.

A. Gallo Wine is not in this.

Q. Gallo Wine is not included?

A. No.

Q. Why is it not included?

A. It was a captive plant, and we had no data from them, and I don't think it was in existence in 1955.

Q. Table 2 in that same book refers to shipments of glass and metal, non-food west of the Rockies. Would I be correct, Mr. Finn, if I concluded that both a one-ounce perfume bottle and a five-quart oil can would be included in this category, if they were made west of the Rockies?

A. Yes, sir; it is all—all types of glass, both, metal, in the non-food category would include all those.

Q. Will you look at table 1F, which is a glass and metal non-food category for east of the Rockies for 1955?

A. Yes.

Q. In the first column is the figure given for Hazel-Atlas [fol. 3038] Glass Company. Does that figure include home canning jars?

A. Yes, sir.

Q. Home canning jars made by Hazel-Atlas are included as non-food jars; is that correct?

A. Oh, I'm sorry. I was looking—I saw food. No, the home canning jars would be under category of food.

Q. Are they in this instance? If you aren't sure, is there any way you can check it?

A. Well, I haven't checked. I could check back on it.

Q. Can you do that, sir?

A. Well, I could, but it would take a little time. You see, we are dealing in units here.

I can't tell now precisely whether it is in food or is in non-food.

The Court: All right, let's go, let's move forward.

Q. So I am left without an answer as to whether it is in food or non-food; is that right?

The Court: Yes, that's right.

A. Yes, that's right, sir.

Q. How about the home canning containers of Kerr, in-
[fol. 3039] cluded in the table for west of the Rockies? Are they treated as food or non-food?

A. Kerr made no home canning in 1955 in the west coast?

Q. I see. You are sure of that?

A. It is not listed on the letter they have from them.

Q. And that is the only information you have?

A. That's right.

Q. You don't know though, do you, whether they included their home canning jars as food, included that with that figure that you have from them?

A. No, I do not.

Q. Now, Mr. Finn, would you turn to table 2C. This is in your folder C, which is Government's 803 for identification. What does that table purport to be.

A. 2C purports to be production and shipments of Crown Caps by Continental Can Company compared to the United States total for the years 1955, '56 and '57.

Q. Down at the bottom, toward the bottom of the table, there is a line headed "all other manufacturers." Can you tell me who are included in that category?

A. Well, I don't have the list before me, but it would be companies like Crown Cork and Seal and Anchor-Hocking,
[fol. 3040] Guttman—I don't recall the rest of them.

Q. Did you compute the percentage for any of the others?

A. No, sir.

Q. Can you tell me whether they are larger or smaller, or any of them are larger or smaller than Continental?

A. I don't know.

The Court: Wait a minute. I don't follow your question. Are you referring to the line on 1C?

Mr. Johnson: 2C. I'm sorry.

The Court: I'm sorry. All right.

Mr. McManus: I would like to object to the form of the question, your Honor. He asked Mr. Finn if any of the companies were larger.

In what way do you mean larger, Mr. Johnson?

Q. You have computed in that table, as I understand it, for 1955 Continental Can production, Continental Can per cent of total for the United States of shipments as 17.1 per cent. Do you know what if any companies in the United States, producing and shipping Crown caps, have a larger percentage of shipments than that percentage?

A. I don't know. I have never seen any data from [fol. 3041] those other companies.

Q. Did you try to get any data from the other companies?

A. I don't recall.

The Court: From all that appears here, Mr. Finn, as far as I can see, there might be four companies in this field—might be five companies in this field, who are all larger than Continental; is that right?

The Witness: Could be, your Honor.

Q. Does this table include exports?

A. I don't think that the data we got from Census lists exports. It doesn't distinguish between exports and domestic consumption.

Q. Do you know if the Continental figure includes exports?

A. No, I do not.

Q. Would you turn now to table 1C in that same exhibit. Can you tell me what that table is?

A. This is a continental United States shipment of metal containers for sale by the three leading manufacturers, excluding metal container shipments by captive plants, and this is in short tons of steel consumed.

Q. Now what is the purpose of excluding captive plants from this table?

[fol. 3042] A. Oh, to show the volume of metal cans that are for sale in the United States.

Q. I think you testified earlier that Sherwin Williams

manufactures cans both for its own and sells cans on the outside; is that correct?

A. That is correct.

Q. Are Sherwin Williams cans included in this table?

A. I have no way of telling. You see, I have no underlying data with respect to this table.

Q. So you don't know whether or not Sherwin Williams cans have been included or excluded from this table?

A. Since these are Census statistics, I presume they are in there.

Q. But you can't tell me how they are treated?

A. No, sir.

Q. We have testimony here earlier that a subsidiary of Hunt Foods sold cans for its parent company. Do you know whether those cans are included or excluded from this table?

A. I presume they are included. I have no way—I do not have the underlying data of all the companies that are included or in this tabulation.

[fol. 3043] A. 5 D?

Mr. McManus: D.

A. This says, "Comparison of Glass Container Plants East and West of the Rocky Mountains for the Years 1920, 1938, and January 31, 1960."

Q. Why did you select 1920 as the starting date?

A. That was the only information I could find available in that particular year.

Q. In that particular year?

A. Well, I started as far back as I could.

Q. What is the magic about 1920?

A. It was the first year given in this tabulation I was able to find.

Q. Were you trying to find the earliest year possible? Is that what you were trying to do?

A. Not necessarily so.

Q. Well, sir, in the record in the Hartford Empire case, there was a tabulation going back to 1885. Why didn't you use that?

A. Well, this tabulation was all set out for me in the

TNEC hearings. It started with 1920 and it ended with 1938.

Q. And that is the only reason for choosing 1920?

A. I believe so.

[fol. 3044] Q. Are you saying, sir, you can't tell what this percentage figure relates to? You have a per cent under the heading "Continental Can for 1956," 37.6 per cent. Do you know whether that is a per cent of a total that includes Sherwin-Williams and United Can & Glass? Or is it a per cent of a figure that excludes it?

A. Well, I presume if a company sells cans that it makes and at the same time uses some, they give a breakdown to the Bureau of the Census of the volume they have used and the volume they haven't, that they have sold. I presume that is the method of treating that.

Q. And that is your presumption. That's the best you know it?

A. Yes, sir.

Q. Mr. Finn, will you turn to table 5 D.

Mr. Johnson: Your Honor, I apologize, but there is nothing I can do except go through a mass of details to show what has been done on these pages.

Q. (Continuing). What is that table, Mr. Finn?

A. The title of this table is the "Value of Packaging Material"——

Q. No. I am referring to 5 D.

[fol. 3045] Q. Do you know when prohibition went into effect?

A. I have a general idea. My father happened to be in the brewery business at the time.

Q. About when?

A. Sir?

Q. About when?

A. About 1917—it was '17 or '19.

The Court: Well, it was '17 first, statutorily, as I recall, and then it was '19, constitutionally.

By Mr. Johnson:

Q. Do you think that event would have any bearing on the existence of glass container companies shortly after 1920?

A. I really don't know.

Q. On your note to this table, Mr. Finn, you say that you eliminated Pennsylvania Glass Products Company because the company doesn't manufacture containers in any large quantity; is that right?

A. Yes, sir.

Q. Do you have any information as to how many or what particular amount Pennsylvania Glass Products Company manufactured containers?

[fol. 3046] A. I think we have the statement from the owner, Pennsylvania Glass Products.

Q. Am I to conclude from your answer that you don't know how many containers they manufactured?

A. Precisely, no, sir.

The Court: Let me ask you something, Mr. Witness. In statement 5 D, you referred to information from the Pennsylvania Glass Company.

Has that information been made available to the defendant?

Mr. McManus: I am not sure if it has or not, your Honor, but we will be glad to, if we have not.

The Court: I mean, this chart—what about Mr. Johnson? Have you had available to you this investigation of concentration of economic power hearing?

Mr. Johnson: I have available the TNEC report.

The Court: I see.

Mr. Johnson: I do not have available the material to which Mr. Finn just referred. However, let me ask some questions about this, and maybe I will get at what I want without that.

The Court: All right.

[fol. 3047] By Mr. Johnson:

Q. Mr. Finn, this table is essentially a comparison of the number of plants at three different periods, is it not?

A. That's right.

Q. And that is what you were trying to do, trying to compare the number in 1920 and the number in 1938 with the number in 1960?

A. Yes, sir.

Q. Now, this table does not purport to show anything about the size of plants, does it?

A. No, sir.

Q. Or anything about production?

A. Nothing in production.

Q. Capacity?

A. Nothing about capacity.

Q. Now, you eliminated from the 1960 list some companies because you say they did not manufacture containers in any large quantity?

A. Yes, sir.

Q. Did you eliminate any companies from the 1920 or 1938 list for that reason?

A. No, I did not.

Q. Did you try to find out whether any of the companies [fol. 3048] included in your 1938 or 1920 listing were either insignificant or inactive?

A. I attempted to find out something about them, but I was unable to.

Q. Did you read this TNEC source book to see what it said about them?

A. No, I don't think I did.

Mr. Johnson: Will you mark this book for identification?

(Defendants' Exhibit W marked for identification.)

The Court: May I ask, Mr. McManus, what is the purpose of 5 D? Why is it offered? What is it intended to show?

Mr. McManus: Your Honor, we believe it shows not only the number of plants but it also shows the number of operating companies in 1960, and that they have decreased from 80 in 1920 to 29 in 1960, and that this is an industry which is gradually becoming more concentrated in four hands. Although——

The Court: Is that the purpose?

Mr. McManus: Yes, your Honor.

The Court: It seems to me, Mr. McManus, an awfully sketchy way of showing this. Well, anyway, go ahead.

[fol. 3049] Q. Is Defendants' Exhibit W for identification the TNEC source book to which you referred?

A. Yes, sir.

Mr. Johnson: Does your Honor wish to see it?

The Court: Not at this point, no.

Q. Now, if you will look at——

By the Court:

Q. Let me ask you this: Suppose between 1938 and 1960 25 companies which had formerly purchased glass containers set up plants of their own for glass container manufacture. Would that be reflected in any way in this figure, in this chart, 5 D?

A. Well, I can't tell in 1920 or 1938. It would be in 1960.

Q. Well, I note that Gallo Glass Company has been eliminated in 1960 because you say it does not sell glass containers.

A. Yes, sir, it was in the Glass Factory Directory, from which I made this particular column up, but I had noted here, I have eliminated it because it did not sell glass containers.

Q. Did you mean to say that as you reviewed the Glass [fol. 3050] Container Directory for 1960 it only has 29 companies in it?

A. Well, they don't give it by companies, sir. They give it by plants.

Q. Then they list 87 plants in operation?

A. Eighty-seven plants.

Q. How do you arrive at 29 companies?

A. We did that by listing the companies and their subsidiary companies under them. We eliminated the subsidiaries and just counted the major companies.

Q. Well, now, you did that. Where did you get the information from?

A. Well, we got it from several sources, sir. For instance, Anchor-Hocking, here, all through here I have

mentioned Maywood, they had two plants in Baltimore. Carl Lowry and Swinburn Bros., they are subsidiaries of Anchor-Hocking, and we just treated Anchor-Hocking as just one company.

The Court: All right. I believe we have had some testimony on Anchor-Hocking.

Mr. Johnson: Yes, sir.

By the Court:

Q. That is Anchor-Hocking. What did you do with other companies? You didn't have testimony——.

[fol. 3051] Mr. Johnson: Perhaps, your Honor, I could ask some questions as to how this table was constructed. Perhaps we will get some answers.

The Court: All right.

By Mr. Johnson:

Q. His Honor referred to Gallo Glass Company, which you say you excluded from the 1960 list.

A. Yes, sir.

Q. And you excluded it because you say it does not sell glass; is that the idea?

A. That's right.

Q. Page 808 of your source book, Defendants' Exhibit W for identification, containing the list of glass plants, indicates a company operated by H. J. Heinz Company at that point.

A. Yes, sir.

Q. Do you know whether H. J. Heinz Company ever sold glass?

A. No, I do not.

Q. But H. J. Heinz Company is included in your 1920 and 1938 list, is it not?

A. Yes.

Q. Now, in your 1960 list, your notes indicate that you counted the Wheaton Companies as one company; is that [fol. 3052] right?

A. Yes, sir.

Q. Do you know how many companies you counted the Knox Glass group as, in 1920 and 1938?

A. In 1938 they were counted as seven companies.

Q. And if you will look at page 810 of your source book, you will see a footnote at the bottom of that page, will you not, which says that they are consolidated in one table for GCA statistics?

A. Yes, sir.

Q. So in 1960, you reduced the companies in existence by counting related companies as a group, and in 1920 and 1938 you increased the number by counting related companies separately?

Mr. McManus: Your Honor, I object.

The Court: Objection overruled.

Mr. McManus: May I explain my objection?

The Court: No.

Mr. McManus: He did not—I don't believe he testified that——

The Court: No.

By Mr. Johnson:

Q. Is that correct?

A. That's correct. But I think somewhere in the TNEC [fol. 3053] hearings you will find that Mr. Underwood, who was then president of Knox Glass Company, stated that these were merely associated companies, and from that we gathered that they were independent companies.

By the Court:

Q. Well, now, what puzzles me, Mr. Witness, is this: In making up this table, were you making judgments on whether companies were in combination or were independent or were affiliated or were subsidiaries or not? Were those your judgments?

A. No, sir, they were staff judgments.

Q. They were staff judgments. In other words, your staff sat there and decided for itself whether companies were independent companies or were subsidiaries or were affiliated or what they were?

A. Not my staff, sir. It was the government staff.

The Court: All right. The government staff.

By Mr. Johnson:

Q. And the government staff decided that they would count the Knox companies in 1938 as seven companies and the Wheaton companies in 1960 as one company; is that correct?

[fol. 3054] A. That is what was decided, sir.

Q. And this is what Mr. McManus means by the decrease of companies in the United States?

A. Well, there are some other points there.

Q. Well, we will go through some of those.

The Court: We will have to do it Thursday morning, gentlemen.

(Thereupon, an adjournment was taken until Thursday, October 13, 1960, at 10:30 a.m.)

[fol. 3055] New York, October 13, 1960, 10:30 A.M.

Trial resumed

Mr. McManus: Your Honor, before Mr. Johnson starts, Mr. Pedersen is here, sitting in for Mr. Austern, who was unable to come back.

The Court: All right.

Mr. McManus: I think, so that everything here will be clear, if he can explain his position—I am not sure by whom he is employed or where he is employed—so that everyone will understand that there is or isn't any objection to his representing Mr. Austern.

The Court: All right, Mr. Pedersen.

Mr. Pedersen: My name is C. R. Pedersen. I am a member of the New York Bar, and I am assistant counsel to American Can Company. I wanted that known to counsel, that Mr. Austern cannot be here today, and he suggested, with your Honor's permission and counsels' permission, [fol. 3056] that I be here in his stead, and subject to your Honor's provisions.

The Court: You have read the transcript?

Mr. Pedersen: I have read the proceedings in your robing room twice, and I understand the conditions under which I am here.

The Court: And you will undertake the same obligations that he undertook at that time?

Mr. Pedersen: Yes, your Honor.

The Court: Very well. Any objections, gentlemen?

Mr. McManus: No objection.

Mr. Johnson: No objection.

The Court: Very good.

Now, what chart are we starting with this morning, or what table, Mr. Johnson?

Mr. Johnson: We are continuing with 5D.

The Court: 5D. Thank you.

Mr. Johnson: However, your Honor, before I begin, I think I should tell you that yesterday, about lunchtime, we were furnished with a list of additional documents that the plaintiff intends to offer on its case, and the list runs in excess of a hundred documents, and I think that that may [fol. 3057] have some bearing on the question of time.

The Court: Yes.

Mr. McManus: Your Honor, when we say "additional documents," I think 97 or 96 of those have already been marked right here.

Mr. Johnson: That's right.

Mr. McManus: They are not new documents.

The Court: I understand that. These are not documents in addition to those that have already been marked, but you intend to offer roughly a hundred additional documents which have already been marked for identification.

Mr. McManus: That's right, sir.

The Court: Very good.

All of which takes a certain amount of time.

Mr. McManus: Yes, your Honor.

LEO V. FINN resumed.

Cross-examination continued.

By Mr. Johnson:

Q. We were talking about table 5D, Mr. Finn, and I was directing your attention to the fact that from the 1960 list you had omitted certain glass companies, which you said did not manufacture glass containers in any large quantity. Now, did you exclude any companies from either the 1920 [fol. 3058] or the 1938 list for that reason?

A. No, I did not, sir.

Q. Now, if you will look at page 806 of Defendant's Exhibit W for identification, which you have identified as the document referred to in your source material, under the heading "Indiana" you will find the name of Hart Glass Manufacturing Company, will you not?

A. Yes, sir.

Q. And that means then that that was included in your account of companies for 1938, doesn't it?

A. Yes.

The Court: What is the name of that, Hartford?

Mr. Johnson: Hart, H-a-r-t, Glass Manufacturing Co.

Q. Now, if you will look on page 621 of the same volume, which is a volume from which you were working, you will find that someone by the name of Mr. Day was testifying, and he says that someone made a suggestion to him, and I quote: "We go out and buy a couple of broken down glass factories." Do you see that quote in the testimony in this source book?

A. Yes, I see it.

[fol. 3059] Q. Then someone asked him something about those glass companies, and he says, and I quote: "I have some notes on a letter taken at the meeting and they were the Hart Glass Company, Dunkirk, Indiana, and another one." See that testimony?

A. I see that.

Q. So that apparently included with your 1938 companies was at least one company that was indicated in your very source material as a broken down glass factory, was there?

A. I included the Hart Glass Company, yes, sir.

Q. But you excluded insignificant companies or companies that you thought were insignificant from the 1960 list; is that correct?

A. Yes, sir; I eliminated several companies here, which I said did not produce in any large quantities, containers.

Q. Now, did you try to find out whether any of the other 1920 or 1938 companies were insignificant?

A. No, sir.

Q. You didn't even go through the rest of the source book to find out whether any others were?

A. I glanced through the source book. I didn't see that particular reference you have.

[fol. 3060] Q. Did you know that the table from which you worked, page 806, had some indication of which companies were less than a hundred thousand gross per year?

A. Yes, I noticed that.

Q. Did you notice that several of the companies which went out of business in the '20s were companies which were indicated as having a size of less than 100,000 gross per year?

A. Yes. I noticed tha .

The Court: Is that a hundred thousand gross of containers?

Mr. Johnson: That's right.

The Court: Is that the figure?

Mr. Johnson: That's right, yes, sir.

The Court: You are not talking about dollars?

Mr. Johnson: No, sir. A hundred thousand gross of containers.

By Mr. Johnson:

Q. Now, on page 806 of your source material you will find under "Illinois" a reference to Chicago Heights Company, will you not?

A. Yes.

Q. The Chicago Heights Company is included in your [fol. 3061] table for 1938; is that correct?

A. Yes, it is.

Q. Now, if you will look back on page 875 of your source material, you will find testimony by Mr. Levitt. Mr. Levitt

is testifying, and he says, and I quote, "The Chicago Heights plant is a very small operation, a hand-blown plant."

Now, notwithstanding that, you included it in your 1938 table; is that right?

A. The 1938 and the 1920 tables were never—were not adjusted by me in any respect.

The Court: You just took what was in the tabulation——

The Witness: That's right, sir.

The Court: —of the hearings of the Temporary National Economic Commission?

The Witness: That's right, sir.

By Mr. Johnson:

Q. Now, you say, however, that you tried to do some adjustments, in 1960 at least——

A. Yes.

Q. —by putting together companies and their subsidiaries; is that correct?

A. That's right.

[fol. 3062] Q. Did you try to do that for 1920 or 1938?

A. No, I did not.

Q. In other words, if the source material showed a company and its subsidiary, that was two for 1920 and 1938?

Mr. McManus: I object, your Honor. He just testified he made no adjustment. I think he would have to look at the TNEC for that.

Mr. Johnson: All right. We will do that.

Q. If you look at page 806 of your source book, New York, you will find a company listed for Olean. Do you see that?

A. Yes.

Q. The Acme Glass Company?

A. Yes.

Q. Did you include that in your 1920 and 1938 lists?

A. That's right.

Q. As a separate company?

A. That's right.

Q. Now, near the end of that column you will find a note. Do you see that note with reference to the Olean Company?

A. Yes, I do.

[fol. 3063] Q. And that note is No. 10, I believe, isn't it?

A. Yes.

Q. Now, let's look at note 10. The note 10 says——

A. Thatcher Manufacturing Company.

Q. In other words, that is a subsidiary of Thatcher Manufacturing Company; is that correct?

A. Well, it has reference to Thatcher, and I presume it is a subsidiary.

Mr. McManus: What does the note say?

Mr. Johnson: It says Thatcher Manufacturing.

Mr. McManus: It doesn't say if it is a subsidiary or not.

Mr. Johnson: No.

By Mr. Johnson:

Q. Would you conclude from that whether it was a subsidiary or not?

A. Well——

Mr. McManus: I object, your Honor. He has no basis for concluding one way or the other. He copies from the report. He said that a number of times.

The Court: Well, in the third list he drew certain conclu-

[fol. 3064] sions, the 1960 list.

Mr. McManus: There is no question about that, your Honor.

The Court: All right. I am going to permit the exploration of what his mental process was in making up the third list, and the only way he can do that is to go through the first and second list.

Q. What did you think that note referring to Thatcher Manufacturing Company meant?

A. Well, to me it meant that Thatcher had an interest in the plant.

Q. You did not pursue it beyond that?

A. No, I did not.

Q. It didn't excite your curiosity at all as to whether it should be counted as one company or two companies?

A. Well, I couldn't tell whether they had a controlling interest or just an interest, but they had reference to Thatcher, and——

Q. You did not think to make inquiry of anyone——

Mr. Johnson: I will withdraw that.

Q. You did not make inquiry about it; is that right?

A. No, because this tabulation is gotten up by a now [fol. 3065] defunct association.

Q. The Thatcher Manufacturing Company is still in existence, isn't it?

A. That's right.

The Court: Tell me, the National Temporary Economic Committee, which I am not familiar with, except as I have heard about it on this trial, was that a committee of congressmen or industrialists or what? What is the committee?

Mr. Johnson: If your Honor would let me try to answer that, I will say this; The Temporary National Economic Committee was a committee that was created by Congress consisting of representatives of Congress and representatives of the various departments of the Executive Branch. It was a joint committee——

The Court: Legislative and Executive?

Mr. Johnson: Legislative and Executive—which held extensive hearings on many aspects of the American economy during the period roughly 1938-1939.

By Mr. Johnson:

Q. Now, Mr. Finn, I want you to look at the lower right-hand corner——

The Court: Another thing: How big was this body?

[fol. 3066] Mr. Johnson: The whole committee?

The Court: Yes.

Mr. Johnson: It was a large committee: representatives of the Department of Justice, the Treasury Department, the Securities and Exchange Commission and the Federal Trade Commission—at least those I recall—sat representing the Executive Department.

The Court: Then an appropriate number of congressmen, I take it?

Mr. Johnson: And a large number of congressmen sat on it. Senator O'Mahoney of Wyoming was, I believe, the chairman of the committee.

The Court: Now, this document, which is Defendants' W

for identification, I gather from the title this does not purport to be a report of the committee, does it?

By Mr. Johnson:

Q. Do you know, sir?
A. Reported?

By the Court:

Q. No. I say I assume, if there was a committee—and I have never known a committee that did not make a report [fol. 3067] at some point—that this committee did make a report, did it not?

Q. There have been some very numerous monographs made of the hearings of this committee, and they were made by individuals who served as staff members of the committee, and also some of the Executive Department representatives made reports on it. But as to whether or not there is an existing report made—I don't know——

Q. In other words, you do not know whether the committee itself ever drew any conclusion from these somewhat extensive hearings that it held or made any findings as to what the facts it was supposed to investigate were? Were there any——

A. I can't answer that, sir.

The Court: And the table, what page is that on, Mr. Johnson? Can you find the table for me? What is this—an exhibit?

Mr. Johnson: I would call that whole document, your Honor, the equivalent of a transcript of hearing, I believe.

The Court: I would suppose so.

Now, how did this table get in? Who prepared it? Where did it come from?

[fol. 3068] The Witness: I think the preceding pages, your Honor—it was transmitted to the TNEC by the Glass Manufacturers Association. They prepared it for that committee.

The Court: All right.

By Mr. Johnson:

Q. Now, you don't have any idea of how that table got in there?

A. No, sir. The one in the——

Q. The one in the TNEC report.

A. No, I do not.

Q. I want to direct your attentiion to table 5 D, in the lower right-hand corner where there is the bold figure of 29.

A. Yes.

Q. And that follows the caption that says, "Number of Companies Operating Plants."

A. Yes, sir.

Q. The other column indicates that that is the number on January 31, 1960; is that right?

A. Yes.

Q. So your intention with that figure is to inform the Court, is it, that on January 31, 1960, there were 29 and only 29 glass companies in the United States operating [fol. 3068a] plants—glass container operating plants; is that right?

A. That's right. If you consider my adjustments I made on the preceding—on the following page.

[fol. 3069] Q. All right, sir. Now, I would like you to go through and name those 29 plants for me one by one, 29 glass container manufacturing companies?

A. There is the Owens-Illinois Glass Company.

Q. Will you go slowly enough so that I can take them all, please? All right, sir.

A. Anchor-Hocking Glass Company; the Hazel-Atlas Division of Continental Can; Knox Glass Company; Brockway Glass Company; Thatcher Glass Manufacturing Company, Incorporated; Ball Brothers Company, Incorporated; Metro Glass Company, Incorporated; Obear-Nester Glass Company.

Q. I'm sorry. Before you leave Metro, is that the same as National Dairy Products Corporation?

A. Yes, sir.

Q. Go ahead, sir.

A. Obear-Nester; Maryland Glass Corporation.

Q. Is that the same as Warner-Lambert?

A. Yes, sir.

Glass Containers Corporation.

Q. Glass Containers Corporation. Is that the same as Hunt Foods, do you know?

A. I think it is.

Fairmount Glass Company; Foster-Forbes Glass Com-
[fol. 3070] pany; Glenshaw Glass Company; Pierce Glass Company; Oil City Glass Company; Laurens Glass Works; Chattanooga Glass Company; Diamond Glass Company; Liberty Glass Company; Latchford Glass Company; Northwestern Glass Company; Armstrong Cork Company; Star City Glass Company; Arkansas Glass Company.

Q. Excuse me one moment. Is Star City a member of another group?

A. You might find it under National Bottle.

Q. National Bottle Corporation. What is the next one after Star City?

A. Arkansas Glass Company; Underwood Glass Company; Alexander Kerr Company; Lamb Glass Company; Wheaton Glass Company.

Q. That is all?

A. Yes.

Q. And those were the only glass container manufacturing companies that you could find in the United States today; is that right?

A. Those are the reference to the 29 companies.

Q. Where did you get that list?

A. From the American Glass Review, Glass Factory Directory—1960.

[fol. 3071] Q. Did you try to check it out with anything else?

A. Oh, I had previous directories. They issue them annually.

Q. When I asked you the other day, with reference to one of your tables, how many companies were included under the caption of "all other manufacturers," in addition to the three companies referred to on that table, you gave an estimate of between 35 and 38, and I refer to page 2882 of the minutes. That would be, adding the other three, a minimum of 38 companies, would it not?

A. A minimum of 38 companies?

Q. You said that you estimated that there were between 35 and 38 included in "all other manufacturers"?

A. Yes, sir.

Q. And there were 3 stated separately on the page, were there not?

A. Yes.

Q. So that would mean at least 41 companies, wouldn't it?

A. Well, what I meant to say was the fact that there were three companies preceding, there were about 35 others. I [fol. 3072] mean a total of 35-37 companies.

Q. Not 29?

A. I was just trying to recall. Yes, there is this distinction: when I mentioned that I was also including subsidiaries belonging to other companies of this 29.

By the Court:

Q. But didn't you tell me, sir, that subsidiaries were listed separately, at least in a number of instances, in the 1938 list?

A. Well, I meant—Mr. Johnson points out here one, that Orleans Glass, which presumably Thatcher had an interest in. As I mentioned, I did not alter the 1938 or——

Q. I understand that, Mr. Finn.

A. Yes, sir.

Q. I had understood from the previous testimony with respect to the Temporary National Economic Committee hearing, that in some instances at least there was one group of at least three companies which were listed separately in that and in a footnote were shown to have some connection with another company, whether by way of subsidiary or interest or whatnot; do you recall that?

[fol. 3073] A. Yes, sir. I was talking about Knox.

Q. There were three there, and one, four, was Orleans. Now that is at least four. Do you know of any others that were treated the same way in the 1938 list?

A. No, sir; I do not. Going back to Mr. Johnson's——

Q. Do you know whether the Gallo Glass Company—was the Gallo Glass Company in existence in '38, do you know?

A. No, it was not.

Q. Was not. But the Gallo Glass Company is not included in this list of yours?

A. That's right, sir.

By Mr. Johnson:

Q. However, the Heintz Company was included in 1938?

A. Yes, as shown by that list.

The Court: Is it true that the Heintz Company at that time was a captive company, in the same sense that the Gallo Glass Company was a captive company, do you know?

The Witness: I have no knowledge.

Q. Now, Mr. Finn, in your count of 29 companies, did you [fol. 3074] include Arrowhead and Puritas Waters Company?

A. No, I did not.

Q. Why didn't you?

A. Frankly, I didn't know anything about them. I never saw them listed.

Q. Why did you exclude Bartless-Collins Company?

A. I don't know whether they are—Bartless-Collins? Bartless-Collins, I don't think, was listed either.

Q. Listed in what?

A. In American Glass Review.

Q. So you just blindly relied on American Glass Review; is that right?

A. Well, that is my source material, sir.

Q. Why did you exclude Castle-Hanson Corporation?

A. Well, we at that time didn't have any knowledge it was functioning.

Q. At what time did you not have any knowledge that it was functioning?

A. When I prepared this.

Q. Do you know that Mr. Cheney testified that Castle-Hanson Corporation was a member of GCMI?

A. Well, I just found that out.

Q. You didn't see fit to correct this chart?

[fol. 3075] A. Well, I haven't corrected this, no, sir.

Q. Why did you not include Glass Products Company, of Vineland, New Jersey?

A. They didn't appear in the directory either.

Q. Why did you not include Goodman-Kleiner Company, of New York?

A. They didn't appear.

Q. Why did you not include Jeannette Glass Company?

Mr. McManus: Your Honor, I object. Is he purporting to read off companies that are operating as glass companies? I have no knowledge. These might be rubber companies. And, also, there is no foundation laid that they are glass companies.

The Court: Now, look, the man who is supposed to be laying a foundation is your witness. The objection is overruled. This witness is supposed to know about this thing. If he knows about them, all right. If he doesn't, then he never heard about them and they are susceptible of being shown that they're operating glass companies, and his table is no good.

Q. Why did you not include Jeannette Glass Company?

[fol. 3076] A. Jeannette?

Q. Yes.

A. They are not listed as a glass container company.

Q. Why did you not include McCoy Glass Company?

A. I don't think they were listed either, sir.

Q. Why did you not include Puerto Rico Glass Corporation, of San Juan, Puerto Rico?

A. Well, this is confined just to the continental United States here. I didn't list them at all.

Q. Why did you not include Universal——

By the Court:

Q. Do you know whether or not the 1938 list was confined to the continental United States?

The Witness: They only listed those states that I have here.

By Mr. Johnson:

Q. Why did you not include Universal Glass Products Company, Parkersburg, West Virginia?

A. Well, they're a subsidiary or controlled by Star City.

Q. You think that--you say that Universal is controlled by Star City?

A. Yes.

[fol. 3077] Q. And that is the reason you exclude it?

A. Did not include it.

By the Court:

Q. Was Universal listed on the list put out by the American Glass Review?

A. Yes, sir; they were.

Q. But you eliminated Universal?

A. That's right.

Q. Despite the fact they were on that list?

A. That's right, sir.

By Mr. Johnson:

Q. Now, in preparing your table and coming to the conclusion that there were 29, only 29, glass container manufacturing plants in the United States, did you check the admissions made by the government in this case in response to the defendants' request to admit?

A. No, I did not.

Q. You didn't even go to that trouble?

A. No, sir.

Q. Now, Mr. Finn, if I may, I would like to turn to table 5C.

The Court: Frankly, Mr. Johnson, at this point there has been, as far as I am aware, no proper foundation laid [fol. 3078] for the admission of table 5C, and I wouldn't at this point waste any time cross-examining about it. At the present writing I do not intend to admit it.

Mr. Johnson: But I would very much like to expose what this witness has done with 5C, your Honor. It has a bearing on the statistical methods that he uses.

The Court: Well, make it relatively brief. I don't propose to spend relatively considerable amount of time on this table, at this stage of the game.

Mr. Johnson: All right, your Honor, I will do that.

Q. The caption of 5C refers to the value of packing materials, Mr. Finn, does it not?

A. Yes, sir.

Q. Do you know whether those are cost figures or sales figures?

A. I do not.

Q. Do you know whether they represent sales at all, or whether they represent production?

A. Well, it is given in the dollar figure.

Q. Still could be a dollar figure and be production figures, could it not?

[fol. 3079] A. Oh, yes.

By the Court:

Q. Is this table reproduced in the same form in which it appears from Modern Packaging Encyclopedia, issued for 1960, or is this something that you made up from individual items in that Encyclopedia?

A. Your Honor, it is in the same form down through line A there. I think it is three-quarters of the way down.

Q. In other words, these figures——

A. The top.

Q. —from "container or material" down through and including line A?

A. Yes, sir.

Q. Is listed—I say "listed"—is taken—let's put it that way—is taken from the so-called Modern Packaging Encyclopedia?

A. That's right.

By Mr. Johnson:

Q. Do you know whether those figures which are given as the value of packaging material relate to the United States or to some other area?

A. I think they are confined to as much of the United States as it is possible to do.

[fol. 3079a] Q. You say they relate to the United States, do you?

A. Yes.

Q. That is your conclusion?

A. I presume so, sir. There is no explanation given for that question in the source material.

[fol. 3080] Q. Now, without going into detail, his Honor commented on what all of these various packaging materials are. I notice that towards the bottom of the sheet you have made some adjustments. Will you tell me what those adjustments are?

A. At the extreme bottom?

Q. Yes.

A. Well, these were items here which we concluded that were not strictly within a packaging and container field.

The Court: You thought these were not within the line of commerce you were trying to establish; is that right?

The Witness: Well, we didn't think they had too much significance in the—rather, did not have a place in this table that is above here, but we didn't think that, for instance, the item of reconditioned barrels and drums should belong in here, so we made that adjustment.

Q. And just what did you do? What was the nature of the adjustment? I mean, just tell me mechanically what you did.

A. I mean, we deducted from the total on line A. We came out with an adjustment.

[fol. 3081] The Court: The adjustment on line C?

The Witness: That's right.

A. (Continuing) And we took the annual net sales and operating revenues and we got a percentage.

Q. Then the whole purpose of this table——

The Court: How do you know, for instance, Mr. Finn, that these figures in the Packaging Institute—whatever it is called, this Packaging Encyclopedia—are annual net sales and operating revenues?

The Witness: Oh, I don't know that, sir.

The Court: In other words, you don't know whether or not you are comparing Continental's annual net sales and operating revenues to annual net sales and operating revenues of the industry or some entirely different standard, do you?

The Witness: That's right, sir.

By Mr. Johnson:

Q. Where did you tell the Continental Can annual net sales and operating figure that you prepared?

A. That's from the annual operating reports of Continental Can, 1957 and 1958.

Q. Did you read those reports at all?

A. Yes.

[fol. 3082] Q. Did you look in those reports to see what those annual net sales and operating revenues were——

A. Yes, sir.

Q. —composed of?

A. Were composed of?

Q. Yes.

A. Yes.

Q. Did you know that they included Canadian sales?

A. Yes, sir.

Q. And you dared compare this figure, which you say—of the packaging industry, you say, of the United States, with Continental Can including Canadian sales?

A. That is what is done here.

Q. And you did it?

A. Yes.

Q. And you are prepared to tell the Court that you did?

A. I say that is what has been done.

Q. Do you think the Court could conclude that from this?

A. Well, I didn't go into the explanation of what all is in that annual report, sir. I said these were the annual net sales and operating revenues of Continental Can. I didn't [fol. 3083] qualify where they were——

Q. Do you know that Cuban sales were in there?

A. Yes, sir.

Q. Did you know that Continental Can's defense sales were in there, non-container defense production?

A. Oh, yes, sir. Everything is in there, I presume.

Q. Sales with woodlands were in there?

A. Yes, sir.

The Court: Sales from what?

Mr. Johnson: Woodlands.

The Court: You mean forest lands?

Mr. Johnson: Yes, sir.

Q. Did that include that?

The Court: May I see that? Do these facts appear from the face of the report that you are alluding to now, Mr. Johnson, such items as you say, woodlands, defense production?

Mr. Johnson: Canadian sales are disclosed.

The Court: Show me that. Show me the item of Canadian sales, will you please? Either one will do.

Mr. Johnson: The '57 statement shows, on page 20, a [fol. 3084] statement of consolidated income.

The Court: All right. Let me look at that.

Mr. Johnson: Yes, sir. The inside cover shows the operating subsidiaries of Continental.

The Court: All right.

By Mr. Johnson:

Q. Did you try to get a breakdown of Continental Can's sales and operating revenues from anyone?

A. Not for this purpose, no, sir.

Q. Now, in making your adjustments, without going into details on that, I notice that one thing you deducted from what you regard as the total value of packaging materials, you deducted packaging machinery; is that right?

A. Yes.

Q. Did you know that Continental Can was a large manufacturer of packaging machinery?

A. I knew they made machinery. I didn't know how much it was.

Q. You knew that they made packaging machinery?

A. Yes.

Q. But you did not make any attempt to adjust the other side, that is, the figure you compared with your total?

[fol. 3085] A. No, sir.

The Court: I think we have gone far enough on this, Mr. Johnson.

Q. Mr. Finn, I have just a couple of other general questions here.

Referring back to your tables, in which you computed what you called the number of units of metal containers manufactured, those figures and every one of those unit figures could not have been constructed without relying on Can Manufacturers Institute material that we have been discussing here in the last several days; is that not correct?

A. Yes, sir. That was the only source I had.

Q. The defendant in this case asked the government during the pretrial proceedings a series of interrogatories. Did you help answer those for the government?

A. Yes, I helped answer a limited number of them.

Q. Would you recall interrogatory 6, in which the defendant asked for the total sales in dollars and in units of

metal cans sold in the United States for each of the years 1953 to 1956, inclusive? Do you recall that?

[fol. 3086] A. No, I don't recall.

Q. Did you ever look at the answers to those interrogatories?

A. Yes, I have.

Q. Did you know that in answering that interrogatory, there was included some figures, and next to them was this note:

> "These figures were estimated and published by the Can Manufacturers Institute, Inc. and the plaintiff has no way of verifying their accuracy"?

Did you know that that was in there?

A. Well, I don't recall this, no, sir. I assisted Mr. McManus in giving him some information, sir.

Q. The government put that warning note on its response to interrogatories, but you did not see fit to put any such warning note on any of your tables, did you?

Mr. McManus: Your Honor, I object. In our underlying data on CMI, there is no question but that these are estimates, but we consider these the best estimates and the best way of doing it, to convert them to units. That is obviously a note that these are estimates of CMI.

The Court: Well, the witness will answer the question.

[fol. 3087] The objection is overruled.

Mr. McManus: I am sorry, your Honor.

The Court: Do you have the question, Mr. Reporter?

(Question read.)

A. Well, I think I explained rather fully how we arrived at these figures in the pages from time to time.

(Defendants' Exhibit X marked for identification.)

The Court: Exhibit X for identification, I take it, is the interrogatory and the answer to which you just referred?

Mr. Johnson: Yes, sir.

Mr. McManus: I would like the record to show, your Honor, that there is no indication here of the date these were answered.

The Court: That can easily be ascertained.

Mr. McManus: Yes, your Honor, but it is not on the exhibit.

Mr. Johnson: Would you stipulate, Mr. McManus, that Defendants' Exhibit X for identification contains a true copy of defendants' interrogatory 6 and a true copy of plaintiff's answer to interrogatory 6(b)?

[fol. 3088] Mr. McManus: I will so stipulate, subject to a motion to strike in the event that it is not accurate.

The Court: This has not been offered, anyway.

Mr. McManus: Yes, your Honor.

Mr. Johnson: I do want to read again that last sentence in the record.

Mr. McManus: Your Honor, is he going to offer this?

Mr. Johnson: No, sir, not at this point.

Mr. McManus: I mean, reading into the record from a document which is not in evidence.

The Court: It seems to me a very reasonable point.

Mr. Johnson: He has stipulated it is correct.

Mr. McManus: But it is not in evidence.

The Court: If you are going to stipulate that it is correct, you either put it all in or not at all.

Mr. Johnson: Very good, sir. I will reserve on offering it.

[fol. 3089] The Court: Yes.

Mr. Johnson: Does your Honor want to see it at this point?

The Court: No.

Mr. Johnson: I have no further questions of this witness at this time, subject to this: that I have not as yet seen—they are here but they were not here when I started cross examining this morning—the corrections that were referred to on Tuesday.

Mr. McManus: Excuse me. Could I have a clarification of what those corrections are, your Honor? If he is talking about the corrections to the tables——

The Court: Yes.

Mr. McManus: —we delivered those to his office yesterday evening, as soon as we had made the computations.

The Court: What time yesterday evening?

Mr. McManus: Well, it was late yesterday evening, your Honor, around 6 o'clock.

The Court: Well, I would say that Mr. Johnson wouldn't

have had an opportunity to look at those between 6 o'clock yesterday and this morning.

Mr. McManus: May I say something about that, your [fol. 3090] Honor?

As I said before, I feel a little put out about bringing this up at this time because this is taking up time of the Court for things that should rightly have been worked out between counsel. We admit that we made a mistake by not including Terminal Island, California in west of the Rockies. One of the reasons why, going back, as I observed, is that the statistician was working from a copy of a document furnished by Continental Can Company, subject to a motion to produce. The information Terminal Island, California was handwritten. Someone, before giving it to the government—I am sure unintentionally—had clipped the "l" off, so it was "Terminal Island, Ca.," but not understanding that, the statistician interpreted that to be Terminal Island, Georgia—G-a. We did not know. Maybe we should be more careful.

It was quite obvious to the defendants that we had not included Terminal Island, California in our documents for five months, your Honor. In addition to that, they pinpointed it right on the nose when they questioned Mr. Finn.

Now, the only reason I am saying that is that we are [fol. 3091] wasting this Court's time in quibbling over things that amount to one, two or three per cent corrections on documents, some which amount to only 1/10 of one per cent, and we did call our statisticians up from Washington yesterday, spent all day and had those corrected.

I am sorry for the error, your Honor, but I think part of the onus is on the defendants for not calling that to our attention——

The Court: I am not ascribing any blame to anyone at the moment. All I am saying is that there are certain alterations by reason of errors in a table. Now, it is not infrequent that there is some error in as complicated and lengthy tables as these.

Nobody is remotely suggesting that the error was made purposely.

Mr. McManus: Yes, your Honor.

The Court: It is there, and Mr. Johnson will have a right to look at the correction.

Mr. McManus: Now, your Honor, if I could just ask you how you would propose that we make the changes in the documents which your Honor has?

The Court: I haven't seen them.

Mr. McManus: I know, your Honor.

[fol. 3092] The Court: I haven't seen what you supplied the defendant.

Mr. McManus: We have——

Mr. Johnson: Your Honor, before we leave this point, in view of Mr. McManus' statement, I feel impelled to say——

The Court: Look, Mr. Johnson, if you are going to go into further explanation, none of this is affecting the progress of the case at all. All I am concerned with is whether there are figures that need correction at this point. If they do, all right.

Mr. Johnson: I understand. But I did say in pretrial proceedings, the point I want to make, that I was not able to reconcile these figures. Mr. McManus has had that information for months. The pretrial record will show that.

Mr. McManus: Your Honor, if I could show you—the changes in tables appear in folder B, and if I could show you how we—how at the present time we have penciled the changes in on that copy.

What we would suggest, your Honor, if you have no objection, and if the defendants have no objection, is that we would take those corrections and, rather than having the penciled corrections in there, Your Honor, if we could sub-

[fol. 3093] stitute the pages subject——

The Court: No. I think it would be, frankly, much better all around to have the present charts marked for identification with the corrections in pencil or ink, as the case may be. Then the record is clear on the corrections that were made, and I think that is part of the record.

I am not saying there is any great significance to be attached to it, but I think it is better to have it done that way.

Mr. McManus: All right, your Honor. Any way that is satisfactory to the Court.

I presume it would be satisfactory to ink them on your copy and initial them——

The Court: Yes; as long as the other side gets a chance to see what the corrections are and has checked the figures, then the corrections can be made in ink on the copy in evi-

dence and on my copy and on the copies of counsel, but I do think that when you make a correction in charts of this nature, the substitution of pages only serves to confuse rather than clarify, unless you can follow the process all the way through.

Now, have you got any redirect?

[fol. 3094] Mr. McManus: Yes, your Honor.

The Court: How long is your redirect going to take?

Mr. McManus: Well, your Honor, I am not exactly sure, but I think not over a half hour.

The Court: Well, suppose we take our morning recess now, and I won't have to interrupt your redirect.

Mr. McManus: Yes, your Honor.

(Short recess.)

The Court: All right, Mr. McManus.

Redirect examination.

By Mr. McManus:

Q. Mr. Finn, in your computations, I believe you testified on cross examination that you attempted to limit your metal can statistics to the continental United States shipments, shipments from continental United States; is that correct?

A. I did.

Q. And you attempted to exclude Hawaiian production?

A. Yes, sir.

Q. And you were able to exclude American Can but you were unable to exclude Hawaiian Pineapple's production; is that correct?

[fol. 3095] Mr. Johnson: I object to that question. He testified he did not try.

The Court: I will overrule the objection.

A. I was able to exclude that in American Can, but not the other.

Q. Now, if you had been able to exclude Hawaiian Pineapple's production, what effect, if any, would that have had on Continental Can Company's share in these charts relating to continental United States, and east and west of the Rockies?

The Court: Let me ask you this: Didn't you tell us you did not know what Hawaiian Pineapple's production was?

The Witness: That's right.

Mr. McManus: He did, your Honor. He said he didn't know and therefore he didn't exclude it.

The Court: If he doesn't know what its production was, how can he possibly testify to what effect it might have in the figure.

Mr. McManus: Your Honor, just this: Mr. Johnson made much of the fact that Hawaiian Pineapple's production was fairly important. If he could have excluded that—that was included—excuse me, their production was included in the [fol. 3095a] Continental United States, the 48 states, because we were not able to exclude it.

[fol. 3096] The Court: Yes, but who knows? Is there anything in the record to show what Hawaiian Pineapple's production was?

Mr. McManus: No, your Honor, there is not.

The Court: From what we know, Hawaiian Pineapple's production might have been a billion units a year.

Mr. McManus: Assume that point, your Honor, if it were a billion units per year and were not included, what effect—I am asking Mr. Finn what effect that would have had on Continental's percentage in the charts that we have here?

A. Well, if I was able to exclude Hawaiian Pineapple, it would have increased the percentage share of Continental Can.

Q. So that the percentage here——

Mr. McManus: I withdraw that.

The Court: Let me follow this, Mr. Finn. Somebody has lost me along the way.

By the Court:

Q. If you had excluded whatever production Hawaiian Pineapple had, you say it would have reduced the continental United States total?

A. Yes, sir.

[fol. 3097] Q. And therefore would have increased by some amount, you don't know how much or how little——

A. No, sir.

Q. —the percentage that you attributed to Continental Can?

A. Yes, sir.

The Court: All right.

Mr. McManus: Now, your Honor, previously hereto you asked in regard to the classifications of food, non-food, beer, soft drinks, and so forth, if there was any material which defined what should be included in those groups, and I said I would attempt to obtain such underlying data.

I have here Government's Exhibit, marked for identification 1205. I have only one copy, unfortunately, which I obtained from the Glass Manufacturers Institute, which in effect lists what is to be included within the various categories.

The Court: That is, in the Glass Container Manufacturers figures.

Mr. McManus: That is correct, your Honor.

Now, I would like to ask Mr. Finn about that, which I think has been covered, but I would like to just clear it up.

[fol. 3098] By Mr. McManus:

Q. Mr. Finn, in comparing the census returns, I think you testified before, of Owens-Illinois, you did have census returns on Owens-Illinois, I believe you testified here before?

A. That's right, sir.

Q. And you also had their returns to GCMI?

A. Yes, sir.

Q. And that was for what period, do you recall?

A. 1955.

Q. And in making that check, taking a category such as beer, what was your conclusion in regard to the figures? Were they the same or were they different?

A. They were identical.

Q. Is that true of other figures, Owens-Illinois, both census returns and GCMI?

A. Yes.

Mr. McManus: Your Honor, we would like to offer Government's Exhibit 1205 as an explanation of the products or type of products that go into the various classifications of census and GCMI.

The Court: Well, did this witness use that document in preparing these tables?

Mr. McManus: He used the GCMI data, your Honor. [fol. 3099] This is an explanation of what is to be included in each one of them.

The Court: What do you say, Mr. Johnson?

Mr. Johnson: This is a GCMI document, and of course, Mr. Cheney has been on here at some length. I would be willing to make no objection to this document on the ground that Mr. Cheney—I would be willing to not object that Mr. Cheney is not called to identify it if the government would be willing to make certain stipulations with respect to it.

The Court: Well, what are they?

Mr. Johnson: That reporting to the GCMI is voluntary; that the GCMI has no way of checking the classifications by its members into these various categories; that it does not actually police the classifications; and that the government has no information as to whether Hazel-Atlas Glass Company actually followed this classification.

Mr. McManus: Well, your Honor, up until the last one I am perfectly willing to stipulate to. I am not too clear on—maybe I would be willing to stipulate on the last one, but I am not too clear what Mr. Johnson means, about—well, I don't know what he means. If he would clarify that, maybe I would be willing to stipulate that.

[fol. 3100] Mr. Johnson: Well, all I mean is, this is a document that is put out by GCMI for the use of its members. I believe that Mr. Cheney would testify that he doesn't know whether his members follow it or not. I believe he would testify that he makes no attempt——

The Court: In other words, he asks his members to follow it, but the institute makes no check to see whether they actually do, and relies on the figures they supply.

Mr. Johnson: That's right.

The Court: All right, with that stipulation, which I think covers the situation, why, the document will be admitted.

(Government's Exhibit 1205 received in evidence.)

Mr. Johnson: I think at this point it might be helpful to know just what the purpose of this document is, what it is to be used for?

The Court: Well, its only purpose, as I understand it, is

to furnish explanation for the tables. Now, the table are not yet in evidence, and I haven't passed on the tables yet. I am admitting it in evidence now as a matter of mechanical [fol. 3101] convenience, so that if, as and when the tables are in, it will be in evidence for the purpose of casting some illumination on them.

That is the only purpose of this, isn't it?

Mr. McManus: Yes, sir; your Honor. You ask me if I would find something——

The Court: Yes, sir; all right.

By Mr. McManus:

Q. Now, Mr. Finn, you did testify that the reports by Owens-Illinois were identical. Did you have a chance to check any of the Hazel-Atlas reports to GCMI and to Census?

A. Yes, sir; we test checked those.

Q. And was there any appreciable error in those two sets of figures?

A. There were some errors, sir, or discrepancies, but they weren't too significant.

Q. When you say not too significant, could you give me the percentage of error, if any, approximately?

A. Well, I would say it was less than one *1* per cent.

Q. Now, you were asked yesterday about Campbell's Soup cans. What is the basis of your knowledge of the type of cans that Campbell's puts its soup in for sale to the public? [fol. 3102] A. Well, merely what I have seen Campbell's soups in, in the regular can, Campbell can. That is the extent of my knowledge about the Campbell Soup Company.

Q. You were also asked about the Sherwin Williams Company; are you familiar with that company?

A. I know of it.

Q. And do you have any idea of the size of that company?

A. Well, I understand it is one of the major paint companies in the United States, if not in the world. They still advertise it.

Q. And your knowledge of how they sell their products would be similar to your knowledge of how Campbell Soups sell their products?

A. That is correct.

Q. Could you tell me in what size, to your knowledge, in what size containers do they sell their products, paint products?

A. Well, paint comes in many size cans.

Q. What sizes?

A. I think from a half a pint up to a gallon, I have seen.

[fol. 3103] Q. And the gallon can is larger than the No. 2 size?

A. Oh, yes.

Q. To your knowledge, does the Bureau of Census report reuse containers for either beer or soft drinks?

A. Not to my knowledge.

Q. Now, if I could direct your attention to—do you have the chart book, the chart book that Mr. Tolton prepared?

A. No, I do not, sir.

Mr. McManus: I am referring to page 26.

The Court: You are talking of 800 for identification?

Mr. McManus: Yes, your Honor. It is Government's Exhibit 800 for identification, page 26.

Mr. Johnson: Will you give me the heading of that, please? I don't have pages in my book.

The Court: "Metal can shipments—'55. Evaporated, condensed milk, and so forth."

Mr. McManus: And it is in section 2.

Mr. Johnson: Thank you.

Mr. McManus: Do you have it, Mr. Johnson?

Mr. Johnson: Yes.

By Mr. McManus:

[fol. 3104] Q. Was that the chart that Mr. Johnson showed to you the other day during cross-examination?

A. I believe it was.

Q. And you were asked if the leading three producers produced 16.3 per cent of all evaporated condensed milk cans?

A. Yes, sir.

Q. Now on that same chart, what share is indicated by Continental Can Company?

A. 16.3 per cent.

Q. And in units, what is it for the leading three? Excuse me. This is in short tons.

A. This is based on short tons, and the leading three have 40,061.

Q. And of that percentage, of that group, what does Continental have?

A. Continental has 39,989 tons.

The Court: Are you drawing the conclusion, from these figures that of the production by the so-called leading three that Continental Can does it all except less than a hundred tons?

Mr. McManus: Yes, your Honor, of the leading three. I would like for you to draw the conclusion that of the leading three, Continental produces just about every one of [fol. 3105] them in evaporated and condensed milk.

Q. And you testified, or the defendants exhibited here, Mr. Finn, that evaporated or condensed milk cans are smaller than a No. 2 can?

A. I think they are.

Q. You were also examined by Mr. Johnson on the plants that you included west of the Rocky Mountains; is that correct?

A. Yes, sir.

Q. And you were asked to list those plants, and you did not list Salem, Oregon; is that correct?

A. That is correct.

Q. What year were you referring to when you omitted the Salem, Oregon, plant of American Can?

A. That was for 1955.

Q. And the charts which are broken down the way we are using them here, east and west of the Rockies, for what year are they concerned?

A. They are only for 1955, only for 1955.

Q. Now, you also testified, Mr. Finn, that you knew some of the companies who manufactured Crown caps, and you listed Crown Cork and Seal, Guttman and Anchor-Hocking. Is that testimony correct?

[fol. 3106] A. No, sir. I didn't mean to say Anchor-Hocking. I meant to say Armstrong Cork Company.

Q. In all of the charts for metal cans that you have prepared for the continental United States, you include—the percentages included in that are the percentages of captive plants, with the exception of chart 1C.

A. Yes. Our totals for the continental United States include all captive facilities. I had no way of excluding those.

Q. If you will go to folder C, chart 1C, or page 2 of Government's Exhibit 803?

A. All right.

Q. Now this chart is in short tons of steel consumed; is that correct?

A. That is correct.

Q. And what is the difference in this chart from the other chart that you have prepared?

A. Well, this is in short tons of steel consumed and the other was in units of cans.

The Court: In other words, the Can Manufacturers Institute conversion figures were not used in this?

The Witness: That is correct, sir.

Q. Is there any other difference in this chart from the [fol. 3107] other charts, Mr. Finn?

A. Well, through this particular one here I was able to exclude the captive facilities as they are reported in the Bureau of Census issues.

Q. And this chart—by "captive," will you tell me what you mean by "captive"? Who would it include, what type?

A. Well, when I speak of "captive," I think they mean the cans are used by the company manufacturing for their own use, to put their own products in.

Q. And could you give me an example of one of those companies, to your knowledge?

A. Well, the Campbell Soup Company.

Q. And the basic data here, in separation of charts which were for captive plants and for non-captive plants, does the Bureau of Census have data referring to reports which are for captive plants excluded and captive plants included?

A. Well, I presume their raw data contains——

Mr. Hughes: I didn't catch that answer.

Mr. McManus: He says he presumes their raw data.

Q. Do they also report in Facts for Industry or any of their other official publications the shipment of metal cans [fol. 3108] from captive plants?

Mr. McManus: I will withdraw that.

Q. What I am getting at, this chart is different from the other charts, you have indicated, because it does not include captive plants; is that correct?

A. My other—this chart does not include captive plants. They are separated out here.

Q. I see. Does the Bureau of Census publish information which separates the captive plants from the totals?

A. You mean by plant description.

Q. Not by individual plants. I am talking about the continental United States as a whole, including Hawaii?

A. Well, they furnish this information I have on page 2. They give you a total amount of steel that was used in captive facilities.

The Court: They have got a separate listing of that?

The Witness: Yes, sir.

Q. Now going to folder B, section 2A, that is page 5, it lists there glass container shipments.

A. Is this 2A?

Q. Yes, 2A in folder B, Government's Exhibit 802.

A. Yes, sir; I have it marked as page 15.

[fol. 3109] Q. Excuse me, I am sorry. It is page 15. And you have a total——

The Court: This is the schedule entitled "Continental United States Shipments of All Types of Glass and Other Containers West of the Rockies." Is that the one you are referring to?

Mr. McManus: That is the one we are referring to, your Honor.

Q. Now, looking under the totals for glass container shipments west of the Rockies, you have the figure in thousands of units, 2,109,165—which is really two billion units. Is Gallo Wine included in that figure?

A. No, sir, because this is in 1955, and they weren't in existence then.

Q. Mr. Finn, do you know if the Continental Can Company is a member of the Can Manufacturers Institute?

A. Yes, I do.

Q. And are they?

A. I have been informed they are.

Q. Going now to Government's Exhibit 803, which is

folder C, and turning to page 5, which is 4 C, chart 4 C—or, excuse me, table 4 C, and going down to the note in that [fol. 3110] table, Mr. Finn, could you explain that note to me?

A. Briefly, it says that in prior years the vacuum closures with the lug thread were included in another category.

Q. So that——

The Court: By the Bureau of the Census?

The Witness: Yes, sir.

A. And then in 1958 they separated them out. And, incidentally, my note should read a little differently here. In place of "prior to," it should read "in 1959 top-seal vacuum closures with lug thread are included with vacuum type caps."

Q. Now, going to chart 3 C——

The Court: And before that, they were not?

The Witness: That's right.

Q. Now, going to the preceding page, page 4, of Government's Exhibit 803, which is chart 3 C, do you have the Bureau of Census data from which that note was taken, Mr. Finn, if it was taken—was it taken from the Census data?

A. Yes, this was taken from the Census data.

Q. Do you have that information with you on that now?

The Court: That note is wrong, too, then.

[fol. 3111] The Witness: That note is wrong, too, and it should be changed to read——

Q. Do you have——

The Witness: —to read as follows: "For 1957 and earlier years, a significant quantity of this type of closure was reported as screw thread and by type of caps."

That is the footnote in the Bureau of Census report.

Q. So am I correct in assuming that, starting in 1958, you were able to separate out vacuum closures from non-vacuum type closures?

A. Yes, they were reported differently to the Bureau of Census in that year.

Q. Reported separately from the non-vacuum type?

A. Yes.

Q. Now, Mr. Finn, do you have available the Bureau of Census definition of metal containers?

A. Yes, I do.

Q. Now, on cross examination you attempted to give your definition of what you thought—of how you thought the Bureau of Census defined metal containers.

The Court: Isn't that in Government's Exhibit 1203 for identification, Facts For Industry?

[fol. 3112] Mr. McManus: Your Honor, I hope it is. I just want to make sure the record is clear on what the definition is. Have you got an exhibit here?

The Court: I have an exhibit, 1203 for identification, which is metal cans in 1958, which gives the coverage and a definition of metal cans. Is that what you are referring to?

Mr. McManus: Yes, your Honor, that is what we are referring to. I wanted to make sure we had the actual definition rather than Mr. Finn's offhand remark on what he recalled it to be.

Mr. Johnson: That is a definition of metal cans.

The Court: Yes.

Mr. Johnson: Not metal containers.

Mr. McManus: Excuse me. I stand corrected. Metal cans. Your Honor, we are offering that exhibit also, in addition to our other statistical data.

The Court: Now, I notice that this physical exhibit has a certain number of penciled notes on it and some excisions in pencil, which makes it look as if it had been used for [fol. 3113] working purposes—I can imagine it might have been—by Mr. Finn. I take it this is offered without any of the penciled material.

Mr. McManus: That is correct, your Honor. Any penciled alterations, corrections or additions, etc., should be excluded from any offer we are making. It should not be considered by the Court in any way.

The Court: All right. Well, I will take this to illuminate—only for purposes of illuminating this discussion that we have had for the record, only so we can understand what we are talking about, and I will accept it. It may be received in evidence for that purpose.

(Government's Exhibit 1203 for identification received in evidence.)

Mr. McManus: Your Honor, that is all I have of Mr. Finn.
Mr. Johnson: I have a very few questions.
The Court: I trust so.

Recross-examination.

By Mr. Johnson:

Q. Mr. Finn, Mr. McManus asked you about the effect of excluding Hawaiian Pineapples from your tables. Now, if you had composed your tables on a consistent basis and included American Can, the effect would be that Continental Can's percentage would be down somewhat, wouldn't it?
[fol. 3114] A. I mean, if I didn't attempt to eliminate the Hawaiian Islands.
Q. If you had not eliminated American Can from your tables, the American Can Hawaiian production from your tables.
A. It would have decreased Continental Can?
Q. Yes.
A. Yes, that's right.
Q. Mr. Finn, you said that you checked the Hazel-Atlas reports. Did I understand you to say that you checked the reports to the GCMI against the Census reports? Is that what you said?
A. Yes, sir.
Q. But you could not tell from that, could you, how Hazel-Atlas had treated any particular item?
A. No, sir. No, sir.
Q. You could not tell whether Hazel-Atlas had treated shampoo bottles, for example——
A. No, sir.
Q. —as medicine or toiletries and cosmetics, could you?
A. No, I couldn't.

The Court: It is in the Census data or in the Glass Con-
[fol. 3115] tainer Manufacturers Institute figures?
The Witness: That's correct.

Q. And that is true with respect to any end use that I might mention?
A. That is true.
Q. Now, you made a correction in your notes on 3 C and

4 C, but you did not mean to imply, did you, that vacuum caps were treated as screw type caps before 1958? Did you?

A. Excuse me just a minute, I will——

Q. Certainly.

A. The problem was that 1956 to '57 the twist-off-lid cap was included in the screw thread and lug type. Twist-off is generally now referred to as a vacuum cap, and it is over in the vacuum—in 1958, the Bureau of Census put it into the vacuum category.

Q. But they were vacuum caps in either year, were they, not?

A. Yes, that's right.

(Discussion off the record.)

Mr. Johnson: I have no further questions of this witness, and I will have no further questions resulting from the amendments that were made this morning.

[fol. 3116] The Court: Very good. All right. You may step down, Mr. Finn.

(Witness excused.)

The Court: Now, as a matter of procedure, I think before I rule on the charts—on these tables—it would be as well to have the cross examination on the charts completed, and then I can rule on the whole mass of material in appropriate fashion at that time.

Do you want to commence the cross examination now, Mr. Johnson?

Mr. Johnson: Whatever your convenience is. I am ready.

The Court: All right. Let's start on it, anyway.

Mr. McManus: Mr. Tolton, will you take the stand.

JULIUS H. TOLTON resumed.

Mr. McManus: Your Honor, I am not trying to limit Mr. Johnson, but, if possible, could we have any indication, if he knows, how long the cross examination might be?

The Court: Well, let's see if he can answer that question.

[fol. 3117] Mr. Johnson: I am afraid I can't at this moment.

The Court: I am afraid the last prognostication on this subject was not outstanding for its accuracy.

I would hope, myself, that he would finish with Mr. Tolton this afternoon.

Mr. Johnson: Some of these tables or charts are very detailed, and it is necessary to go into some of these deeply.

The Court: I am expressing a hope. I am not giving you a direction.

Mr. McManus: Your Honor, the only reason I am asking is that, as we informed you the other day, we have this gentleman coming in from out of town, and, if he was here and there was no objection, and if it was going to go on through Friday, we would like to interrupt and put him on the stand.

The Court: If your man from out of town arrives on Friday morning—that is, tomorrow morning—we will interrupt this cross examination and put him on.

All right, sir. You remember, you are under oath.

[fol. 3118] The Witness: Yes, sir.

Cross-examination.

By Mr. Johnson:

Q. Would you turn first, Mr. Finn, to your heading IV——

The Court: This isn't Mr. Finn any more.

Mr. Johnson: I am sorry. Mr. Tolton. I am sorry.

The Witness: I am ready, Mr. Johnson.

Q. The table is entitled "Historical Growth of Metal and Glass Container Shipments Expressed as Index Numbers and Shown as a Trend."

Will you tell me how you prepared that table?

A. Well, Mr. Johnson, we took the source data that we had available as listed on the following page of the—on page —the data——

The Court: Before you go to that, Mr. Tolton, explain this to me, will you please. I have got this marked as page 68——

The Witness: Yes, your Honor.

The Court: —which is the chart marked IV, and is that a

portrayal on page 68 of the material, of the figures, on page 69?

The Witness: Yes, your Honor.

The Court: That is a translation of the figures in chart [fol. 3119] form on 69 onto 68.

The Witness: Yes, your Honor.

Q. All right. Where did the figures come from?

A. Well, the basic data are expressed in the source material at the foot of the page. In the statistics pertaining to the glass, it came from the Glass Container Manufacturers Institute of 1957, page 47, 1958, and 1958 Bureau of Census figures, series 38-G.

Now, you will find the glass container figures conform to the source because the glass was expressed in gross. The column titled "Glass—U. S. Total" is the gross amount for those given years as it came out from the GCMI document.

Q. I notice that you use the GCMI material for some years, and the Bureau of Census for the last year; is that correct?

A. I think that is accurate, Mr. Johnson.

Q. Why did you use the GCMI some years and the Census in the last year?

A. Well, I don't have the GCMI document right here with me, but my reflection is that I think we used the final year or two from Census because the document did not show those two years. That is my thought right at the moment, but I— [fol. 3120] oh, excuse me. Well, as of that document we did not have the material for, I guess it was, 1958.

But the Census material relates to a larger number of glass manufacturing companies than the GCMI, does it not?

A. Just a moment. I have a later document here. I happen to have a 1958, and my impression is at the time the chart was made we must not have had this one available, but in reading over, I find that they conform exactly here.

For '57 and '58, if I may read in the gross amounts, in domestic we have here, 1957 reads 139,952 on the table accompanying the chart. The GCMI document, Glass Container Manufacturers Institute put out, page 46 has also 139,952. And for 1958, the figure in the chart, or the table accompanying the chart, shows 139,848, and the GCMI document shows 139,848, showing they are identical in that respect.

Q. Do you know if these index numbers are based on domestic or on total shipments?

A. They are based on the domestic total shipments, that's right.

Q. Both of them?

[fol. 3121] A. For both tables, you mean?

Q. No. For both glass and metal containers.

A. I could not be exactly sure with respect to the cans because we depended on the Can Manufacturers Institute for the figures in those early years, and I have seen nothing that says "exclusively domestic" on it. That is all I can say about it at the present.

The Court: Are you saying, Mr. Tolton, that with respect to the can figures, this is estimated No. 2 cans?

The Witness: Yes, that's right, your Honor.

The Court: And that is taken from the Can Manufacturers Institute material, at least for the earlier years, through 1957?

The Witness: That's right, your Honor.

The Court: Now, are you telling us that in some years this might have been just domestic production and it in some years might have been overall production? Or do some years include only domestic shipments and other years include foreign shipments, export shipments?

The Witness: Well, your Honor, I would not be certain about that in the earlier years at this time. All I can say is that from looking at Census material, the export is very [fol. 3122] small in relationship to the total. I was trying to think—well, I would hesitate to say exactly, but it was very small in relationship to the total, the export.

By Mr. Johnson:

Q. Why did you select 1939 as your beginning year?

A. Well, Mr. Johnson, there was a—in the cans of our CMI material, Can Manufacturers Institute material, the document that we—the oldest document we were able to get showed 1929, then 10 years later, 1939, and then came forward year to year, so we used 1939 as a starting point for a continuous number of years.

Q. Now, if you had used any other, say, for example,

1946, the result would have been entirely different, would it not?

A. It certainly could have been different, yes.

Q. Well, it would have been different, wouldn't it?

A. Yes, it would have been different.

Q. So the result you get from this table depends entirely on the start of it, does it not?

A. Overall, yes.

[fol. 3123] By the Court:

Q. Well, I don't pretend to be expert on tables, but suppose we drew a line between the figure 180 on the chart to a horizontal line from one 180 to the other 180——

A. Yes, your Honor.

Q. —and also drew a vertical line beginning with the year 1946. Now, if that were done, would that give, the way this chart is set up, a fair picture of the figures?

A. Of the post-war——

Q. Of the post-1946 figures.

A. No, they would vary then, because you would have then the figures of cans and metal. There is a zero point which the growth pattern would show.

Q. What I am getting at is that if I should black out on this chart everything that was not within the angle of the two lines that I spoke of, would that segment be an accurate charting of the trend, in your opinion?

A. Well, your Honor——

Q. Let me just show it to you——

A. I think I understand your Honor.

Q. Here. Draw a line, 180, and we draw another line [fol. 3124] roughly, 1946; say that is 1946. Would that be an accurate chart?

A. No, it would not.

Q. It would not?

A. It would differ, because you would have as a starting point—you see, the starting point we have in glass and cans is 100. We set 100. So that would move both in the relationship of 100 as an index number, and then they would work out from there.

Q. Would the spread be the same or different?

A. It probably would be different.

The Court: I see. That is what I wanted to get at.

By Mr. Johnson:

Q. As a matter of fact, Mr. Tolton, the trend lines might even cross and come out the other way, might they not.

A. I haven't gone through it, but it is possible, yes.

Q. Now, I notice that in these tables, you have used the total No. 2 cans, and using that magic phrase "which might have been produced from the amount of steel consumed."

A. Yes.

[fol. 3125] Q. Why did you use No. 2 cans?

A. Well, Mr. Johnson, the CMI material on which we based the early years that were drawn have information only in those early years on the No. 2 cans which might have been produced, so in order to be consistent we went all the way through on the No. 2 cans, the use of the No. 2.

Q. And if you had used the other type of computation that Can Manufacturers Institute made——

The Court: That is, the so-called actual number,

Q. —the so-called actual number which might have been produced——

A. Yes.

Q. —you would get an entirely different result, would you not?

A. Yes. I think generally the actual cans run higher in numbers than do the No. 2 cans because of the variety of types and sizes there are.

[fol. 3126] The Court: Well, if you started with a base, the spread would be the same as this, in terms, would it not?

The Witness: I think that's right, your Honor.

By Mr. Johnson:

Q. Is that right, Mr. Tolton?

A. I think it would be substantially the same. I couldn't state precisely. I mean, I would have to go against it in each instance.

Q. You mean if you started from a 1946 base?

A. Oh, I beg your pardon.

The Court: No, no, I didn't say that.

Mr. Johnson: Oh, I'm sorry.

The Court: I said, if you had used the actual cans which

might have been produced instead of the No. 2 cans which might have been produced, starting with a given difference, the resultant spread from that point forward would be approximately the same.

The Witness: I think that's right, your Honor.

Q. There is really no reason to believe that it would be approximately the same, is there?

A. Well, as I say, if you started in 1940, and we have in metal 119,444, as it stands here, and then—I mean 1939, [fol. 3127] excuse me—I would think that in the actual cans you would have a few more, I mean, but then that would be your base of 100, so that would continue all the way through. I mean, the only thing I could think of, over the years you might have some variance in the amount of actual cans used, I mean, as to the volume in a given field.

The Court: Unless the spread in the actual cans and No. 2 cans was precisely the same in every year?

The Witness: Yes.

The Court: That is, the relationship of the two figures was precisely the same.

The Witness: That's right.

The Court: That would of course be a variation.

The Witness: There would be a variation; that's right.

Q. To the extent that there were more small cans in late years, the variation would be greater, would it not?

A. If that is true, that is right.

The Court: All right, Mr. Johnson, we will not take a recess until five minutes after 2.

(Luncheon recess to 2:05 P.M.)

[fol. 3128] AFTERNOON SESSION

2:05 p.m.

Mr. Greenberg: Your Honor, before we proceed, with the Court's permission, I would like to take up just one matter with you.

Tomorrow morning, as we all know, Mr. Hughes will testify with respect to the plastic tables which have been marked

for identification. I have been informed by the Plax Corporation, who submitted plastic container statistics to us, which have been encompassed in the tables, that they wish counsel to be present.

However, I am cognizant of the fact that we have problems with confidentiality with respect to other plastic container company statistics, and I wonder if we may permit counsel for Plax to be present under the same sanctions that applied to Mr. Austern.

The Court: I think that when counsel for Plax arrives, we will then see what can be worked out and how far he is willing to go and how far anybody else is willing to go as far as entering into a similar arrangement that we have with counsel for American Can is concerned.

Mr. Greenberg: I think that's right.

[fol. 3129] The Court: All right.

JULIUS H. TOLTON resumed.

Cross-examination continued.

By Mr. Johnson:

Q. Mr. Tolton, we were working on this historical growth chart, and I think you had agreed with me that, if you used a different base, you could and would get different results, and I think I asked you whether the can line on this table wouldn't be entirely different if cans other than No. 2 cans had been used. Is that right?

A. It would be different, yes.

Mr. Johnson: Would you mark for identification this document, which is a Department of Agriculture bulletin entitled "The Vegetable Situation."

(Defendants' Exhibit Y marked for identification.)

Q. Defendant's Exhibit Y for identification, a Department of Agriculture bulletin, on page 24, contains this statement?

"In recent years there has been for most vegetables a very notable shift in canning, away from the once

popular No. 2 can toward the smaller No. 303 and the No. 300 sizes."

[fol. 3130] Now, to the extent——

The Court: What is the date of that publication.

Mr. Johnson: I am sorry. That is 1956—February, 1956.

Q. Now, to the extent that that——

Mr. Johnson: I withdraw that.

Q. Fruit and vegetables is the largest single canned food; is that correct?

A. That's right.

Q. To the extent that this statement is true, the number of cans referred to in your trend line would be unstated, wouldn't it?

A. Yes, that's right. That's right.

[fol. 3131] Q. Now, will you turn to the next following table and would you tell me briefly what this table is?

A. Well, with the use of the source material that is explained on page 71, or the chart on page 70, we endeavored to show the growth of metal and glass containers, expressed as these index numbers, for the period of year 1940 through 1958.

Q. And it is the same type of table as the preceding one.

A. It is, yes.

Q. It relates, you say, to food?

A. Yes, that's right.

Q. On the table following the chart, in your notes you indicate the categories that you have included with metal containers; do you see that at the bottom of the page?

A. Yes, I do.

Q. And in that listing you have included soft drinks as a food, have you not?

A. I have, yes.

Q. Were soft drinks included in the glass categories of food, also?

A. No, they were not.

Q. So you include soft drinks as a food for one purpose, [fol. 3132] but not for another; is that correct?

A. Yes, I had to.

Q. Soft drink cans you regard as a food; soft drink in bottles, not as a food?

A. Yes.

By the Court:

Q. Why did you do that?

A. Your Honor, in the early years soft drinks was included in the food line. That is the reason we did that. So to be consistent——

Q. Well, if it is included in the food line, why wasn't it included in the glass food?

A. It could have in that respect, your Honor, that's right. But I was hoping to stay as close entirely to the food field as I could, and the soft drinks line, apparently it hasn't been too heavy over the years in the metal can field. It has just come in in recent years.

Q. Well, was there any problem in eliminating under metal soft drinks?

A. Well, your Honor, the statistics included soft drinks for the early years.

Q. But you knew of no way to pull out the soft drinks?

[fol. 3133] A. I did not, in earlier years.

Q. Well, in earlier years, certainly in 1940, as I recall it, for all practical purposes the number of soft drinks in cans was minimal, if there were any; is that right?

A. That's right.

Q. When, when in the course of this yearly analysis were there first given separate figures for soft drinks in cans?

A. I can check on that. I think it was 1954, if I am not mistaken. Yes, it was 1954, 1954.

Q. One question here, so I make sure I understand your chart. Do these charts make any actual attempt to show the relative proportion of the food that is in cans and in glass? I mean, can you tell that, or is there any attempt in these charts to depict that?

A. Well, as of a date, I mean, which would be 1940 or 1939, establishing that as a date, then you would say relatively in a sense, "This has happened in cans; this has happened in glass," would be my interpretation.

Q. All right, you start off with 1940, and there were 17, as I understand it, 17 billion glass containers produced; isn't that right?

[fol. 3134] A. Well, that is in thousands of gross, your Honor.

Q. Thousands of gross?

A. That's right. It was shown that way in GCMI figures, so we retained that.

Q. All right, you have got thousands of gross there.

A. That's right. It would be 17,968,000 gross.

Q. Gross.

A. That's right.

Q. And what about the 102,083?

A. That is 102,000,000,083—102,000,000,083 gross.

Q. Oh, that is in gross, too?

A. That's right. We tried to make them comparable in that respect.

Q. I see. So then in terms of actual numbers, the number of cans used in the food industry at that point was considerably over five times the number of glass items?

A. That's right; starting from that base, that's right.

Q. But both of them are started with the same base of a [fol. 3135] hundred.

A. Yes.

Q. So that in essence there is no attempt here to show the proportion of glass in cans used in food?

A. Yes, in actuality, that's right.

The Court: All right, go ahead, Mr. Johnson. I am sorry to interrupt.

By Mr. Johnson:

Q. The food referred to here in this table is not limited to foods that are heat sterilized and hermetically sealed, are they?

A. That's right. I would say it encompasses more than that.

Q. Are cans for frozen products included in the can shipments?

A. I think not.

Q. You think not?

A. Let me just take a hasty look at it. Well, from the census categories, I do not see anything addressed to the frozen food as such.

Q. So I am to conclude that you can't tell whether cans

for frozen foods are included or excluded from this table; is that right?

A. That would be right.

[fol. 3136] Q. Now I want to refer to the item here at the bottom of the table, following the food chart, called "note." Will you tell me what the meaning of that note is?

A. This has reference to metal cans. We were concerned, to this extent:——

The Court: Where is the note? I don't follow.

The Witness: Excuse me. It is page 71, your Honor, and in the source material just underneath the table.

The Court: It is the third item in the source material?

The Witness: That's right; in the notes.

A. (Continuing) Mr. Johnson, we were addressing ourselves, because this thing was estimated No. 2 cans that we used as a basis, well—how—well, you might say accurate—that it might be—if we then referred back and related it on the basis of a tonnage basis, to see—taking 1940 year tonnage in metal cans before it was used for the factor to develop units, we then used the tonnage basis of, say, 1940 as the base, and went up year to year on a tonnage basis to see how it test checked against the index numbers, we [fol. 3137] developed on the basis of the units as cans and we found out that it was right within a very close range.

Q. These figures were developed from tonnage figures in the first place, weren't they?

A. They were, that's right.

Q. Wouldn't they necessarily be the same? How can there be any variation?

A. Let's see. Just a moment. Well—oh, I see—let's [illegible]. Wait a minute. There is this aspect of it. They [illegible]. In the use of the No. 2 cans, which was [illegible] from the tonnages, we had to establish a [illegible] on the CMI data, the number of units per ton [illegible], we developed a factor, which was 8,740 cans per ton, and we utilized that throughout, we utilized that throughout, in order to develop our No. 2 cans in the food field. So having set that up as a standard all the way through, we wanted to then see how that worked out in relationship when we used no units, but used the tonnage basis standing alone.

[fol. 3138] Q. Well, maybe I am missing something here.

A. All right.

Q. Do I understand from what you say now that you used yet a different conversion factor than Mr. Finn?

A. Yes. That's right, for the food field we did, that's right, because, you see, he addressed himself to actual cans. We were addressing ourselves to No. 2, estimated for this chart, for the reason that I explained previously, and so, in the food field, we could not go back in the earlier years and relate it to a unit total. So we had to, in that sense, develop a figure which turned out to be 8440 units, and we cast that for all the years per ton and used that in order to develop the unit totals.

Q. Well, without going through the laborious process of how you did it, is it correct, then, that you developed a conversion figure for use here which was not only different from Mr. Finn's figure, but also a conversion factor which Can Manufacturers Institute never used?

A. Well, I don't know how the can manufacturers develop their figures, but I have not seen this factor in any Can Manufacturers Institute book, if that is what you mean.

[fol. 3139] Q. What I am trying to get at is that this is a conversion factor which you created; is that right?

A. From CMI material.

Q. But it is not a conversion factor that they used; is that right?

A. Well, I don't know—I am not—I am sorry, I don't quite understand the distinction. That is what I am getting at. I am not trying to withhold or anything else like that. I just don't quite understand the question that you have asked.

Q. You did not find this conversion factor stated in any CMI literature; is that right?

A. That's right.

Q. And you computed by doing whatever you did——

A. That's right. From the CMI material, they had No. 2 cans, shipments—or, I mean, No. 2 cans which could be—I have forgotten just the exact terminology there. No. 2 cans. Then they had their tonnage that was used to make, so the division in that sense came from the CMI material, although it never was in existence as a figure in any of the CMI documents. That is all.

The Court: I thought in one table, the CMI documents did [fol. 3140] have the number of No. 2 cans which might have been produced. Was that just overall and not in terms of food?

The Witness: That broke down, your Honor, for a number of years back, but then in the early years they did not carry it in that way all the way back.

Q. And the CMI computations were not based on the food category as you defined it here; is that correct?

A. That's right, that's right.

Q. Mr. Tolton, I would like to go back to the beginning of your chart.

A. All right.

Q. And on the very first table——

A. Is this page 1 or page 4? I am sorry.

Q. It is page 4 according to the numbering system that I have got.

A. All right. Thank you.

Q. There you refer to the leading four companies.

A. Yes.

Q. What was your basis for selection of what you called the leading four companies?

A. It was from the GCMI material that has been fur- [fol. 3141] nished—explained previously.

Q. That is, number of containers manufactured or shipped?

A. That's right. Shipments of the number of containers.

Q. How did you determine that Knox Glass Company was No. 4?

A. Well, the unit totals in going down, Owens-Illinois, Anchor-Hocking, etc., in an overall category it fell into the fourth position.

Q. And in your case, as in Mr. Finn's case, you ignored Wheaton Glass and Armstrong Cork?

A. Yes. Those were two which apparently did not report to GCMI.

Q. You ignored any company that did not report to GCMI?

A. That's right.

Q. Why did you select four companies?

A. Well, it seemed to be reflective, probably, of a—I don't

say—somewhat of a breaking point between them and probably others that fell below it.

Q. And that is the only reason that you can give for selecting four instead of two or seven or nine?

A. Well, in reading generally industry literature—I [fol. 3142] mean, literature in industries—they develop threes and fours, and that sort of thing, categories. I don't know that that had any basis, but I have seen much of it, and it seemed to suggest itself as being kind of generally a breaking point from there on to those lower down.

Now, that isn't the whole, absolute truth. There is some fog about it historically.

Q. Sort of a pick-and-choose proposition?

A. Well, it could be.

Q. So on this top column, this big black column—black in my book, anyway——

A. Yes.

Q. —that shows the leading four, 60 per cent. That could just as well be leading five and some other per cent; is that right?

A. Yes, it could be possible, that's right.

Q. Now, looking at that top column, will you tell me how much of that top percentage is accounted for by Owens-Illinois Glass Company?

A. How much of the percentage? Just—well, am I supposed——

The Witness: Am I supposed to address myself to that, your Honor, as individual companies? That is the only [fol. 3143] question in my mind.

The Court: I don't hear any objection.

Mr. McManus: Your Honor, I think the only thing he is asking—I will assure him there is no problem on confidentiality.

The Witness: That's right.

The Court: If there is such a problem, I am counting on someone calling it to my attention here. I would not necessarily recognize it myself.

Mr. McManus: Your ruling is that any parties other than the defendant and the plaintiff here—your ruling is that this is not to be revealed outside the courtroom.

The Court: That's right.

By Mr. Johnson:

Q. May I suggest, Mr. Tolton, I am going to ask this question quite a number of times. Do you have working papers from which you can give us these figures?

A. Just a moment. I will have to look a little further. Perhaps I can——

The Court: What I would like to do at this point, so you won't be faced with this, Mr. Johnson, try to indicate to Mr. McManus what sort of material the witness should have and [fol. 3144] he can have it there. We will take a brief recess, so we won't have what may be a recurrent problem.

(Short recess.)

By Mr. Johnson:

Q. Now, Mr. Tolton, could you give me the figure attributable to Owens-Illinois in that top bar?

A. This is total domestic that you are speaking of?

Q. Yes, sir.

A. And this is the year 1955?

Q. The year that your chart has.

A. That is right. It is 34.4 per cent.

Q. Can you give me Anchor-Hocking?

A. It is 11.8 per cent.

Q. Hazel-Atlas?

A. 8.8 per cent.

Q. Knox Glass?

A. 4.6 per cent.

Q. Now, why did you add those together, Mr. Tolton?

A. Well, it lends itself to show the large companies and their proportions of the industry, as so stated in this chart.

[fol. 3145] By the Court:

Q. What did you say Hazel-Atlas was?

A. 8.8 per cent.

Q. Now, am I failing to follow something here? Why is Hazel-Atlas included in the leading four? 8.8 per cent. You have down here 9.6 per cent—you see it below down there. It is 8.8 and 9.6 above——.

A. I beg your pardon. I was reading in the wrong column. I will have to retract. Fortunately or unfortunately, I was reading in the 1956 column instead of the 1955.

Q. All right, let's get the 1955 column.

A. The '55 column is 34.2 per cent for Owens-Illinois; 11.6 per cent for Anchor-Hocking; 9.6 per cent for Hazel-Atlas; and 4.5 per cent for Knox.

The Court: All right.

The Witness: I thank you for calling my attention——

By Mr. Johnson:

Q. Your graphic method of presenting this data would completely obscure the fact, would it not, that Owens-Illinois was more than three times as large as the next—or about three times as large as the next largest glass con-
[fol. 3146] tainer manufacturing company?

A. Yes, because it addresses itself to all four, rather than to one.

Q. And you were satisfied to obscure that fact?

Mr. McManus: I will object to that.

The Court: I will sustain the objection.

Q. What do you mean by glass containers, Mr. Tolton?

A. Well, I meant what its meaning is addressed to in the sense of categories of glass containers in the GCMI materials.

Q. And you did not look any farther than that?

A. Well, I certainly looked in [redacted] publications that are read somewhat generally in the industry. But, as purported in the charts—reported in the charts, used these two means to develop the charts.

Q. And whatever they called a glass container, you called a glass container; is that right?

A. That is right.

Q. Did you include home canning containers in Hazel-Atlas shipments?

A. I did.

Q. Did you include packers' tumblers in Hazel-Atlas shipments?

[fol. 3147] A. I did.

Q. Would you look at the next table headed "Total Narrow-Neck" and would you give me the same kind of breakdown you gave me for the first bar of the other chart?

A. This is total narrow-neck in the year 1955. For Owens-

Illinois, 38.2; for Anchor-Hocking, 7.8; Hazel-Atlas, 5.8 per cent; and Knox Glass, 4.6 per cent.

Q. Can you give me the largest percentage of any company that is included in the next bar, the "All Others"?

A. The next one down is Brockway, which has 4.2 per cent.

Q. What is a narrow-neck glass container?

A. Well, it certainly is addressed to that way in the Census categories and in the GCMI categories, and I followed whatever they conformed to as meaning a narrow-neck glass container.

Q. Does it include green olive jars?

A. Green olive jars?

Q. Yes.

A. I presume, if they had a narrow neck, it would.

[fol. 3148] Q. You don't know?

A. No, I don't.

Q. Did it include milk bottles?

A. Well, we have a dairy products item. Let me just take a look and see whether that is a narrow neck or wide mouth.

Well, dairy products, which would include, I presume, milk bottles, would be in the wide-mouth area.

[fol. 3149] Q. All right, sir, would you turn to the next table and give me the same breakdown for the top bar?

A. This is food containers, narrow neck for the year 1955. Owens-Illinois, 43.3 per cent—well, the next one I have listed is Anchor-Hocking, 5.6 per cent; Hazel-Atlas is 7.8 per cent.

The Court: 7 and——

The Witness: 7 and eight-tenths. Your Honor, this has "7" here. It is a matter of rounding that did it, is all I can say.

The Court: I see, all right.

A. (Continuing) Hazel-Atlas is 7.8, according to this, and Knox Glass is 5.8 per cent.

Q. Will you give me the largest in the "all others"?

A. Thatcher has 5.6 per cent.

The Court: So that Thatcher has the same percentage here as Anchor-Hocking.

The Witness: That's right, your Honor. We endeavored

to—these four—to be consistent with them throughout, in the sense that they were the first four in their overall, and I think they are the first four in narrow neck field, and so [fol. 3150] we held to that consistently throughout.

The Court: Yes, I understand.

Q. So it doesn't necessarily mean that they are the first four, even as you have divided in each of these categories?

A. In every category, no, it doesn't mean that.

Q. Now this table headed "food," does that refer to all types of food?

A. Well, certainly all the food that is commercially processed, and home canning—I think those are generally—would be the major categories that would be in there.

Q. It is not limited to heat sterilized and hermetically sealed food products?

A. Not exclusively, no.

Q. It is not limited to that at all?

A. I say no then in answer to your question.

Q. Did you ever try to get any statistics relating to narrow neck glass containers, relating to or used in canning, as that term has been defined here before?

A. Well, I have looked into it, yes, Mr. Johnson.

Q. What did you do to try to get such figures?

[fol. 3151] A. Well, I think—let's see—well, I mean, the Census Bureau in its census of manufacturers puts out some statistics that would relate to the food packing field, of which they have in some years put out some items in glass and in cans. I don't know whether that exactly answers your question.

Q. Well, at any rate, you were not successful in getting any such statistics; is that right?

A. No, I wasn't successful.

Q. Now, would this table include containers for cider?

A. I could not answer offhand whether it does or not, whether that would be in a juice line or that would be a part—which would go to encompass the food field. I couldn't tell that.

Q. Would it include maraschino cherry jars?

A. I could not answer offhand.

Q. Salad oil bottles?

A. Well, I would have to hold to whatever the GCMI and

the Census Bureau has put into these categories. That is the means by which I operated.

Q. Well, would you have put tomato juice bottles here or under soft drinks?

A. Well, let's see——

[fol. 3152] Mr. McManus: Your Honor, I am going to object to that, in that he is asking him the same question.

The Court: I would be inclined to agree with you. He said he relied on the GCMI categories and doesn't remember the specific details of items going in one category or the other.

Q. Would you turn to the next table, please? This is headed medicinal and health supplies, narrow neck.

A. Yes, sir.

Q. Would you give me the breakdown for the first bar?

A. This is medicinal, health supplies for the year 1955. Owens-Illinois, 45.2 per cent; Anchor-Hocking, 2.2 per cent; Hazel-Atlas, 6.5 per cent; Knox Glass, 2.3 per cent.

Q. And the largest percentage in the "all others"?

A. Is Brockway, at 6.4 per cent.

Q. Can you define the term "medicinal health supplies"?

A. No, I couldn't without the aid of the Census Bureau.

Q. Would you answer me in the same way with respect to this table as you did in the preceding one, if I ask whether [fol. 3153] end products were included in this table or not included?

A. I would answer——

Q. In short, you don't know? Is that correct?

The Court: I think, in short, he relied on the GCMI categories and doesn't go beyond that.

Q. Would you turn now to the next table, and would you give me the same type of breakdown of the first bar, as to the percentages of the four companies named?

A. For the year 1955, chemical, household and industrial in the narrow neck field, Owens-Illinois, 37.2; Anchor-Hocking, 2.9; Hazel-Atlas, 10.9 and Knox Glass, 10.4

Q. The largest of the "all others"?

A. It seems to be Pierce Glass Company at 5.6.

Q. And again, so that I don't have to repeat the question each time, in so far as the specific end products are con-

cerned in each of these tables, if I were to ask you about various end products, you would give me the same answer, that is, that you relied on the figures as you got them; is that correct?

A. I would; that is right.

[fol. 3154] Q. All right, sir, would you turn to the next table, toiletries and cosmetics, and do the same thing for me?

A. Toiletries and cosmetics in narrow neck field, 1955: Owens-Illinois 18.1 per cent; Anchor-Hocking, 24 and no tenths per cent; Hazel-Atlas, 9.4 per cent; Knox Glass, 1.9 per cent.

Q. And the largest in the "all others"?

A. It is Foster-Forbes Glass Company, 4.0.

Q. All right, sir. Would you turn to the next table and do the same for me?

A. This is beverages returnable, 1955, and the percentages are for Owens-Illinois 44.7; Anchor-Hocking, 4.7; Hazel-Atlas, zero; Knox Glass 3.7.

Q. Largest of the "all others"?

A. It appears to be Laurens Glass Works, L-a-w-r-e-n-s, 10.5 per cent.

Q. Do you have the sixth company, also—I shouldn't say the sixth—the next largest in the "all others"?

A. It seems to be the Chattanooga Glass Company, at 9.9 per cent.

Q. Will you turn to the next table and do the same thing?

[fol. 3155] A. This is beverages non-returnable, 1955. The percentages are Owens-Illinois 70.8 per cent; Anchor-Hocking, 9.6 per cent; Hazel-Atlas 0.3 per cent; Knox Glass, .8 per cent.

Q. Largest of the "all others"?

A. Seems to be Foster Forbes at 3.8 per cent.

Q. All right, sir, will you do the same for the next table, the next chart?

A. Yes, all right. This is beer returnable for 1955. The first company here is Owens-Illinois, 36.1; Anchor-Hocking, 7.9; Hazel-Atlas, 0.2 per cent; Knox Glass, 2.3 per cent.

Q. And the largest of the "all others?"

A. Is Thatcher Glass Company at 12.2 per cent.

Q. Give me the next one in the "all others", the next largest?

A. Northwestern Glass Company at 6.5 per cent.

Q. Turn to the next table and do the same, sir?

A. This is beer, non-returnable, for the year 1955, with these percentages: Owens-Illinois, 34.8 per cent; Anchor-Hocking, 15.2 per cent; Hazel-Atlas, 1.0 per cent and Knox Glass, 3.2 per cent.

Q. The largest of the "all others"?

A. Obear-Nester, O-b-e-a-r N-e-s-t-e-r Glass Company.

[fol. 3156] Q. What percentage?

A. Oh, I beg your pardon. 9.6 per cent.

Q. And the second largest of the "all others"?

A. Thatcher Glass Company, at 9.1 per cent.

Q. Will you do the same with the next table?

The Court: Now, are you going to ask him to do this for all of them?

Mr. Johnson: Yes, sir.

The Court: All right.

Mr. McManus: Your Honor——

The Court: Isn't there some way this could be done without my sitting here and listening to a repetition of these?

Mr. McManus: If there is no objection, your Honor, we would be glad to have Mr. Tolton sit down and put it on our documents right along, as I have been doing, alongside of the companies, Owens-Illinois, whatever the percentage is.

The Court: It seems to me that would save a very considerable amount of time here.

Mr. Johnson: It's quite all right with me.

Mr. McManus: With the understanding that these questions have been asked and this was the answer that Mr. [fol. 3157] Tolton would give.

The Court: All right, I am going to instruct Mr. Tolton to put down on all the remaining charts, presumably in section 1 of the charts——

Mr. Johnson: And in the following section, section 2.

The Court: The following section 2 is American Can, Continental Can, National Can.

Yes, sir.

Mr. Pedersen: If the Court please, have we put in our figures by Census categories total?

The Court: Yes.

Mr. Pedersen: That was done?

The Court: Wait a minute. Yes, as to American Can and National Can, they are in by census categories, aren't they?

Mr. McManus: Mr. Austern indicated he had no objection as long as it was done on an aggregate basis. By that I mean total of all fruits and vegetables for 1955, and put the percentage down.

The Court: They are not actually in evidence, but they have been referred to in the charts that have been under discussion.

Mr. Pedersen: I had under that section 2 aggregated [fol. 3158] National and American Can, but figures are now in that separate those two companies.

Mr. McManus: Your Honor, as I recall, he did not agree to that. I think I would have to—he said he had no objection—I would have to look back at the record—where inadvertently it had been done, because National was not making cans of that type, which would show American Can's percentage, but I would have to look at the record to see if he did or did not object to this sort of thing.

The Court: I think you ought to find that out. My recollection is that he said it did not present a problem, but I am not positive of that, Mr. Pedersen, frankly, and I think you ought to refer back to the record with Mr. Pedersen.

Mr. McManus: Yes, your Honor.

The Court: (Continuing) While that is done, before that is done, so that we can straighten that out.

Mr. McManus: All right, sir.

The Court: Now, will it be advisable, in view of your future cross-examination, Mr. Johnson, to do that now?

Mr. Johnson: Well, for this purpose I don't need any [fol. 3159] thing except to get those percentages broken up.

The Court: I mean, I am trying to do this as we go along, on the theory that that will aid the progress of the cross-examination, if we have these done at the time, and presumably you intend to go on from there to something else; am I correct?

Mr. Johnson: That is right; and what I propose to do on the offer of these tables, these charts, is to object to any lumping of my client with any other people with whom it has no connection. What has been done in these charts, in every one of them, has been to take my client and group them, and this witness, I believe I have paraphrased fairly

what he said, arbitrarily grouped them with others. Now, I don't see why they should be grouped with others.

The Court: Well, all right, that is your own position. I am not so much concerned with that at the moment. I am concerned with the mechanics of what we are doing now. I suggest we do this: that the witness take and as rapidly as possible complete these section 1 charts, with the data that I have directed him to put down. Then you can find and discuss with Mr. Pedersen during that period the por-
[fol. 3160] tion of the record in which Mr. ——

Mr. McManus: Austern?

The Court: Yes, which counsel for American Can yesterday referred, yesterday or the day before, referred to this problem of lumping, and see what the record actually says, and see that Mr. Pedersen is informed with respect to that. When that is done, and if you can find that this does not present a problem, then he can go ahead and mark the American Can and National Can stuff. If it does present a problem, then I will hear Mr. Pedersen, and we can make an appropriate ruling. Let's do it that way now, mechanically, as rapidly as we can, so as to get that part of it out of the way.

I will take a brief recess for that purpose.

(Short recess.)

[fol. 3161] Q. Mr. Johnson: Your Honor, I would like to say at this time that I have no interest in any of American's or National's percentage figures for any purpose of cross examination. My objection to these tables is going to be based—to this portion of these tables, is going to be based on two things. One is the adding of my clients in with their competitors.

The Court: Yes.

Mr. Johnson: And, secondly, the obscuring of the fact that American is so much larger than Continental or, in the case of glass, that the others are so much larger. So that as far as I am concerned, if the government and American want to and can work out any arrangement by which these percentage figures can be furnished to your Honor and not to me, and ultimately, if necessary, that somehow they get into the record, I have no objection to that.

The Court: What do you say to that, Mr. Pedersen? Certainly you have no objection to my seeing them.

Mr. Pedersen: No, sir. I have no objection to your seeing them, and I don't think Mr. Greenberg has either, but I can't speak for him.

Mr. Greenberg: Your Honor, when we discussed this prob-
[fol. 3162] lem, we merely hypothesized as to what might happen on appeal, and we felt that those figures could be sealed and the characterization of one larger than the other covered in those terms.

The Court: Well, I think what I might do in order to complete the record is to let the figures, sealed, be handed up to me, and then perhaps, with respect to the tables, have a concession that the percentage of American Can in each of these total figures is substantially larger than any other—something of that nature.

Mr. McManus: Your Honor, I don't think we could stipulate to that, because at the present time, although American might be larger in some areas, they might not be in others, and I frankly don't recall what areas those are.

The Court: Well, would there be any objection, Mr. Pedersen, without our disclosing what the actual American figures were, to a statement along those lines applying to each chart?

Mr. Pedersen: None whatever, your Honor.

The Court: As long as there was no disclosure of the actual figures or the precise percentage.

Mr. Pedersen: No objection, your Honor.

[fol. 3163] The Court: Once I have the figures myself, I can relate them to the chart and make a statement for the record that I think will be sufficient for the purposes of the defendants without in any way prejudicing American Can.

Mr. Pedersen: That would be fine, your Honor.

The Court: All right. So I assume, gentlemen, that what will occur is that those figures will be worked out by the witness, will be shown to Mr. Pedersen, of course—oh, no, they can't be shown to Mr. Pedersen because then we proceed to disclose National and Continental to Mr. Pedersen. They will be shown to me and I will make some appropriate announcement with respect to it that I don't think will prejudice anyone. That will go in the record, and at the

same time the other figures will be sealed in the unlikely event that they ever become necessary.

By Mr. Johnson:

Q. Mr. Tolton, would you turn to the——

The Court: May I ask you this, on these tabulations, gentlemen. They are all done now in the first group of charts actually on the original exhibit in evidence. Very good.
[fol. 3164] Mr. Johnson: The original exhibit under discussion,

The Court: Yes, you are right. 800 for identification, not yet in evidence.

Q. Would you turn to the chart relating to food, wide-mouth.

The Court: That is page 17.

Mr. Johnson: I have a different numbering system since I am going by the old one.

The Court: Yes, page 55.

Q. Mr. Tolton, why did you include packers' tumblers with wide-mouth food containers?

A. Well, in the category of packers' tumblers were items that, well, such as peanut butter and other items like that, could be incorporated in the food field.

Q. The Census categories that we have been discussing do not include packers' tumblers with food containers, do they?

A. That's right. They carry them separately.

Q. So this is just your idea; is that correct?

A. Well, yes, in the sense that they are in the chart.

Q. And packers' tumblers are used for a great number [fol. 3165] of things, other than food, are they not?

A. I really don't know. I really don't know.

Q. For example, candles for religious use.

A. In packers' tumblers, you mean?

Q. Yes. Is that one of the big uses for them?

A. I am not familiar with it.

Q. You just added them into food without regard to what they were used for; is that right?

A. Yes. In conversation with others, we developed it, and that is it. I might add this, Mr. Johnson, that in the GCMI

tables, it is my understanding that Hazel-Atlas has included them in the food line, which is one reason why we went to the lengths we did.

Q. Do you know that they did?

A. Well, I assume a little—yes, it is true. It will only take a moment to look.

The most I can say here is packers' tumblers is not considered separately in the GCMI figures. I would better hold to that.

Q. Would you turn, Mr. Tolton, to the first table in your category II, headed "Metal Can Shipments." There is a note 1 that says that this total—that is, the total of short tons of metal can shipments—includes firms making cans for their own use.

[fol. 3166] A. Yes, that's right.

Q. Then you have selected three companies as the leading three companies?

A. Yes, that's right.

Q. Do you know whether those are the three leading companies in terms of tons of steel used in making metal cans in the United States?

A. From all that I have read and seen in industry surveys and that sort of thing, these are the leading manufactures who produce for sale.

Q. But not necessarily the leading three companies of the total industry, as you have defined it here; is that correct?

A. Well, if you are incorporating captive plants, I could not be sure.

Q. Well, you say that it includes captive plants, don't you?

A. You are right.

Q. Now, before I leave this section, Mr. Tolton, do you know if the Census Bureau publishes anywhere the end products which are included in these various end product categories?

A. I am not sure I quite understand you, but do you mean——

[fol. 3167] Q. Let me rephrase the question: Do you know if the Census Bureau anywhere publishes lists of the end products which are included in the various categories of either glass containers or metal cans?

A. Well, in the sense that it—like census of manufac-

turers in the canning field, there is an attempt to break it down into cans and glass, into some product items.

The Court: I do not think that is what Mr. Johnson asked you.

You were not asking about cans and glass, were you, Mr. Johnson?

Mr. Johnson: No, sir. I was asking about the end products which are included in the various groupings of glass containers for metal cans.

Q. For example, is there any place that I could go to determine from Census sources whether hair shampoos would be classified as toiletries and cosmetics or as health and medicine items?

A. I am not aware of any definitions that—I mean, that would define it in terms that way, no.

Q. Would you turn to the next section?

A. Three, that is?

Q. Yes. I believe you have a different category grouping [fol. 3168] in these charts than you do in section 2; is that right?

A. That's right. One is in tonnage and this is in units.

Q. There are also different groupings, are there not?

A. Yes, sir.

Q. Why are they different?

A. Well, these conform to our tables. The others conform exclusively, I guess I might say, to the Census categories.

The Court: These are simply, as you put them in, Mr. Tolton, talking about group 4, visual presentations of the material entailed; is that right?

The Witness: In large measure, your Honor. There might be a little divergence here from chart to chart, but I think in large part that is right.

By Mr. Johnson:

Q. Now, these tables are made up by this conversion process which Mr. Finn described to us; is that right?

A. That's right.

Q. And being so constructed, they ignore any difference in product mix in different parts of the United States, do [fol. 3169] they not?

A. Yes, if that is—that's true.

(Defendants' Exhibit Z marked for identification.)

Q. Is Defendants' Exhibit Z for identification the document which you referred to as your source material for the chart on page 29?

A. 39.

Q. 39?

A. 39. That's right.

The Court: What is that?

The Witness: This is Facts for Industry from the Census Bureau metal can survey for 1956, series M-75-D-06.

The Court: In other words, this is the same type of document for 1956 as 1203 is for 1959; is that right?

The Witness: That is right.

By Mr. Johnson:

Q. Now, if you will look at this Defendants' Exhibit Z for identification, you will see that the total shipments for 1956 were 4,700,000 tons. Do you see that?

A. Yes.

[fol. 3170] Q. In the upper left-hand corner?

A. Yes.

Q. And of that total tonnage, you will notice that 1,600,000 was in the fruit and vegetable category; is that right?

A. Right.

Q. So that would be about one-third for the country as a whole, would it not?

A. Roughly speaking, that's right.

Q. Now, if you will look on the next page, table 2 of Defendants' Exhibit Z for identification, you will see that the——

The Court: Have you got a copy of that for me, Mr. Johnson? Without it I can't follow your examination at all.

Mr. Johnson: Your Honor can use this one.

I am sorry, I should have referred to table 3 in my last question instead of 2. That is on the back of the exhibit.

The Court: All right. I have it.

Q. (Continuing) —you will notice there that the total for

fruits and vegetables in the West is 666,000 out of one million one.

A. Yes, I see.

[fol. 3171] Mr. Johnson: Do you follow that? There is a figure given toward the bottom of the page at Figure 3, your Honor, for the West.

The Court: Yes, I have it.

Q. So that indicates that about half of the tonnage in the West was for fruits and vegetables?

A. That's right.

Q. So that your method of treating the product mix as if it were the same all over the United States results in a distortion, does it not?

A. Not for the whole United States. For a region.

Q. Well, in making your table you have assumed that the product mix was the same for the whole United States, did you not?

A. Yes. But East, West, North and South are all added together to make the total product.

Q. The total?

A. The total, yes.

Q. With the result that you have assumed the same product mix throughout the United States?

A. Yes. To that extent, yes.

Q. Well, in this very large category of——

The Court: Now, wait a minute. In giving the total for [fol. 3172] the whole United States, you did not try to break it down into any particular differences in product mix in any given section of the country, did you?

The Witness: Well, we have like a food category, if I understand your Honor, where we have east and west breakdowns. I mean east of the Rockies and west of the Rockies.

The Court: Is that reflected on some of your tables here? Yes, I see it is. Now, I will go on further.

Is your question directed now at the first table, this general table?

Mr. Johnson: No, sir. It is the second one.

The Court: Oh, I see. All right.

By Mr. Johnson:

Q. And all through these east and west tables you have assumed a uniform product mix, have you not?

A. That's right. For this given class of food, beer—I guess I haven't gone that far in the charts, but I mean that sort of a breakdown. That's right.

Q. Would you look, sir, at the table headed "Total Metal Container Shipments, 1955, All Types East of the Rockies." [fol. 3173]

A. Yes.

Q. And following that, there is a table of notes.

A. Yes.

Q. And this gives some conversion factors. Are these new and different conversion factors from those we have been talking about here the last couple of days?

A. These are the same that appear in the tables.

Q. Are these the same conversion factors that appeared in the tables?

A. Yes, I would think that's right, yes.

Q. Can you say that they are or that they are not?

A. Well, let me take just one moment and I will verify that.

This is folder B and deals with the east-west breakdowns. And this is page 4 in folder B and has the breakdown "Food Containers, Beer"——

The Court: Page 4. What table is that?

The Witness: Just page 4. The instructions or notes.

A. Food containers, it has 9,237 in the tables and 9,237 in the chart sources. 10,161 for the beer containers; 10,161 in the chart source.

Soft drinks, 11,167; 11,167 in the soft drinks.

[fol. 3174] And non-foods, 7,681 in the table, and 7,681 in the charts.

Q. So they are the same?

A. Yes, they are the same.

Q. Would you turn now to your category VI.

A. VI?

Q. Would you tell me what this chart is supposed to be, looking at the first chart in the section?

A. From this document that was supplied to us from Continental Can, which was designated "Sales to Key Cus-

tomers and Suppliers for the Years '56 and '57," we looked into it as a series of breakdowns into metal containers. I think it has Hazel-Atlas by name and many other types of containers or packaging—whatever you want to call it—and wherever—and it shows the customer to whom they made sales, and from that, wherever it appeared from the metal—I guess the metal division or the metal container division—I would have to look at it precisely, in the Hazel-Atlas columns. There appeared a column "Customers"—Borden Milk Company, for example. If it appeared in the metal division and the Hazel-Atlas division, we considered that a common customer.

[fol. 3175] Q. Now, your note in this table says, "Source: In answer to government interrogatory."

Now, this document was never given as an answer to an interrogatory, was it?

A. I would have to check with other authority, but my impression is that here is a copy of the document which has had P-3079 written on it.

Q. Do you know the difference, sir, between an answer to an interrogatory and a document produced on motion to produce?

A. I am afraid—well, I have heard of both, but I do not know the technical, legal language.

The Court: Well, is or is not the source of this material VI an answer to an interrogatory?

Mr. Johnson: No, sir, it is not. It was produced on motion to produce.

The Court: And what was produced?

Mr. Johnson: The document referred to.

The Court: What is it?

Mr. Johnson: Would you mark this for identification, please?

(Defendants' Exhibit AA marked for identification.)

[fol. 3176] Mr. Johnson: Your Honor, I am about to go into a rather difficult cross-examination, and perhaps you would want to follow with Defendants' Exhibit AA for identification.

The Court: Now, it is understood, is it, that Exhibit AA for identification is a document supplied by Continental

Can to the government in response to what, a notice to produce?

Mr. Johnson: Yes, sir. It was not in answer to an interrogatory.

The Court: What did the notice to produce ask for, this specific document?

Mr. Johnson: No, sir; it did not. It was, if I may say, one of these typical antitrust motions to produce.

Mr. Johnson: I object to that, your Honor. I object to that slandering of the Antitrust Division.

The Court: All right.

Mr. McManus: I can tell you exactly what it was, if he can't.

The Court: All right, let's not get into this sort of controversy, gentlemen.

Tell me what they ask for.

Mr. Johnson: It was a very broad motion to produce, that [fol. 3177] was worked over here in this court several times, I believe, before your Honor was assigned to this case, as a result of which the defendant produced a very large number of documents, of which this was one.

By Mr. Johnson:

Q. Did anyone ever make any representation——

Mr. Johnson: I withdraw that.

Q. Is Defendants' AA for identification a document to which you referred in your note?

The Court: Without interrupting the flow of this examination, before we get to this somewhat complicated document, I'd like to understand, Mr. Johnson, if you can tell us, or the witness can tell us, just what these tables are supposed to show? I have read the original notes here, but let's take the first customer on page 1, which I will not name, I will not name him unless Mr. Pedersen will absent himself, but there is a figure 2, that is, for 1957, and then there is a figure 1 under "metal" and 1 under "fiber drum corrugated box"; what does that figure 2 mean under "fiber corrugated box" and 1 under "metal"?

Mr. Johnson: Well, without getting into a question which

I am going to have to refer to later, the question of round-
[fol. 3178] ing of figures——

The Court: Yes, well, this says——

Mr. Johnson: —I would indicate that one division sold a thousand dollars of merchandise.

The Court: That would be a thousand dollars of metal and a thousand dollars of fiber drum materials to that customer?

Mr. Johnson: That is right.

The Court: So that we go down here to customer 9, under 1957, there is a figure of 1963, that would mean that for that particular company, customer, during 1957, $1,963,000 worth of merchandise was sold, and it was all metal cans?

Mr. Johnson: All from the metal division.

The Court: All from the metal division.

Mr. Johnson: Yes, sir.

The Court: All right, that will give me a start anyway.

Mr. Johnson: I think that for a moment, your Honor, the witness needs to see that copy in order to answer my last question.

The Court: All right.

Mr. Johnson: Then we will give it right back to you.

[fol. 3179] Q. My question is, was this Defendants' AA for identification the document which is referred to in your note as the source of this table?

A. It is.

Q. Was any representation ever made to you, Mr. Tolton, that the information in this document was accurate?

A. Well, other than what appears on the second page here, as underscored by the sales department itself in its notes.

Q. Which indicates that there might be a considerable amount of inaccuracy; is that right?

A. Yes. There is a sentence here which says:

"This method of producing a Key Customer Report has the advantage of virtually eliminating manual errors in tabulating, but the data is still only as good as the basic information, which is dependent on accuracy of coding invoices."

Q. And do you know how figures were rounded in this document?

A. No, I'm not familiar with the rounding process, Mr. Johnson.

Q. Now, you will note throughout the document there are a number of figures, figure 1, which stands for a thousand [fol. 3180] dollars?

A. Yes.

Q. Now, do you know what figures were rounded to get that number?

A. I do not, no.

Mr. McManus: I object. There is nothing to indicate in this document to me that any of these figures have been rounded.

The Court: Well, it is quite plain to me that from just an examination of page 1, that you didn't sell precisely a thousand dollars worth, you didn't sell everything without any dollars less than a thousand and any cents.

Mr. McManus: I am not too sure how Continental Can sells, but I will take it.

The Court: Well, if that isn't so, you have got to show me differently.

Q. Did you make any inquiry about the rounding of figures?

A. No.

Mr. Johnson: Oh, I am sorry, I don't believe I had an answer to the last question.

(Record read.)

Q. Did you make any inquiries?

[fol. 3181] A. Not of Continental Can.

Q. Do you know whether sales were omitted entirely if they were less than $500?

A. I do not know.

Mr. McManus: Your Honor, same objection. I am not sure this document shows that anything has been omitted under $500.

The Court: Well, all he asked him is whether he knew or not.

Mr. McManus: I am sorry, your Honor.

The Court: Overruled.

Q. Now, if sales under $500 were omitted from this document, there might be a number of customers which were shown as common customers for one year and not for another, when for a fact there might have been nearly the same amount of sales in both years?

A. It is possible, yes, you know, if that is the breaking point, I mean, as you have suggested.

The Court: Let me ask you, let me ask Mr. McManus, please, what you say, Mr. McManus, the table on page 85 is designed to show?

Mr. McManus: It is designed to show, your Honor, that in 19—approximately at the time of merger, that Continental Can Company and the Hazel-Atlas—the metal divi- [fol. 3182] sion of Continental and the Hazel-Atlas division had approximately 200 key customers. That is my interpretation of it. It is a little bit under 200. I don't have the exact number here, your Honor, but it is approximately 200, and that in 1957 they had increased that, so that they were up over 200.

The Court: You mean there is no showing here as to how many key customers they both had? For all that appears here, they each might have had 25,000 key customers.

Mr. McManus: From these documents we ascertained that there are approximately 200 key customers, your Honor—excuse me, excuse me. Did I say "key"? If I did, I withdraw it—common customers. I have been using the wrong word.

The Witness: Within the key customer list.

Mr. McManus: Within the key customer list, there were 200 customers that would have been common customers.

The Court: Well, how many customers are there? Is there anyplace that shows it?

The Witness: It explains it in the——

Mr. McManus: In the succeeding——

The Court: I know the explanation is in there, but I am [fol. 3183] talking in the way of charts.

The Witness: You mean total customers? No, there is no chart that shows the total customers.

The Court: Or total key customers?

Mr. McManus: No, your Honor, no, but only in dollar value.

The Court: All right.

By Mr. Johnson:

Q. Now, do you know if there is a single instance shown in this document of a customer who became a customer of both the metal division and the glass division for the first time in 1957, in other words, who became a common customer of these two divisions for the first time?

A. In 1957?

Q. Yes.

A. I would have to go through the document to check it through.

Q. As I understand Mr. McManus, his interest in this chart is to show the increase in the number of common customers; is that a correct statement of what you think this chart is designed to show?

A. Well, it lends itself that way, yes. That is one of the facets of it.

[fol. 3184] Q. But you don't know offhand whether there is one single instance in this book of a customer who became a common customer for the first time in 1957?

A. I could by going through the book, I could tell.

Q. But you can't tell that from your chart?

A. No, I can't tell that from the chart; that's right.

Q. Now, can you tell me if the customers who are included in that column of the chart marked 1956 are the same customers as those included in the bar marked 1957?

A. No, because I couldn't tell whether a new one came in or an old one was lost, or just, you know, or how that works out.

Q. There might be entirely different people?

A. It is possible; highly improbable.

Q. Why do you say it is highly improbable?

A. Because I think you find as you go through that there are many that are common to both years, or a number of them.

Q. Now some of my questions are going to relate to the other tables in this group, also; and if you will look at the value of common customer sales, next table, I want to ask [fol. 3185] you if you made any analysis of the amount

which was sold by the metal division in 1956 to those customers, who accounted for the $178,000,000 in 1957?

A. You mean in the way of comparing them?

Q. Yes, sir.

A. No, I didn't in that respect.

Q. So that it is not safe to draw the implication from this that the persons who bought the $178,000,000 in 1957 are the same persons that bought the $147,000,000 in 1956, is it?

A. Without looking at the document, I couldn't be sure.

Q. And the same thing is true with respect to the glass container customers?

A. That is true.

Q. Is that correct?

A. Yes, sir.

Q. Now in making up your chart of value of common customer sales, did you give any effect to price increases?

A. Not over the two-year period, no.

The Court: These common customer charts bear no relation to what end use the common customer might put the [fols. 3186-3272] product, do they?

The Witness: No, your Honor, they do not.

The Court: For all that appears here the end uses for which metal or glass are sold to the common customer might be entirely different; would bear no relation one to the other?

The Witness: That is possible, yes.

Mr. Johnson: Now at this point, your Honor, in order to——

The Court: Well, at this point, Mr. Johnson, it is 25 minutes of 5, and it would seem to me that this might be an appropriate time to take a recess until tomorrow morning. However, if there is something that you want to finish up tonight, so that when we stop we don't leave something hanging in the air, maybe you can go ahead for awhile longer.

Mr. Johnson: No, this is a convenient place, as convenient as any.

* * * * * * *

[fol. 3273] JULIUS H. TOLTON resumed.

Mr. Kostelnik: Your Honor, since I believe any representation on our part is no longer needed, since I assume I am no longer exactly a welcome guest, may I be excused?

[fol. 3274] The Court: Yes, very good, sir. It is a little difficult to keep track of who is supposed to be here at any given moment, but I think now you are excused, and not only excused, but I must ask you to leave.

Mr. Kostelnik: Thank you, sir.

The Witness: If your Honor please, for just a moment, yesterday there was a problem in our chart book, the second section, which dealt with disclosing the shares or per cents pertaining to American, Continental and National Can, and as I understand, we were to reveal to you but not to the remainder, to the defense counsel, those shares as they appeared in the pages in the chart book, section 2.

So in order to bring that about, we have set them out in typewritten form, and this will be the Court's copy, and then we will have one for ourselves, and these will relate to the given pages named there as to the shares of American, Continental and National Can Company.

COLLOQUY BETWEEN COURT AND COUNSEL

The Court: Well, first of all, we will mark this as a Court's exhibit.

Mr. McManus: That's right.

(Marked Court's Exhibit 13 for identification.)

[fol. 3275] Mr. Greenberg: I would like the record to show that we made an original and one copy, and no other copy.

The Court: Yes. I told you yesterday, after I got these confidential figures, which will be marked as a Court's exhibit and sealed for purposes of the record—at least at this time—I will try to relate these figures to the various charts in some manner that might be helpful in terms of solving the defendants' problems as to what the breakdown was.

I wonder if I can approach it this way: For example, let us take the chart on page 24, which is entitled "metal can shipments, '55", "total industry", "leading three com-

panies" and "all others" et cetera. I think I could say this to you—and I will ask for your comments after I make this statement—that the American Can's share of the red line or the top line denominated as "leading three", which amounts to 76 per cent, according to the legend—American has the largest share, Continental has the next largest share, which is not very substantially less than American's share, and the share of National Can is very substantially less than either of them.

Now, is that sufficient for your purposes, gentlemen?

[fol. 3276] Mr. Johnson: Yes, sir. I have no difficulty with that. I have, as I said yesterday, objections based on this method of treating these figures, that is, this method of portraying.

The Court: Yes. That is, you are not——

Mr. Johnson: I have no comment otherwise to make on it.

The Court: All right. I will do this chart by chart as I go along.

I will then go to chart 25, 1955 metal cans, fruit and vegetables. The share of American Can is the largest. The share of Continental Can is somewhat less than the share of American Can. The share of National Can is very substantially less than either of them.

With respect to 26, evaporated and condensed milk, as I understand it, the figure represents only Continental, and there are no figures for either American or National included.

Mr. McManus: Your Honor, this, if you will notice, is because looking at the chart—do you have it in front of you?

The Court: Yes.

[fol. 3277] Mr. McManus: Percentage wise it doesn't amount to a tenth of a per cent. In units there is just a little bit in difference.

The Court: All right. A shade is going to make no difference.

Mr. McManus: That is right, your Honor.

The Court: It does not appear on the list that was furnished to me.

Mr. McManus: That is right. In the units.

The Court: All right.

Now we go to 27. In 27, the share of Continental is largest. The share of American is less than that of Continental.

The share of National is very, very substantially less than either, a relatively small proportion.

With respect to 28, the share of American is considerably larger than the other two, and I think I can go so far as to say represents more than half of the total. Where I do not indicate that there is more than half the total, it means that there is less than half the total.

The share of Continental is considerably less than the share of American, and the share of National is minimal.

[fol. 3278] As to table 29, which is "fish and sea food", the share of American is largest and in excess of 50 per cent of the total. The share of Continental is considerably less than that of American and represents the balance of the total. There are no figures for National in that bar of the chart.

As to 30, "coffee", American has very much the largest total, considerably in excess of 50 per cent. Continental has all of the balance. There is no figure for National in that total.

As to 31, the figure of American represents by [redacted] largest proportion of the total and is considerably in ex[redacted] of 50 per cent. The share of Continental is very substantially less than that of American and accounts for all but a minimal amount of the balance, the minimal amount being ascribed to National.

With respect to chart 32, "beer", American has the largest total, which is slightly in excess of 50 per cent. Continental has somewhat less than American, and National has a total which is very considerably lower than either of the others.

With respect to chart 33, "pet food", the largest figure in that total is that of Continental. The figure of American [fol. 3279] is somewhat less than that of Continental, and the figure of National is somewhat less than American.

As to 34, which is "oil, open top", the largest figure, the largest proportion is that of Continental. The figure of American is slightly lower than Continental, and National has the balance, which is substantially smaller than either of the other two.

35, "soft drinks", American has the largest proportion of the bar total. Continental's total is somewhat less than

American's, and National Can's total is considerably less than that of Continental.

As to 36, "all other food, soap, et cetera", American has the largest total. Continental has considerably less than the total of American, and National has a minimal amount.

With respect to 37, American has the largest proportion of that total. Continental has considerably less, and National has substantially less than Continental.

All right, gentlemen.

Now, Mr. Clerk, will you be good enough to take Court's Exhibit 13 for identification and seal it.

[fol. 3280] The Clerk: Yes.

The Court: And put the title on the sealed envelope, so we will know what it is.

The Clerk: Yes, sir. May I ask one other thing, your Honor: what shall I do with it? Shall I have it impounded or put it in the vault?

The Court: It will be impounded. It will be held with the papers in the case. I do not think we will have to put it in the vault, I am frank to say. It can be left in your custody, Mr. Clerk, and you can do whatever you think will keep it safe, without going to extremes.

Cross-examination.

By Mr. Johnson:

Q. Mr. Tolton, just before we adjourned last evening, we were discussing the tables or the charts under VI in your book of charts. Do you have before you your source material, the volume which was identified as Defendants' Exhibit AA for identification?

A. I do.

Q. And would you look at page 127 of the source book? They are numbered on the upper left-hand corner.

A. 127?

Q. 127, yes. Do you find the heading there, "Union Carbide"?

[fol. 3281] A. Yes. I do.

Q. And under that there are certain subsidiaries of Union Carbide, are there not?

A. Yes. That is right.

Q. That entry shows sales of $1,000 by the Glass Division in 1957 to Linde Air Products, does it not?

A. Yes. That is right.

Q. Nothing in 1956; is that correct?

A. To Linde Air Products?

Q. To Linde Air Products.

A. Yes.

Q. And that entry also shows sales by the Glass Division in 1956 of $1,000 to Visking, does it not?

The Court: To what?

Mr. Johnson: Visking. It is carried over on the following page.

The Court: All right.

Q. (Continuing)—and it shows no sale by the Glass Division to Visking in 1957; is that correct?

A. That's right.

Q. The total indicated sales of the Metal Division for the Union Carbide for 1956 is $209,000; is it not?

[fol. 3282] A. That's right.

Q. Is that amount of $209,000 included with your 1956 total?

A. It is, because we considered only the parent company and did not go into the subsidiaries.

Q. So the $209,000 would be included?

A. Yes.

Q. Would it not?

A. Yes. That's right.

Q. And your table also includes the $428,000 of sales by the Metal Division in 1957; is that correct?

A. That's right.

Q. The result of including those two figures shows an increase of somewhat over $200,000 in your Metal Division sales between the two years; is that correct?

A. That's right.

Q. And that is reflected in your tables?

A. That would be, yes.

Q. The only reason that that increase of $200,000 is shown on your table is because of these two separate $1,000 sales by the Glass Division to separate subsidiaries of Union Carbide; is that true?

[fol. 3283] A. That's correct in this instance. That's right.

Mr. Johnson: Do you follow, your Honor?

The Court: Oh, yes.

Mr. McManus: Which chart are you talking about, if I may?

The Court: 86, page 86. Common customer sales, we are talking about.

Q. Now, will you look on page 44 of the source book; do you see the heading "Falstaff Brewing"?

A. Yes.

Q. Now that shows no sales by the Hazel-Atlas Division in 1956, does it?

A. That's right.

Q. And in the Metal Division column it shows sales in 1957 of about $16,000,000.

A. Yes, that's right.

Q. And about $13,000,000 in 1956.

A. That's right.

Q. Now isn't it true that the way you constructed your chart, that no part of the sales made to Falstaff in 1956 was included in your total metal division sales?

A. That's right.

Q. On your chart?

A. That's right.

[fol. 3284] Q. And isn't it true that the way you constructed your chart, all of the $16,000,000 for 1957 was included?

A. That's right; that's right.

The Court: Well, now, wait a minute. Let me go back.

These say that there was nothing included for Falstaff in '56; right?

The Witness: That's right; that's right.

The Court: And because Hazel-Atlas sold them a thousand dollars worth of merchandise in '57, you upped this whole total by almost $16,000,000; is that right?

The Witness: Yes, in relation to the metal, on the metal: that's right.

By Mr. Johnson:

Q. Now, sir, will you look at page 112 of the source book, under the heading "Sinclair Oil and subsidiaries," at the very bottom of the page. Now that shows Metal Division sales of $3,331,000 for 1956, does it not?

A. That's right.

Q. And the way you constructed your table, none of that $3,331,000 would be in your 1956 metal sales; is that correct?

[fol. 3285] A. That's right.

Q. Now you will see that the following year, 1957, metal sales indicated as $2,818,000.

A. That's right.

Q. For 1957. Were those $2,818,000 included in your '57 table?

A. They would be, yes.

Q. So the result of $1,000 sales by Hazel-Atlas division is that you increased the metal sales figure by $2,818,000.

A. That's right.

Q. Notwithstanding the fact that the Metal Division sales to Sinclair in that year were about half a million dollars less than they were in the preceding year?

A. That's right.

The Court: The preceding year's figure, $3,000,000 plus, was not in the '56 bar?

The Witness: That's right.

Q. Do you have any idea what products were sold by Hazel-Atlas to Sinclair Oil?

A. No, I don't.

Q. Do you know that Hazel-Atlas sold and sells other items, other than containers?

A. Perhaps. I would accept your word.

[fol. 3286] Q. Do you know that the Metal Division of Continental sells other things than containers?

A. Yes.

Mr. Johnson: Your Honor, I could go on, but I am aware of your admonition.

The Court: Yes. I take it that if you went on you would not be doing anything else than multiplying things of this nature.

Mr. Johnson: Yes, sir.

Mr. McManus: Your Honor, I would not like the inference to be made, because on redirect I think we can show that lots of these customers are a big bulk of common for each year. I am not saying that Mr. Johnson can't pick out ten, but I think going beyond ten, much beyond ten, would be very difficult. That is my point.

The Court: All right.

Q. Would you turn now, Mr. Tolton, to your chart under your heading IX. That is "United States shipments of screw, thread and lug type closures."

A. Yes.

Q. "Tin mill products."

A. Yes.

Q. Do you know if tube caps are made of tin?

[fol. 3287] A. What?

Q. Tube caps are made of tin? Are they tin mill products, I should say?

A. I wouldn't know, sir.

Q. So you wouldn't know whether or not they were included in this figure "U.S. total," is that true?

A. I wouldn't know other than what the census indicates.

Q. Would you look at the next table in that group? That is headed "Shipments of Crown caps."

A. Yes.

Q. In caption you have "the remaining segment of United States total." Will you tell me what you mean by that?

A. Well, the census figures give what you call a "U.S. total."

Q. Excuse me. "U.S. total" of what?

A. With respect to Crown caps.

Q. I see. So what you mean to say is "U.S. total of Crown caps"; is that what you mean to say?

A. That is what I had in mind.

Q. Would you turn to chart under section VII?

A. VII?

[fol. 3288] Q. How did you make up this chart? I am looking at the first chart in the section.

A. All right. The basic information was secured from the Internal Revenue Service? They have a Division of Statistics, which furnishes—well, not to everyone's use—but they call it their source book of information, which is open to scholars and other people who find it essential to use it.

They develop what they call industry statistics, generally following the classification or standard industrial classification for that which relates to industries, and in this instance this set of figures from them related to tin can and other tinware industry, as it is called.

Q. What do you understand that term to mean?

A. Well, I have the definition here about that, so I'd just as soon if I could refer to it.

Q. I have no objection.

A. I am reading now from "Instructions for coding industrial activity.

"Corporation income tax returns, Form 1120.

"U.S. Treasury Department—Internal Revenue Service—Statistics Division coding unit.

"May, 1956 (revised).

[fol. 3289] "Publication No. 287."

And I have on page 24, at the top:

"Major group 34—fabricated metal products except ordnance, machinery and transportation equipment."

Now, within that major group 34 there is a 340 group, called "Tin cans and other tinware," and that says, defines it:

"Tin cans: beer, oil, milk, ice cream and general line.

"Other tinware (except household and hospital utensils)."

That is the definition.

The Court: Mr. Johnson, I have to take a telephone call, so we will take a short recess.

(Short recess.)

The Court: I would like to have the last question and answer, please, repeat it.

(Record read.)

By Mr. Johnson:

Q. Will you look at the first table under section II of your chart.

A. First table?

Q. Under II of your chart book.

A. Oh.

[fol. 3290] Q. In the caption of that chart you refer to "total industry," do you not?

A. Yes, yes, sir; I do.

Q. Now, the "total industry" referred to there, and the industry referred to in the caption of the first table under VII are not synonymous, are they?

A. I will answer your question just in a second. What I am looking for is the standard industrial classification numbers associated with the census material. I know it is in the 34 grouping.

The Court: You are talking about census material?

The Witness: Yes. He asked me, in the sense of comparison there, to see whether it was synonymous, and I was trying to check through my charts for industry material here to see if there was the same 340 grouping there. That was what he was trying to do.

Mr. McManus: Your Honor, I think we are getting very technical. If Mr. Johnson is trying to ascertain if on page 89 "tin can and other tinware," if there is something included within that group that is not included back on page 24, which says "metal can shipments," the government is [fol. 3291] willing to stipulate that there well could be and there probably is.

Is that what you are trying to get, Mr. Johnson?

Mr. Johnson: Yes, sir.

The Court: All right.

Q. So that with that stipulation the reference to industry is defined in different ways, is it not?

A. Yes. I am sorry if I misunderstood you.

Q. Now, looking again at this table, the first one under VII, isn't it true that if a company is included as being in the industry which is defined as "tin can and other tinware industry," its total sales, whether of tinware or not, are included in your table?

A. That's right. The point drawn is, their primary operation is the——

Q. So that if a company made cans and something else, but if the Internal Revenue people decided that its principal

business was cans, all of its sales would be included in your figures in this table?

A. That is right.

[fol. 3292] The Court: Let me ask you this: Assume that a company made some other form of tinware than cans, and no cans. Would it still be included within this?

The Witness: If it follows within the definition.

The Court: If it falls within the definition?

The Witness: Yes, your Honor.

Mr. McManus: Excuse me. I don't want to interrupt, but are we referring back to page 89? Because you are talking about sales, and that's an asset.

Mr. Johnson: Unfortunately, this table was changed after I had the page numbers, so I do not have the page number.

Mr. McManus: Could you just give the definition of the title?

Mr. Johnson: Number of firms and gross sales in industry.

The Witness: It is page 89.

By Mr. Johnson:

Q. Now, if the Internal Revenue Service decided that a company's principal business was something other than [fol. 3293] making cans, but it made cans, would its sales be included in this table?

A. No, it wouldn't be incorporated in this classification.

Q. I think we have had testimony here that Sherwin-Williams Paint Company makes cans. Would its sales figures be included here?

A. I would think not. I would think if Sherwin-Williams primary sales were paint, it would probably fall into the paint category.

Q. Would the same thing be true of Campbell Soup Company?

A. Yes.

Q. Now, Crown Cork & Seal is the largest crown manufacturer in the United States, is it not?

A. I understand that it is.

Q. And it also makes cans, does it not?

A. I think it makes some.

Q. Are its sales included in these gross sales?

A. Well, I haven't studied Crown Cork & Seal enough to

know which its primary operation would be, but whichever it is, I assume it would fall into that classification.

Q. So you can't tell whether their figures are in here [fol. 3294] or not?

A. No, I can't.

Q. In the column to the right of this page, there is the figure 1407. Now, I understand from your legends that that relates to gross sales of firms having over $100 million in assets; is that correct?

A. That's right.

Q. Would Continental Can's sales be in that group?

A. It would.

Q. And would that 1407 include all of Continental's can sales?

A. It would.

Q. Paper, glass, metal, everything?

Mr. McManus: Your Honor, just a clarification. I think I may be wrong, but is that a sales figure on page 89, or is that an asset figure?

The Witness: No, that is a sales figure on page 89. It says by asset classification but deals with gross sales.

The Court: Grouping is by asset classification. The bar is a sales bar.

Mr. McManus: Thank you, your Honor.

[fol. 3295] By Mr. Johnson:

Q. Now, Mr. Tolton, you have told me that captive manufacturers——

The Court: Wait a minute, before we leave that subject.

By the Court:

Q. 1407 is 1,407,000,000?

A. That is right.

Q. And that would include, you say, all Continental sales?

A. It would, your Honor.

Q. Would it include all American sales?

A. Yes.

Q. I understood Continental—am I wrong on this, this figure?—that Continental's sales in the course of a year were in excess of a billion dollars.

A. That's correct, but this is for 1956.

Q. And I also understood that American's sales, at least at this point, were in excess of a billion dollars?

A. That's correct.

Q. But you say plainly, these two on the red bar in '56 include American and Continental?

A. That's right, and for each year previously.

[fol. 3296] Q. And you say that their total sales at that point, overall, including glass, cardboard, seals, everything, were $1,407,000,000, roughly?

A. That is right. That is round.

Q. Yes.

A. That is true.

By Mr. Johnson:

Q. Now, if I understand you correctly, you say that captive manufacturers, who make cans for their own use, whose principal business is something else, are excluded from this table.

A. That is right.

Q. And non-tinware sales are not included; is that right?

A. Yes, I thought you said other tinware.

Q. Now, with those inclusions or exclusions, this chart shows nothing about other can companies or about trends in the industry, does it?

A. Well, except by definition in standard industrial classification and how it was utilized by the Internal Revenue Service.

Q. All of the changes between these three columns, as far as you know, could have been accounted for by something other than can sales, could they not?

[fol. 3297] A. Only in the respect that still its primary operation was tin cans. That's the main thing. If it slipped over where it became more of some other type of thing, it would shift into——

Mr. Johnson: I don't think you understood my question. I wonder if I might have it again.

(Question read.)

A. Well, I still think I hold to my contention. I would say yes, as long as it didn't slip over then into having its

primary operation as something other than tin cans; that's all.

Q. All I am saying is, comparing these three columns, there are changes in those three columns.

A. Yes.

Q. All of those changes, from the first column to the second column to the third column, could be the result of increases in sales of things other than cans?

A. I am not trying to—I still hold to my contention. I mean, I agree it could happen as long as it didn't slip over into another category. In other words, let's say if Continental Can made $200 million of cans one year, and $100 [fol. 3298] million of other products, well, if its increase went to $300 million and somehow or other that was due to pasteboards, we will say, a great increase, then it would go over into the pasteboard industry.

Q. Let me clarify that. The difference between the bottom figure of the next-to-the-last column and the last column is 1459, is it not—no, I am sorry; is 459?

A. Yes, that's right.

The Court: 459 million.

Mr. Johnson: 459 million, that's right.

Q. Now, if a company that is included in the bottom part of both of those columns had increased its paper sales by $459 million between 1950 and 1956, and it still did not go out of its principle business, being can-making, all of that increase would be accounted for by that, would it not?

A. That would be true under that circumstance, that's right.

Q. Now, then, let me try something else. Suppose that a company had $400,000 in assets in 1946, in which of these columns would its sales be put?

A. It would be presumed—oh, well, in 1946 it would be in the top part of the column there, in the vertical line.

[fol. 3299] Q. Of the left-hand column?

A. Yes, that's right.

Q. Now, suppose that the same company had assets of $600,000 in 1956.

A. Yes.

Q. In which of the three blocks—I am sorry. If it had

assets of $600,000 in 1956. In which of the three blocks on the right-hand column would its sales be put?

A. It would be in the polka dot section there.

Q. In the second block from the top?

A. Yes.

Q. So, in other words, because that company had been successful in increasing its assets, your chart would show that the top block had decreased, would it not?

A. That's right.

Q. Now, Mr. Tolton, why did you select the years 1946 1950 and 1956 in making these charts?

A. Well, they were selected because 1946 was the first post-war year. '50 seemed to be about a mid-point, and '56 is the last information we were able to get from the Internal [fol. 3300] Revenue Service. They run about three years behind in their statistics of income.

Mr. Johnson: Would you mark this document, which is entitled "Corporation Income Tax Returns, Statistics of Income, 1956-57," as a defendants' exhibit.

(Defendants' Exhibit GG marked for identification.)

By Mr. Johnson:

Q. Defendants' Exhibit GG for identification is a volume that bears the imprint of the United States Treasury Department. Did you use this book in the preparation of your tables?

A. Well, ours was the original source book that was obtained from the Internal Revenue Service, that's right.

Q. I want you to look at page 135 of this book, which is the 1956-57 volume. You will note in the middle of the page the statement that "Beginning with 1951 a probability sample has been used as the basis of the tabulated data." Do you see that statement?

A. I see it there.

Q. Now, would that indicate to you that the Internal Revenue Service had adopted a different method of com- [fol. 3301] piling statistics between 1950 and 1956?

A. I notice here in an earlier year it says, "Beginning with 1951 a probability sample has been used as the basis

of the tabulated data," which would indicate that in prior years they had had a little different method.

Q. They counted one way before 1951—they had counted one way before 1951 and another way after 1951?

A. Yes. They had the experience of the previous years.

Q. So your table is based on two different methods of computing; is that correct——

A. In——

Q. —in that the probability sample has been used after 1951?

A. Yes, that's right.

Q. Now, the column on your left shows the total of 52 firms; is that correct?

A. That's right.

Mr. Hughes: On the right.

Mr. Johnson: I am sorry.

Q. The column on the right; a total of 52 firms.

Mr. Johnson: Will you mark for identification a volume [fol. 3302] entitled "Corporation Income Tax Returns, Statistics of Income, 1957 and 1958."

(Defendants' Exhibit HH marked for identification.)

Mr. McManus: What is that column—1946? Is that the one you are talking about?

Mr. Johnson: I am talking about 1956.

Q. While we are doing that, the column for 1950 indicates 86 firms. Is that correct?

A. Which column was that?

Q. The center column, 1950 column.

A. Eighty-six firms. That's right.

Mr. McManus: What chart are we on?

The Witness: We are on the same chart.

Mr. McManus: 89? All right.

Q. Now, I want to show you Defendant's Exhibit HH for identification, which is another volume, which bears the imprint "United States Treasury Department," containing statistics of income for 1957 and 1958. I want you to look at page 22——

Mr. McManus: Your Honor, I can't see the purpose of going into this. Does this refer to '57 and '58 income?

Mr. Johnson: It does, sir.

[fol. 3303] Mr. McManus: Our chart only relates to 1956, as far as I have been able to ascertain.

The Court: Yes, I know. But, because your chart refers to 1956 and stops there, that is no reason why he isn't, on cross, entitled to go into the material immediately before and after those years in order to test the validity of your chart.

Mr. McManus: All right, your Honor.

The Court: Overruled.

Mr. McManus: All right, your Honor.

By Mr. Johnson:

Q. If you will look at page 22, line 122, which shows "Tin Can and Other Tinware," looking at, first——

A. Yes, I have.

Q. Looking at the first column following that, which indicates the number of returns in that classification, for 1957——

A. You asked me how many——

Q. —will you tell me how many there are?

A. There were 96.

Q. There were 96 in 1957, so if you had carried your chart one year further, it would have shown that there were more companies than there were in 1950, would it not?

[fol. 3304] A. I assume so. I say that because whether the source book is different than this for some reason or other—that's the only exception I would have.

Q. Was that why you stopped at 1956?

A. I stopped at 1956 because that was the last they had in the source book data to offer us, and that seemed to be the year of the—that the merger was consummated, so that would be the reason.

The Court: How do you explain the fact, if at all, Mr. Tolton, that in 1950 there were, as I see it, 86 firms in this category, and in 1956 there were 52 firms in the category, and in 1957 there were 90-odd firms in the category?

The Witness: Well, the only thing I could think, possibly, is this: that there was the difference between primary op-

eration and whether Internal Revenue Service had additional information that there actually were more firms that made tin cans that wasn't their primary operation——

The Court: You just don't know?

The Witness: I just don't know.

By Mr. Johnson:

Q. Tolton, would you turn to your table under your caption VIII.

[fol. 3305] A. VIII? Yes.

The Court: This is the so-called prior acquisition documents?

Mr. Johnson: One of the prior acquisition documents, yes, sir. When I get through, I have a suggestion, or I would make it now, if you like, as to how to handle these.

My thought was that, since decision is being reserved on all of these tables, I could just as well complete my cross examination——

The Court: Oh, I think that's right, Mr. Johnson.

Mr. Johnson: —and this document can then be treated with the——

The Court: With the prior acquisition material that we will be dealing with perhaps on Monday.

Mr. McManus: Your Honor, could I say one thing, too, about this chart before we start?

The Court: Yes.

Mr. McManus: I agreed with defendants in a stipulation that their acquisition of a part or all of Fort Wayne Corrugated Paper Company was not to bear any relationship to this case, and I noticed the other day that in making up this [fol. 3306] chart that was placed on the chart.

Now, I would like to start for the record that we are willing to strike it or to state and ask you not to give any consideration to the fact that they might have acquired an additional interest——

The Court: Where does that appear—Fort Wayne Paper?

Mr. McManus: That is 1950, your Honor, and has to do with paperboard. It is the last one under that——

The Court: I see.

Mr. Johnson: Thank you, Mr. McManus.

The Witness: What other one was there? Was there——

Mr. McManus: That was the one.

The Witness: I see.

The Court: If that is so, I am going to take this Fort Wayne Paper Company and eliminate it physically from the chart at this time, so we are not bothered with that any more. Let me have your pen, please, Mr. Clerk.

Mr. McManus: Fine, your Honor. I am sorry that got on there.

The Court: All right. I have blocked out Fort Wayne [fol. 3307] Corrugated Paper Company from that chart.

By Mr. Johnson:

Q. Mr. Tolton, your caption relates to the container and related product field. What do you mean by the term "related product"?

A. Well, I think they make machinery and, if I am not mistaken, they have a machinery division and other things like that which would probably be used to, I mean, you know, make some of the products too that they sell, so I would consider that as part of the related operations.

Q. Well, sir, you made this table. Do you know whether you are mistaken or not?

A. Well, I think—I certainly have—I know I have knowledge that they purchased machinery and equipment and that sort of thing, I mean, through the merger program, or whatever you want to call it, through the years. I think that is—yes, I would say that is right.

Q. I want you to look down under the heading "1930s," the very last entry under that column. Do you see the name Canonsburg Coal Company?

A. Yes, I do.

[fol. 3308] Q. Can you tell me how that is related to the container field?

A. If I may have reference to the Government's Exhibit for identification 786, I think I can answer that.

Mr. Greenberg: I will give him the exhibits, your Honor, but I think Mr. McManus and I both agree we are getting into legal questions.

Mr. McManus: That is all right, he can answer that. There is no problem.

The Court: Let me ask you one thing before you go any

further. With the exception of the Fort Wayne Corrugated Paper Company, are there any domestic acquisitions of Continental Can Company, in the period covered by the chart, which are excluded from the chart?

The Witness: I am afraid I didn't quite understand.

The Court: Let me put it this way. This chart is entitled "Domestic Acquisitions of Continental Can Company in the Container and Related Product Field."

The Witness: Yes.

The Court: Now, I want to know whether the Continental [fol. 3309] Can Company, if you know, made any acquisitions during the '20s, '30s, '40s or '50s, with the exception of the Fort Wayne thing which we have just eliminated, which isn't shown on this chart.

The Witness: Well, I think we tried to exclude any acquisitions outside of the country.

The Court: All right. I understand that. This is domestic acquisitions.

Now, my question is whether there are any domestic acquisitions by Continental Can Company in the '20s, '30s, '40s or '50s which are not included in this chart, with the exception of the Fort Wayne.

The Witness: We tried to cover them all.

The Court: Then what is the point of putting in the "Container and Related Product Field"? Isn't this a chart of all acquisitions of Continental Can Company during this period?

Mr. McManus: Your Honor, could I answer that? Or are you asking the witness?

The Court: I am asking the witness at this point.

The Witness: Well, as near as I can say, your Honor—as near as we can tell, it slipped into this category or categories here.

[fol. 3310] The Court: As I get the impression reading the heading of this chart, to be perfectly frank with you, Mr. Tolton, there are some acquisitions that are not in this chart. But you say there is none as far as you know, except——

The Witness: In the domestic field, as near as I can.

The Court: In the domestic field. All right.

Mr. Greenberg: If the Court please, will the record show

that Mr. Tolton has before him an exhibit which is not in evidence. I just wanted to indicate that to you. It is G——

The Witness: 786.

Mr. Greenberg: G-786.

The Court: All right. What are we looking for at the moment.

Mr. Johnson: The relationship of Canonsburg Coal Company.

The Court: Oh, yes.

Mr. Handler: He is looking in the wrong place.

The Witness: I think that's right. 26. Thank you.

[fol. 3311] By Mr. Johnson:

Q. Now, sir, we have waited a long time for you to refer to your material. Will you tell us what relationship Canonsburg Coal Company has to the container field?

A. It says, "In January, 1934, Continental organized the Canonsburg Coal Company"——

The Court: What are you reading from?

The Witness: I am reading from Government's Exhibit for identification 786.

The Court: What page?

The Witness: Page 21—21 in the typed——

The Court: Typed 21?

The Witness: That's right. And it is No. 26 at the top of the page.

The Court: All right.

A. I will read the whole thing.

"In 1933 Continental purchased the Hazel Mines of Chartier Creek Coal Company"——

Q. Excuse me. Can't you answer the question without reading from this document?

A. Well, I wanted to get to the point. It says it is a subsidiary of Standard Tin Plate Company, to operate this property, and it was disposed of in 1941.

[fol. 3311a] I just went down the paragraph this way.

[fol. 3312] Q. You are reading about something, about mining rights covering 500 acres of coal, coal mining equipment; is that what you are reading about?

A. That's right, as a subsidiary of Standard Tinplate Company.

Q. And that was the Cannonsburg Coal Company?

A. That's right.

The Court: And as I read this number 26, it says "The coal mine was adjacent to the property then owned by Continental and was acquired as a source of supply to it"; is that right?

The Witness: I see that, yes, your Honor.

Q. Now, Mr. Tolton, under the column headed "1940s," there is a reference to Marco Chemicals, Inc.; will you tell me what relationship that has to the container field?

A. Well, that is also in this document. Do you know which number it is offhand, without my having to run through it?

Q. I do not, sir.

The Court: This appears to be——

Mr. Handler: It appears on typewritten page 29, and there is a new number 31. It is number 40, the top of the page.

[fol. 3313] A. It says "The company is engaged in the production of resins, plastic products and chemicals . . . is located in Sewaren, New Jersey." Then there is another one down there "and is the first step in entering the plastic field."

Q. And from that somehow you concluded that that was related to the container field?

A. Right. I'd have to say broadly, in the broad sense of the word, it is related.

Q. It is related?

A. Pardon?

Q. It is related to the container field?

A. Well, I can only say plastics ultimately have been made into containers. That is about as far as I could go on it.

Q. Do you know what kind of plastics Marco Chemical, Inc. was manufacturing?

A. No, I didn't.

Q. In whatever year it was bought?

A. I do not.

Q. When you referred to acquisitions in this table, you include acquisitions of machinery?

A. Yes, it did include machinery; that's right.

Q. So it is not all acquisitions of companies you are referring to?

[fol. 3314] A. Well, they were purchased from a company. I am not trying to quibble. I mean, that is—they had to buy them from somebody, and they bought them from a company, and it was the machinery purchased from that company.

The Court: I don't follow you, Mr. Witness. You mean to tell me that if Continental Can decided to acquire $5,000,000 worth of machinery from another company, it would be listed here?

The Witness: Yes.

The Court: Without purchasing the company?

The Witness: Yes, there is such instances.

The Court: All right, give me such an instance?

The Witness: Well, I think there is an Armour, if I am not mistaken—I just have to run down here.

The Court: Armour & Company, yes.

The Witness: So that was machinery, as I understand, and Owens-Illinois, that was machinery, or at least; at least I guess can making equipment from Owens-Illinois at that period of time.

The Court: That is when they bought the Owens-Illinois [fol. 3315] Can Division, wasn't it?

The Witness: Yes, that would it; that's right.

By Mr. Johnson:

Q. How about Clarkford Paper Company?

The Court: Suppose they bought in a year from some company in the open market $10,000,000 worth of machinery to refurbish a plant, and they ordered $10,000,000 of machinery from the XYZ Machinery Company to be made for it; would that be included here?

A. I would think not, for the reason that if XYZ Company made in its course of business machinery for them, that would not be related to an acquisition or acquiring of that type of thing.

By Mr. Johnson:

Q. Mr. Tolton, you have referred to a particular document here from time to time for information. Did you check the Department of Justice files for other information with respect to these acquisitions?

A. Well, I would say in the one that has been stricken there was some reference to it.

Q. I am not talking about that one.

A. Oh.

Q. I am not discussing that one.

A. All right. No, I don't think, I don't think I personally [fol. 3316] did. I don't think I did.

Q. You qualify that by saying you personally did; did you have it done for you?

A. No, I didn't. I put it this way: I came into the case a little later in the matter, and there had been some work done—well, I say work done, I mean, looking into the acquisition kind of program, I would say, and so to that extent I didn't personally look into these—into that element of it.

Q. Did you check the Department of Justice files to determine if the acquisition of any of these companies was encouraged by the Department of Justice?

Mr. McManus: Your Honor, I object to that question. I object to him asking a question which was put, because it is my position and the government's position that the Department of Justice doesn't encourage acquisitions. He has already said that he didn't look up any of this in the file.

The Court: That is your position, Mr. McManus.

Mr. McManus: Well, I would like to have it made clear for the record.

The Court: You say the Department doesn't encourage.

Mr. McManus: Yes.

[fol. 3317] The Court: All right, I will overrule the objection. You made your statement.

By Mr. Johnson:

Q. Will you answer the question?

A. Repeat it, please.

The Court: Yes, have it repeated.

(Question read.)

A. I did not.

Q. Mr. Tolton, can you tell me which of the companies that are named on this chart were subsequently sold by Continental Can?

A. No, I could not. I mean, I could develop it, but I could not at this time do it.

Q. What do you mean "could develop"?

A. Well, if I looked through materials that have been given us in this case, and all that, I don't know, perhaps I could locate such information if there is any, if there is any such sales made.

Q. But you didn't try to do that?

A. Pardon?

Q. But you didn't try to do that?

A. I would say not.

Q. You were content to leave the impression that all these companies had been acquired by Continental?

[fol. 3318] Mr. McManus: Your Honor, I object. I mean, Mr. Johnson is testifying here. I mean, he is answering.

The Court: The objection, Mr. McManus, is overruled. This is cross-examination.

Go ahead.

(Question read.)

Mr. McManus: Your Honor, I don't want to keep interrupting, but to questions of that type will I have a continuing objection?

The Court: Oh, yes, you can have all the objections you want. They are overruled.

Finish your question, Mr. Johnson.

Q. You were content to leave the impression that these companies had been acquired by Continental and retained by it; is that correct?

A. Well, that asks me for a state of mind, that is all I can say. But I am not—I wasn't content to leave them, although I did not look into it. Now if that can split a hair, that is about what happened.

Q. You think someone reading this chart would get that impression?

A. Well certainly what the chart says, these were acquisitions and it kind of speaks for itself, and that is as far as [fol. 3319] I can go.

Q. I see. These were acquisitions, and that was all.

A. All right.

Q. No other information. Mr. Tolton, how did you make these classifications, shown on the right-hand of the table?

A. On the left?

Q. Shown on the left-hand side of the table?

A. Well, from the documents that I utilized in order to draw it up.

Q. In the last column under "1950s," you have Bowes Industries, Inc.

A. In what one was that?

Q. Under the 1950s, under "flexible packaging."

A. Yes, I see it there.

Q. Will you tell me what Bowes Industries made?

A. Without the document G-785 I couldn't at this time, except that I assume it related to the—to the flexible packaging field.

Q. What would you call the flexible packaging field for this purpose?

A. Well, it could make polyethylene, it could make, oh, glassine, wax paper—those would be in the paper field, [fol. 3320] excuse me. I can't think of the principal one that DuPont makes.

By the Court:

Q. Well, let me ask you this: I understand that as far as I could see, from looking at Exhibit 787, the one you have been referring to, 786 or 787, as the case may be, that only goes up to the 1940s, doesn't it?

Mr. Handler: It is the next exhibit, your Honor.

A. There is another one, your Honor.

The Court: Is there another one?

Mr. Handler: Yes.

The Witness: 785 actually preceded this one and was for a later period of time.

The Court: I see.

The Witness: I was trying to think. Cellophane is what

I had in mind from DuPont, that sort of product, as part of the flexible packaging field.

By Mr. Johnson:

Q. Now you are referring to another document; is that the document from which you got your information with respect to Bowes Industries?

Mr. McManus: What is the number?

[fol. 3321] The Witness: Oh, it is Government's Exhibit for identification 785.

Q. So with that in front of you, can you tell me why you classified Bowes Industries, Inc. as a flexible packaging company?

A. The only one I could see in there, if napkins had something—has a flexibleness about them, that would be the only reason that it got in there.

Q. So that becomes your basis for classifying that as flexible packaging?

A. I am afraid that would be the only one there.

Q. In a field related to the container industry; is that correct?

A. Yes—well, there are others here that indicate it is in it, I think in the container field, but I meant——

Q. I see. What are they?

A. Well, there is plastic coated paper plates. Then there is napkins, plastic knives, forks, spoons and cups, and then purchase from outside suppliers for the purpose of resale.

Q. Which of those do you regard as related to the container field?

A. Probably the cups.

[fol. 3322] Q. I see a reference here in the 1920s to Penick & Ford. You really mean to imply that Continental Can acquired Penick & Ford?

A. Where is that located?

The Court: In the top upper left-hand square under the 1920s.

The Witness: Oh, I see it. G-786.

A. Well, this is on page 16 of G-786. It goes 16 and 17 in the typewritten figures. When you ask me this, I have to refer to page 17, Mr. Johnson.

"Penick & Ford sold its can business to Continental, because it felt that Continental could effect large scale economies in its operation, thus supply cans at lower cost than Penick & Ford have been able to realize. In this way Continental acquired an important customer."

Q. So that acquisition back in the 1920s was a part of Penick & Ford and not Penick & Ford; is that right?

A. Oh, in total, purchased the can business. Then I presume—yes, they had other business.

Q. Look down, Mr. Tolton, in the very last entry under 1940s, Vulcan DeTinning Company.

A. Yes.

[fol. 3323] Q. Do you know what the largest interest Continental ever had in Vulcan DeTinning was?

A. I think they had a 51-4/10 per cent stock interest, is my reflection at this time.

Q. That is what you think they had, is it?

A. Yes—well, I saw it in Moody's, and I saw it referred to in—not the per cent, precise per cent—but in the Continental's annual report.

Q. Do you know how much they have now?

A. I couldn't say.

Q. Would you look in the column 1950s, next to the last item, Tenco, Inc.; do you know what that company was?

A. I am looking for it. Just a moment.

Government's Exhibit 785, on page 6, shows Tenco, Inc. of Winona, Minnesota, and it was plastic pipefittings. That is all it is.

Q. Plastic pipefittings?

A. That's right.

Q. This is something you regarded as related to a product in the container field; is that correct?

A. Yes, in the "all other" category.

Q. I want you to go back to your caption again, and in the light of what you said a moment ago will you try to [fol. 3324] define for me what you meant by "acquisitions"?

A. Well, I think there is considerable debate. Probably what—merger or acquisition—but it would be the acquiring of the facilities or a major stock interest—I think those two probably would incorporate the two main areas, or prob-

able means of acquiring an interest, of which then you exact a degree of control.

Q. You know that Vulcan DeTinning Company is listed on the New York Stock Exchange?

A. You mean presently?

Q. Yes, sir; either under that name or some other name?

A. No, sir; I'm not aware, except your thought.

Q. Did you make any effort to ascertain whether it was so listed or not?

A. I may have seen it on occasion, but I couldn't readily say when or where I had seen it.

Q. Do you know that owners of over 10 per cent of the outstanding equity stock of any stock listed on the New York Stock Exchange are required to report their holdings to the Securities and Exchange Commission?

Mr. McManus: What period of time are you talking about?

[fol. 3325] Mr. Johnson: Any period of time since 1934 on.

Mr. McManus: No, I mean the question, what period of time was the question directed to?

Mr. Johnson: Any time.

Q. Did you know that they were required to report, that any holder of over 10 per cent equity stock of any corporation listed on the New York Stock Exchange is required to report its holdings to the Securities and Exchange Commission?

A. Well, I have certainly been in to the Securities and Exchange Commission, but I didn't know all the items which they had to, I mean, to make reportings and refer to. There is considerable amount of information they have to furnish the SEC.

Q. So you didn't try to get any information that might have been available with respect to these companies, outside of these few documents you have been referring to; is that right?

A. Well, I have looked into SEC records from time to time, yes.

Q. In connection with this preparation, the preparation of this table?

A. Well, as it relates to acquisitions, because they, they

[fol. 3326] made—well, I was trying to think back—Hazel-Atlas—sav, the Hazel-Atlas acquisition. They put out a prospectus and other material, of which they have to furnish the SEC, and I have looked at that data and the information from time to time, not in complete detail, but I have looked at it.

Q. Mr. Tolton, how much of this chart that we are discussing now did you prepare yourself?

A. Well, the whole chart was prepared under my supervision.

Q. And the information was gathered under your supervision?

A. Well, not wholly in the sense that some—some came into my province, I should say, after I came into this matter.

Mr. Johnson: May I have just one moment, your Honor?

The Court: Yes.

Mr. Johnson: To look at my notes?

The Court: Yes.

Mr. Johnson: I have no further questions of this witness.

The Court: Have you any redirect, Mr. McManus?

[fol. 3327] Mr. McManus: Yes, sir.

Redirect examination.

By Mr. McManus:

Q. Staying on page 92 of Government's Exhibit 800, that is the domestic acquisitions of Continental Can Company and data in related products field, the source of your information that you drew upon was the submission of Continental Can Company in connection with FTC study of acquisitions?

A. That is right.

Q. And the annual reports of Continental Can?

A. Yes.

Q. Moody's Industrials?

A. Yes.

Q. And Continental Can's proxy statement of October 26, 1956. Now, could you tell me what proxy statement that relates to?

A. I think that was the Hazel-Atlas one, I am not sure. It may have had other considerations, I am not—just one

moment. I have it right here and I can readily ascertain.

Within this proxy statement, which is Continental Can Company, Inc., "Notice of proxy statement of special meeting of common and preferred stockholders to be held October 26, 1956."

[fol. 3328] It has listed—well, I am just going to the index here, which precedes page 1, and the purpose of meeting is section 1. Section 2 is summary of terms of merger; section 3 business of Gair.

Q. That's right, Mr. Tolton. I just want to find out if that is the one that you used?

A. Yes, that's right.

Mr. McManus: Your Honor, I think I can cut this this redirect examination on this chart considerably by saying that some of the other data that we have offered, and which we are going to argue should be admitted on past acquisitions would explain in considerably more detail, in more detail than the chart, what was involved with the acquisition of the companies, and things of that nature. So if that data would go in, and when and if it does go in, it would explain in more detail.

I can see no purpose in going into that at this point.

The Court: All right.

Q. Now, you were asked the question if tube caps are made out of metal; do you know what tube caps are, Mr. Tolton?

A. I think as one who used them I might know.

[fol. 3329] Q. What would you consider a tube cap?

A. Well, it would go on like toothpaste or some such product as that.

Q. Would they be plastic or metal?

A. Well, I think I have seen them either.

Q. I see. So a tube cap could be plastic or it could be metal?

A. Yes.

Q. Depending on what type of tube cap you are looking at; is that correct?

A. That's right.

Q. Now going to Government's Exhibit 800 for identification, page 89, that deals with tin can and other tinware, and is based on sales figures there.

A. The gross sales, yes.

Q. Now Mr. Johnson indicated to you or showed to you a publication of Internal Revenue, which indicated that there were additional companies in 1957 that were doing other than what they were in 1956; is that correct?

A. Yes, that's right.

Q. Now I want to ask one more question: If a company fails to file an income tax return, would it be in this classification?

[fol. 3330] A. No, it would not.

Q. If a company was bankrupt and had no assets, would it be in this classification?

A. Well, let's see, bankrupt.

What I am getting at is this, they showed some that have net income and no net income. If they were still in operation and showed a loss, it would appear in here. Now if they were completely out of existence, it wouldn't show in here.

Q. Now, the next chart, page 90, I don't think Mr. Johnson asked you about that in any detail. Could you explain to his Honor what that is supposed to portray?

A. Well, the previous one aligned the companies on the basis of, or within those groupings on the basis of gross sales. This one was assembled on the basis of their total assets.

Q. And in this chart the figure 2, referring to the heavy black bar on the bottom part of the bar——

The Court: The red bar.

Q. —the red bar in the original, that is referring to companies, American Can Company and Continental Can Company?

A. That's right.

[fol. 3331] Q. And the same thing would be true in 1950?

A. Yes, the same would be true.

Q. And the same thing would be true in 1957?

A. That's right.

Q. In going to—Mr. Johnson asked you if you knew if the Department of Justice attempted to encourage any of these acquisitions in this Government's Exhibit 800, if you knew, and your answer—what was your answer?

A. I do not know.

Q. Do you happen to know if they tried to discourage any of these acquisitions?

A. Not——

Q. Other than the present one or Robert Gair?

A. Well, not specifically, except——

Q. You just don't have knowledge if they encouraged or discouraged; is that correct?

A. In this particular area, that's right.

Mr. McManus: Thank you.

That is all I have, your Honor.

The Court: All right.

Well now, gentlemen, it seems to me—have you anything further with this witness, Mr. Johnson?

Mr. Johnson: No sir.

[fols. 3332-3337] I wanted to ask your Honor's pleasure on how you want to consider these various documents?

The Court: Well, you may step down, Mr. Witness. Thank you.

(Witness excused.)

* * * * * * *

[fol. 3338] New York, October 17, 1960, 10:30 A.M.

Trial resumed

Colloquy Between Court and Counsel

The Court: Before we begin this morning, is there any reason, as you gentlemen see it, for having this hearing in camera?

Mr. Johnson: No, sir; I don't think so.

Mr. McManus: Not on the part of the government.

The Court: Very good.

Mr. McManus: Your Honor, it was my understanding that our procedure this morning was divided into three parts. The first was, the government was to offer its statistical data. The second was a discussion or argument on prior acquisitions; and the third part, the offering of additional documents that the government had indicated it would like to make an offer on.

[fol. 3339] The Court: That is as I understand it.

Mr. McManus: Now, the first part, your Honor, on the tables and charts, as I understood your instructions, the government was to offer these tables and charts, and the defendant was to make such objections or comments as they desired. Then the government would have a chance to offer them. Now, I presume the best way to do it is to proceed in the same sequence as we had heretofore, and the government now offers Government's Exhibit for identification 801, which is entitled "Folder A."

The Court: Well, now, didn't I gain the impression—I may be mistaken in this—that Mr. Johnson felt if the government offered all of its exhibits at the same time, that is, the chart exhibits, there might be a relation between them and it would be better from the standpoint of the presentation to have them all before the Court at the same time?

Am I correct in that, Mr. Johnson?

Mr. Johnson: Yes, sir. It is my understanding that they have all actually been offered.

The Court: I understand that, but I think the record [fol. 3340] will read better and more clearly if we repeat the offer now and then go on from there.

Mr. Johnson: Yes.

Mr. McManus: The government would like to offer, your Honor, Government's Exhibit 800, Government's Exhibit 801——

The Court: Wait a minute. Let's have those so I get them. Now, 800 is?

Mr. McManus: Excuse me, your Honor. Could I withdraw that and start with 801? That is the sequence we followed, because that is the table.

The Court: Yes.

Mr. McManus: Government would like to offer Government's Exhibit 801 for identification, which is also indicated as "Folder A"; Government's Exhibit 802 for identification, which is also marked "Folder B"; Government's Exhibit 803 for identification, which is also marked "Folder C"; Government's Exhibit 800, which is also marked "Plaintiff's chart book 1", and the government would also like to offer, your Honor, Government's Exhibit 1202, which is the underlying data for a number of these tables and charts.

The Court: Now let me ask you this: Does this include [fol. 3340a] the so-called plastic charts?

Mr. McManus: It doesn't, your Honor.

The Court: I think you'd better offer those at the same time.

Mr. McManus: The government offers Government's Exhibit 809, in addition, your Honor.

[fol. 3341] Mr. Handler: Your Honor, may I interrupt the proceedings a moment, please?

The Court: Yes, Mr. Handler.

Mr. Handler: I just came into the courtroom and received from government counsel a memorandum of law on prior acquisitions which I am going to try to read between now and the time that I get up to argue the point.

I would like to ask counsel whether they have written a brief on the motion to dismiss, because, if they do have one, I think they ought to give it to me now and not two minutes before the argument commences.

The Court: All right. What do you say to that, Mr. McManus?

Mr. McManus: Your Honor, we are going to have a little two-page memorandum in opposition to the brief that you handed us Friday evening, at the close, Mr. Handler, which I think we would have ready this evening. It is pretty much hornbook law—at least we assume it is—much as Mr. Handler's was.

[fol. 3342] The Court: I see. Well, I will be interested to receive that, but I don't really think that this is a subject that should take very much in the argument. As I see it, the government has offered six separate exhibits, which include the sets of tables on tin and glass, so called, the chart book, the Can Manufacturers Institute annual report and the plastic charts.

Now, there is nothing else that you are presently offering in the way of supporting data?

Mr. McManus: At the present time, that is right.

The Court: At the present time.

All right, Mr. Johnson.

Mr. Johnson: With that, then, I understand that we have before us the tables and the charts offered on the witnesses Finn, Tolton and Hughes.

Your Honor, statistics have a useful place in economic and business analysis, but in the hands of the unwary they become a trap, and in the hands of the unskilled they are positively dangerous.

[fol. 3343] The government here would have the Court believe that these witnesses merely took some data and performed a mechanical operation in putting it into tabular form, but that clearly is not so. Each of these three witnesses selected and adjusted and attempted to analyze data. Some of the data that have been presented here are based, in the first instance, at least, on census data.

Census data, handled by the Bureau of the Census, is handled by highly skilled experts. But even so, it is not without its difficulties, and in this connection I refer to a letter by the Director of the Bureau of the Census, which was quoted by the Court of Appeals in the Seventh Circuit in Federal Trade Commission vs. Dilger, 276 F. 2d 739, in which the Director of the Bureau referred to the necessity of making approximations in census reporting.

I wish to make it clear, however, that my objections to the material here presented are not based on difficulties with the primary census material. My objections go to the manner of the use of that material.

[fol. 3344] Also, my objections are not based primarily on the simple mathematical aspects of the material presented. It is true what I was able, by being able to focus on certain of the arithmetic, to uncover at least one major error, which was immediately corrected.

Now, in the areas in which I could not focus because of lack of access to underlying data, the errors, if any, go uncorrected and undetected.

Your Honor, I object to these tables and charts. It is really improper to dignify them by calling them statistics because they are misleading and false by virtue of the manner in which they have been constructed.

Data presented in the form of figures can be misleading in many ways. The government has no more right to present half truths than it has to present untruths.

In my law practice I do a considerable amount of securities work. I was once on the staff of the Securities and Exchange Commission. The securities laws are explicit in for-
[fol. 3345] bidding not only the use of misleading statements but in forbidding the omission of facts necessary to make the statements made not misleading. This is a sound principle and generally accepted throughout the law, and, your Honor, it is this principle, among many others, which the Department of Justice has here overlooked.

I do not exaggerate when I say that if a company, in selling its securities to the public, were to use in its selling literature data prepared the way the data here proffered have been prepared, the Securities and Exchange Commission would cause the officers of that company to be sent to jail and they would use the instrumentalities of this court to do it. Similarly, if a company were to use data prepared the way these data have been prepared in its advertising, the Federal Trade Commission would cause cease and desist orders to be issued, and they would enforce those orders through the United States courts.

The technique of selection and omission is clear throughout this material. For example, they omit American Can
[fol. 3346] Hawaiian production and say they do it because Continental doesn't manufacture it. They omit plastic caps because they say neither Continental nor Hazel made them. But when I ask why they include glass containers for fresh milk, which admittedly neither Continental nor Hazel-Atlas manufacture, they simply look astonished and say they don't see any reason why they should be included.

It is primarily the methodology, then, that I am concerned with. The government has chosen sometimes to cut their material, sometimes to stretch it, but it seems never to have occurred to them that an honest presentation should be a consideration.

I want to start my objections with tables 3 C and 4 C.

The Court: Are you now referring to 801?

Mr. Johnson: To 803.

The Court: 803. And give me those again. 3 C——
[fol. 3347] Mr. Johnson: 3 C and 4 C.

Your Honor will recall that it was disclosed on cross examination that these figures were chosen from among many in the underlying material. The extent or nature of the

choice, as in so much of this material, is not apparent from the face of the tables and would never have been disclosed except for cross examination.

As a result of the choice made, the figures which are presented are meaningless for the comparative purpose for which they were selected and the percentages which they set out are percentages which have no meaningful relationship to anything.

Now, sir, would you prefer that I continue or that I wait for rulings on specific documents or groups?

The Court: No, Mr. Johnson. I think the way to do this—I have kept on making notes on these specific charts to which you object, to which you specifically, specially object, as well as your general objection, and any such tables or charts [fol. 3348] I will refer to specifically when I rule.

Mr. Johnson: Very good.

The Court: Unless they are already included within some other general rule. So that we are now dealing with 3 C and 4 C of 803.

Mr. Johnson: My next objection, then, is to 2 C. By measuring Continental against all other manufacturers——

The Court: I am sorry, Mr. Johnson. You have got to go a little slower because I have to follow you.

You said 2 C——

Mr. Johnson: 2 C is also in 803, in folder C.

[fol. 3349] The Court: Right.

Mr. Johnson: Here, by measuring Continental against all other manufacturers and omitting to describe such other manufacturers in any way, the table gives a misleading impression of the position of Continental.

The Court: What do you think they should have done? If you were preparing such a chart, what would you show?

Mr. Johnson: At the very least, I would not, I believe, have tried, by computing a percentage for Continental of a total, I would not have limited it to that and given the impression, as I believe they were trying to do here, that Continental was the largest manufacturer in this field.

In connection with this, I turn to Exhibit 800, and I object to the two tables which are included in Section IX.

The Court: Section IX of?

Mr. Johnson: 800 is the book of charts.

The Court: I see.

[fol. 3350] Mr. Johnson: And my objections to those are the same as those to 2C, 3C and 4C. Your Honor will observe that they are related charts.

The Court: Now take the one on what I have marked on my copy as page 94, which shows that Hazel-Atlas in 1958 had four-tenths of the percent of what is alleged to be U.S. shipments of screw, thread and lug type closures.

Mr. McManus: Your Honor, just to correct the record, I think the percentage is 4.7.

The Court: Oh, I see, 4.7 per cent. I see that.

How do you say that is misleading?

Mr. Johnson: By the selection of the hundred per cent, which is the screw type and lug type closure, tin mill products, which your Honor will recall was picked out of this census material to the exclusion of all of the other material referred to.

The Court: Plastic, aluminum, and so forth.

[fol. 3351] Mr. Johnson: Yes.

The Court: Of course, I take it your position is these have to relate to some line of commerce.

Mr. Johnson: I think they are meaningless if they are just figures taken out of the air or selected.

The Court: What do you say is the closure type of commerce which the government is contending, line of commerce, which the government is contending here?

Mr. Johnson: I have so far not been successful in learning what it is.

The Court: All right, sir.

Mr. Johnson: I turn next to Table 5C in Exhibit 803.

The Court: Well, you don't have to argue with on Table 5C.

Mr. Johnson: Very well, sir.

The Court: Thus far, as far as I can see, there has been no basis established for the admission of 5C.

[fol. 3352] Mr. Johnson: I go on then to——

The Court: If after I hear Mr. McManus I should in any way change that conclusion, I will hear you on the subject then.

Mr. Johnson: Yes, sir.

I go on then to 5D, the next following table in 803. This is a chart assigned, Mr. McManus said, to show increase in concentration in the glass container industry. The cross-

examination disclosed that what it really showed were rigged figures. The material is taken from divers sources, adjusted in various odd indefensible ways, and the conclusion is finally reached—it is clear, I believe, that the witness himself did not believe it—that there were on January 31, 1960, 29 companies operating glass container plants in the United States.

The Court: As compared with 43 in 1938 and 80 in 1920.

Mr. Johnson: As the witness counted them; yes, sir.

I turn next to Folder A, which is 801. I am looking first [fol. 3353] at Section I of this exhibit, and Sections V and VI of Folder B, Exhibit 802.

The Court: Now, the ones in B are——

Mr. Johnson: V and VI.

The Court: V and VI.

Mr. Johnson: The first table there is headed "Continental U.S. shipments of all types of glass containers east of the Rockies for 1955 compared with the leading manufacturers in that section."

The Court: Yes, sir.

Mr. Johnson: Looking first at Table I(a) in this group, which is the first table in Exhibit 801 for identification, my objection here is directed principally to the misleading concept of "leading manufacturers." The witness admitted that he did not know whether or not these were the leading manufacturers, since he did not have access to data for the whole industry. The objection to the remaining tables in this group is somewhat different, in that I object to the man-[fol. 3354] ner of the groupings of the census categories by the witness, which he testified that he had—groupings had been created by him for his own purpose.

The Court will recall, for example, the omission of wine and liquor from I(b). None of the other tables in this group compares with census categories; and Tables I(d) and I(e) committed indefensible error of adding together returnable and non-returnable bottles, an error which the Bureau of the Census has consistently avoided in the presentation of its material.

In my next grouping——

The Court: And this specific objection now goes not only to Section I of 801, but Sections V and VI of 802; is that right?

Mr. Johnson: Yes, sir. They are tables which relate——

The Court: You are considering those are inter-related and your objection applies to all of them, the objections you just stated.

Mr. Johnson: Yes, sir; that is correct.

[fol. 3355] The Court: Very good.

Mr. Johnson: In my next grouping I include all of the tables and the charts which contain unit figures for metal containers. This includes Sections II and III of Folder A, Sections I, II, III, IV and VII of Folder B; that portion of Section III of the book of charts, Exhibit 800 for identification, which relates to metal containers.

The Court: In other words, this objection goes to all figures here which used a unit figure for metal containers of various types.

Mr. Johnson: Yes, sir.

There is one more, Section V of the chart book.

The cross-examination covered fully the weird statistical methods used in creating these figures. I want to remind your Honor that the witness testified that each and every one of these unit figures was based on his computations from the Can Manufacturing Institute material. He explained the method by which he got these figures. He started [fol. 3356] from a hypothetical figure to a number of containers which might have been manufactured from the tons of steel consumed. He misunderstood the nature of this figure. He regarded it as an estimate. Whereas it is clear from the underlying material that it has never been anything except a hypothetical number which might have been made.

The Court: Mr. Johnson, just what do you think that figure is? You say a "hypothetical figure"; what do you think the purpose of putting that figure in the Can Manufacturers Institute table is? What were they after?

Mr. Johnson: Well, sir, Can Manufacturers Institute was here on the stand and the government did not see fit to ask him about this material. For what it is worth I suggest that this material was simply publicity material, released for newspapers, of the kind that says, "If all automobiles were put end to end around the world, they would go around the world so many times," the sort of data we see every day. I think this material rises to no higher dignity than that.

[fol. 3357] They say a can company may use so many tons of steel. If they had used it in such and such a way it would have been enough to have made so many cans. I think examination of the material itself which has been offered here indicates that that is all it is.

The witness then, taking this material, created by himself a conversion factor. Bear in mind, Mr. Finn testified that he was not a statistician. He used a method which he admitted the Can Manufacturers Institute had never used; that he has never seen anybody else use; and not being a statistician he was not in a position to defend the statistical validity of it.

I say the method he used is completely indefensible. On examination it will prove to be an average of an average, which no statistician worthy of the name would use for any purpose.

He also testified that he had never been able to find in this material or elsewhere any method of computing the [fol. 3357a] number of units manufactured by Continental or can manufacturers. It is no argument, no worthy argument, to say that this was the best he could do. If it is no good, the best that a man can do is still worthless.

[fol. 3358] This material is presented with the obvious intention that it should be relied on by the Court, and it is intended that these percentages should be used. They would like your Honor to prepare an opinion that uses this material.

Your Honor would find that if you did that, you would be relying on material which is computed in an indefensible manner.

The witness—I withdraw that.

The government also has admitted that it has no way of evaluating the Can Manufacturers Institute's data or the methods of computation. With respect to that, I turn to sections 1 and 2 of the chart book, Exhibit 800 for identification.

The Court: 800. This is the chart——

Mr. Johnson: This is the chart book. These are charts, and as such they were prepared for the purpose of creating impressions and for that reason they are particularly susceptible to being misleading.

They are misleading, first, because of the use of the lead-

ing company concept. They are also misleading in the tech-
[fol. 3359] nique of adding together the percentages of several unrelated companies. This has to do, apparently, with something that the government is fond of calling oligopoly, a term which sounds very bad but which I have never been quite able to understand.

Why there should be any relevance in a lawsuit to the fact that two unrelated, vigorously competing companies should together have such-and-such a percentage of the market I don't know. I am not able to follow the theory of the concept involved, unless there is some kind of an implication that somehow the companies are acting in concert. That implication is clearly without any foundation in this litigation.

The Court: Well, there has been no showing in any part of the government's case, it is quite clear, that anybody here is acting in concert. That is, when I say "anybody here," any of the various companies in any of the industries are acting concert. At this point you don't make any such claim.

[fol. 3360] Mr. McManus: I do not, your Honor.

The Court: Very good.

Mr. Johnson: In connection with this group of tables, I also go back to the one remaining table in folder C, Exhibit 803 for identification, and refer to table 1C, the first table in this exhibit.

Here, again, the leading-company concept has been used without foundation, and the table also divides up the metal container industry and tries to separate out from consideration some of the most effective competition in that industry.

The Court: You are talking about the captive companies?

Mr. Johnson: Yes, sir.

I then turn to section 4 of the chart book, Exhibit 800 for identification.

The Court: All right, sir.

Mr. Johnson: In so far as the metal container line on these charts is concerned, it is also based on the hypothetical figures of Can Manufacturers Institute, but in this case, for [fol. 3361] reasons unknown to me, and unexplained by the witness, they have seen fit to use a different set of hypothetical figures, this time taking the——

The Court: This time because they used No. 2 cans instead of actual cans.

Mr. Johnson: They used the hypothesis that all steel used by can companies was made into No. 2 cans.

The witness also testified, your Honor will recall, that the figures would be different, that the lines would be different if they started from a different starting date.

Since 1939 has no meaning as far as I know in this litigation, the other end of the line has no meaning either. One could get lines to go in almost any way they like in a project of this type, depending on the starting point.

The Court: All right, sir.

Mr. Johnson: I go then to section 6 of the chart, Exhibit 800 for identification.

The Court: This is the common-customer sales.

[fol. 3362] Mr. Johnson: Government counsel should have known, even if the witness didn't, the difference between an answer to an interrogatory and a document produced on motion to produce. The indication here is that this material was taken in answer to an interrogatory, which is not true.

The interrogatory, of course, is a sworn answer. A document produced on a motion to produce——

The Court: You don't have to explain that.

Mr. Johnson: However, the cross examination indicated how these tables were constructed and they indicate how absolutely devoid of meaning they are.

The Court: Incidentally, was this basic document offered in evidence?

Mr. McManus: It was marked for identification by the defendants, your Honor.

Mr. Johnson: That is correct. It has not been offered.

The Court: The government does not intend to offer that?

[fol. 3363] Mr. McManus: Your Honor, I will tell you: I overlooked that. I really did intend to offer it.

The Court: It seems to me quite obvious that without that basic document these tables aren't worth anything.

Mr. McManus: At the present time it has a government's exhibit number.

The Court: I am not calling upon the defendants to offer that.

Mr. McManus: I understand that, but if, at the conclusion of that, I ask for permission to offer it——

Mr. Johnson: If offered, I have several other objections to make.

The Court: You might as well offer that. While discussing the common-customer tables, you better discuss table 2, because they go together.

What is the number of that exhibit?

The Clerk: Defendants' Exhibit AA for identification, [fol. 3364] your Honor.

Mr. McManus: We would like to give it a government's number, the next one.

(Government's Exhibit 1206 marked for identification.)

Mr. McManus: The government would like to offer, in addition, Government's Exhibit 1206 for identification.

Mr. Johnson: Going on, then, to the tables, the Court will recall that in the tables or charts, millions of dollars of sales were included in these tables as common sales, simply as sales of a thousand dollars or less by the other division of Continental, and these tables are probative of nothing.

In respect to the underlying material offered by the government, no adequate foundation of any kind has been laid for the receipt of this material. There is no indication of where it comes from, how it was prepared, what it was used for. It is just a document picked up with thousands of other documents pursuant to a motion to produce. There [fol. 3365] is no reason for accepting this document just returned up in the welter of all other documents. It is full of irrelevant material, material having no relation to this litigation whatsoever, and I very strenuously object to its admission.

This document, amongst other things, has been in the hands of the government for many months. It has never been marked for identification, has never been referred to in pretrial.

I turn, then, to section 7 of the book of charts, Exhibit 800 for identification. This is the material, the Court will recall, taken from Internal Revenue statistics.

Cross examination made it clear that part of this ma-

terial is based on count and part of it is based on sampling technique. It is completely misleading.

The Court will also recall what the results would have been if this material had been extended for another year. It is a case where the government apparently has offered [fol. 3366] this material to show what it calls concentration in the industry; and, incidentally, the industry here referred to is a different one than they have referred to elsewhere, but it proves no such thing. This is an example of the government's omission to state material facts necessary to make the facts stated not misleading. The government should have known if it did not what the results of adding 1957 in this material would be. They did not see fit to do so. They intended not to disclose that to the Court.

The chart under section 8——

The Court: That is prior acquisitions, and we will take that up when we discuss prior acquisitions.

Mr. Johnson: Yes, sir. It will be treated under prior acquisitions.

I don't know if I addressed myself particularly to Government's Exhibit 1202, which was the CMI booklet for which, again, the government has made no attempt to lay a foundation, notwithstanding that they had a representative [fol. 3367] of the CMI on the stand at a time when these tables had already been prepared.

Their remains, your Honor, the plastic tables and charts, which were included in Exhibit 809 for identification, and I am sure the Court retains a vivid recollection of those charts and the machinery of their preparation. They are utterly fantastic charts. They are based on nothing; they prove nothing.

Those, sir, are my objections to this material.

The Court: Well, I think we will take a recess before I hear Mr. McManus.

(Short recess.)

[fol. 3368] The Court: All right, Mr. McManus.

Mr. McManus: Your Honor, Mr. Johnson skipped around considerably, so there might be pauses as I try to work back and forth. But I will try to make them as brief as possible.

The Court: All right.

Mr. McManus: I would like to say first, your Honor, that the government made no attempt to make these figures other than what they are, and in fact, if we erred, we erred on the side of being conservative and against our own percentage figures. By that I might say, as I pointed out before, Mr. Johnson mentioned the Hawaiian production. We took out only American Can's Hawaiian production, on which we happen to have statistics. We left in the Hawaiian production of one or two of the plants out there of a company, on which we are not able to get information. By leaving that information in, that made the overall statistics higher, and consequently, Continental Can, who does not produce out there, it made their statistics lower.

[fol. 3369] The same thing, I might add, we did, your Honor, in regard to glass containers in some of these charts. We knew that Hazel-Atlas did not make milk bottles. It was quite obvious to everyone from the beginning they did not. However, we left the milk bottle statistics in, which as a result would make the overall statistical data larger, overall national figures larger, and Hazel's participation smaller. There is no secret about it. We pointed it out clearly on the charts.

Now, we did not include plastic tops. We will argue that they are not in our line of commerce.

We also would like to point out, your Honor, that there was no secret about that. We pointed out to the defendants what we included or excluded. If it was not clear on the table, it was abundantly clear to the defendants, because their statisticians came down to Washington about May of this year, and our people took them by the hand, table by table, and informed them of all the underlying data, and [fol. 3370] furnished them the underlying data where it was needed.

Now, we have not offered here, your Honor, every piece of underlying data, largely because we did not want to clutter the record any more than we already have.

In the case of sales to key customers and suppliers, we have now made an offer, and before the conclusion of my little discussion here I think perhaps it might be better to make an offer of the underlying data from Internal Reve-

nue Service, which I will probably do and explain why as I go along through my presentation.

If we could now refer to Tables 3C and 4C in Folder C, Government's Exhibit 803 for identification.

The Court: Yes.

Well, now, what do you say your line of commerce is?

Mr. McManus: Well, we say, your Honor, that the proper line of commerce is tin mill products, metal caps, which would include the caps, vacuum and non-vacuum, screw, [fol. 3371] thread and lug type in the categories that we have set out.

The Court: You say, for instance, that cans made of plastic——

Mr. McManus: Would not be in our line of commerce.

The Court: Cans made of aluminum?

Mr. McManus: Would not be in our line of commerce.

The Court: Now how does that square with——

Mr. McManus: Your Honor, I would like to——

The Court: I will hear you on this, but I am very puzzled by this point.

Mr. McManus: Could I say this at this time? These charts do more than just the line of commerce argument, insofar as competition between whether aluminum and plastic or plastic and metal compete. These charts, 3C and 4C, also show what we would argue are full line argument. 3C, for example, shows the percentage of metal caps that— [fol. 3372] of the metal cap line that we argue, the percentage they have of metal caps, that they have both in units and percentages, and in 4C it shows the percentage of vacuum type caps, which you will notice is up in the 60 per cent.

And, as we have had testimony here, these vacuum caps are used only in the food field. We intend to show, as we have argued here before——

The Court: Now, look, let's get to 4. We are going along too fast.

Mr. McManus: 4C, your Honor?

The Court: Yes, I am looking at 4C.

Mr. McManus: The White Cap Company, the percentage of U.S. total for 1958 in production, was 61 per cent, and in shipments was 60.6 per cent. Now that is the vacuum closures, your Honor, and we have had testimony in the record

that the vacuum closure is only used for food, and we intend to argue that this Hazel-Atlas acquisition is bad because Continental Can now has the White Cap machinery that we have talked about, the witnesses have talked about; they [fol. 3373] have 60 per cent production at the present time at least, or at least at the time in 1958, of all vacuum caps sold. They now furnish the glass containers, where the finish has to fit the cap perfectly, and also they have the facilities to furnish the paper board container, the corrugated shipping container, and it gives them a complete package, the shipping container. The testimony that we have is that it represented anywhere from 15 to 25 per cent of the cost of the ultimate container.

So this chart on 4C not only shows that, we would argue, competition between the 60 per cent of White Cap in the vacuum, but also in the screw, thread and lug type, which Hazel had 4 per cent. We are arguing that those two are properly in the same line.

The Court: 4 per cent of the metal.

Mr. McManus: Yes, sir.

The Court: There is nothing to show here what percentage they had of——

Mr. McManus: Plastic and aluminum; that is correct, [fol. 3374] your Honor.

So as I say, if you should feel that these charts were—well, we feel that this is a proper line, but even if you should decide that our metal closure line was not proper, these charts should go in to show the effect of the acquisition of Hazel-Atlas in being able to furnish this full line. So they should go in, on our argument, for two purposes—one, for our line of commerce argument, the elimination of competitors in the metal cap field, but also the full line argument, that I have indicated here before.

Now going to 2C, if I may, your Honor, we have never argued that Crown caps were in competition with screw caps or with vacuum closures. We have never argued that. In fact, I think we have said explicitly that although there may be occasional exchange, or used to be, or maybe still is, of Welch's grape juice, we do not think that they both should be put in the same line.

Now Mr. Johnson accused us that we intended to indicate [fol. 3375] that by these figures their company, their client,

Continental Can Company, was the largest producer of Crown caps in the United States. We have no such intention. It is quite obvious they are not. It is well known throughout the industry, and right even in their own report, which we are offering, their annual report, they state they are second. It is no secret that Crown Cork and Seal Company is a larger company. They are second. We do not have the statistics on the size of Crown Cork and Seal. We do know they are bigger, and if you would like me to give you the estimate that I believe they are in size, I will be glad to do it.

The Court: What do you say they are in size?

Mr. McManus: I would say, your Honor, that they are probably in the 40 or 45 per cent bracket.

We argue, your Honor, that this also goes in for our full line argument. Here you have the same type of situation. You have the crowns, you have the bottles, and you have [fol. 3376] the corrugated shipping container. Also, although I don't want to get into the acquisition argument, they gained this position; we are going to show through our documents, and we are going to argue they gained this position largely through acquisition of companies that were in this field.

The Court: All right. Now I think Mr. Johnson then went to 5C.

Mr. McManus: Well, your Honor, he went first to the chart, IX. I want to see if there is any difference that I might have to comment on as to that.

The Court: Yes. I don't think there is anything to be added much.

Mr. McManus: No, sir, your Honor.

The Court: In other words, if the tabulation is in, the chart is in, and if the tabulation is out, the chart is out.

Mr. McManus: I would think that would be correct.

I would not prefer to argue on 5C, 803——

[fol. 3377] The Court: I am going to exclude 5C. I see no foundation whatsoever for 5C.

Mr. McManus: I see.

The Court: So that with respect to 5C, the objection is sustained.

Mr. McManus: Your Honor, we now go to table——

The Court: The next thing is 5D.

Mr. McManus: —5D, that is correct, in folder C, Government's Exhibit 803.

Now, your Honor, I would like first to direct your attention to the number of companies in operation on January 31, 1960, that column, the right-hand column.

The Court: Yes.

Mr. McManus: We of course argue that the whole chart should go in, and although there might be some errors, that this is the best information available, showing the change from 1920 to 1960.

But directing our attention specifically to 1960, we believe here that it is clear; that it shows the number of companies [fol. 3378] operating plants in the United States, and that any caveats or changes are listed on the attached page, the second attached page.

The Court: Well, I am going to exclude 5D in total. I think that is a very misleading chart. There has been no proper foundation laid for it, in my judgment, at all, so I am excluding 5D.

That means, for the record, that as far as folder C, which is Government's 803 for identification, 5C and 5D of that folder, the objection is sustained and 5C and 5D will be excluded.

I may say that the fact that I am passing these other things without ruling on them does not indicate that I am either excluding them at this point or letting them in.

Mr. McManus: I understand that, your Honor.

The Court: I will come back and make rulings on these when you have completed your argument on these others, [fol. 3379] except for those which I specifically ruled out.

Mr. McManus: I understand, your Honor.

Now, referring to Government's Exhibit 801, which is folder A, and Mr. Johnson, I think, referred specifically to the chart, 1A—

The Court: Well, these are the glass, aren't they?

Mr. McManus: Yes, your Honor.

The Court: With respect to the objections on glass, that is, 801, Section I, 802, Sections V and VI, the objection is overruled and those will be admitted.

Mr. McManus: All right, your Honor.

The Court: I may say that because I admit a chart is no indication of the weight that is to be given to it. The ques-

tion of weight is entirely another matter, and a chart may go in, and I may give it little, if any weight.

Mr. McManus: I understand.

Your Honor, before we leave, although you are admitting those, could I just make one little statement at this point? [fol. 3380] One of the arguments was made that Armstrong and Wheaton were not excluded. I would like to refer to the fact, your Honor, that practically every glass container manufacturer that testified here was asked who were the leading companies in the field, and they listed up to the first four or five, and in each one of those Armstrong and Wheaton were never mentioned.

Mr. Hughes: Your Honor, just so we are clear, do I understand that your Honor has received all of the tables in Section I, folder A?

The Court: Yes, all of the tables in Section I, folder A, that is Exhibit 801, and all of the tables in Sections V and VI, of 802, which were treated as a group by Mr. Johnson.

Mr. Hughes: Thank you.

Mr. McManus: Now, your Honor, Mr. Johnson then referred to tables and charts that contain unit figures, and that was 2 and 3 of folder A, one, two, three, four and seven of folder B.

[fol. 3381] Mr. Handler: Repeat that, Mr. McManus.

Mr. McManus: My understanding was that Mr. Johnson referred to unit figures in charts, Sections II and III of folder A.

The Court: Which is 801.

Mr. McManus: Excuse me, yes, sir, which is 801, and to Sections I, II, III, IV and VII of folder B, which is 802.

The Court: I, II, III, IV and VII, my notes indicate.

Mr. Johnson: And also that portion of Section III.

The Court: Yes, the charts in Exhibit 800, which use unit figures.

Mr. Johnson: Yes, sir.

The Court: Now in connection with your discussion here, Mr. McManus, you may as well address yourself also to Exhibit 1202.

Mr. McManus: Yes.

Your Honor, I think there is not much need, although we referred to those, to be specific about any chart, because

[fol. 3382] basically the system arrived at or the methology used was pretty much comparable in each one, as I recall.

I would like to say this, your Honor, that CMI, Can Manufacturers Institute, which published this data, of course, represents the can manufacturers, of which the defendant here is one of the principal members, and has been for a number of years.

The Court: What do you mean by "represents the can manufacturers"?

Mr. McManus: Well, it is a trade association, your Honor, which is composed, perhaps I'd better say, of the leading can manufacturers, as we have had testimony here. We have had testimony that American, Continental, National and several others, a number of other companies, belong to that association.

The Court: Do you think that this defendant is bound by what the Can Manufacturers Institute says?

Mr. McManus: Let me say this, if I may, your Honor? [fol. 3383] I would say this—if I may comment, I would like to answer that in just a moment—this association is a somewhat different type of association than most of the trade associations that I have seen, and we have testimony here by the third largest manufacturer of cans, the president of that company, who is also an officer in that corporation. This corporation is not run by everyone getting one vote in deciding how this operation, this company, this association is operating. The larger companies get more votes and the middle companies get lesser and the smaller companies even get lesser.

Now, American, as I recall, and Continental fell into that upper bracket. I am not sure if National did. I think they did not, but they fell at least in the middle, and then the lower.

Now, a lot of work goes into the making up of this statistical data. They have a staff. It is quite obvious it is an expensive operation. They make up this publication, and there is testimony that they distribute it to their members. [fol. 3384] They have been doing this for years. That publication carries back over a number of years. It is our belief that it is relied upon by the industry, and I think you can conclude that if they didn't consider that this was the proper way of doing this, at least to give them some idea

of the number of cans made, they would long since have discontinued doing it and would long since have spent all the money gathering all this data and distributing to themselves and other members of the industry.

The Court: Now, what testimony is there in the record to lay, as you say, a foundation for 1202 for identification?

Mr. McManus: Well, your Honor——

The Court: Apart from the general testimony as to what Can Manufacturers Institute does generally? Is there anything in the record with respect to this document and how it was made up and by whom, and under what circumstances?

Mr. Handler: Which one is 1202?

The Court: It is the annual report of steel and tin con-
[fol. 3385] sumed in metal cans, Can Manufacturers Institute.

Mr. McManus: Your Honor, our argument would be that this is a business organization. They surely would not make up this type of data and distribute it to themselves if they thought there was no sound basis for doing this. There is no question but that this is a document which was put out by CMI. We did not put a man on the stand to——

The Court: You had the CMI fellow here, and you didn't ask him about this.

Mr. McManus: No, sir, your Honor, we did not. We think it is quite obvious that it is a—we are not arguing that this is not an estimate, your Honor. We are not arguing that. It says so right on the pages themselves.

The Court: Well, where does the data that is in here come from?

Mr. McManus: Well, the data that they use is the census data, and they in turn convert that into units for these various groupings. Now, the basic data, there is no question about.

[fol. 3386] The Court: The basic data is identical with the census data, and I think there is testimony in the record to that effect.

Mr. McManus: That is correct, your Honor. So all they have done here, these people, these members, these large members, all they have done is, they have used some system to convert that into this type of statistical unit. If they did not think it was a good estimate or fairly accurate estimate,

it would seem to me that they would not have spent all this money over the number of years, and they have been doing it for a considerable number of years on the No. 2 can basis, and they apparently think they have improved on it, because lately they have not only been doing it on the No. 2 cans for food, but they have added that actual category that we have been talking about, actual number of cans.

The Court: What do you think the phrase "might have been made" or "might have been produced" means?

Mr. McManus: Your Honor, I think it is an estimate. [fol. 3387] Your Honor, I think it is an estimate by a trade association that represents by far, by far, most of the can manufacturers in the United States. They surely would have more know-how, those members, in how to estimate the percentage, the percentage of cans that went into these various units, than anyone that I can possibly think of.

We are not asking you to take this on the basis that there isn't other ways of coming to this conclusion, or we are not asking you to consider that there were that number of cans actually made. It might vary a percentage or two or three or four. But we say that this is the estimate used by this very defendant's own trade association, of which they are one of the principal members and one of the highest voting members, or at least have more votes than anyone else except American Can and possibly Continental. They published this for years, and they continue to publish it.

We argue, your Honor, that that is the best unit information that is possible to get at this time. No one in the in- [fol. 3387a] dustry that I know of, I will agree, works on a unit basis. Census does it on base boxes of steel consumed; then converts it into tons. This association, of which the defendant is a principal member, decided to do it this way, and we agree with them, we think that this is a good estimate.

[fol. 3388] The Court: All right. So much for that.

Now, next the charts in sections 1 and 2. Well, I don't think the charts in sections 1 and 2, which are the—they are the glass charts, aren't they?

Mr. McManus: Yes, your Honor.

Mr. Johnson: Section 2 is metal containers.

The Court: Section 2—that is short tons, all of it, isn't it?

Mr. McManus: Yes, your Honor.

The Court: It doesn't need a conversion factor.

All right. I will overrule the objection as to charts 1 and 2, Exhibit 800, and they will be admitted.

(Charts 1 and 2 of Government's Exhibit G-800 for identification received in evidence.)

The Court: I will review these again, so we will have a complete set of rulings here on all these charts.

[fol. 3389] Mr. McManus: Then, your Honor, going to 800, section 4——

The Court: Now, wait a minute, 1C. 803, 1C.

Mr. McManus: Excuse me, 803, 1C.

The Court: 803, 1C, is the next thing that Mr. Johnson read.

Mr. McManus: Yes, your Honor.

The Court: That is on the theory that the captive companies are not in there.

Mr. McManus: Yes, your Honor. We offer this——

The Court: Now, tell me why you think the captive companies ought to be excluded.

Mr. McManus: The reason I think that, your Honor, is that these captive companies are not offering their cans for sale. It is our contention that you take a company like Campbell's Soup Company, which is a large manufacturer of soup cans, they are selling——

The Court: Are there any figures anywhere in the record on Campbell's Soup Company can manufacture?

[fol. 3390] Mr. McManus: No, your Honor. They don't give out those figures, and the Census does not publish them. There are other captive plants, and they lump them all together.

The Court: Is theirs a total figure for captive companies in the census?

Mr. McManus: The way they do it theirs is not. But you can take the figures of all can manufacturing plants and subtract the figure of captive plants manufacturing cans in the United States that we have in 1C.

The Court: You haven't put in the record anywhere what the total figure, including captive plants, would be.

Mr. McManus: Your Honor, may I have just a moment. I think it is in this chart. Could I check?

The Court: Let me see. I don't have it.

Is this shipments by manufacturers for their own use? Is that supposed to be captive plants?

[fol. 3391] Mr. McManus: That's correct, your Honor. I would like to correct my statement. Mr. Finn just indicated to me. Take 1957, where it indicates that in the continental United States there were 4,566,616 short tons of steel consumed. That would include for own use and for sale. Then we go down where it says "less shipments by manufacturers for own use," which is 632,859 short tons.

The Court: And then you take that as 100 per cent and take percentages of that?

Mr. McManus: Of the 3,923,757 short tons.

Now, I would like to point out, your Honor, that again we took a conservative approach, we believe, to all of our charts. This chart is the only one that is based on figures which exclude captive plants. All of the other data include captive plants, although we argue they are not in competition with Continental Can Company when they are selling their cans to themselves.

The Court: All right.

[fol. 3392] Mr. McManus: Now, we would argue, your Honor, that this would show—this is a concentration figure of companies which offer cans for sale. In other words, in this chart we argue, your Honor, that Continental's percentage has increased so that they are now up to 37.2. American also increased to 45.2.

The Court: All right.

Mr. McManus: But I would like to make it clear that all the other charts are not based on captive plant data, although we do believe that this is probably somewhat more realistic in that the other companies do not offer their cans for sale.

I would like to add also that this is based on census data.

The Court: Next is chart—section 4 of the charts, supposedly historical growth.

Starting off with this, I have no idea what this chart is supposed to prove or the purpose of it. It hasn't been made clear to me what, if anything, it does prove.

Mr. McManus: Maybe I should start with that, your [fol. 3393] Honor.

The chart in section 4 of Government's Exhibit 800, page

68, is entitled "Historical Growth of Metal and Glass Container Shipments Expressed as Index Numbers and Shown as a Trend."

Now, we start out with 1939 from the base of 100, and with this—what this chart is——

The Court: What has 1939 got to do with the present lawsuit?

Mr. McManus: Your Honor, it was the period just—I mean, it was the period further on——

The Court: It seems to me that, if anything, 1939 was a very curious year to choose because immediately thereafter we went into the war and the whole canning industry was adversely and abnormally affected by the shortage of metal.

Mr. McManus: That's correct, your Honor. We used this figure because this was the data the furthest back that we had. I believe that is the testimony.

Now, your Honor, the purpose of this chart is to show——

[fol. 3394] The Court: If, for instance, you used 1948, let's say, or 1946 as a starting point, your trends would be entirely different, wouldn't they?

Mr. McManus: I thought they would not.

The Court: I thought the witness told me, when I showed him this corner of the chart, that the trend would be quite different if you started off with 1946, let's say, as 100.

Mr. McManus: Well, what he was saying, your Honor, I believe, is that they would not be identical with this chart. That would be absolutely correct. But if you are talking about the trend, we are trying to show here that glass containers percentagewise, their shipments are increasing faster than metal cans. That's the purpose of this chart.

You would not come out with the same, exact figures, but I believe that if you or the defendants want to make up a chart that starts in 1948, the results would be entirely the same.

Now, whether the line would hit 282, or whatever it is, [fol. 3395] and the other one hit 24, I am sure it wouldn't, but there would be a spread, and the glass containers, their percentage would increase faster than that of metal cans. That is our firm belief.

Now, we do the same thing, your Honor, on page 70, which is the historical growth of metal and glass container ship-

ments expressed as index numbers and shown as a trend, and we do this, your Honor, for food containers.

The only purpose of this chart is to show that in the food field, glass containers have increased percentagewise much more rapidly than metal cans.

The Court: What do you say is the significance of that?

Mr. McManus: Well, your Honor, we aren't going to argue that there are not more metal cans sold for food than there are glass. It is quite obvious that they are. But it is our position to argue that the glass has been growing at an accelerated rate and as such is making inroads more [fol. 3396] rapidly into the food field than the metal cans percentagewise.

The Court: All right.

Now, we come next, if I understand it, to section 6 common-customer sale.

Mr. McManus: Now, I would like to say something about that, your Honor——

The Court: This is a bad one, in my opinion.

Mr. McManus: All right.

The Court: This is a very bad one.

Mr. McManus: For my side or the other side?

The Court: For your side. It is a very poor and misleading chart, to my mind. Unless you can convince me to the contrary, you can now argue with respect to 1206, but as far as these charts or any expression of what is in 1206, I have no confidence in them whatever, and I am going to exclude the chart.

Mr. McManus: I see. Your Honor, then directing my attention to Government's Exhibit——

[fol. 3397] The Court: You can argue 1206 now.

So that the record may be plain, Section 6 of Exhibit 800 are all excluded.

Mr. McManus: Your Honor, directing myself now to Government's Exhibit 1206, I would like to state a few things about this document which I think—where inferences, I think, may have improperly been made. We did say, your Honor, and it was an oversight and I take the responsibility, that it was an answer to an interrogatory. It wasn't. It was an answer to a government motion to produce.

The Court: What did you call for on the motion to produce?

Mr. McManus: In general, the names of customers and what they produced.

The Court: That was your request, relating generally to that?

Mr. McManus: Yes.

Now, the request was much broader than this document, no question about that. Or at least in my opinion it was, [fol. 3398] and I believe in the defendant's opinion.

As you recall, in trying to settle our differences over the requests of the government, we sat down in chambers and we tried to work out our differences as far as possible. This chart—or, excuse me, this table here, "Sales to Key Customers and Suppliers," was not included, as Mr. Johnson would like you to believe, in a group of a whole mass of documents which they turned over to the government. No, no, sir, it wasn't. This document, your Honor, was held back and handed personally to me by Mr. Johnson, and the reason he did that is because he says, "This information is highly confidential. I do not want it in the files of the Department of Justice just for anyone to read. This is a highly classified document," and as such I believe that Continental Can relies on it.

It says——

The Court: All right. I am familiar with it. I think that is enough of that. I get your position on that.

[fol. 3399] Mr. McManus: Of course, your Honor, we were referring to the first page, as to how the document is made up. That would be part of the basis of our offer, that it was made by the sales control document, and the first page indicates that it was so compiled.

The Court: Yes.

Now, next is section 7, and this time you have really got me. Section 7 of Exhibit 800.

Now, the very title of this table, to my mind, demonstrates that it is irrelevant. I am not going to take tables about tin can and other tinware industry in this case, and I am not going to take tables that are predicated on tin can and other tinware industry.

We are dealing with the container industry. If you have got figures about containers, I am willing to consider it,

but I am not willing to consider stuff of this nature, and I am going to exclude both of these.

[fol. 3400] Mr. McManus: Your Honor, before you do, may I make one short argument to explain the basis of these things and why we think you should take them in?

The Court: All right.

Mr. McManus: Our basic purpose is this, your Honor. This is for the purpose—excuse me. First, I would like to identify the documents that we are referring to as Government's Exhibit 800, and they are the charts in section 7 "Tin Can and Other Tinware."

Now, the only purpose—first, I would like to say, your Honor, we admit and the statistician has already testified, that this includes not only the tin can industry but also people that make tinware, and the only purpose of this chart is to show that in this industry, which includes additional people, the tinware people, that the American Can and Continental Can have for years, from 1946 through 1956, had by far the great bulk of the sales and by far the highest number of assets. They have been the dominating com-

[fol. 3401] panies. It only goes in for that purpose. It is a category which has been set up by Internal Revenue Service, and it includes a little more than the tin can industry. But even including other industries, Continental and American predominate, and we say that you should take it to show that even though we have expanded the overall universe, they are still the dominant companies.

Now, I would like to point out one other thing——

The Court: What about this argument by Mr. Johnson as to the omission of 1957?

Mr. McManus: I was just going into that, your Honor, and I would like to direct my argument to that, because Mr. Johnson has accused us of being misleading a number of times here, and I want to say that Mr. Johnson is misleading the Court, perhaps not intentionally, but the document he showed Mr. Tolton is not the document on which we based our statistics. This is put out by the Internal Revenue Service, and it gathers information, this document, for

[fol. 3402] scholars and people that are interested in tax and things of that nature, and it gathers data and puts it in here.

They refer to the actual studies that were made that we

have here, that they might occasionally use that as a source, or they may sometimes use that as a source. But they will use other stuff. They use Census and other things of that nature. We rely upon this——

The Court: What is that that you hold in your hand?

Mr. McManus: This is a study made by the Internal Revenue Service from the income tax returns—from the income tax returns of the various companies.

The Court: Has the other side seen that?

Mr. McManus: Yes, your Honor, they have. They have had copies of this for a number of months. Since last May, I believe.

The Court: And what is that entitled, that document that you hold in your hand?

Mr. McManus: This is from the source books of statistics [fol. 3403] of income. This is the statistics of income. This is put out, I believe, annually—annually. This is never put out until about three years after the material has been gathered. That is the only reason we had up through 1956.

There are other sources that this document relies on, and they can do it annually and they can make guesstimates out of it, but this is the reliable source information for the data which we have and what we plot our chart on. We start out with this basic data and finish with this basic data. If we had finished with this, we would come out with some other conclusion. But this is the basic data. We don't start out with this and finish with other documents which we don't consider to be accurate.

The Court: Are you going to offer that?

Mr. McManus: Your Honor, I was going to say that to be abundantly clear, we should show it to the defendants and [fol. 3404] give it a government's exhibit number. This has the usual seals, etc., of the Treasury Department confirming that it was so made by them.

(Government's Exhibit 1207 marked for identification.)

Mr. McManus: The government would also like to offer Government's Exhibit 1207 for identification. We would like to offer that into evidence.

The Court: Let me see 1207.

Mr. McManus: In addition to this——

The Court: Just a moment.

Is there anything in this material here that defines what tin cans and other tinware is?

Mr. McManus: Your Honor, we have a—I mean, Mr. Tolton read, I believe, from a different classification index which we could put in, if you thought——

The Court: Mr. Tolton read from it. What was the definition? Do you recall it?

Mr. McManus: Could I have him answer that, your Honor?

[fol. 3405] Could you indicate what that was, the definition of tin cans and other tinware?

Mr. Tolton: I read from the Internal Revenue Service document which defines the tin can and other tinware industry, and then it went into detail——

The Court: Where is that?

Mr. Tolton: I have it right here.

The Court: Let me see it.

Mr. McManus: Your Honor, while he is getting that, could I point out one other thing that shows that the statistics we compile would be somewhat different from what Mr. Johnson offers out of his book, and I will tell you why.

As the witness testified, our statistics refer to companies whose primary operation is the manufacture of tin cans and tinware. This could include captive plants whose primary operation could be paints, such as Sherwin-Williams. So that is the reason our figures would refer only to companies whose primary operation is the manufacture of cans.

[fol. 3406] Now, this could include companies whose operation is not that, but who incidentally might make cans for their own use or for other purposes.

The Court: That doesn't help us very much, Mr. McManus. Tin cans: beer, oil, milk, ice cream and other general lines. Tinware and household utensils.

That doesn't help me. It doesn't give me any really fair idea of what the industry is.

Mr. McManus: Well, your Honor, it would be our position that this chart would include the tin can industry, by that definition, and it would probably include other tin manufacturers.

The Court: I don't know, for instance, whether it includes frozen foods or not. For instance, the little cans that frozen orange juice comes in. Do you think that——

Mr. McManus: Oh, I most assuredly believe that it does, because that is a tin can. It would include any tin can.

[fol. 3407] The Court: All right, Mr. Johnson, I will hear you.

Mr. Johnson: I asked the witness that question, and he said he did not know.

Mr. McManus: And I think you asked me if I did, and I thought it does.

The Court: Well, that is a matter of opinion.

Mr. McManus: At any rate, your Honor, it includes the tin can and tinware industry. It includes more than our line of commerce, and I am willing to concede that that is quite obvious that it does. But what it includes in addition to tin can, it obviously, I think, includes all the tin can companies who make cans for sale, their primary operation. It includes some people who make tinware products which are not tin cans.

The Court: Is there any indication in the record, for instance, what proportion of American Can's production goes into tin cans? For all that appears in the record, 10 per cent of their production might go into tin cans, and 90 [fol. 3408] per cent into other tinware.

Mr. McManus: Well, your Honor, there is no question but that in our chart—if I understand you, in our chart there was no argument by Mr. Johnson that the two companies involved there were not American Can and Continental Can. He asked him questions about that himself.

The Court: Oh, I quite understand. That is why I am asking you about American Can.

Mr. McManus: Well, these are only—well, the asset figures, your Honor, of course—I will withdraw that.

Their sales figures, as I understand it, I believe the witness testified, referred only to their tin can production.

Mr. Handler: That is not so.

Mr. McManus: Isn't that true, or am I wrong? I am in error, your Honor. I will withdraw that. Excuse me, your Honor.

What he said, as I should have realized, is that that was their primary business, so obvious over 50 per cent of [fol. 3409] their sales, would have to be in cans or they would not be in that classification, and the same thing would be true of Continental. The same thing would be true of

any company on this list. Over half of their sales would have—their primary sales would have to be in tin cans or tinware.

The Court: Well, now, Continental is included in here.

Mr. McManus: Yes, your Honor.

The Court: I don't remember the figures, the Continental figures, but let's say 51 per cent of Continental's sales are in tin cans and 49 per cent are in other than tin cans, and let's suppose the same thing occurs in American Can.

Mr. McManus: Yes, sir.

The Court: That means if that were so—I don't know whether it is so or not—these charts would be completely misleading——

Mr. McManus: Well, all we are saying to show——

The Court: —in relation to the issues in this case.

[fol. 3410] Mr. McManus: Your Honor, I think what the charts show is in this whole industry, from 1946 on, both in sales and in assets, these two companies have been the dominant companies for that 20-year period, and I believe that they have expanded their share and some of the smaller companies have lost——

The Court: If I do let these in, I assure you the significance I attach to them is going to be minimal.

Is there anything else?

Mr. McManus: That is all I have to say on this group. If you would like us to go into plastics, Mr. Greenberg will——

The Court: I think I will take that after lunch.

Mr. Hughes: Your Honor, did you rule on 1207?

The Court: No, I haven't ruled on 1207, and I won't rule on 1207 until I hear from you gentlemen.

[fol. 3411] Mr. Greenberg: If the Court please before we recess for lunch I would appreciate one clarification. The only guidance I have from Mr. Johnson with respect to his objections to the plastic table are in essence that they are utterly fantastic and prove nothing. That really doesn't indicate to me what his objections are.

The Court: It indicates to me what his objections are, and I think it is your job to show that these charts have some validity and are admissible. That is your burden.

All right, gentlemen. We will take a recess until five minutes after 2.

(Recess taken to 2:05 p.m.)

[fol. 3412] AFTERNOON SESSION

2:10 P.M.

COLLOQUY BETWEEN COURT AND COUNSEL

Mr. Greenberg: If the Court please, I believe the order of business at this point is defendant's general objections to Government's Exhibit 809.

The Court: That's right.

Mr. Greenberg: Turning first, sir, to table 2, the dollar sales, the dollar sales of each of the seven firms included within this table have been the subject of a stipulation which has been marked Government's Exhibit 925. Within this table we seek to compare each company's dollar sales with two universes. These universes received definition and consent by the parties in response to his Honor's statements at pages 3,204 and 3,241 of the transcript of proceedings of October 14, 1960.

The reason for the two universes is that defense counsel agreed to use Mr. Schillaci's estimate of what Plax considered——

The Court: Now wait a minute, wait a minute. They [fol. 3413] didn't agree to use this. They agreed that if you took Mr. Schillaci's figures and had them projected, you would reach a certain result.

Mr. Greenberg: That is correct, your Honor.

The Court: All right.

Mr. Greenberg: I was about to add that in the next sentence.

The Court: All right, I'm sorry.

Mr. Greenberg: Continuing, your Honor, that line of thought, reference is made to page 2,511 of the proceedings of October 4, 1960, and to Mr. Schillaci's testimony of June 14, 1960, on page 178.

We believe, your Honor, that these tables are competent, relevant and material.

The Court: The first universe of 39,000 is what we will

call for want of a better word the Schillaci universe, and the 29,000 is what universe?

[fol. 3414] Mr. Greenberg: That is millions, your Honor.

The Court: What?

Mr. Greenberg: Millions, your Honor. Three zeros——

The Court: Yes, I know that, but what is the 29,000,000?

Mr. Greenberg: That is the range of from 30 to 40 per cent. In other words, one universe constitutes, after a projection, 30 per cent, or starts with the 30 per cent estimate, and the other one starts with the 40 per cent estimate.

The Court: In other words, that is, taking the range of Schillaci between 30 and 40 per cent, the 30 per cent is the 29,000,000 and the 40 per cent is the 39,000,000.

Mr. Greenberg: That is so, your Honor.

Tables 3 and 4 do not contain a universe figure. Table 3 contains the poundage figures for six firms and the dollar sales of one firm, all of which are covered by the stipulation G-925.

[fol. 3415] A group total is used instead of a universe to indicate relative rank in production among the leading companies.

The characterization of "leading companies" is based upon testimony already in the record, testimony which occurred during the month of June.

Table 4 has the same format as table 3, except that it makes its computations for both dollars and pounds.

We believe tables 3 and 4 are competent, relevant and material and should not be rejected by his Honor.

Table 1 seeks to compare the growth of five leading firms in the plastic container industry, and for Continental Can alone, and compares such growth with the expansion of the glass container and metal can industries. The data in this table is based upon census material and facts covered by the stipulation.

The Court: Well, my worry about table number 1, I am frank to say, Mr. Greenberg, is that it seems to compare [fol. 3416] different things. You have got plastic containers net sales by Continental Can compared to plastic bottles, jars and carboys with another five firms, apparently lifted more or less arbitrarily out of the industry, and then you compare that to metal cans and glass containers, and what

worries me is what is the significance of the plastic bottles, jars and carboys?

Mr. Greenberg: Your Honor, we think that the poundage rate of growth and the dollar sales rate of growth are related.

The Court: For instance, in 3, if this figure were plastic containers instead of plastic bottles, jars and carboys, you might get an entirely different figure of percentage increase.

[fol. 3417] Mr. Greenberg: If the Court please, these figures are based on the matters covered by the stipulation. In 3 what we tried to do was to extract from the figures such things——

The Court: When I say 3, I am talking about line 3 of table 1.

Mr. Greenberg: That is what I am talking about.

The Court: All right. Go ahead.

Mr. Greenberg: With those poundage figures in line 3, we tried to extract from these figures that which was represented by Christmas ornaments, toy pigs and what have you, which represented a small percentage, a very small percentage of the production of these five leading companies. That is the reason why we call line 3, or entitle it "Plastic Bottles, Jars and Carboys." That is the only reason.

The Court: Is it your contention that line 3 represents thousands of pounds of polyethylene consumed by these five firms in the manufacture of all containers, plastic con-

[fol. 3418] tainers, manufactured by them?

Mr. Greenberg: No, your Honor. We are indicating that —this is what we are trying to show: We have taken five companies who we believe are leading companies in the field, and this is based upon testimony in the transcript. We wanted to show their growth, regardless of what the rest of the industry did, their growth, the growth of these leading companies, over a five-year period, because they are the ones——

The Court: Well, the only way you can show that in the container field is by including all the containers, the plastic containers, they manufactured.

Mr. Greenberg: Well, I think these are all the plastic containers they manufacture. They do not include containers such as toy pigs or the few other things——

The Court: I am not talking about toy pigs.

Mr. Greenberg: Your Honor, again I wish to reiterate, all this line 3 shows is the growth, perhaps in an important [fol. 3419] phase of these companies' business, their growth over a five-year period. We want to show——

The Court: You don't say, for instance—do you say that polystyrene is in competition with metal cans and glass containers?

Mr. Greenberg: No, your Honor, we do not. The testimony this far has indicated that competition has been in the high and low-density polyethylene fields. We do not deny that, for example, occasionally a company such as Prell will put out a polystyrene tube, and that was offered by Mr. Hughes a few days ago. But that is surely the exception, and we maintain that is so, and we believe the defendants cannot show that it is not the exception.

The Court: All right. Anything further on this, Mr. Greenberg?

Mr. Greenberg: No, your Honor.

The Court: Now, I will hear briefly from you, Mr. Johnson.

You may remember that 1207 for identification has been [fol. 3420] offered since I heard from you last time, and you might want to address yourself to that. That is the material from the Internal Revenue Service.

Mr. Johnson: Yes, sir.

Let me address myself first to the last subject, since it is now before us.

The more I hear about this group of documents, 809, the more confused I become as to what they are all about. The government seems somehow to be trying to get from us an agreement of what the plastic container industry is, or what the plastic container business is.

I have not tried to define it for the purpose of this case, and I don't think it is incumbent on me to do so.

With respect to what Mr. Schillaci said, it seems to me that really all I can say is that Mr. Schillaci said what Mr. Schillaci said, and it is in the record.

At this point we get all confused about whether we talking about Polyethylene, blow-mold, of polystyrene. I have [fol. 3421] just heard that polystyrene containers for some reason are apparently so different that they are not even closely related to the polyethylene bottles. I heard that with considerable surprise from the government.

With respect to what Mr. Schillaci said, about what this industry was, on page 178 of the transcript——

The Court: Just a minute. I will follow you as you go along. All right.

Mr. Greenberg: Could you wait just a moment until I get the page reference?

Mr. Johnson: Yes.

Mr. Greenberg: All right.

Mr. Johnson: On page 178, it is there that he says:

> "... we do something in the order of between 30 and 40 per cent."

A few lines down, your Honor asked him:

> "He is talking about the type of bottles we have been discussing here. Is that right?"

The witness says:

[fol. 3422] "Yes, sir.

On page 143 he says:

> "We manufactured the bottles for use in the field, mostly from polyethylene but not limited to that. The plastic material that can be blown is used for selling the markets where special purposes are required or where a special function or purpose is needed."

On page 229, Mr. Greenberg asked, toward the bottom of the page—I am sorry——

Mr. Greenberg: I didn't.

The Court: It was Mr. Hughes.

Mr. Johnson: I am sorry. Mr. Hughes in cross examination asked him:

> "... whether you"—referring to Plax—"make polyethylene bottles of low-density and high-density."?

He said, "Yes, we do.

> "Q. And that is the overwhelming highest percentage of the bottles you make, that is, made of either low or high density?

The answer on page 230 is "Yes."

[fol. 3423] Then on pages 238 and 239, on cross examina-

tion, it was suggested to him that there might be as many as 200 companies in the industry. He says that wasn't the figure that he had in mind. "but I certainly would not say that it was out of line . . ."

The next page, 240, referring to these same small manufacturers, the Court asked him:

> "What sort of volume would he produce in terms of dollar volume?"

He said:

> "Couple thousand, three, four thousand dollars a week,"

and your Honor then translated that into, "Say, two hundred or $250,000 a year maybe?"

He said, "Possibly."

And on the following page, he goes into the question of injection molding and makes an estimate as to the number of firms in the injection molding business.

So, your Honor, all I can say on that again is that Mr. Schillaci s[illegible]hat Mr. Schillaci said. I don't think I need [fol. 3424] spend any time on the rest of these tables in this group. They are just indicating how much a limited group of companies did, and to me this is nothing more than taking six delicatessen stores at random and adding up the total and then dividing as to what percentage of the six each of them sold.

Mr. Greenberg did comment on the leading companies, and he said that his concept of leading companies here was based on the record.

Again I point out, as I did in the cross examination, that somehow and mysteriously American Can Company has disappeared from this group. There is no reference to Olympic Plastics. In fact, there is no indication of what is meant by leading companies at all.

Going back, then, to the earlier material, Mr. McManus has said in a number of instances that this material was the best they could do and I simply point out again that if the material is no good in the first place, the best they can do is no good.

[fol. 3425] Mr. Greenberg: I would like a page reference to that.

The Court: What is that?

Mr. Greenberg: I would like a page reference to that?

The Court: To what?

Mr. Greenberg: To Mr. McManus' statement that this was the best they could do, or something like that.

The Court: Don't interrupt his argument. If you have anything to say, you can add it later.

Mr. Greenberg: I hesitated to argue, your Honor, and I don't normally do that, but I believe that remark is improper argument.

The Court: Go ahead, Mr. Johnson.

Mr. Johnson: Now, with respect to the chart that related, or the table, I believe, to captive manufacturers, Mr. McManus said they did not have any figures, and I think that with respect to your Honor's question about Campbell's Soup he merely said they did not have any figures.

[fol. 3426] The Court: As I understood it, he said he did not have any specific figures on specific companies. He pointed to a figure on one of the tables, six hundred million-odd, which he said indicated the number, that is the gross, of the so-called captive man manufacturers.

Mr. Johnson: That is correct. I simply wanted to comment that he did not have any American Can figures until such time as he chose to give them. The same figures were available with respect to the other companies as were available with respect to American.

This morning we have a new starter as an offer by the government. This is Government's Exhibit 1206, the so-called key customers. I indicated before this document has never been considered at all in pretrial discussions.

[fol. 3427] Mr. McManus indicated, I think the words he used were "this document had been held back and subjected to special treatment."

In the first place I think it should be clear, if it isn't already, that regardless of how this document was produced, it was not prepared for any purposes in this case. It was not prepared in response to either an interrogatory or prepared in response to a motion to produce.

The Court: You don't question that it came from your

files, or, I take it, that it was a report of your Sales Control Department, do you?

Mr. Johnson: I do not, sir, but it was not prepared in response to anything. We have no evidence with respect to it. There is no indication that it is an admission by the company. There is no indication of why it was prepared; no indication of the accuracy of the material. It doesn't even show what products were sold—simply lines that show metal containers or glass containers of the Hazel-Atlas Division. There has been no foundation of any kind whatso- [fol. 3428] ever laid with respect to this document.

What is your Honor supposed to conclude it means? What do all of these figures stand for? What is the purpose of making the offer? I don't know. We are left in the dark completely with respect to that.

Mr. McManus made something about the manner in which this was produced. Of course it was produced very carefully, with all kind of references to confidentiality. This is a list full of customers' names. Instead of being held back in any way, shape or form, this document was discussed with the plaintiff at a time when we were trying to work out the scope of the motion to produce. Now suddenly we find this as a document which is to be offered for no one knows what purposes.

With respect to the Internal Revenue material, Mr. McManus said that in that instance when I questioned the witness I was actually talking about material other than that used. I presented that document that I used to the witness, after it had been marked for identification, and asked him [fol. 3429] on page 3300 of the transcript:

> "Did you use this book in the preparation of your tables?"

The answer: "Well, ours was the original source book that was obtained from the Internal Revenue Service, that's right."

Mr. McManus makes a distinction without a difference. The documents, the charts, that he is referring to apparently were prepared from earlier versions of this material. The witness, however, had no difficulty whatsoever identifying with this material. In fact, the number of returns which

are referred to in cross-examination, number of 52 on line 122 of page 16, is exactly the number referred to for 1956 in the chart (showing to Court).

The Court: Yes.

Mr. Johnson: Some reference was made in Mr. McManus' argument as to the exclusion of plastic caps from one of the closure tables. I don't know whether plastic caps should or should not be included. My point there is simply that the [fol. 3430] government has picked out what he now says, what he now describes, as tin mill products, and has decided that that is the thing, that somehow there is some magic in comparing those.

Mr. McManus talked at length about this little CMI brochure, pamphlet. Mr. McManus says this was an expensive document that was prepared by a large staff; it was published year after year; obviously people relied on it. Mr. McManus said those things.

There is not one word to that effect in the record. I was hesitant to answer your question as to why this was prepared for fear I would be testifying. But does Mr. McManus know any of these things? Does he have the least idea of where this mimeographed sheet was prepared and why it was prepared and who relies on it and who looks at it?

He has had Continental people on the stand; he has had CMI people on the stand. What does he know about this thing? If he wants testimony of what it is, I say it is a [fol. 3431] publicity blurb that is thrown out and no one relies on it.

Your Honor asked some questions of Mr. McManus with respect to the so-called growth charts, the tables that show glass-container line and the can line and the metal container line, going from 1939 on up to some later date, and Mr. McManus indicated his belief that if you started from any date other than the one they had, that the results would be something approximately the same.

Your Honor will recall, however, that I specificially asked the witness whether there was not a possibility that those two lines might cross if they started from a different date, and the witness said there was such a possibility.

Well, your Honor, I believe those are the comments that I wanted to add.

The Court: All right, thank you.

Now, gentlemen, I am prepared to rule, and I will go through these things the way Mr. Johnson treated them by way of objection.

First, the first objection was raised to charts 2C, 3C and [fol. 3432] 4C of Exhibit 803, which is folder C.

As to those, the objections are overruled.

(Charts 2C, 3C and 4C of Government's Exhibit 803, folder C, received in evidence.)

The Court: As to chart number 9 on Exhibit 800 for identification, relating to closures, or Section IX of the chart book relating to closures, the objection is overruled.

(Section IX of Exhibit 800 received in evidence.)

The Court: As to 5C and 5D of folder C, Exhibit 801, the objections are sustained as to both of those.

Mr. Hughes: That is 803, your Honor.

The Court: I beg your pardon?

Mr. Kuhn: 803.

The Court: 803, yes, I'm sorry.

As to the tables comprising Section I of Exhibit 801, and Section V and VI of Exhibit 802, the objections are over-[fol. 3433] ruled and those tables are received.

(Tables comprising Section I of Government's Exhibit 801 and Sections V and VI of Government's Exhibit 802, received in evidence.)

The Court: As to Sections II and III of Exhibit 801, and Sections I, II, III, IV and VII of Exhibit 802, the objections are overruled and those tables will be received.

Mr. Handler: Will you repeat those numbers, your Honor?

The Court: Exhibit 801, Sections II and III, and Exhibit 802, Sections I, II, III, IV and VII.

(Sections II and III of Exhibit 801, and Sections I, II, III, IV and VII of Government's Exhibit 802 received in evidence.)

The Court: As to the part of Section III of Exhibit 800, and also Section V of Exhibit 800, which objections were

raised on the ground that contain unit figures that were [fol. 3434] based on improper conversions, the objections are overruled.

(Part of Section III and also Section V of Exhibit 800 received in evidence.)

The Court: As to Sections I and II of Exhibit 800, the chart exhibit, the objections are overruled.

(Sections I and II of Exhibit 800 received in evidence.)

The Court: As to table number 1C of Exhibit 803, the objection is overruled.

(Table number 1C of Government's Exhibit 803 received in evidence.)

The Court: As to Section IV of Exhibit 800, which relates to historical growth, I am going to overrule the objection, but I think it should be understood that I consider these charts of very, very doubtful value, and at the present writing at least the weight I will give to them will be minimal, if any.

(Section IV of Exhibit 800 received in evidence.)

The Court: Now, as to Section VI of Exhibit 800, the [fol. 3435] so-called common customer sales charts, the objections are sustained and those charts will be excluded.

As to Exhibit 1206, which is the report of the Sales Control Department of Continental Can with respect to sales to key customers and suppliers, the objection is overruled and that material will be admitted.

(Government's Exhibit G-1206 received in evidence.)

The Court: As to Exhibit 800, Section VII, the firm asset classifications from Internal Revenue statistics, first of all I will take Exhibit 1207, which are the basic Internal Revenue statistics from which Section VII of Exhibit 800 purports to have been made. The objection to 1207 is overruled and 1207 will be admitted.

(Government's Exhibit 1207 received in evidence.)

The Court: Insofar as Section VII of Exhibit 800 is con-

cerned, the objection will be overruled and they will be [fol. 3436] admitted.

(Section VII of Exhibit 800 received in evidence.)

As far as Exhibit 1202 is concerned, which is the Can Manufacturers Institute figures, I understand that most of the figures, the basic figures, in that table agree with the census figures, and there is testimony to that effect insofar as base box totals are concerned. As far as the balance of material is concerned, I have, frankly, very grave doubt as to whether there was sufficient foundation laid. However, at this point I am going to admit that material subject to a motion to strike, and I am going to make the same caveat, subject to a motion to strike, with respect to all the material in any of these exhibits which we are discussing, which relate to a certain figure for cans predicated on the pamphlet of the Can Manufacturers Institute.

(Government's Exhibit 1202 received in evidence.)

[fol. 3437] The Court: With respect to Exhibit 809, the plastic tables, the objection is overruled and the plastic tables will be admitted.

(Government's Exhibit 809 received in evidence.)

Now I want to reemphasize in making these rulings that the admission of any document is not in any way an endorsement by the Court of the weight to be given to a document or any indication as to the amount of weight that will be given to it. I have already indicated with respect to several of these documents that I think they are pretty feeble as far as having any probative value or weight is concerned. I think you might as well know that I consider the plastic tables not so much in terms of the accuracy of any figures that may be included in there, but as to the significance of the figures, of very doubtful value indeed.

The same may be said with respect to a number of other tables that have been admitted in evidence.

I am saying that so the government will not assume that because a table has been admitted into evidence they can [fol. 3438] proceed from there without giving the most careful consideration to the question of the weight, the sig-

nificance of the tables, in the light of the picture that is before me and their relation to the issues.

Now, I do not know, gentlemen, whether the rulings I have just made cover the offers in full. Insofar as they do not cover the offers in full, anything in Exhibits 800, 801, 802, 803 and 809, which was not covered by a specific ruling in the rulings that I have just made, as to any other such material, the objections will be considered to be overruled and the material admitted, that is, if I have omitted anything in my specific rulings.

Mr. Johnson: I think your Honor's rulings are very precise.

However, I should like to ask a question with respect to this G-1206, which was the additional starter here this morning.

I don't now understand what it was offered for or what [fol. 3439] it is intended to prove.

The Court: I think that is a fair question and I think Mr. McManus ought to tell us.

Mr. McManus: Your Honor, as I understood it, we had made an offer of what we considered common customers between Hazel-Atlas Glass Company and the Metal Can Division of Continental Can, and you indicated that you thought those tables were highly misleading. I could understand—well, maybe I couldn't—but at least I understood some of the problems you have with the tables, and we, in effect, are offering the basic data in lieu thereof, which we feel shows the common customers of Continental Can Company and Hazel-Atlas Division, and also, we think the table will show part of our full line position.

Mr. Handler: Will show what?

Mr. McManus: Part of our full line position, which indicates that Continental sells a number of products of these types, such as paper and cans, caps and so forth to the same [fol. 3440] common customer. We think that that is what that table will show, and that is what it is offered for, primarily the first, but also the second.

Mr. Johnson: It is offered then for these purposes without any showing what it is all about or——

The Court: Well, the difficulty with that is, Mr. Johnson, that this has got, as I read it, quite an elaborate description

of what it purports to be in the second page, which I have read, and I presume that it is what it purports to be.

Mr. Johnson: Well, your Honor, I believe I am entitled to a witness on that subject, as to——.

The Court: You may call him, and if you find, if you get as far as your case, it appears that this is not what it purports to be and for some reason it ought to be excluded, you can make a motion to strike. This is true of any exhibit which I have admitted from the files of Continental Can, [fol. 3441] concerning which there has been presently up to now no testimony.

Mr. Johnson: Yes, sir. It is not simply a matter of being what it purports to be, but also of explanations of what it is.

The Court: Well, you are perfectly entitled to make all the explanations you want to, and, Mr. Johnson, you may show, for all I know, that instead of helping the government this material is very helpful to you.

Mr. Johnson: I understand that.

Mr. Handler: Your Honor, I am going to be confronted very shortly with the argument on the motion to dismiss, and I will have to deal with this exhibit.

I find quite unenlightening the first part of Mr. McManus' statement, in which he says that the exhibit purports to show common customers. The second part of the statement I understand. He says he wants to use it in terms of his full line contention.

There is no issue in this case as to whether or not there [fol. 3442] were common customers. What would be significant about the offer is the inference that he wants to draw from the fact of common customers, and on that he has been silent.

Now, the document does not purport to show competition between Hazel-Atlas and Continental Can for the patronage of the common customers, and I think that Mr. McManus ought to state now whether or not he at any time is going to call your Honor's or another court's attention to this exhibit and ask that an inference be drawn that by virtue of the fact there are common customers, that there is competition. Because the fact of the matter is that a common customer listed in this exhibit might be an oil company that buys oil cans from Continental and buys tumblers from Hazel-Atlas, to be used for promotion, and this exhibit

doesn't say one word about the products that are being purchased by the common customers, and it would be a most misleading use of the exhibit to say that it shows competition. [fol. 3443] The Court: What do you say to that, Mr. McManus?

Mr. McManus: Your Honor, I think with all due respect to Professor Handler we are starting a day earlier. I think that inferences can be drawn from this document of the effect of having common customers, and I think the government will.

Now, the defendants have every right, as Mr. Handler has just indicated, to draw inferences contrariwise, and you have indicated also, your Honor, that they have every right if they get to that stage for them to call a witness who will testify that this does not mean this, but it means something else. But I think a fair reading of this document would show the common customers of these various divisions in glass, cans, things of that nature, to show the common customers, and inferences can be drawn that that gives them an advantage, and we would like to draw them.

Mr. Handler: If your Honor please, right after your [fol. 3444] ruling I think that a motion to strike is quite in order, because I think that this is a most unusual and extraordinary procedure. The document was offered in evidence at your Honor's invitation in order to serve as an explanation for an exhibit which your Honor now has excluded. Now, it is one thing to have a document in which would enlighten the Court on reading an exhibit. It is quite another thing, without a witness, without any effort, to offer evidence surrounding the execution of this document and to ask your Honor at this stage of the record to draw an inference of competition from the fact that there were common customers. Certainly there must be a greater predicate than that.

The Court: Professor Handler, in order to ask me to draw an inference from this document that there are common customers in some significant sense, significance in having relation to the issues in this lawsuit, Mr. McManus will have to show me something in this document that leads to such an inference.

[fol. 3445] Mr. McManus: That's right.

The Court: Now the fact is that the charts which I ex-

cluded and which Mr. McManus, I think, introduced to demonstrate the inferences that could be drawn, I have excluded them. At the present time I am not drawing any inferences from this material. I say this is offered, the key customers and suppliers of Continental Can, in my judgment, as having some relevance in this Section VII proceeding.

Now, the inferences to be drawn from it, or what they establish, are another matter entirely, and I do not for the moment want it understood that by admitting this or any other document in evidence I am drawing any inferences.

Mr. Handler: Thank you, your Honor.

The Court: All right.

Mr. Johnson: May I ask your Honor that 1206 be treated as a particularly confidential document?

The Court: I can easily see why, Mr. Johnson.

Mr. Johnson: Yes, sir.

[fol. 3446] The Court: The very heading of the document indicates the necessity for its being treated as confidential material, and it will be ordered to be part of the sealed record in this case and not disclosed to anyone outside of counsel for the parties.

OFFERS IN EVIDENCE AND COLLOQUY BETWEEN COURT AND COUNSEL

Mr. Johnson: There were several items marked for identification on cross-examination. Some of those I should like to offer at this time in the light of your Honor's rulings.

I offer first Defendant's X for identification, consisting of defendant's interrogatory 6 and plaintiff's answer to interrogatory 6B.

Mr. McManus: Could I have the purpose, your Honor?

Mr. Johnson: The purpose is to show that the government, in answering the defendant's interrogatories, said that it had no reason to verify the accuracy of Can Manufacturers Institute data.

[fol. 3447] The Court: Any objection?

Mr. McManus: No objection, your Honor.

The Court: It may be received.

(Defendants' Exhibit X for identification received in evidence.)

Mr. Johnson: I next offer that portion of Defendants' Exhibit Y for identification which is the United States Department of Agriculture Bulletin No. 24 under the heading "Trend in Canned Vegetables to Smaller Size Cans."

The Court: Any objection?

Mr. McManus: No objection.

The Court: It may be received.

(Defendants' Exhibit Y for identification received in evidence.)

The Court: Now, something just occurred to me that must be cleared up.

When I stated a few moments ago that with respect to Exhibit 803, among others—Exhibit 800, I think—where is the prior acquisition table?

Mr. Johnson: That is in 800.

[fol. 3448] The Court: 800. I thought so. When I said that everything in 800 was to be admitted if not specifically covered, I did not refer to 808, which is the prior acquisition table which we have still got to discuss and which I have to pass on.

Mr. Johnson: I think you caught us asleep, your Honor.

I have also several physical exhibits referred to in the cross examination which I now want to offer: Defendants' Exhibit 105 for identification, Defendants' 113 for identification and Defendants' 122 for identification.

The Court: Those were some of the things you offered as examples on the cross examination.

Mr. Johnson: Yes, sir.

The Court: Any objection?

Mr. McManus: Your Honor, if they are the ones that I stipulated to previous to the start of the case, if they are what they say they are, I have no objection.

[fol. 3449] The Court: All right. They may be received.

(Defendants' Exhibits 105, 113 and 122 for identification received in evidence.)

Mr. Johnson: I offer also Defendants' 210 for identification, Defendants' 212 for identification, Defendants' 214 for identification and Defendants' 215 for identification.

Mr. Greenberg: If the Court please, may we have the scope and purposes of the offer?

The Court: No. They are samples, again, that we used on cross examination of a witness, and we don't have to have any further definition of this.

Is there any objection to it?

Mr. Greenberg: May I examine them for just a moment, please?

The Court: Of course you may.

As I recall them, some of them are labeled "Polyethylene jar with a polystyrene lid," if I am not mistaken. Now, I presume somebody wants some indication that they are what [fol. 3450] they say they are. If you want a witness for it, I am sure they will get you a witness, but it seems to me an enormous waste of time.

Mr. Greenberg: No objection.

The Court: They may be received.

(Defendants' Exhibits 210, 212, 214 and 215 for identification received in evidence.).

Mr. McManus: Your Honor, I understand that those are the ones that we stipulated that they are what they purport to be, and that is what we are admitting them for.

The Court: All right.

Mr. Johnson: With respect to each of those, there is a stipulation——

The Court: All right. Mr. McManus has just conceded that there is a stipulation on them, and that they are what they purport to be.

Mr. Johnson: I offer next Defendants' Exhibit BB for identification, CC for identification, DD for identification and EE for identification. With respect to these items, your Honor, there is no stipulation. These are items which were [fol. 3451] used on the examination of a witness.

The Court: All right. I will admit them. If you find any error in them anywhere, move to strike them and I will hear you at that time.

Mr. Greenberg: If the Court please, I would like to make one comment for the record: The stipulation does not, nor is there any evidence of what these containers hold or can hold or whether they are appropriate for sale in the lines of commerce that we had specified, to wit, drugs, cosmetics——

The Court: I will look at them, and I will know pretty

well after this lawsuit whether they are suitable for sale in the line of commerce that we are talking about.

(Defendants' Exhibits BB through EE for identification received in evidence.)

The Court: As far as the rose dust is concerned there, I have used that on a rose bush on a roof in New York.

All right.

Mr. Johnson: That is all I have.

[fol. 3452] The Court: Now, presumably before we go to a different subject matter, we are going to take a brief afternoon recess. I take it the next order of business is the prior acquisition.

Mr. McManus: Yes, sir.

The Court: And so that I may be clear on that, the evidence on prior acquisitions offered by the government is what?

Mr. Greenberg: The exhibits are G-785 and G-786.

The Court: I see.

Mr. Handler: If your Honor please, there are three exhibits that have been marked so far: G-785, G-786 and the page in G-800 to which you refer.

The Court: Yes.

Mr. Handler: In addition, your Honor, there are two documents that have been marked by the government since the July recess which in part deal with this subject, and I wonder if it wouldn't be a good idea for them to be formally offered at this time so that I might be able to discuss all [fol. 3453] documents having to do with prior acquisitions at one time. I am referring to G-788, which is a resolution of board of directors of Continental Can, and G-900, which in part has to do with this subject, particularly with reference to the Obar & Nestor transaction.

I would like counsel for the government to make a formal offer at this time.

The Court: I will have a formal offer made. I want to see what we are dealing with. I will have those two exhibits which were just mentioned to take in with me.

Mr. Greenberg: Your Honor, if you are taking them in, I would like to point out that with respect to G-900 we are offering only pages 8 through 34, and we are offering 788.

(Short recess.)

The Court: All right.

(Discussion off the record.)

The Court: Let the record show that Mr. Martin Jacobs, representing now Mr. DeMerell, an officer of Anchor-Hock-
[fol. 3454] ing Glass Company, who testified on June 27, 1960, has presented a letter which has been shown to counsel for both sides, in which Mr. DeMerell corrects certain answers given in his testimony on the record at page 1498 of the transcript on June 27th last.

In accordance with the Court's suggestion, the government has offered the letter of Jones, Day, Cockley & Reavis of Cleveland, addressed to Mr. McManus, dated October 14, 1960, which makes these corrections. The letter has been offered by the government and will be received as Government's Exhibit 1208 in evidence.

(Government's Exhibit G-1208 received in evidence.)

The Court: This corrects the record, and if counsel wish to go through those mechanics, they may arrange to have the copies of the record physically corrected in accordance with the terms of the letter, should they deem that desirable.

Mr. Jacobs: Thank you very much, your Honor.

Mr. Greenberg: If the Court please, last June the govern-
[fol. 3455] ment had offered certain documents which related to so-called prior acquisitions. At that time Mr. Handler submitted a brief to his Honor with copies to government counsel in which he made his formal objections on the grounds of relevancy and materiality to G-785 and G-786. In that brief he amplified the grounds that he stated, and the government is prepared now to argue in rebuttal.

The Court: I see.

We are now arguing with respect to the government's offer of Exhibits 785 and 786 for identification, which have not yet been ruled on.

Now, do I understand that there are other documents which the government claims bear on the question of prior acquisitions, and which the government is now offering?

Mr. Greenberg: Two other documents bear in part on the question of prior acquisitions and a contemplated acquisition by Continental Can. I hasten to add, however, that we offer the two documents involved, G-788 and G-900, for all

[fol. 3456] purposes. G-900, however, is limited to an offer of pages 8 through 34.

To the extent that these two documents pertained to the argument on prior acquisitions and contemplated acquisitions, we agreed to discuss them and to offer them along with G-785 and G-786.

The Court: And, of course, there is also implicit in all this the chart 8 of Exhibit 800, which purports to be some sort of pictorial representation of prior acquisitions.

All right.

Mr. Greenberg: If the Court please, I would desire now to commence the government's argument with respect to prior acquisitions.

The Court: Well, the question is, who comes first?

Mr. McManus: That's correct. I suppose that the government really has the burden of showing the Court why prior acquisitions should be admitted here and how they are relevant.

The Court: What do you say to that, Mr. Handler?

[fol. 3457] Mr. Handler: We are objecting, your Honor, and I think I ought to be able to present my objection, and then it would seem to me the normal thing would be for Mr. Greenberg to respond.

The Court: Well——

Mr. Greenberg: Your Honor, the government, in light of the fact that Professor Handler has submitted a brief to you in June, would prefer to open the discussion.

The Court: Well, Mr. Handler submitted the brief to me in June, Mr. Greenberg, and I got a brief from the government at 3:27 this afternoon. It doesn't seem to me that that gives the government any privilege of opening.

I have not read your brief. As far as I know, before I pass on this question, which I intend to pass on at the conclusion of the argument, unless something rather peculiar happens, I will not have read the government's brief by that time, and I am frank to say that if the government expects me to read their briefs they must not wait from June 27th until 3:27 on October 17th when the argument is to be held and [fol. 3458] expect me to read their brief.

Mr. Greenberg: Your Honor, may I make one comment? This brief was intended only to supplement our arguments in court, and I wish to add that for the record, and of course

we would prefer if his Honor did read the brief, but, as I stated before, it merely supplements our arguments.

The Court: I will hear from Professor Handler on his objection, and then I will hear from you.

Mr. Greenberg: Thank you.

Mr. Handler: If the Court please, I am very much in the position of a pitcher who has been in the bullpen warming up for the past 10 days.

The Court: This is really also part of the warm-up process, Professor Handler, what I expect to hear from you tomorrow or the next day. This further warm-up may be good for you.

Mr. Handler: There are now before your Honor a proffer of five exhibits. I should like to address myself first to [fol. 3459] three and subsequently I shall turn to the latter two.

The three exhibits, briefly, consist first of 785, which is a voluminous document, consisting of a comprehensive letter to Mr. England of the Federal Trade Commission by the Willkie firm in response to an inquiry from him.

The Court: That is what—785?

Mr. Handler: I believe it is 785—786. I beg your pardon.

The Court: 786.

Mr. Handler: But chronologically it comes first.

Attached to this document of some 36 pages are many financial statements in the form of exhibits.

The document purports to summarize the various acquisitions made by Continental, the earliest was December 6, 1926, and it runs through to an acquisition on September 21, 1944. Each of these acquisitions is separately discussed in separately numbered paragraphs.

[fol. 3460] Now, in addition, there is an Exhibit 785, which was a table of six pages, likewise prepared by the Willkie firm, which was submitted to the Department of Justice as an exhibit to a letter answering many questions which the Department put to the defendant.

The Court: Was that in answer to an interrogatory?

Mr. Handler: No, this was in answer to a letter of inquiry before the suit was started.

This purports to summarize a substantial number of acquisitions during the period from 1942 to 1956. It lists the names of the acquired company, the form of acquisition,

the date of acquisition, the product line of the company, and then the information furnished to the government with respect to the acquisition.

Now, the third of the group of exhibits is the table to which frequent reference has been made, the chart in Government's Exhibit 800. By my numbering it is page 92. And this chart purports primarily to be based on the two previous [fol. 3461] exhibits.

Now, the complaint in this action, in paragraph 6, alleged that since 1942, Continental has acquired more than 25 independent business enterprises. Accordingly, the defendant, in an interrogatory, requested the government to state how and precisely in what manner the acquisition by Continental of each of these 25 businesses is claimed to be relevant to the acquisition of Hazel-Atlas by Continental or the charges made in the complaint in respect thereof. The government answered that these prior acquisitions are relevant in the present case in so far as they involve a company engaged in the production, manufacture and/or sale of containers, container products and related products.

Now, I presume that this answer does not relate to Continental. I don't suppose the government is saying that the acquisitions are relevant because Continental is engaged in the container field. I would suppose that the answer has to do with the acquired companies.

[fol. 3462] Now, there are two points that I want to make to that answer. The first is, as Mr. Johnson brought out in his cross examination of Mr. Tolton, that the proffered exhibits are not confined to container companies at all. They relate to companies engaged in fields remote from and not connected with containers or accessory lines. Indeed, if you look at the bottom of the chart, you find a caption, "All Others," and seven companies are listed under "All Others." Mr. Johnson brought out that some of the companies are engaged in businesses that are most remote from the packaging field. For example, we call your Honor's attention to the Tenco Company, which is engaged in the manufacture of plastic pipe fittings. He referred to Wallace Container Company which makes Vinite collapsible tubing.

The Court: What is that used for, Mr. Handler?

Mr. Handler: What is that?

The Court: What is that Vinite tubing used for?

[fol. 3463] Mr. Handler: I will have to find out, your Honor.

Mr. Johnson informs me that the Wallace Company is extinct and we don't know what the tubes were used for, and I used the past tense for Tenco. I should use the present tense. They are making plastic pipe fittings.

The Court: Aren't they discontinued too?

Mr. Johnson: I believe. It is not quite correct that I don't know what they were used for. I believe that Wallace Container Company at one time did make tubes. Now, whether that is the principal product or not, I don't know.

Mr. Handler: Apart from the fact that these documents, and particularly 786, embrace acquisitions of companies that are not engaged in this field, more important than that is that our contention is that these prior acquisitions, even if in this field, are lacking in relevance and in materiality.

For example, some of the acquisitions have to do, if you [fol. 3464] look at the chart, with the canning machinery phase of Continental's activity. You haven't heard a word in this case of any anticompetitive effect as charged in the field of canning machinery. And some of these companies were in the flexible packaging field. What you have heard about flexible packaging is that the government claims that fresh food packaged in flexible packaging is not to be treated in the same breath with foods packaged in tin and in glass.

Now, having regard for the type of contention that has been made in this case, and considering relevance and materiality in terms of the issues litigated here and not in some abstract fashion, what is the significance that the government attributes to acquisitions of the character to which I have just referred?

Now, I come to acquisitions in the canning field and to the acquisition now in question in the glass field.

At pretrial your Honor asked a series of extremely pointed questions of government counsel to clarify this [fol. 3465] phase of the case, and their answers may be summarized by saying unqualifiedly that they admitted that the prior acquisitions have no materiality to this litigation. Now, that, of course, is my conclusion, which I shall endeavor to support by reference to the colloquy.

Now, I define materiality the way the books on evidence

define materiality, that is to say, evidence without any legal significance to the issues in the case at bar.

Now, your Honor asked first, is the government challenging the legitimacy of the prior acquisitions, and the answer was that they are not challenging those acquisitions.

Your Honor next asked: Would this case have been brought if there had been no prior acquisitions. Is the government claiming that this acquisition is unlawful, standing on its own footing, separate and apart from the prior acquisitions? And the answer was, "Definitely, yes."

And, finally, your Honor asked: What is the significance of the prior acquisitions? And Mr. McManus told you that [fol. 3466] if all he had was evidence of prior acquisitions, he couldn't make out a case.

Now, that is asking the same question, I submit, in three different ways, and the fundamental question is, what is the legal significance of this evidence, and the answer is that it has no significance because you have got to determine, as the statute commands you to, the legitimacy of this acquisition on the basis of its own facts. It is this acquisition whose effect upon competition must be determined as a pre-condition to any finding of illegality.

Now, Mr. McManus, in his answers to the interrogatories, and frequently at pretrial, gave a second reason as to why he was referring to the prior acquisitions. He said that the prior acquisitions are relevant on the theory that they may be part of a cumulative process described in House Judiciary Committee Report No. 1191, and at one point, when you were trying to draw out from him the legal theory underlying his contention of the significance of prior acquisi- [fol. 3467] tions, he said, and I quote, referring to the pretrial transcript at page 872:

> "The only reason I say so, your Honor, is what the committee reports tell me."

Now, the burden of my argument today, and it is an argument which I believe has never been made before to any court, is that the committee reports do not tell Mr. McManus what he said they "tell me." On the contrary, they tell him precisely the opposite.

Now, your Honor is familiar with the monumental work

of the late and beloved Justice Cardozo, who enumerated the three basic ways in which judge law develops: the method of history, the method of logic and the method of sociology. He did not mention the method of error, and law develops through misreading of significant documents, through false logic, through erroneous history and through invalid sociology, and what your Honor is confronted with here is false history.

The government, not only in this case but in many cases [fol. 3468] instituted under Section 7, has misread the House report, and I think your Honor is going to be called upon, for the first time since this statute was enacted, to read the House report exactly as it appears in the printed document, and I invite your Honor's attention, if you have our memorandum of law, to page 5.

The Court: I have it before me.

Mr. Handler: Now, there the House committee was answering the question: would the bill merely duplicate the Sherman Act, and it is pointed out that the bill is not intended as a mere re-enactment of that statute. Then comes the key paragraph which I would like to read with your Honor's permission:

> Acquisitions of stock or assets have a cumulative effect, and control of the market sufficient to constitute a violation of the Sherman Act may be achieved not in a single acquisition but as a result of a series of acquisitions. The bill is intended to permit intervention in such a cumulative process when the effect of an acqui- [fol. 3469] sition may be a significant reduction in the vigor of competition, even though this effect may not be so far-reaching as to amount to a combination in restraint of trade, create a monopoly or constitute an attempt to monopolize."

Now, you have got to read this report exactly as it is written, and you have got to recreate the situation which gave rise to this legislation. At the time of this legislation, there was only one instrument, one legal instrument, by which acquisitions of assets could be challenged. That was the Sherman Act, and Your Honor will remember that in the Alcoa case, where Judge Hand presided over a statutory court, he made the observation, which has been much

quoted, where, in defining monopoly, he said that 90 per cent is clearly sufficient—the percentage referring to market share—66 or 64 per cent might not be sufficient, 33⅓ per cent was clearly not sufficient.

Now, the 64 per cent had to do with the decision in the [fol. 3470] 1926 term of the Supreme Court, where the court upheld International Harvester, a company, which through acquisitions, had achieved a 64 per cent market share.

Under this statute, in attacking mergers, you had to wait until the company had achieved a monopoly position. You couldn't go after a single merger if it fell short of monopoly. You had to wait until the aggression was large enough, and that is why you considered the series of acquisitions, and that is why in such historic landmark cases as the Standard Oil of New Jersey decision by Chief Justice White in 1911, he reviews the various acquisitions of the Standard Oil trust which led to their having a dominant and monopoly position which the court adjudged to be unlawful and ordered dissolution.

But the whole point of this legislation was to permit intervention in the legislative process at any stage. You did not have to wait until the end. You could go after each and every acquisition if it had the effect of substantially lessen-[fol. 3471] ing competition, and that is pointedly, unqualifiedly and, I think, most lucidly set out in the language I just quoted. But you can intervene even though the effect of the challenged position may not be so far reaching as to constitute a monopoly menace.

Now, my good friends have referred in the memorandum which they submitted today; at the very last page, to certain authorities. They refer to Judge Weinfeld's decision in Bethlehem Steel, to Judge Weber's decision in Brown Shoe, and they also refer to the Senate report, all of which I shall want to address myself to.

Now, if you will turn, your Honor, to page 4, I believe, of the government brief, and look at the first paragraph, they refer to this intervention in a cumulative process. They then say that it, the statute, is addressed to growth through a series of small acquisitions, referring to the Senate report, page 5. Well, let's see whether they have correctly interpreted the Senate report in this regard.

[fol. 3472] Page 5 of the Senate report reads:

> "Under the Sherman Act, an acquisition is unlawful if it creates a monopoly or constitutes an attempt to monopolize. Imminent monopoly may appear when one large concern acquires another but is unlikely to be perceived in a small acquisition by a large enterprise."

And here is the sentence from which they quoted a part:

> "As a large concern grows through a series of small acquisitions, its accretions of power are usually so minute as to make it difficult to use the Sherman Act test against them."

That is the very same point that I have made, not the point that they would imply in the quotation on page 7.

Now in the next sentence, the quotation on page 4 of the brief—I was in error—in the next sentence in that paragraph of page 4 they say:

> "Consideration is to be given to the circumstances giving rise to the acquisition."

[fol. 3473] Again they quote from the Senate report. Let me read the whole sentence:

> "It is expected that in the administration of the Act, full consideration will be given to all matters bearing upon the maintenance of competition, including the circumstances giving rise to the acquisition."

Certainly the circumstances surrounding the acquisition at the time it is made, not the circumstances having to do with other acquisitions which are not in suit.

It is noteworthy in this Senate report—and I think I should call this to your attention because it is the fundamental error that has been made by Judge Weber in the Brown Shoe case, which is now up on appeal before the United States Supreme Court—you will remember the sentence I read from the Senate report which says:

> "As a large concern grows through a series of such small acquisitions, its accretions of power are usually

so minute as to make it difficult to use the Sherman Act [fol. 3473a] test against them."

Now, Judge Weber took that sentence, which, incidentally, is not a sentence of the Senate committee, which is a sentence which the Senate committee quoted from a Federal Trade Commission report on the merger movement, to which I shall shortly refer.

[fol. 3474] Judge Weber took that sentence and he said, "This sentence is proof positive that the Congress intended to prohibit minute acquisitions," and he said in Brown Shoe that the acquisition was certainly of large enough dimension to be denominated a minute acquisition; therefore, the acquisition was unlawful.

Now, on page 20 of their memorandum, where they speak of authority, they rely upon Judge Weber's decision.

I will not deny, your Honor, that Judge Weber refers to prior acquisitions by Brown Shoe in his opinion. Nor will I deny that Judge Weinfeld, in Bethlehem Steel, likewise refers to prior acquisitions. But that is a far cry from saying that these two learned judges would have refused to sustain an objection to this evidence had the objection been lodged. There is nothing in the opinions to show that the point that is now before you was considered by them.

Frankly, because I think you want and are entitled to complete frankness on my part, I don't know what these [fol. 3475] fabulously long records show in this regard. I do know that the fabulously long opinions written by these judges do not pass upon this point.

I go even further, your Honor, in the interests of complete candor: I certainly have no knowledge—and I have followed, as you are aware, all of these merger cases since the statute was enacted in 1950—I am not aware that these arguments were called to the attention of Judge Weinfeld or Judge Weber. Certainly the issue in those cases may very well have been buried in trials of extraordinary length. All I know is that the House report upon which Mr. McManus relied and which he said to you was the basis upon which he argued the relevance, and he said, "I think that it is relevant, your Honor, because the committee reports tell me it is relevant"—I am paraphrasing what he said—well, I say

that the committee reports do not say that prior acquisitions are relevant.

[fol. 3476] Now, I am not going to burden your Honor with any extended analysis of the Senate report. The House report is sufficient. It is enough for present purposes to call your Honor's attention that the Senate report quotes in part from the Merger Movement, and if you read the Merger Movement you have the same distinction that is made in the House Report.

Under the inadequate statute it had to wait until the acquisitions achieved the dimension of monopolistic matters. You had no instrument to step in and challenge the particular acquisition where it did not involve monopoly.

The Court: Well now, Mr. Handler, assuming your argument that under the House report and the Senate report on question 7 neither of such reports authorizes the admission, or I scarcely see how they can, the admission of these documents or make the documents relevant—I have grave doubt whether you could start making documents relevant by reports of the Congress, which are useful for a variety [fol. 3477] of purposes, but are not at all sure that is one of them—but, assume that they are not, assume that those reports have the effect of making this material relevant, I wish you would address yourself to the point of why it may not be relevant regardless of what they say?

Mr. Handler: That is precisely the point where I find myself, your Honor.

I think that the government, in offering this testimony, wants you to draw some inferences, and I have the same difficulty here that I have throughout the case in ever finding out what are those inferences which they want you to draw.

The Court: Well, of course, you see, I am in something of a dilemma here, too. I am in a dilemma by reason of some of the objections from the defense upon the theory that the matter should be excluded because I might draw the wrong inferences from it. I don't think that that is necessarily an argument for the inadmissibility of the testimony, of the evidence.

[fol. 3478] Mr. Handler: I couldn't agree with you more, your Honor. When I chide my good friends for being silent about the inference that they want you to draw, I am not chiding them because you are going to confuse inference

with admissibility, I chide them without knowing the inference it is extremely difficult for me to know what is the ultimate proposition of fact that they are trying to prove by this document. They tell you, as they told us, that "We are trying to prove that there were prior acquisitions." Earlier today Mr. McManus said, "This document shows common customers."

Well, these documents show prior acquisitions. So what? What is it they are trying to prove?

Now here, your Honor, I come to what is the essence of this matter. Obviously they think that prior acquisitions has something to do with a section VII case. They are not offering this evidence here for you to pat us on the back [fol. 3479] and say, "Well, you were good people in making these prior acquisitions." They want you to draw some inference adverse to us. They have some proposition that they are trying to establish, and that proposition obviously is deleterious.

Now, if your Honor please——

The Court: I don't want to interrupt your thread, but let me ask you this: let's suppose that instead of offering evidence about prior acquisitions by Continental, the government offered a historical survey of the industry in the last 20 years. Assuming we knew precisely what the industry was, assuming we have a well defined industry and the government said "We want to show your Honor what the history of this industry was during the past 20 years," would you say that that was irrelevant and immaterial in a Section VII case?

Mr. Handler: I would say, your Honor, I would quote your Honor the big case report, where the judges who [fol. 3480] studied this problem have urged—yes, I am referring to the Prettyman Report and this new report has been promulgated by Judge Murtagh.

The Court: If you want to get along with me, don't quote me the Murtagh Report, which is what I call a long and protracted report of a long and protracted conference on long and protracted cases, that still continues in its long and protracted fashion, and it does not impress me, frankly.

Mr. Handler: Well, your Honor, I think you should be and are impressed by the fact that it is necessary in these

cases to have some terminal point, a point of beginning and a point of end.

The Court: I agree with that.

Mr. Handler: And it is the consensus of all the Federal Judges, and I have never seen anyone express a dissenting opinion.

The Court: I may agree with everything the report said. My only difference is it has all been said 45 times before [fol. 3481] by 45 other committees and people.

Mr. Handler: Precisely.

The Court: Stretching back for ten years.

Mr. Handler: I agree with that. But the nub of the matter is that these cases have to be compressed within manageable proportions.

The Court: Yes.

Mr. Handler: And we are not here engaged in writing a doctoral dissertation. You go into history if history is going to shed some light on the present, if it is going to enable your Honor to determine whether this acquisition of Hazel-Atlas may have the effect of substantially lessening competition. But if it is offered for that purpose and it doesn't shed any light, or if it sheds a misleading light on the problem, then it seems to me that it is not relevant.

Now let me explain what I mean by this: You heard Mr. Johnson cross-examine Mr. Tolton. Mr. Tolton had been asked by Mr. Johnson, "Do you know whether the govern-[fol. 3482] ment ever encouraged any of these mergers on page 92 of Exhibit 800?" And he said he didn't know, after Mr. McManus objected.

Then Mr. McManus, on redirect, said, "Do you know whether the government ever discouraged any of these mergers?" and the same answer, "I don't know."

Now, the predicate of Mr. McManus' redirect examination was very clear to me. He was trying to signal to your Honor that these acquisitions had not been encouraged by the government.

Now let me read to you Exhibit 900, which the government is now offering in evidence.

The Court: Well, as a matter of fact, I may say to you that during the recess I read practically all of the pages except for the figures and statistics and tables, I read all of the text from pages 13 to 34 of Exhibit 900.

Mr. Handler: Did you read, your Honor, the bottom of page 31 and page 32?

[fol. 3483] The Court: Let me just see.

Yes.

Mr. Handler: Now, our proposition is this, your Honor: Do you remember that at pre-trial you indicated that you would not grant us an order for the production of material in files of the Department of Justice which has to do with these acquisitions. We made the statement then and we make it in this document, which the government now is offering in evidence as part of their case, we made the statement then that the government of the United States encourages many of these can acquisitions, because the government of the United States, after Judge Rose's decision in the American Can case, where he refused to order dissolution, encouraged the creation of a large company that could compete effectively against American Can.

Now I submit that it is contrary to all principles of justice for the plaintiff in a litigation to offer documents from which it wants to prove a proposition of fact, when it has in [fol. 3484] its own possession evidence which negate the fact that it is endeavoring to establish.

I go further, your Honor. The law in this country, and particularly in this Circuit, is that when the United States Government comes into court and tenders a witness or tenders a document, it is under an obligation to furnish the Court with all documents relevant to the document in question, and if it fails to provide the Court with those documents, the case has to be dismissed. That is Judge Hand's decision.

The Court: I am quite familiar with that principle.

Mr. Handler: Now we say that we don't understand what this evidence relates to. If it relates to the fact that we made prior acquisitions, and that is supposed to establish some deleterious tendency, pattern or trend on our part, we say that these exhibits prove nothing of the kind.

What does the table prove? It lists a lot of names. What [fol. 3485] does 785 do? It calls attention to the fact that many of these acquisitions were reviewed with the Department of Justice. And the opening pages of 786 expound the same philosophy as is embodied in 900.

Now, are they trying to show that we made prior acquisitions because the government of the United States wanted us to do so? If that is the fact, what light does that shed on whether this transaction is lawful or unlawful? What does history mean in the context of this litigation?

We bought other companies. Now what does that mean, so far as whether or not the line of commerce are the ten enumerated by the government, or whether or not there has been or is likely to be a substantial lessening of competition in any of those lines?

Now I shall briefly advert to their brief, where they endeavor, I suppose, to meet some of these arguments, and to clarify what they said at pre-trial.

My good friends have a very beguiling habit of testifying [fol. 3486] in the guise of arguing, and I know that your Honor accepts what they write or what they say merely as argument and not as proof. But turn if you will to page 5, the first sentence under "Past acquisitions and the effect of the present merger.

"The history of past acquisitions by Continental and by other firms manufacturing packaging items is material to show that the effect of the Hazel-Atlas acquisition may substantially lessen competition by making it necessary for competitors to merge in order to keep up."

Now, you had 16 glass companies here. You had Solinsky. You had Plax. Where is the evidence? Where is the evidence in this record that it is necessary for competitors to merge in order to keep up? Who says this beside the Yale note, which is not evidence, and the government?

I continue reading:

> "The evidence of past acquisitions will show how the growth of Continental by mergers has given the decisive [fol. 3487] advantages vis-a-vis smaller less diversified manufacturers in all of the lines in which Continental deals."

Now, again, where is that evidence? You have heard many promises about "decisive advantage," and I intend to deal with this fully on my motion to dismiss. At this point I merely ask how dare they make a statement that our acquisitions have given decisive advantages over smaller

less diversified manufacturers in all the lines of commerce in which Continental deals?

Then the next sentence:

> "The government has introduced some evidence of mergers that have followed and paralleled Continental's mergers."

They gave you evidence of mergers of can companies, of companies engaged in the manufacture of canning machinery; companies engaged in the manufacture of flexible packaging; companies engaged in the manufacture of paper; companies engaged in the manufacture of crows. I'd like [fol. 3488] Mr. Greenberg to give you record references where they have introduced evidence of mergers in other fields that have paralleled Continental's mergers.

Now going back, they speak about putting pressure—going down to the next paragraph—"putting pressure on all package and closure manufacturers to present a comparable full line."

Where is the evidence of that?

Is it evidence from Mr. McManus and Mr. Greenberg to make the statement? Why didn't they ask that question of these companies that took the stand? They had chairman of boards; they had presidents; they had executive vice presidents—you had a Who's Who of these industries appear before you. These were the gentlemen who were knowledgeable. Why weren't they asked these facts?

This is what they were trying to prove and if they had proved decisive advantage, if they had proved that they would put pressure, if they had proved that we had altered the patterns, well, you wouldn't need this kind of evidence. [fol. 3489] You would have it already. This isn't the way to prove these kind of facts.

Now, the essence of it, your Honor, is that history adds absolutely nothing here. I am not going to take the extreme position that somehow, somewheres, in some set of circumstances you might not have a case where you would find it enlightening to delve into the past. But you are not dealing with this problem, nor am I, at the threshold of a case. We are on the eve of the government's resting. We know their case now. Now, if they had offered this at the very begin-

ning, they would then be able to say to you, "Well, your Honor, wait awhile and you will see its relevance."

There is nothing to wait for. What will history, what will prior acquisitions enlighten your Honor on? How is it going to help you in deciding the two basic issues here—relevant markets and whether or not there has been a substantial lessening of competition, in actuality or in prospect?

[fol. 3490] Now I want to end with just one more word. I am always very flattered when my adversaries quote from me or cite me, as they do in this case at page 20, but I am a very peculiar person. When I am quoted I like to be quoted accurately.

At the bottom of the very last page of their brief, footnote 36, they refer to the lectures that I gave at the University of Buffalo Law School, it is page 67, and they assert that I have taken the position that acquisitions are material.

Now let me read to your Honor what I said. I was reviewing—in this lecture I made some years ago, before there were any decisions, and all one had to deal with were the complaints filed by the government, Department of Justice and the Federal Trade Commission. I analyzed those complaints, and I said, after reviewing a lot of complaints:

"Some of the cases appear to be an attack on business [fol. 3491] pure and simple, without regard to any anti-competitive effect. Some rest squarely upon quantitative substantiality. In several considerable emphasis is given to the history of prior acquisitions, as though that factor in and of itself might be decisive."

This is the quotation on which they rely in telling your Honor that I heard in my writing affirmed the relevance and materiality of prior acquisitions.

I say, your Honor, that these three documents are plainly irrelevant and immaterial in the context of the present case. I don't have to deal with what the situation would be elsewhere.

Now the two other documents have further infirmities. 788 is a resolution of the board of directors of Continental Can, which recites that the chairman indicated to the board that he had been in negotiation with two glass companies, and that if his negotiations could be successfully completed Continental would acquire one or both of these companies.

[fol. 3492] The Court: Is this before the Hazel-Atlas merger or not?

Mr. Handler: It was contemporaneous. It was May 16, 1956. It was before.

The Court: I presume, though I am not trying to read something in there, that one of these was the Hazel-Atlas Glass Company.

Mr. Handler: One was the Hazel-Atlas Glass Company. And the board told him to go ahead with his negotiation.

The Court: I have read that, and I don't understand what the significance of that is, frankly. Everybody knew they were going to get the Hazel-Atlas Glass Company, and plainly, they wouldn't possibly acquire the Hazel-Atlas Glass Company without the chairman telling them there were some negotiations on the fire.

Mr. Handler: Well, the purpose of this, your Honor, is a sentence in G-900, the file exhibit, and here I think your Honor will find that not only is the government offering [fol. 3493] evidence which is irrelevant, but it is doing something which you and I would not do, and something which we would personally not be very proud in having others do.

In this letter which was submitted to Judge Hansen, who was then the head of the Anti-trust Division, and signed by the Willkie firm, the statement was made that:

"Continental has asked us to inform you in the strictest confidence that it is carefully considering the business of Obear-Nester Incorporated, East St. Louis, Illinois, including its subsidiary, Lincoln Container Company, to supplement the lines of Hazel-Atlas. The concern is primarily a beverage bottle manufacturer with combined net sales in '54 and '55 of around $15,000,000 and $14,000,000 respectively. It is our intention to discuss the matter with you fully before proceeding with the acquisition."

Well, the acquisition never went through.

The Court: Were there any discussions, or what hap- [fol. 3494] pened? Was the trouble about Hazel-Atlas which made any such conferences inadvisable, or what happened?

Mr. Handler: The negotiations failed for other reasons, your Honor.

The Court: All right.

Mr. Handler: Now, this is a fortiori. To offer evidence of acquisitions which never occurred, which were merely in contemplation, certainly that is not history.

The Court: It is not history. It seems to me the only thing that would bear on was intent, and as I understood it there is no question of intent in this case.

Mr. Handler: There is no question of intent in a Section VII case. We are held accountable for the consequences of our acts. Continental Can did not act as a sleep walker. It consciously bought this company.

Now Mr. Greenberg in his brief refers to the Supreme Court decision in DuPont-General Motors, where DuPont tried to bring the purchase, that it had made some decades [fol. 3495] before the Supreme Court ruling, of General Motors stock within the investment exception of old Section VII, which is continued in the new version of that statute. It was in connection with whether or not the stock had been bought for investment that the court considered General Motors' intent.

Obviously, the intent with which you buy stock, whether you are buying it to control an enterprise, or whether you are buying it for an investment, is necessarily material to the investment exception. That has nothing whatever to do with the present case, where intent is obviously of no consequence. If this acquisition substantially lessened competition, we could bring in a thousand witnesses here, telling you what wonderful guys we are, and you would hold all of it immaterial, and if the acquisition does not substantially lessen competition, our state of mind is immaterial. It has been no issue in case whatsoever.

[fol. 3496] For all of these reasons, your Honor, and I thank you for indulging me in what has been, I fear, an excessively long argument, we say that these documents should be rejected. They are not material, they are not relevant.

In addition, the chart in G-800, we believe, is misleading for the reasons brought out in Mr. Johnson's cross-examination.

The Court: Well now, Mr. Greenberg, it is now 4:30, and I don't think, in considering the fact that I have heard a substantial number of words from a substantial number of people today, I don't think it is fair even to you or to me to

hear you on this question this evening. I take it you want to be heard at some length.

Mr. Greenberg: My discussion might encompass a few minutes less than Professor Handler's, but it might be fairly lengthy.

The Court: All right. Now I will tell you what I will do. I will read what I describe as your belated memorandum tonight and I will hear you on this question in the morning, [fol. 3497] and probably make my rulings after I hear you, and anything further which Professor Handler may briefly wish to say to me.

Apart from that, we have these additional documents, which number, as I understand it, somewhere around a hundred. I directed that counsel confer on that on Friday, or over the weekend, in an effort to determine how many were being introduced simply for the purpose of showing what I would succinctly refer to as an awareness, and how many were for more general purposes.

What was the result of that conference?

Mr. McManus: Your Honor, we indicated to Mr. Hughes that only I think four or five, or at the most, six—I forget the number, but a very small number—were going to be offered for other than awareness. Now, of course, I would like to define "awareness" when I get to it.

The Court: Oh, I understand that.

Mr. McManus: You understand that.

Another thing. Since that time, your Honor, I have gone [fol. 3498] over these documents, some additional, which I think I will not offer because they are cumulative, and also I hoped in the morning, where we have bulky documents, to indicate that we are only offering maybe the first four or five pages.

The Court: You had better do that, because if you are going to offer reading material by the ream, you are going to have to be awfully selective in offering, because I am just not going to read a lot of bulky documents unless I have some reason to read it.

Mr. McManus: I understand that, and that is why I have that job about 90 per cent completed, and I would have it completed in the morning. So that I think the time spent in that should not be of considerable length.

Mr. Hughes: Well, I only want to say this: Mr. McManus

told me today that he thought that if I were to spend another 10 or 15 minutes with him, that he could draw a line through a lot of these exhibits, which would mean to me that they [fol. 3499] are not even being offered at all. To the extent that we could do that, why, that is fine.

The Court: That is all to the good.

Mr. Hughes: That is all to the good.

Mr. McManus: Surely.

Mr. Hughes: I do think that your Honor should be aware that even though it would appear now they were to be offered for a limited purpose, there are some of these documents as to which we have additional grounds for objection, I don't know, the objection that we have been making to that whole awareness concept.

The Court: Yes.

Mr. Hughes: And therefore, even though this will help, to some extent, to expedite it, I feel that we will have to go on a document by document basis.

The Court: Well, I am simply trying to visualize what we are going to get into tomorrow. I should say it is quite plain that assuming the government rests some time tomorrow, when the government rests we will take an adjourn- [fol. 3500] ment for the day and we will begin with the argument on the motions the following day. I should assume that we will not be taking the whole day tomorrow.

Mr. Hughes: Your Honor, I think that as with any long case, as you draw near the end of it there are what I would call tag ends. We do have one or two tag ends that we want to draw to your Honor's attention.

The Court: All right.

Mr. Hughes: They will take only moments, as I say.

The Court: That is all right. Let's get all the loose ends and tag ends and bobtail and whatnot cleared up tomorrow, and get this package, which is called the government's case, buttoned up.

Mr. Greenberg: Your Honor, I have only one comment to make, if Mr. Hughes will permit me.

You indicated that you intended to read our brief tonight, and of course we are quite elated over that. I would like to add, however, that after having listened to Professor Hand- [fol. 3501] ler for such a long period of time, I believe he suggested further arguments and amplifications of our

brief, which will be presented in oral argument. I hasten to add that.

The Court: I am not going to limit you by your brief. I will hear you, don't worry about that.

Mr. Hughes: Your Honor, may I just say this, that it would be helpful, I think, and expedite matters if Mr. McManus could tell me tonight which of these exhibits he is going to contract and only offer limited portions?

Have you said that your work on that is 90 per cent complete?

Mr. McManus: I intend to do that, and I hope before the evening is out I will have more.

The Court: All right, you confer and cut out as much as you can by conference.

Mr. McManus: I will.

The Court: Very good. Goodnight, gentlemen.

(Adjourned to October 18, 1960, at 10:30 A.M.)

[fol. 3502] New York, October 18, 1960, 10:35 A.M.

Trial resumed

The Court: All right, Mr. Greenberg, we will hear you on the question of the prior acquisitions.

Mr. Greenberg: Thank you, sir.

If the Court please, the process of determining what is not relevant and what is not material is essentially one of considering what should be rejected completely and finally from this litigation.

The defendants, by their objections, would have his Honor reject for all purposes any evidence relating to the past acquisitions already in the record or to come. The defendants would have us reject evidence in the record which relates to the acquisition of the White Cap Company. This [fol. 3503] company was purchased on January 4, 1956. Its position as one of the industry leaders in the sale of vacuum caps and in the development of capping machinery cannot objectively be subject to serious dispute. The vacuum cap is an integral part of the glass container in many segments of the food industry.

The specific relationships between the things produced by the White Cap Company and the glass containers of Hazel-Atlas have been the subject of abundant testimonial and documentary proof. The White Cap acquisition, when viewed in the context of the Hazel-Atlas merger, has placed smaller glass container manufacturers in a position where their development into serious and substantial competitive threats has been impeded by their opponent's full line advantages.

Concomitant with this, such acquisitions serve to deter the entrance of new substantial capital into the market.

In Government's Exhibit 900, for identification the defendants indicate that after the Hazel-Atlas acquisition they were contemplating the purchase of the Obear-Nester Glass Company.

[fol. 3504] Before the Court is this situation: Continental Can acquired the White Cap Company. A few months later the Hazel-Atlas Glass Company contemplated the acquisition of still another important competitive factor in the glass container industry. This situation, we say respectfully, necessitates intervention by the Court.

The Court: Now, I am a little baffled. I don't want to confuse two things. You talk about the acquisition of the White Cap Company as one of the prior acquisitions. You also talk about possible plans that the defendant may have had in the future for the acquisition of another glass company, which never came off.

Mr. Greenberg: That is correct.

The Court: In other words, they were talking about the acquisition of another glass company. It seems to me that these two things are quite different, and that prior acquisitions are one thing, but prospective plans which never came off are something quite different, unless you are going to say that we are dealing with intent as an important element in this case.

Is that your position?

Mr. Greenberg: Your Honor, our position is this: We [fol. 3505] agree with your Honor that the occurrence of the White Cap acquisition, and on its heels, the Hazel-Atlas acquisition, would be enough to support our argument with respect to full line advantages, and other arguments which I will develop in my argument. To that extent we agree with his Honor.

With respect to the Obear-Nester Glass Company, we say that there is language in some of the cases which indicate a fear of a chain reaction of acquisitions which might result from upholding the legality of an acquisition under consideration, and we bring the contemplated acquisition of Obear-Nester to your Honor's attention for whatever value he may find.

[fol. 3506] The Court: I am frank to say, quite apart from the other question of prior acquisition, I see very little, if any, significance in a contemplated acquisition—I say a contemplated; I don't even know how it is contemplated. There is one exhibit which talks vaguely about the possibility of perhaps acquiring some glass companies, one of which was plainly Hazel-Atlas, but it does not seem to me that that has any significance in the picture, nor is it of any evidentiary value, unless you are talking in terms of the defendants' intent to do certain things, and I had understood that it was early stipulated here that intent was not a part of this lawsuit.

Mr. Greenberg: If the Court please, I had intended to deal with that question later, but I will deal with it now.

The Court: Don't let me interrupt the thread of your argument. We will take it up again when we come to it.

Mr. Greenberg: I might as well do it now.

We would like to direct your Honor's attention, on the question of intent and the acquisition of companies, to United States v. Columbia Steel Company.

[fol. 3507] The Court: First of all, you have got to get over one hurdle, it seems to me, and that is that I have a very clear recollection that during the course of the pretrial in this case it was stipulated on the record by the government that intent was not a part of this case.

Mr. Greenberg: Your Honor, I do not recollect exactly the wording——

The Court: And I am not going to permit, at this stage, if intent was not a part of this case in the pretrial, intent to be dragged into this case now.

Mr. Greenberg: If I may continue, your Honor.

The Court: Yes.

Mr. Greenberg: Section 7 of the Clayton Act has always been directed toward retardation of a cumulative process

which threatens to have serious anti-competitive consequences.

Professor Handler disagrees with this assertion.

Referring to pages 4 and 5 of the defendants' June brief which dealt with prior acquisitions, he argues that [fol. 3508] since the statute by its terms does not require a consideration of prior acquisitions by its "plain meaning," that therefore a court should consider them irrelevant and immaterial. Realizing, however, that such an argument may appear unreasonable to his Honor, Professor Handler abandoned such an argument in the middle of page 5 of the June brief for the assertion that the government has misconstrued the cumulative effect language of the House report.

We are told and instructed that what the language really means is that, since each merger is now subject to the Clayton Act before it reaches illegality of the type condemned by the Sherman Act, we need not consider any other acquisitions but the one in question.

First, we would like to agree wholeheartedly and completely with part of Professor Handler's thesis. We agree with him that Clayton Act standards and Sherman Act standards are at different poles. We shall agree with him on this point throughout this litigation. That this distinction between standards justifies the ruling out of prior acquisitions is a startling theory, but the fact that such an [fol. 3509] assertion is startling and unique does not make it credible, sensible or acceptable.

Our point is that if the Hazel-Atlas merger is looked at in a vacuum and not in its true sense, then how can we determine whether this is one of a series of acquisitions which is causing harm to the competitive vigor of our economy in the manner I have described earlier?

The next prior acquisition to be discussed is that of the Elmer Mills Corporation. This company was purchased in 1953. It has always been and today is one of the industry leaders in the sale of plastic containers to the cosmetic, drug, household and chemical industries.

The competitive relationships between and among can, glass and plastic containers have been amply demonstrated for his Honor.

To acquire a substantial enterprise in the plastic container industry in 1953, and then to follow it up three years later with the acquisition of a leading glass container company operating in the same fields reduce the vigor of competition across industry lines to the detriment of buyers of containers for drug, cosmetic, household and chemical products.

[fol. 3510] Moreover, the joinder of two such competing companies has the result of placing smaller container manufacturers in a position where their development is hindered by their——

The Court: Let me ask you a question here. Let me interrupt you again.

What do you say is the difference, or what added significance is there from the fact that the plastic company, which was acquired in 1953—in other words, what difference does it make, assuming that at the date of the Hazel-Atlas merger the Continental was engaged in the plastic container field substantially; what difference does it make whether they went into that field on their own or whether they went into that field by an acquisition in 1953?

Mr. Greenberg: Well, I think the 1953 date is significant because the plastic container industry began its growth, it began to become a successful competitor to cans and glass containers. The plastic container industry, as your Honor knows from the testimony in the record, is a virgin industry, it is a new industry, it is a new source of competition [fol. 3511] to can and glass container manufacturers.

The fact that Continental acquired its way into the business instead of building a new company, we think is significant because the legislative history places an *anethma* on acquisitions as opposed to building new plants, because when this is done you are not only eliminating a competitor, you are buying know-how, you are buying customers and placing other container manufacturers in a position where their development is hindered.

The Court: But you are not in this lawsuit, Mr. Greenberg, in any way critical, as I understand it, of the action of Continental in acquiring this plastics company in 1953. That also has been stipulated on the record.

Mr. Greenberg: I am sorry, your Honor, I don't understand.

The Court: In other words, the government is not attacking or, indeed, claiming that the action of Continental in 1953 in acquiring the plastic companies is in any way illegal. That has been certainly stipulated on the record in the course of our pretrial discussion.

[fol. 3512] Mr. Greenberg: I think that perhaps is correct, sir, but I do not believe that that forecloses inquiry into mergers of this type. The fact that a merger was legal in 1953 and is legal now I think still can be inquired into in a situation where we are alleging that the Hazel-Atlas acquisition, by virtue of its relationship with the prior acquisition, creates a situation, an evil situation, to use the words of the DuPont-GM case, and for that reason we believe that these prior acquisitions, among other reasons, are relevant.

Just for the record, when you would ask me about whether we considered intent relevant in a suit of this nature, whatever we said in the past may have been ambiguous, but what we meant to say was that we believe that bad intent on the part of the acquiring company is relevant but that good intent on the part of the acquiring company is not.

The Court: I want a record reference to that because this is quite different from what my conception of the stipulation is. Has anyone got a record reference here?

Mr. Handler: May I interrupt, your Honor?

[fol. 3513] The Court: I would just like the reference.

Mr. Handler: The pretrial transcript, at page 309, the middle of the page.

The Court: Well, now, I am reading from the transcript:

"Let me interrupt you again. To what extent, if any, is the question of the intent or purpose of Continental Can in making these acquisitions of significance?

"Mr. McManus: The intent, your Honor, is of no significance. There is no significance.

"The Court: Your position is that if these acquisitions had the effect or tended to have the effects you claimed for them, intent and purpose are of no significance either way?

"Mr. McManus: That's correct."

Mr. McManus: Your Honor, I made that statement, and may I say something? I don't want to interrupt the presentation here. The government still stands behind that statement, and I am dealing only with this case of course.

The Court: Well, I am not asking you to do anything [fol. 3514] outside of this case. I am interested in this case at the moment; that is all.

Mr. McManus: That's right.

Now, your Honor, the only thing I would like to say, the fact that Continental Can's board of directors decided that they can buy two companies has nothing to do with their intent after they acquired the company.

We are not arguing that they had bad intent or good intent in buying Obear-Nester. We just say that they had permission from their board of directors to buy another company, and were in the process of buying. We put no onus on their intent in what they were going to do with Obear-Nester and in attempting to affect the industry. Your intent only comes up after you have made your acquisition.

We are just trying to show by this document that they were in the process of not only buying Hazel-Atlas but were moving on to the next step to buy Obear-Nester. We do not allege that there was either a good intent or a bad intent to use or misuse Obear-Nester.

I would say that bad intent could be a factor, but we are [fol. 3515] not using that in this case, your Honor.

The Court: Well, it cannot be a factor now in view of the stipulation, and the stipulation in the pretrial, and that was as long ago as June 9th and 10, 1959.

Mr. McManus: That is absolutely correct, your Honor, and we still stand by it.

I think what Mr. Greenberg was trying to point out was that it could be, but it is not a factor in this case.

The Court: All right.

Mr. Greenberg: I had been discussing the Elmer Mills acquisition when I interrupted the train of thought on the question of intent, so I will try to continue now.

I had just finished discussing the proposition that the joinder of two such competing companies has the result of placing smaller container manufacturers in a position where their development is hindered by their opponent's

full-line approach. This has the concomitant result of discouraging the entrance of substantial new capital into the container industries affected.

Continental Can has made many other acquisitions over [fol. 3516] the years. In 1944 it purchased the Bond Manufacturing Company or Corporation. They produced crown caps and cork products. There has been evidence offered of the relationship between crown caps and narrow-neck beverage bottles. Our arguments with respect to the relevancy of this acquisition is the same as those asserted for the White Cap acquisition.

Continental Can has also purchased companies producing paper containers and paper products. In this field they have bought companies producing composite containers, fiber drums, paper containers of various types, as well as the companies producing the raw materials which are used in manufacturing these containers.

In addition, their acquisition program has reached the companies producing can-making machinery, laminated bags, and flexible packaging.

In its earlier years it acquired many admittedly substantial metal can companies. This can be ascertained from the comments contained in G-786, and I refer his Honor to page 7 of G-786, which discusses the U.S. Can acquisition. [fol. 3517] The Court: All right.

Mr. Greenberg: Other references, your Honor, which I state in passing are to pages 9 and 11 of G-786, those portions which deal with the Southern Can Company and the Wheeling Can Company. All of these acquisitions, which are cumulative in nature and which encompass many years, discourage and prevent the development of companies operating in the can, glass and plastic container industries.

The defendants offer a substitute for competition from such companies. At page 14 of G-900 it is said:

"Many products now use or can use a variety of different types of packaging. Thus, it is the policy of Continental to encourage its various individual product divisions to push their own particular type of packaging to maximize customer service volume and profits."

And the following part, your Honor, is the part I wish to emphasize:

"This results in strong intra-company competition, which in many instances is more effective than outside competition in bringing about the adoption of improved products, cost reductions and better service to customers."

[fol. 3518] The government rejects their substitute as not being consonant with the principles of our capitalistic system.

In drawing near to the close of our argument there are certain points which we believe should be made to make our overall position crystal clear.

Point number 1: We do not and cannot, as responsible officers of the court, suggest that Continental Can or any other company cannot diversify or integrate. This would be a reckless argument. Perhaps if the defendant's acquisitions were fewer and less significant over the years there would be no argument today on the relevancy of prior acquisitions.

Point number 2: Mr. Handler referred to a few seemingly unrelated acquisitions as being included in G-785 and G-786, and the graphic chart which portrayed certain of the defendant's prior acquisitions. We do not deny that there are unrelated acquisitions included in these exhibits. They were left in to show that out of all the acquisitions made by Continental Can over the years just a few were unrelated to the arguments we assert. Mr. Handler did not mention certain Canadian acquisitions described in G-786. These are also unrelated. There are ten unrelated ac-

[fol. 3519] quisitions in G-785 and G-786, and they are as follows: The Reynolds Molded Plastic Company is unrelated; and so are the Dixon Manufacturing Company, Bowes Industries, Tenco, Inc.; Cannonsburg Coal Company; Metal Box and Printing Industries; Whittall Can Company, Ltd.; Colonial Canners, Ltd.; Mono, Ltd. of Canada; General Steelwares, Ltd., McDonald Division.

With these mergers eliminated from the case, your Honor, let defense counsel and the government join issue on such past mergers as the U.S. Can Company, the Southern Can Company, the Wheeling Can Company.

The Court: Well, now, you say "join issue." That again puzzles me, Mr. Greenberg. What are you joining issue on? You are joining issue with respect to, let's say, the merger of United States Can Company, whenever it was,

in 1920? Are you claiming that there is anything illegal, either in the statutes at the time or in the Clayton Act, in the merger in 1920 of Continental and United States Can?

Mr. Greenberg: We are not saying these companies were acquired illegally. We don't know, frankly. As far as we know they were not acquired illegally. We are saying [fol. 3520] this is part of a cumulative series of acquisitions which have covered cans which competed with the cans of Continental, inter-industry competitors, such as the Hazel-Atlas Glass Company, supplemental packaging items, such as the vacuum closure in the Crown cap, and other types of packaging items described in G-785 and G-786, such acquisitions as the White Cap Company, the Elmer Mills Company and the Bond Manufacturing Company.

What now are defense counsel's arguments when we focus on acquisitions of these kinds with their characteristics?

I have nothing further, your Honor, at this point.

The Court: Do you wish to be heard further, Mr. Handler?

Mr. Handler: Just really very briefly, your Honor.

I must confess that I am totally at a loss to understand what a stipulation, solemnly made by the Government of the United States in a lawsuit, means in light of the argument that your Honor has just heard. At pre-trial you were told unqualifiedly that there was no attack upon any [fol. 3521] of the prior acquisitions. Mr. Greenberg now tells you, in response to your question, that he doesn't know whether these acquisitions were legal or illegal. I don't know what his words mean. I have heard them all, and I thought I understood the English language.

But he tells you that the can company acquisitions back in the '20s prevented the development of new companies in the can and glass industry. I don't know where that comes from. I heard no such evidence, and I have attended every day of this trial, and I have read the record and I have read all the exhibits. That is a matter of evidence.

Also, it seems to me that it is an attack on the prior acquisitions, if they had that effect. He has made the same kind of an attack upon the Mills acquisition and on the White Camp acquisition, all, I think, in total disregard

of the solemn assurance your Honor was given at pre-trial that no effort would be made to attack the legitimacy of the prior acquisitions.

Now, he also has, I think, compelled your Honor to exclude the chart in G-800, because he has told you that this is a misleading chart. Its title is "Domestic acquisitions [fol. 3522] of Continental Can Company in the container and related product field," and he has listed all the acquisitions that do not fall within that title.

Now with respect to everything that he has had to say about full line advantages, chain reaction, and the like, I intend to cover that fully in my argument on the motion to dismiss, because that has to do with the evidence that is in this record, as contrasted with counsel's decisions.

Thank you, your Honor.

The Court: Let me see Exhibit 800, will you please?

On this question of prior acquisitions, I am not persuaded that the evidence of prior acquisitions is irrelevant and immaterial. I am, on the other hand, not persuaded that the relevancy and materiality of that evidence is anything more than the admission of a certain amount of historical background. As historical background I think the evidence may or may not throw some light upon the operations of Continental Can and what has happened through the years in terms of the operation reaching the point which they did. At the present time I view the evidence only in that context, and I do not think in a case of this character [fol. 3523] prior history of the company in question can be considered to be irrelevant and immaterial, and thus excluded.

Beyond that at this stage I do not go. We are certainly not getting into any question of intent here. There isn't any intent question in this case, because the government has said so, in so many words. We are not getting into the question of whether the prior acquisitions were or were not illegal. As I understand the stipulation of the government, there is no attack on the prior acquisitions. But that does not go so far as to say that they may not have some relevance or materiality in terms of an understanding of the operations of the Continental Can Company in the light of its historical background.

For that reason I am going to admit Exhibits 785, 786 and pages 13 to 34 of Exhibit 900.

Mr. Greenberg: Your Honor, we offered pages 8 through 34.

The Court: 8 through 34, all right.

As a matter of fact, if Continental should take that position, I am perfectly prepared to consider any suggestion by them that we admit the whole letter, which is Exhibit 900.

[fol. 3524] Mr. Greenberg: If the Court please, if pages 1 through 7 are admitted, we would like to make it clear that pages 1 through 7 contain self-serving legal discussions which we simply do not agree with and we would hope that your Honor would find it——

The Court: Well, I think that if Continental thinks it made its position with respect to this whole subject matter clear in the letter to Judge Hansen, they are entitled to have their entire position placed in the record and not merely parts of it, if they want it.

Mr. Greenberg: I just, respectfully, your Honor, did want to make it clear that the government was not offering pages 1 through 7.

The Court: Well, the point is that if Continental takes the position that, assuming that the pages that the government offers go in, the whole letter goes in, then I will consider such an application by Continental. I haven't read the previous pages, I don't know what is in them.

Mr. Handler: Your Honor, you anticipated very properly the point I was going to make. We feel that if the government offers part of the letter of this sort, the doctrine of [fol. 3525] completeness would require that the entire letter be offered by the government.

The Court: Well, then, you object to that, Mr. Greenberg?

Mr. Greenberg: I most certainly do, your Honor. We don't think the law of evidence reads that way.

The Court: Well, I do.

Mr. Greenberg: Well, I did want to say, I am talking about whether we have to bring it in as part of our exhibit, not whether it goes in. That was the point that I was addressing myself to.

The Court: I don't say you are offering it. All I say is that it seems to me very fundamental business that if

you offer parts of a letter as alleged admissions against interest, you have got to have the rest of the letter; you have got to have the good with the bad and you can't pick out a part of it and say, "We are going to take this and we are not going to let the rest of the explanations go in."

Mr. Greenberg: I just did want to make my point clear. I was addressing myself to whether we were making it part of our exhibit.

The Court: Well, the point is, in any event 900 will go in [fol. 3526] in its entirety, so as to give me the entire picture. 785 will go in in its entirety. 786 will go in in its entirety.

(Government's Exhibits 785, 786 and 900 received in evidence.)

The Court: Now, that leaves us with two other things. That leaves us with 788 and also with 800, whatever the chart number is. Is it 8 or 9?

Mr. McManus: 8, your Honor.

Mr. Johnson: 8.

The Court: As far as 788 is concerned, I am going to let it in. I think it is of no value and doesn't make the slightest difference either one way or the other. I think it might just be in to complete the record. I can't think that it does anybody any harm. Although that is not a good method of admitting evidence, I will admit it.

(Government's Exhibit 788 received in evidence.)

The Court: In so far as the chart is concerned, it seems to me that the chart is mislabeled, and I am not going to admit in evidence a mislabeled chart. It says "Domestic acquisitions of Continental Can Company in the container and related product field"

[fol. 3526a] Mr. McManus: Your Honor, could I address myself to that, if I may?

The Court: Yes.

Mr. McManus: Your Honor, that may be right, and I am not strongly urging that this document go in. However, I would like to say this: it was compiled, I believe, from the underlying data that you have admitted, and insofar as aiding the Court in understanding, we would be willing——

[fol. 3527] The Court: Well, I will tell you what I will do with you. If you physically strike from that exhibit the words "in the container and related product field," I will let the exhibit in evidence as a mere listing of what is contained in these other exhibits for purposes of convenience and nothing more.

Mr. McManus: Now, may I suggest——

The Court: What do you say to that, Mr. Handler? Or Mr. Johnson?

Mr. Johnson: Cross examination indicated that the side headings were misleading. There are categories at the side. If we start amending the table it is going to be a different thing entirely, and it seems to me that with the indicated change on it it has no probative value whatsoever.

The Court: Well, in many cases, Mr. Johnson, a tabulation has no probative value standing by itself. It is merely a convenient form of viewing certain information.

I do not indicate here that this chart has any probative value standing by itself. If is merely a listing of some things that happen to be in evidence.

[fol. 3528] Now, you say that it is also inaccurate in the categories on the left-hand side, do you?

Mr. Johnson: Yes, sir. If you will look at the second one, glass and plastic containers, and under the heading "1940s" there is Reynolds Spring Company. Mr. Greenberg just now said that Reynolds had no relation to the container industry at all.

The Court: What is Reynolds, do you remember?

Mr. Johnson: I think it was a bomber parts company that was acquired during the war.

The Court: Well, if that is so, and there are certain inaccuracies of that nature in here, I am not going to admit the chart.

Mr. McManus: That is all right, your Honor.

The Court: I will exclude it.

Mr. Greenberg: Your Honor, I did want to make one point before we left these various documents, and that is that we are offering, as I believe your Honor recalled, G-900, pages 8 through 34, for all purposes.

Mr. Handler: I didn't hear that.

[fol. 3529] The Court: He says he is offering pages 8 to 34 of Exhibit 900 for all purposes.

Mr. Handler: We have no objection, your Honor.

The Court: All right.

Mr. Handler: Your Honor, just in the interest of a clear record, am I correct in understanding that you have admitted 785, 786 and 788 for the limited purposes which you articulated in your ruling?

The Court: That's right.

Mr. Greenberg: If the Court please——

Mr. Handler: One further point——

Mr. Greenberg: May I just address myself to that point? We are offering 785 and 786 for the truth of the facts stated therein, and we would hope that we could cite any facts contained in those documents as what is the case and as what was the case.

The Court: These facts are in the record as facts presumably. The question we are dealing with now is the significance to be attached to those facts from an evidentiary point of view. That does not destroy their validity as facts.

Mr. Handler: Mr. Greenberg, your Honor, renewed the [fol. 3530] offer of 900 to pages 8 through its conclusion when he asked that it be admitted for all purposes.

Would your Honor indicate the basis upon which you are admitting the first eight pages?

The Court: Yes. The first eight pages will be admitted for all purposes too.

All right, now, gentlemen, where do we go from here?

Mr. Hughes: Your Honor, I had indicated that there were a few matters that I thought we could address ourselves to before Mr. McManus went to his documents, and the first, your Honor, is to remind your Honor that on June 15, 1960, we offered in evidence as our Exhibits B-1, B-2 and B-3 the annual reports of the Owens-Illinois Glass Company for 1953, 1954 and 1959, and at that time Mr. McManus indicated that he wanted to have an opportunity to look at them before he indicated whether he would have any objection, and then somehow or other the whole subject got lost in the shuffle, and in going over the record this was one of the things that we wanted to dispose of.

The Court: Have you any objection to those?

[fol. 3531] Mr. McManus: The only thing I would like to

have is the purpose of the offer and then I am sure I have no objection.

Mr. Hughes: We offered them in connection with the testimony of Mr. Levis. You will recall Mr. Levis testified to——

The Court: He testified at some length as to the operations of Owens-Illinois.

Mr. Hughes: That is right, as to its earnings, and sales, and that sort of thing, and it is offered by way of illumination of his testimony.

Mr. McManus: We have no objection.

The Court: It may be received.

(Defendants' Exhibits B-1, B-2 and B-3 for identification received in evidence.)

Mr. Hughes: Your Honor, may I pass to another subject?

The Court: Yes, please do.

Mr. Hughes: One thing, your Honor, that we felt should be clarified before the plaintiff rests was the posture of the case before you as relates to the pretrial proceedings.

We had felt, and we wanted to be sure that we were [fol. 3532] correct in our feeling, that the proceedings before you in pretrial were before you in considering the motion to dismiss. I have in mind such things as your pretrial orders and rulings, stipulations or agreements of the parties——

The Court: Well, such as the stipulation, or the part of the transcript that we referred to this morning.

Mr. Hughes: Yes, that is correct.

The Court: I would assume that—in fact, I have assumed—the pretrial record in a non-jury trial of this nature is a part of the record as a whole and must be considered together with the evidence in connection with any motions.

I take it there is no disagreement on that, is there, Mr. McManus?

Mr. McManus: No sir, your Honor.

The Court: All right.

Mr. Hughes: Mr. Johnson has a matter to dispose of.

The Court: All right.

Mr. Johnson: After your Honor's ruling yesterday with respect to the documents, there were two additional exhi-

bits which I had had marked for identification, portions [fol. 3533] of which I wanted to offer and I overlooked it at that time.

The first are pages 16 and 135 of Defendants' Exhibit GG for identification.

The Court: Which is what?

Mr. Johnson: Which is United States Treasury publication on statistics of income, 1956-1957.

The Court: That is one of the documents you used on cross examination?

Mr. Johnson: Yes, sir.

The Court: Any objection to that?

Mr. McManus: If he is offering it for the purpose of explaining his cross examination—is that what it is?

Mr. Johnson: Yes, sir.

Mr. McManus: I have no objection.

The Court: All right. Received.

(Pages 16 and 135 of Defendants' Exhibit GG for identification received in evidence.)

Mr. Johnson: And the second one offered for the same purpose is page 22 of HH for identification, which is a similar Treasury Department publication, statistics of income, 1957-58.

[fol. 3534] The Court: In other words, it is the next volume of the same series.

Mr. Johnson: Yes, sir.

Mr. McManus: No objection.

The Court: All right. It may be received.

(Page 22 of Defendants' Exhibit HH for identification received in evidence.)

Mr. Hughes: Your Honor, on June 17 we offered Defendants' Exhibit F, which was a brief schedule of dates of certain price increases. That was offered, you may recall, at the end of a day.

The Court: I don't recall, Mr. Hughes.

Mr. Hughes: We want to withdraw that exhibit, unless there is——

The Court: Was it admitted?

Mr. Hughes: It was admitted subject to Mr. McManus' consideration of it, yes. It was admitted subject to any——

Mr. McManus: It was admitted subject to my motion to strike, your Honor, and it was used in the cross examination of one of our witnesses, and I don't think that this exhibit should be withdrawn.

[fol. 3535] Mr. Hughes: That is all right.

The Court: All right, we will let it stand.

Mr. Hughes: I think, your Honor, that covers the items that we wanted to call to your attention.

The Court: All right. Now, Mr. McManus, are you prepared to go ahead now on the documents, or would you like a couple of minutes to get the documents arranged physically?

Mr. McManus: Your Honor, I believe that I am as well prepared as I would be five minutes from now.

The Court: All right. Let's go right ahead.

Mr. McManus: Of course, with a number of these documents you sometimes get a little bit confused, but I have explained to the defendants as much as I could, or at least thought I could, the documents that we will attempt to offer, and also the limitations that we put on those documents.

Now, your Honor, I have Government's Exhibit 1209 for identification, which is notice and proxy statement for [fol. 3536] special meeting of common and preferred stockholders of Continental Can Company, Inc., to be held October 26, 1956.

The Court: What is that—on the merger?

Mr. McManus: This was on the merger, but it outlines a great deal of the operation of Continental, Hazel-Atlas and Robert Gair, and as such I think that it does have a bearing on this case. It took place approximately a month after the Hazel-Atlas acquisition.

The Court: Yes, Mr. Hughes.

Mr. Hughes: Your Honor, in the first place, let me say that I thought that it was clear that we were trying only the Hazel-Atlas case and not the Gair case. Beyond that, your Honor, it seems to me that there is an enormous amount of this material that is now being offered that could have no conceivable relevance here, and in the interest of keeping our record down and sticking only to relevancy, I would think that Mr. McManus could indicate those portions that he really intends to rely on.

The Court: That would seem so to me. Have you got a copy of that, Mr. Hughes, or Mr. McManus?

[fol. 3537] Mr. McManus: Yes, your Honor (handing).

Mr. Hughes: And also the purpose of them, too.

The Court: For instance, here is a summary of the terms of the Robert Gair merger. Now, what in heaven's name has that got to do with this lawsuit?

Mr. McManus: Your Honor, we are willing to strike that out.

The Court: The purpose of the meeting—if you take the position that in this document there are certain things that you consider admissions against interest on the part of the defendant, I am willing to consider them, but it does not seem to me, and I have gone through—here is a great description of the Gair Company, which goes on for some pages, and then there is item 4 about the business of Continental. Now, it is Continental's description of its own business. It may conceivably be relevant and material here. I can understand that. Perhaps Continental's summary of its earnings. I don't know whether the range of security prices has anything to do with this case or not. I imagine that it does.

[fol. 3538] A lot of stuff about the records of Gair and remuneration of them: has that got anything to do with this lawsuit.

Mr. McManus: Perhaps I should withdraw the reference there to the agreements with Gair and matters of that sort.

The Court: Why don't I suggest this at the moment: that you offer section 4 and section 5. Do you want the capital stock of Continental described? Have I got anything to do with that?

Mr. McManus: We will offer that portion now, your Honor, and if I could have five minutes I will——

The Court: In other words, we will take some relevant portion of this and let's try and agree to cut out all the stuff that isn't relevant.

Mr. McManus: Your Honor, the government——

The Court: I take it, Mr. Hughes, you have no objection.

Mr. Hughes: To 4 and 5, your Honor, no.

The Court: You have no objection to those two?

[fol. 3539] Mr. Hughes: No, your Honor.

Mr. McManus: Now, your Honor, the next government exhibit is Government's Exhibit 1210, which deals with the notice of special meeting of stockholders of the Hazel-Atlas Glass Company, and outlines the acquisition of the Hazel-Atlas Glass Company and the business of Continental and the plants of Continental, the description of the companies and their earnings, and things of that nature. It is a typical notice to stockholders.

The Court: What do you say to that, Mr. Hughes?

Mr. Hughes: Here, again, your Honor, it does seem to me that there are some portions of this that really are not relevant, a description of the common stock, and——

The Court: Well, I think in this case, Mr. Hughes, it would be more time-consuming to eliminate than otherwise. I am going to overrule your objection and take that.

Mr. Hughes: Yes. All right.

The Court: 1210.

(Government's Exhibit 1210 for identification received in evidence.)

[fol. 3540] Mr. McManus: Your Honor, the government would like to offer Government's Exhibit 1211 for identification in evidence, which is the Continental Can Company's annual report for 1955; Government's Exhibit 1212 for identification, which is the Continental Can Company's annual report for 1956; and Government's Exhibit 1213, which is Continental Can Company's 1957 annual report. These cover the years just prior, including and after the Hazel-Atlas merger.

The Court: Any objection?

Mr. Hughes: Here, again, are you offering the entire document?

Mr. McManus: Yes. I think it is important to show the operation of the company, before, during and right after the acquisition.

The Court: Any objection?

Mr. Hughes: I have no objection, your Honor.

The Court: All right. They may be received.

(Government's Exhibits 1211 through 1213 for identification received in evidence.)

Mr. McManus: Your Honor, the rest of the documents [fol. 3541] that we are offering, we are offering them on the basis of the fact that Continental made them and that it was a pattern and a course of conduct of their company to make such documents, and that it showed their concern for other types of packaging material, principally glass.

The Court: Which is wholly on the awareness theory.

Mr. Hughes: Would you read Mr. McManus' last statement?

(Record read.)

The Court: Just let me have a description very briefly of what these documents are, and how many there are to begin with.

Mr. McManus: Your Honor, I don't have the exact number, but I believe there were 97 the other day, and I would think that we have cut them at least in half. On the bulky documents we have cut pages down considerably, as you had indicated that you would desire us to do.

The Court: Let me hear Mr. Hughes on this. He is familiar with the material, I believe.

Mr. Hughes: Yes. Your Honor, may I first say that I think it is going to help you your Honor, as we move along [fol. 3542] through these documents, if you had before you the stipulation that we entered into with respect to some of these documents. We have prepared a very lengthy stipulation which your Honor had before you when the documents of GCMI were being offered, and that stipulation said some things about some documents and other things about other documents, and our position is, your Honor, that if we go through these on a document-by-document basis, in the end we will save time because each one has certain different aspects to it.

I do say that you can get to things like surveys where I think we can work out a pattern of procedure as to what Mr. McManus is offering and how much of the document really needs to go in.

The Court: Is the stipulation marked with an exhibit number?

The Clerk: Yes, your Honor. 804 or 805, I don't remember which.

Mr. Hughes: Your Honor, this happens to be a copy of it.

The Court: Fine.

Mr. McManus: Your Honor, we would prefer first to—I assume we will go through them one by one, which I [fol. 3543] think is probably the better way.

The Court: I think that will save time in the long run.

Mr. McManus: Yes. I refer your Honor to Government's Exhibit 401 for identification.

The Clerk: Your Honor, may I have a few minutes to get organized on these exhibits?

Mr. McManus: Yes, I think that would be a better idea.

The Court: Yes, I think we will take a few-minute break here so that you can get together with the clerk, so that the clerk can have this material ready for me.

Mr. McManus: Yes, your Honor.

(Short recess.)

[fol. 3544] The Court: All right.

Mr. McManus: Your Honor, unless you want me to do otherwise, I will indicate the document we are offering and the pages, and as I understand it you have the stipulation before you, and unless you want me to, I will not read what that stipulation says.

The Court: All right, I think that is just as well.

Mr. McManus: Your Honor, the government is offering Government's Exhibit G-401 for identification, and with respect to that document we are offering the cover page, entitled "The packaged syrups market and appraisal of metal containers competitive position," from the first page down through iii, which includes the cover page and three additional pages.

The Court: Wait a minute. I am trying to follow this. There is a title page, called "The packaged syrups market." Then there is a summary.

Mr. McManus: That's right, your Honor.

The Court: In other words, the first, the title page, and four additional pages, you offer.

Mr. McManus: That's right, your Honor.

[fol. 3545] The Court: Yes, Mr. Hughes.

Mr. Hughes: Your Honor, I object to it as irrelevant and immaterial. No proper foundation has been laid for

its reception. There is no proof of any circulation of the document outside of the company; no proof of any authority or offer to bind the defendant; no proof of any adoption or reliance on the document by the defendant; and on the further ground that there is no proof of their competition in any respect, and there is certainly no proof of any competition between Continental Can and Hazel-Atlas, and it has no probative value on the issue of whether this acquisition violated Section VII.

The Court: All right, objection overruled. It will be admitted for the limited purpose indicated by Mr. McManus.

(Government's Exhibit G-401 received in evidence.)

Mr. Hughes: Now, your Honor, it having been admitted, may I call your Honor's attention to paragraphs 3, 4 and 5, beginning at I.

The Court: "In the small size market," and so forth and so forth?

Mr. Hughes: Little i, I guess, little iii, I guess is what [fol. 3546] I should have said.

The Court: You are talking about the paragraphs——

Mr. Hughes: That are marked 3, 4 and 5, the first two sentences of 5.

The Court: Yes, all right.

Mr. Hughes: Your Honor, I think I should add the objection of incompetence, as to this document.

The Court: All right, overruled.

Mr. McManus: Your Honor, of course we would like to draw particular attention to paragraph 6.

The Court: All right.

Mr. McManus: The government also now offers, your Honor, Government's Exhibit 406 for identification. We offer the cover page, the contents and page 3, introductory page.

The Court: You are not going into the history of coffee.

Mr. McManus: We also offer, your Honor, pages 20 through 23.

Mr. Hughes: Again, for the same limited purposes as you have indicated, Mr. McManus?

[fol. 3547] The Court: Yes, everything from now on, unless Mr. McManus states to the contrary, I am assuming, is offered for the same limited purpose as 401.

Mr. McManus: That is correct, your Honor.

Mr. Hughes: Your Honor, I object to this document on all of the grounds urged in connection with Exhibit 401.

May I call your Honor's attention to the fact that in considering this document—I withdraw that remark, your Honor, and stand upon the objection.

The Court: All right, objection overruled.

(Government's Exhibit 406 received in evidence.)

Mr. McManus: The government, your Honor, offers G-407 for the same purpose, and in this case we offer the entire document, page 1 through 15.

Mr. Hughes: The same objection as to the previous documents, your Honor.

May I call your attention to the fact that this document relates to Savorlock Can, as to which there was testimony. I think it was the witness Cleaves who indicated——

The Court: It never came to pass.

[fol. 3548] Mr. Hughes: —it never came to pass, and it finally wound up in a shipment to South Africa.

Mr. McManus: I don't think the latter was testified to, because I have checked it, your Honor.

The Court: Well, I don't care much whether it ended up in South Africa, Timbuktu or the Atlantic Ocean. Doesn't make any difference here.

The same ruling, Mr. Hughes.

Mr. Hughes: I think, also, the record on that ought to be made clear that Mr. Walker, when he testified, said that he had never seen the document, and Mr. Cleaves, although he was on the witness stand, was never questioned with respect to the document.

The Court: Well, I will take it.

It seems to me though, I may say, Mr. McManus, that you are beginning to get a tremendous amount of cumulative testimony here. I mean, we deal with coffee in here, these are two documents on coffee. The second doesn't seem to add very much. Is there any reason why we should have the record cluttered with this cumulative matter?

Mr. McManus: Your Honor, I think the fact that it is [fol. 3549] cumulative—now, I have tried to cut down pages so that we don't have any more—is a factor, I mean,

is important, because it shows—our argument is—because it shows very much the concern of the can companies in this field where they are trying to make inroads. If there were just one isolated document, it would make a lot of difference than if there were quite a number.

The Court: Well, mere quantity for its own sake is not going to do you any good.

Mr. McManus: I understand that, your Honor, but quantity combined with a certain amount of quality, I think, should be helpful.

Mr. Hughes: Your Honor, I call your attention to the fact that this exhibit is undated.

The Court: All right.

(Government's Exhibit 407 received in evidence.)

Mr. McManus: The next exhibit, your Honor, that we offer is Government's Exhibit—excuse me. Did you rule on that document?

The Court: Yes, same ruling.

Mr. McManus: —Government's Exhibit G-411, which consists of five pages, and we offer the entire document, your [fol. 3550] Honor.

Mr. Hughes: Same objection, your Honor, and may I call your Honor's attention to the fact that Mr. Lankelma, who is indicated to be the author of this document, was subpoenaed as a witness and never called by the government, so that there has really been no identification of the document beyond what the stipulation says.

The Court: Overruled.

I may say that of course if we should get past the events of the next two days, and you should continue with the defendant's case, you of course are at liberty to call any of these people.

Mr. Hughes: Yes, sir; I realize that. My point and my legal position is that the burden really is upon the government to lay a proper foundation for these documents.

The Court: Yes, I understand.

Same ruling.

(Government's Exhibit 411 received in evidence.)

The Court: Next, Mr. McManus?

Mr. McManus: Your Honor, the next exhibit is Govern-

ment's Exhibit 412, and the government offers only the [fol. 3551] first five pages. The first five pages would include the cover.

Mr. Hughes: Well, your Honor, this is the first of a number of surveys which are to be offered in evidence, and you will recall, your Honor, that when the GCMI documents, surveys, were offered, that your Honor ruled that it was merely sufficient to show the fact of a survey——

The Court: That's right.

Mr. Hughes: —and for that reason the contents of the documents were reduced.

The Court: Well, as I understand it here, Mr. Hughes, so that we understand one another, there is a summary. Is that included within—I don't have the pages of this exhibit numbered.

Mr. Hughes: I object to the summary, because that does constitute this foreword——

The Court: I will sustain the objection to the summary.

Mr. Hughes: And the foreword, which really constitutes part of the text of the survey, its setup.

Mr. McManus: Your Honor, my position on that is this: You have to go through to the summary and including the [fol. 3552] summary, in my opinion, to tell what this survey is.

Now, I understand that when this summary indicates "Preference rating show 46 per cent in favor of glass," something of that nature, you are not taking that in as a truthful statement.

The Court: All right, Mr. McManus, it seems to me quite sufficient to take in the table of contents, the title page—the title page, the table of contents and the foreword. You don't have to go beyond that.

Mr. McManus: All right, your Honor.

Mr. Hughes: And the foreword is taken merely as descriptive of the——

The Court: Not as truth of the facts stated, but as descriptive, for the purpose of showing that Continental had a survey made on this subject matter.

Mr. Hughes: With that limitation, your Honor, may I interpose the same objection as I have made to other documents, except of course here the document didn't really

emanate from our files, in the sense that it was authored by anybody in Continental.

The Court: All right, same ruling.

[fol. 3553] (Government's Exhibit 412 received in evidence.)

Mr. McManus: With respect to 413, your Honor, the government offers the cover page, page 1, 2, 3 and 4, for the same purpose.

The Court: I don't see any reason why you have to go beyond the cover page and page 1 on this.

Mr. Hughes: Well, your Honor, you are limiting it then to those two pages?

The Court: Yes.

Mr. Hughes: And with that limitation, the same objection is interposed as to the previous survey.

The Court: Same ruling.

(Government's Exhibit 413 received in evidence.)

Mr. McManus: Your Honor, the government offers Government's Exhibit 414, the cover page, which would be proposal for the introduction of a new soluble coffee can for the Continental Can Company.

Mr. Hughes: Well, your Honor, here, in addition to all the other objections, this doesn't even appear to be a survey. It appears on its face to be some sort of a suggestion that an advertising agency made to us. There is no indi- [fol. 3554] cation that we ever acted on the proposal, and here it seems to me——

The Court: No, I don't see any—I will exclude it.

Mr. McManus: Your Honor—well.

The Court: You have got enough on coffee in here.

Mr. McManus: If I may, your Honor, I am afraid that I possibly might have lost a tab off one of my documents. If I could just have one minute to check with Mr. Hughes?

The Court: Yes.

Mr. McManus: Your Honor, the government would like to offer Government's Exhibit 415, which deals with baby food.

The Court: The whole exhibit?

Mr. McManus: Just a minute, your Honor. I just want to make sure that we have what we are talking about.

The Court: Now, look, you have here, as I see it, 415. You are going to offer 415-B and 416?

Mr. McManus: No, sir; your Honor.

The Court: Oh, you are not?

[fol. 3555] Mr. McManus: We are offering 415, and the first five pages.

Mr. Hughes: You are offering only the first five pages, you say?

Mr. McManus: That is correct. The charts and the data we are not offering.

Mr. Hughes: Your Honor, I interpose the same objection and call your Honor's attention to the additional fact that this is very remote in time. It goes back to the spring of 1946. I respectfully submit that is sufficient for the purposes for which it is being offered just for the title sheet to be admitted.

The Court: No, I will take it, Mr. Hughes. Overruled. Same ruling.

Mr. Hughes: Yes.

(Government's Exhibit 415 received in evidence.)

The Court: What is next?

Mr. McManus: The next, your Honor, is 416, and that would be the cover page and through the next six pages.

Mr. Hughes: What was the last one? 416, was that the one?

[fol. 3556] Mr. McManus: 416, and it would be the cover page report of Consumer's Survey on baby food in Philadelphia, and it would include the following six pages.

The Court: The last page, including "Respectfully submitted Batten, Barton, Durstine & Osborn"?

Mr. McManus: That is correct, your Honor.

Mr. Hughes: Your Honor, the same objection, and I call your Honor's attention also to the fact that this is dated in 1946, and in addition the title page, it seems to me, is a sufficient description of the document without the necessity of including the balance of it, which contains a lot of hearsay and a lot of discussion as to how this survey was purportedly conducted.

The Court: I will take the document as offered and overrule the objection.

(Government's Exhibit 416 received in evidence.)

Mr. McManus: The next one is 417-A. The government offers the cover page——

The Court: 417-A. That is distinguished from 417; right?

[fol. 3557] Mr. McManus: That is correct, your Honor. And we are only actually, your Honor, offering the foreword on page 2, which is the cover page.

Mr. Hughes: Here again, your Honor, this is a document that has no identification on it at all beyond the fact that it was produced. There is no stipulation with respect to it.

The Court: There is no stipulation about 417-A in the stipulation?

Mr. Hughes: There is no stipulation on this, and we have no information as to the origin of this document or anything about it.

The Court: All right.

Mr. McManus: Just a second now.

Mr. Hughes: And may I also add that the witness Larson was questioned about it and said he didn't know anything about it, and that was the substance of what he said.

The Court: In the absence of any foundation for this, I will exclude the document.

Mr. McManus: All right, your Honor.

The Court: Now, where do we go from there?

Mr. McManus: 419, your Honor.

The Court: All right, what do you want in 419?

[fol. 3558] The Clerk: My records indicate 419 is in evidence.

The Court: 419 is in evidence, according not only to our records, but according to the marking on the exhibit.

Mr. McManus: All right, sir.

Mr. Hughes: Your Honor, my understanding is that just the last two pages of 419 are in evidence.

The Court: Well, the record may show that, but I am just trying to indicate that 419 has been disposed of.

Mr. Hughes: Yes, that's right.

Mr. McManus: The next one, your Honor, would be 420, and we would offer the cover page and the foreword.

Mr. Hughes: Again, your Honor, we think it would be

sufficient for the government's purposes to show just the cover page.

The Court: It seems so to me, Mr. McManus. I don't see that you need any more than that.

Mr. McManus: Your Honor, the foreword indicates the purpose.

The Court: So does the title page, "Use, attitudes and opinions of cans against glass jars among young mothers [fol. 3559] and doctors."

Mr. McManus: Your Honor, I would still offer the cover page and one page.

The Court: All right, you get the cover page and no more.

Mr. Hughes: Same objection to this.

The Court: Yes, overruled.

(Government's Exhibit 420 received in evidence.)

Mr. McManus: The next one is 422, your Honor. We would offer the entire document here as explanatory of Continental's advertising of Aerosol containers.

Mr. Hughes: Is this Exhibit 421 you are talking about?

Mr. McManus: 422.

Mr. Hughes: Exhibit 422?

Mr. MacManus: Yes. Excuse me. Did I skip one?

Your Honor, I thought I had told Mr. Hughes that we were not offering 421.

The Clerk: It is already in, Mr. McManus, according to my records.

Mr. Kuhn: No, 421-A is in. 421 is not in.

[fol. 3560] The Court: I understand they are not offering 421.

Mr. McManus: We are not offering 421. We are offering 422, your Honor.

The Court: All right.

Mr. Hughes: Same objection, your Honor.

The Court: Same ruling.

(Government's Exhibit 422 received in evidence.)

Mr. McManus: We now go, your Honor, to Government's Exhibit——

Mr. Hughes: Your Honor, may I also call attention to the fact that 422 is not dated.

Mr. McManus: We now, your Honor, go to Government's Exhibit 438, which I believe is in the next book.

Mr. Hughes: 438?

Mr. McManus: Yes.

Mr. Hughes: How much of this document are you offering?

Mr. McManus: Just page 1, your Honor.

The Court: Page 1?

Mr. McManus: Yes.

Mr. Hughes: Same objection, your Honor.

[fol. 3561] The Court: Same ruling.

(Government's Exhibit 438 received in evidence.)

Mr. Hughes: May I have a moment, please?

Mr. McManus: 439-A, your Honor.

The Court: I don't have 439-A, I don't think. What is it entitled?

Mr. Hughes: You Honor, there is no stipulation with respect to this document, and there has been no foundation laid for it.

The Court: I don't even have it here, as far as I know. What is it called?

Wait a minute, wait a minute now.

Mr. Hughes: I wanted to correct that, your Honor. We have stipulated that it was produced from our files, but beyond that we have not stipulated. There is no foundation for it, and Mr. Walker, when he testified, was shown it and said he didn't recognize it.

So, in addition to all the other grounds that I have urged here, it seems to me that there is absolutely no foundation whatever laid for the reception of this document, no identification.

The Court: What foundation do you claim is laid for [fol. 3562] this?

Mr. Hughes: It isn't even dated, your Honor.

Mr. McManus: Your Honor, we will withdraw 439.

The Court: Very good.

Mr. McManus: The next one, your Honor, that we offer is Government's Exhibit 442. We offer the cover page and the table of contents on the next page, your Honor.

Mr. Hughes: Well, your Honor, this is another survey which was prepared by an outside firm. I object to it on all the previous grounds urged with respect to the previous surveys, and call attention to the fact that since the only purpose is to establish that a survey was made, that the title page is sufficient for that purpose.

The Court: Now, in this case, I will take through page H, consisting of four pages all told, and overrule the objection.

(Government's Exhibit 442 received in evidence.)

Mr. McManus: The next, your Honor, is Government's Exhibit 600.

[fol. 3563] Mr. Hughes: Same general objection, your Honor. There is no real foundation for this document. The most that it was stipulated was that it was from our files, and in some way prepared by the defendant.

The Court: This is a thing called "the ABCs of canning"?

Mr. McManus: That's right, sir.

The Court: Objection overruled.

(Government's Exhibit 600 received in evidence.)

Mr. McManus: The next one, your Honor, is Government's Exhibit 612.

Mr. Hughes: That was not on the list of documents. Mr. McManus indicated that that was a document that he was withdrawing.

Mr. McManus: I thought I indicated I withdrew a number of documents after 612, your Honor. I didn't intend that 612——

Mr. Hughes: May we pass that one then, your Honor?

The Court: Let's pass it and reserve it for later.

Mr. McManus: All right.

[fol. 3564] The next document, your Honor, is 641.

Mr. Hughes: Your Honor, may I inquire how much of this is being offered?

Mr. McManus: Well, your Honor, we have marked out on—I thought we had morked on defendant's copies as well as your own the parts that we were offering.

The Court: 641 consists of one page, doesn't it?

Mr. Hughes: You have, but in offering the document you didn't indicate that.

Mr. McManus: Oh, I'm sorry. We are offering the one page in Government's Exhibit 641.

Mr. Hughes: That is the page that is numbered page 2?

Mr. McManus: It is entitled "Canned foods meet highest quality standards."

Mr. Hughes: Same objection.

The Court: Overruled.

(Government's Exhibit 641 received in evidence.)

Mr. McManus: We offer Government's Exhibit 642, pages 1, 2, 3 and 4, inclusive.

Mr. Hughes: That was 642?

Mr. McManus: Yes.

[fol. 3565] Mr. Hughes: Mr. McManus, was that 642?

Mr. McManus: That is correct. All the way over to the pretty girl on the last page.

Mr. Hughes: Including that?

Mr. McManus: Including that.

Mr. Hughes: Same objection.

The Court: Same ruling.

(Government's Exhibit 642 received in evidence.)

Mr. McManus: The government offers Government's Exhibit 643, which is one page entitled "NCA president cites gains in can food popularity."

The Court: What about the pretty girl in the second and third? Are you going to leave her out?

Mr. McManus: We are going to offer her independently, your Honor. We have numbered her separately.

Mr. Hughes: Which number is that?

Mr. McManus: 643.

Mr. Hughes: Just that first page?

Mr. McManus: 643 is the first page of Canned Foods Merchandiser for January, 1958.

Mr. Hughes: That's right.

Mr. McManus: January, 1958.

[fol. 3566] 644, your Honor.

Mr. Hughes: Same objection, your Honor.

The Court: All right, 643 and 644, the objection is overruled.

(Government's Exhibits 643 and 644 received in evidence.)

Mr. McManus: 645, we offer Government's Exhibit—I withdraw that, your Honor.

The next exhibit is Government's Exhibit 648.

Mr. Hughes: 648 is your next?

Mr. McManus: Yes.

The Court: Now, 648, in my copy, has some markings on it.

Mr. McManus: Yes, we offer the entire exhibit, except where it has been X'd out, which would be the first paragraph on the first page of 648, and it would be stating with "brokers can help" on the second page of Government's Exhibit 648.

Mr. Hughes: Same objection.

The Court: Overruled.

(Government's Exhibit 648 received in evidence.)

[fol. 3567] Mr. McManus: Next is Government's Exhibit 649. We offer Government's Exhibit 649, the entire exhibit, in evidence, which includes one, two, three pages.

Mr. Hughes: Same objection.

The Court: Same ruling.

(Government's Exhibit 649 for identification received in evidence.)

Mr. McManus: The Government offers Government's Exhibit 650——

The Court: Wait a minute, now. 650, yes, except for the part which is X'd out.

Mr. McManus: Yes, starting with "Passed the test."

Mr. Hughes: Your Honor, if I am not mistaken, this exhibit is the last page really of the preceding exhibit.

The Court: I don't quite understand why this has a separate exhibit number.

Mr. McManus: Your Honor, I believe at the time we marked these we did not know if that was going to be a separate exhibit or not.

The Court: All right. Combine that page with the preceding exhibit number except for the part that is X'd out [fol. 3568] and it will be admitted as part of 649.

Mr. Hughes: Same objection.

The Court: Same ruling.

(Marked as part of Government's Exhibit 649 in evidence.)

Mr. McManus: 656, your Honor, is the next one. The Government offers page 3 and page 4.

The Court: Wait a minute. 656 is only, as I see it, two pages.

Mr. McManus: Yes, sir, which are pages 3 and 4 of the Canned Foods Newsletter for Brokers, May, 1958.

Mr. Hughes: Your Honor, I object upon the same grounds, and may I call your Honor's attention to the fact that page 3 in part, as least, appears to be nothing but a quotation from part of a letter of one Val S. Bauman, vice president of National Tea Company. I cannot see any possible relevance or materiality.

The Court: Well, Mr. Hughes, it may be relevant that Continental Can chose to distribute this puffing statement from Mr. Bauman to whomever it distributed its publication. I don't know. I will admit it.

[fol. 3569] (Government's Exhibit 656 for identification received in evidence.)

Mr. McManus: The next number, your Honor, is 684.

Mr. Hughes: Are you offering this entire document?

Mr. McManus: Just a minute, now, Mr. Hughes.

Your Honor, we are limiting our offer the first and second pages of 684.

Mr. Hughes: Mr. McManus, may I ask you whether you would be prepared to stipulate that the type of can that is referred to in this document is now out of use? Because I think with that stipulation I would not object to it.

Mr. McManus: I have no reason to believe that it is. I don't know that it is not.

Mr. Hughes: I object to it on all the grounds——

The Court: Overruled.

(Government's Exhibit 684 for identification received in evidence.)

Mr. McManus: The next number, your Honor, is 685, [fol. 3570] and it consists of one page.

Mr. Hughes: Your Honor, this relates to the same subject matter, that can that was a subject matter of the immediately preceding exhibit, and I object to it on all the grounds previously urged.

The Court: Overruled. Same ruling.

(Government's Exhibit 685 for identification received in evidence.)

Mr. McManus: Your Honor, the Government offers 686 for identification in evidence, the first page only.

Mr. Hughes: Again this relates to the same subject matter, and I make the same objection.

The Court: Same ruling.

(Government's Exhibit 686 for identification received in evidence.)

Mr. McManus: The next exhibit, your Honor, is Government's Exhibit 700.

Mr. Hughes: What is that?

Mr. McManus: It is the Hazel-Atlas advertisement which consists of one page.

Mr. Hughes: Your Honor, I object to this document on all of the grounds that have been previously urged and in addition may I call your Honor's attention to the fact that [fol. 3571] there is absolutely no proof that this document was ever used by Hazel-Atlas, and we have no information that it was, and for all we know it may have been the suggestion of an advertising agency. In any event, there has been no foundation whatever laid for the reception of this document.

The Court: What foundation do you say has been laid for the reception of this document, Mr. McManus?

Mr. McManus: Your Honor, this purports to be a—well, this is admitted to be a document that was produced by the defendant, Continental Can, from its files, which shows containers or we believe that it shows containers for the drug and cosmetics industry, and has stamped on the top of it, next to the spot announcements, "The Drug and Cosmetics Industry."

The Court: Where does it say that? Is this 700?

Mr. McManus: Yes, your Honor. You see, it says "Spot

Announcements" and the copy has "The Drug and Cosmetics Industry."

Now, we think, your Honor, that it does indicate Hazel-Atlas' concern and preparation of advertising material for the purpose of selling their containers for that industry.

[fol. 3572] The Court: Well, is there any doubt at all that Hazel-Atlas advertises its product extensively?

Mr. Hughes: Well, when you say "extensively," your Honor, I would have some hesitation about saying——

The Court: Well, withdraw the word "extensively." Is there any doubt that Hazel-Atlas advertises its products?

Mr. Hughes: It has, yes, but we don't know whether this was ever run——

The Court: I don't know of any foundation for this. I will exclude it.

Mr. Manus: All right, your Honor.

The next exhibit, your Honor, is Government's Exhibit 715, and your Honor, we offer the three pages of 715.

Mr. Hughes: The same objection, and in addition may I specifically point out there has been no foundation laid for the introduction of this document, no showing as to whether this was ever in fact distributed for release, and we have no information on that subject. We object because there is no foundation laid for it.

The Court: I will overrule the objection.

[fol. 3573] (Government's Exhibit 715 for identification received in evidence.)

Mr. McManus: The next exhibit we have, your Honor, to offer, is Government's Exhibit 738.

Mr. Hughes: There has been no foundation laid for this document, no stipulation with reference to it, so therefore we object to it.

The Court: No foundation. It is not referred to in the stipulation.

Mr. McManus: No, your Honor, it is not, but this is an advertisement which bears the trademark of the Continental Can Company.

The Court: I don't even know what publication it was published in.

Mr. Hughes: There is no proof that it ever in fact was published.

The Court: No. Objection sustained.

Mr. McManus: Government's Exhibit 741, your Honor.

Mr. Hughes: Your Honor, I object to this on all the previous grounds, and in addition, Mr. McManus has indicated that crowns were out of the case.

Mr. McManus: I never said that, your Honor. I never [fol. 3574] said that crowns were out of the case.

Mr. Hughes: Well, you have said that they are not in competition with screw-type closures.

Mr. McManus: I have said that.

Mr. Hughes: Excepting for that correction, I add that as an additional objection to its reception.

The Court: Where was this published? Where is it dated? What is this?

Mr. Hughes: It has no date on it, your Honor, and we have no information as to whether it was ever used or when it was used, or how it was used.

We object to it on the ground that no foundation has been laid.

The Court: All it says here is that this was produced by the defendant from its files.

Mr. Hughes: That's right.

The Court: You don't know what use was made of it, when, if ever, it was published, whether it was a draft.

No, I will exclude it.

Mr. McManus: The next one is Government's Exhibit 745, your Honor.

Mr. Hughes: I object to it on all of the grounds urged to the previous document, your Honor, but I do suggest [fol. 3575] that if Mr. McManus is prepared to stipulate that Continental Can maintained a booth at the American Bottlers of Carbonated Beverages Conventions for many years prior to the date of this document, I would be prepared to withdraw my objection.

Mr. McManus: Your Honor, I cannot see where that has much bearing on this document. I don't know. I have no way of knowing if they did or did not.

Mr. Hughes: I understood, your Honor——

The Court: Well, there is a certain amount of give and take here, Mr. McManus.

Mr. McManus: I know. I understand that, but this document was stipulated to. It was stipulated that it was produced by the defendant from its files. It was prepared on or about November, 1956, by or for the defendant, and distribute to district sales managers and plant managers.

Mr. Hughes: The point about it is, your Honor, that this document indicates at the top "First Edition."

From that, during the course of the pretrial, the Government appeared to have drawn the inference that this was something new to Continental whereas in fact they have [fol. 3576] been maintaining a booth at this Convention for many years prior to the date of this document, and, as I say, if they were prepared to stipulate to that fact I wouldn't object to it at all.

Mr. McManus: Your Honor, I am not trying to be difficult. I don't know where the first sentence has anything to do with maintaining a booth anywhere.

The Court: Well, it says "See you at the ABCB Show."

Mr. McManus: 745.

The Court: "Visit us at Bond Booth No. 00001." That is the last page.

Mr. Hughes: And then in '56, at the pretrial conference in November of '56, Mr. Greenberg stressed that this was the first edition, and he stressed the postscript and quoted to your Honor, "See you at the ABCB Show."

I withdraw that. It was at the pretrial conference—I don't have the date but it occurred in the stenographer's minutes at pages 466 to 468.

Mr. McManus: Your Honor, I don't want to quibble. I would be willing to stipulate that since Continental went into the manufacture that they have had a booth or some [fol. 3577] type of display at the ABCB Show, or whatever it is there, the Bottlers Convention.

The Court: All right, then, it will go in with that stipulation.

(Government's Exhibit 745 for identification received in evidence.)

Mr. McManus: The next document is 748, your Honor.

Mr. Hughes: Your Honor, we object to this. We have no information as to when or where this document was ever used, and in addition to all other grounds urged, that there was absolutely no foundation laid for its reception. This, again, deals with the subject of crowns.

The Court: What is the purpose of this, to show that they sell crowns? Everyone knows they sell crowns, Mr. McManus.

Mr. McManus: Yes, your Honor. Actually I think that we are offering this document insomuch as an explanation of crowns as we do the fact that they sell crowns. I know that you are aware of that, but this is a descriptive document of crowns and how crowns are produced and sold.

[fol. 3578] Mr. Hughes: I press my objection. There is no foundation laid for its reception.

The Court: I will take it. Overruled.

(Government's Exhibit 748 for identification received in evidence.)

Mr. McManus: The next document, your Honor, is Government's Exhibit 750.

Mr. Hughes: This document is undated and I object to it on all the grounds previously urged.

The Court: Overruled.

(Government's Exhibit 750 for identification received in evidence.)

Mr. McManus: The next document is 751.

The Court: How much of this do you want to put in?

Mr. McManus: May I have just a second, your Honor?

The Court: Yes.

Mr. Hughes: The same objection, and there is no foundation laid for tis reception. We have no information as to whether this interview was ever used by the defendant or by White Cap, and it appears, so far as we know, to be a draft of a possible interview of an employee of White Cap Company.

[fol. 3579] The Court: A possible interview? This is the report on White Cap Engineering & Services. This is 750, isn't it?

Mr. McManus: I thought you admitted 750, your Honor. Maybe we have gotten out of step here.

The Court: Did you offer 749?

Mr. McManus: No, sir, your Honor, I did not.

The Court: Then I omitted 750. All right, it is 751.

Mr. Hughes: I don't know whether your Honor heard my additional objection to this. We just have no information with respect to whether or when or how this document was used, and it would appear merely to be a draft of a proposed interview of an employee of White Cap Corporation on some possible——

The Court: Yes. I don't see that there is any foundation for this. All that may happen is that this may be just promotional blurbs from Harshe-Rotman, whoever they are.

Mr. McManus: The defendants have admitted, your Honor, that it was produced from their files. It was prepared by Harshe-Rotman for White Cap Company, a subsidiary of the defendant, and in our request to admit they [fol. 3580] answered that it was made in the course of their respective engagement.

Mr. Hughes: That is quite true that we acknowledged that it was prepared by them for us, but beyond that we haven't gone, and I repeat that we have no information whatever as to whether this was ever used.

If the plaintiff had really thought this document had great significance, it could easily have gone into it during the taking of the depositions, or during the pretrial period to establish its admissibility.

The Court: I don't see that any proper foundation has been laid for its admission, Mr. McManus. I will exclude it.

Mr. McManus: Now, the next exhibit, your Honor, is Government's Exhibit 752.

Mr. Hughes: Same objection, and I repeat here with respect to this document that we again have no information as to whether this press release was ever used or ever issued. There is no foundation whatever laid for its reception.

Here again this is something the Government could have pursued if it so desired.

[fol. 3581] The Court: Yes. I will exclude it.

Mr. McManus: 754, your Honor, in which the defendants state this this document——

The Court: Yes. I see it.

Mr. Hughes: Same objection.

The Court: The same ruling as previously. We will admit it.

Objection overruled.

Mr. Hughes: Yes, your Honor.

(Government's Exhibit 754 for identification received in evidence.)

Mr. McManus: 755 is the next one, your Honor.

The Court: This is in the same category.

Mr. McManus: All right, your Honor, we will withdraw Government's Exhibit 755.

Mr. Hughes: Same objection to this as was made to——

The Court: 755 has been withdrawn.

Mr. Hughes: Oh, yes.

The Court: Next?

Mr. McManus: Well, your Honor, 756. The Government offers Government's Exhibit 756.

Mr. Hughes: Same objection to that as to the other [fol. 3582] Harshe-Rotman publicity releases.

The Court: No evidence as to what the nature of this document is or what was done with it. I will sustain the objection.

Now Mr. McManus, how much have you got to go here?

Mr. McManus: We are at 756. We have between six and eight at the most, your Honor.

The Court: I think we will take a luncheon recess now. There will be a couple of loose ends to finish up after lunch anyway, so we will return here at 2:15, gentlemen.

(Recess to 2:15 p.m.)

[fol. 3583] AFTERNOON SESSION

2:25 P.M.

The Court: All right.

Mr. McManus: Your Honor, I believe this will take us only a few minutes.

If you will go now to Government's Exhibit 759 for identification.

Mr. Hughes: 759?

Mr. McManus: 759.

The Court: Now, you are presenting this apparently for the advertisement by the White Cap Company; is that right?

Mr. McManus: Yes, your Honor.

The Court: Any objection to this?

Mr. Hughes: Same objection, your Honor.

The Court: Overruled.

(Government's Exhibit 759 received in evidence.)

Mr. McManus: 772, your Honor, would be the next one.

Mr. Hughes: Your Honor, the same objection as to all the other documents, and I call your Honor's attention to the fact that the document is undated and there is no foundation of any kind that I am aware of that has been laid [fol. 3584] for this document.

The Court: As I understand it, this document, according to the stipulation, was prepared for use as advertising material by or for White Cap Company.

Mr. Hughes: Yes, sir.

The Court: A subsidiary of the defendant.

Mr. Hughes: Yes, sir. I withdraw my objection. No objection.

The Court: All right, it may be received.

(Government's Exhibit 772 received in evidence.)

Mr. McManus: Your Honor, the other document that we had, there was some question about Government's Exhibit 612, whether I had indicated 612 or not, and you said that you would come back to that.

Mr. Hughes: Well, your Honor, I interpose the same general objection to that, and I will point out that it was apparently Mr. Smart who prepared that document, and he was a witness, and he was not examined at all concerning the document, and no attempt was made to lay a foundation for the admission of this document.

The Court: It is not in the stipulation, is it?

[fol. 3585] Mr. McManus: Yes, it is, your Honor.

The Court: It is?

Mr. McManus: Yes.

Mr. Hughes: I want to be clear about that, your Honor. Your Honor, you have my copy of the stipulation, and my working notes don't indicate——

The Court: The stipulation says, "This document was produced by the defendant from its files. It was prepared on or about December 13, 1954, by S. B. Smart, then assistant product sales manager of defendant."

Mr. Hughes: And he was a witness and he wasn't asked anything about this document, your Honor, and I submit there is no foundation been laid for it.

The Court: How much of this 612 do you want?

Mr. Hughes: I think the first page would be satisfactory, your Honor.

The Court: All right, objection overruled.

(Government's Exhibit 612 received in evidence.)

Mr. McManus: Your Honor, there is one other document, which I understand is not in evidence, and which I [fol. 3586] did not put on the list, but which has been referred to, I think, by both sides, and possibly for the information of the Court and to elucidate our discussions here I would like to offer Government's Exhibit 304. It is the Articles of Incorporation and Code of Regulations of GCMI, the Glass Container Manufacturers Institute.

Mr. Hughes: You Honor, I object to it. I don't object on the ground that it isn't a true copy, I dispute that, but I object to it as incompetent and irrelevant and immaterial.

The Court: Overruled.

(Government's Exhibit 304 received in evidence.)

Mr. McManus: Your Honor, the only other matter that I have is, I understand that on Government's Exhibit 1209 for identification, which was the notice and proxy statement——

The Court: That is the Gair proxy statement.

Mr. McManus:—the part that you indicated, the sections that you indicated would be admitted; is that correct?

The Court: 4 and 5.

Mr. Hughes: Well, I think your Honor already admitted [fols. 3587-3591] those, as I understood.

The Court: Well, if I have not, 4 and 5 of 1209 will be admitted. The balance will be excluded.

Mr. McManus: All right, your Honor.

Your Honor, the only other matter that we have is, one of the people that prepared our chart relating to past ac-

quisitions was a little bit embarrassed because it was indicated that the Reynolds Plastics Division of Reynolds Spring Company was a spring company or an aviation corporation. This doesn't really add to the case, but if the record would show that it appears that it was a plant producing molded plastics at Cambridge, Ohio.

Mr. Johnson: I think Mr. McManus has perhaps misunderstood my statement this morning. I said I believed that it was making bomber parts.

Mr. McManus: I see.

The Court: All right.

Mr. McManus: In that case, your Honor, with that on the record, the government rests.

. . . . . .

[fols. 3592-4208] New York, October 19, 1960, 10:35 A.M.

Trial resumed

The Court: Yes, Mr. Handler.

Motion Of Defendant To Dismiss

Mr. Handler: If the Court please, now that the plaintiff had completed the presentation of its evidence, the defendant moves for a dismissal upon the ground that on the law and the facts the plaintiff has shown no right to relief. We are seeking a final judgment on the merits, dismissing the complaint.

. . . . . .

[fol. 4209] New York, December 8, 1960; 10:30 o'clock a.m.

Trial resumed

Present: Mr. McManus, Mr. Greenberg, Mr. Hughes, Mr. Johnson, Mr. Kuhn, Mr. Handler.

ORAL RULING ON DEFENDANT'S MOTION TO DISMISS

The Court: Gentlemen, we have been in recess, and I am going to read to you some material that I have prepared here which will bear on our situation.

On October 18, 1960, the Government closed its case and rested after some six weeks of trial. Thereupon, the defendant moved for a dismissal pursuant to Rule 41(b) of the Federal Rules of Civil Procedure and for judgment on the merits in its favor on the ground that upon the facts and the law the Government had shown no right to relief. In substance, defendant contended that the Government had failed to establish that the merger of Continental Can [fol. 4210] Company, a manufacturer of tin cans and numerous other products, and Hazel-Atlas Glass Company, primarily a manufacturer of glass containers, violated Section 7 of the Clayton Act. I heard extensive argument by counsel for the respective parties on defendant's motion, and both sides have briefed the questions presented.

At the conclusion of the argument the trial was adjourned for a month so that I could carry out my assignment in Civil Part I of this court, where I have been continuously engaged during November. However, while on this assignment I have been able to make a study and analysis of the record in this case, the briefs submitted by counsel, and the transcripts of the very full oral arguments before me.

I am now prepared to give you my decision on the defendant's motion for dismissal. However, what I am about to say will be the bare bones of my decision only. I have had no time to prepare the opinion, which will follow in due course and which will contain a full statement of the facts and the law with reference to the motion and the reasoning [fol. 4211] leading to the results that I have reached. I will not attempt this morning to do more than give you some ultimate conclusions.

This case is being tried by the Court without a jury. Rule 41(b) of the Rules of Civil Procedure provides that where defendant moves for dismissal at the close of the plaintiff's case on the ground that upon the facts and the law the plaintiff has shown no right to relief, "the court as trier of the facts may then determine them and render judgment against the plaintiff or may decline to render any judgment until the close of all the evidence."

In making such a determination, the Court may weigh all the evidence presented by the plaintiff, draw inferences therefrom, and determine whether the plaintiff has sustained its burden of establishing the right to relief which it claims. The question is not merely whether the plaintiff, at the close of its evidence, has made out a prima facie case, where such inferences as there are must be those most favorable to the plaintiff. It is rather whether upon the record the plaintiff would be entitled to the relief which it claims were the case to end there.

[fol. 4212] The problem then is whether the plaintiff has met this test. If it has, defendant's motion for a dismissal must be denied. If it has not, the motion must be granted.

Section 7 of the Clayton Act forbids the acquisition of one corporation by another "where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly."

The Act does not prohibit mergers or acquisitions as such, even though they may result in some lessening of competition. It deals only with such acquisitions as will probably result in lessening competition to a substantial degree.

The Government has the burden of proving a violation of the statute by a preponderance of the evidence, and in order to succeed it must sustain that burden on each element of its case.

There are two elements to the Government's case. First, it must establish the appropriate lines of commerce or relevant markets in the appropriate sections of the country which are affected by the acquisition under attack.

[fol. 4213] Second, it must establish that the effect of the acquisition may be substantially to lessen competition or to tend to create a monopoly in such relevant market or

markets. In substance, its burden is to show that there is a reasonable probability that competition will be substantially lessened in any of the areas of effective competition, established to be relevant markets.

It is not necessary for the Government to establish the probability of substantial lessening of competition in all the markets for which it may contend, but merely that there is the probability of such lessening in any line of commerce in any section of the country.

In the case at bar, the Government contends that there are ten separate lines of commerce in which the effect of the acquisition of Hazel-Atlas by Continental may be substantially to lessen competition or to tend to create a monopoly. In each of these lines of commerce the Government claims that the section of the country affected is the United States as a whole. As to eight of the lines of commerce it contends that sections of the country also affected are the United States east of the Rocky Mountains and the United [fol. 4214] States west of the Rocky Mountains.

It may be noted that the Government originally contended that there were other sections of the country affected in various of the lines of commerce contended for, but it has withdrawn such claims.

The ten lines of commerce in which the Government contends that competition may be substantially lessened are specified with particularity in the Government's answer to defendant's interrogatories in December 1958, some two years ago. These lines of commerce remained unchanged through many exhaustive pretrial sessions in which the issues to be tried were carefully limited and defined, and during the more than six weeks of the trial itself. These are the issues tendered by the Government, and it is upon these issues that the case has been tried.

Each of these lines of commerce and the claimed effects of the acquisition within them will be dealt with briefly separately.

[fol. 4215] I

As its first line of commerce, the Government specified containers for the canning industry and defined canning as "the process of sterilizing foods, including juices, by heat

and hermetically sealing them in tin cans and glass containers."

I will assume for purposes of this discussion that the Government's evidence establishes this to be a line of commerce and a relevant market, although that question is by no means free from doubt. Even if such an assumption be made, however, the Government has failed to establish any basis upon which I could find that competition within this line of commerce may be lessened to any substantial degree by this acquisition, for I find in this record no evidence as to either the size or shape of the relevant market or the share of either of the merging companies in it.

Indeed, the Government practically concedes that it has failed to make such a showing, for after the case had proceeded for over two years through the lengthy pretrials, through six weeks of trial, and through the defendant's argument on its motion for dismissal, the Government virtually abandoned its claim as to substantial lessening of [fol. 4216] competition within this line and attempted to substitute an entirely new and greatly expanded line of commerce for it.

During the course of its argument in opposition to the motion for dismissal, the Government asserted for the first time that heat sterilization was not a part of this line of commerce but that the key word in the Government's description of the canning container market was hermetic sealing. Moreover, under the Government's interpretation of hermetic sealing, all food containers made of tin or glass are hermetically sealed. Thus the Government in substance urges that this line of commerce covers all food containers made of tin or glass.

Apart from the manifest unfairness to the defendant of permitting the Government completely to switch its theory at this thirteenth hour, the proposed new line of commerce —in substance, all food in glass or cans—recommends itself neither to logic nor to the realities of the market place. The evidence produced by the Government is wholly insufficient to establish that there is any such line of com- [fol. 4217] merce. Assuming that such a line of commerce existed, however, the Government's proof is insufficient to show that there may be lessening of competition within any

such line of commerce by reason of the acquisition, to any substantial degree.

II

The second line of commerce specified by the Government is delineated as containers for the beer industry, consisting of glass bottles and metal cans used to market beer. I find that there is sufficient evidence in the record which, standing uncontradicted, establishes that this line is a line of commerce, or a relevant market.

However, the evidence adduced by the Government is insufficient to establish that the effect of the acquisition may be substantially to lessen competition within this relevant market. Without going into detailed figures at this time, the percentage share of Hazel-Atlas Glass Company in the relevant market ranged from 0.14% in 1955 to 0.17% in 1957—in other words, less than 2/10ths of 1% of the relevant market. This share is so insignificant as to show on its face that Hazel-Atlas was not a significant competitive factor in this line of commerce at the time of the merger, [fol. 4218] or at any time thereafter.

Recognizing this, the Government sought to establish that though there might be no substantial lessening of actual competition, there was substantial lessening of potential competition.

I find that the Government has failed to establish that there was substantial lessening of potential competition in this relevant market by reason of the acquisition, for it has not shown a probability that Hazel-Atlas would have become a significant competitive factor had the merger not taken place.

III

The next line of commerce which the Government delineated was "containers for the soft drink industry," consisting of both tin cans and glass bottles.

There is great difficulty in finding evidence in the record to establish this line of commerce as a relevant market. Under the definitions advanced by the Government, this market includes containers for both carbonated and non-carbonated soft drinks. The evidence relied on to establish this as a line of commerce is confined almost entirely to con-

tainers for carbonated beverages. Such evidence does not [fol. 4219] establish a relevant market of both carbonated and non-carbonated beverages.

Assuming, however, that the evidence justified a finding of a separate line of commerce which was limited to glass and metal containers for carbonated beverages only, which is a departure from the line for which the Government has contended throughout this trial, there is a failure of proof on the crucial issue of whether the effect of the acquisition may be substantially to lessen competition in that relevant market. While the Government's proof in support of its claimed line of commerce deals solely with carbonated beverages, the evidence upon which it relies to establish substantial lessening of competition in that line relates to containers both for carbonated and non-carbonated soft drinks. This divergent approach to the two issues relating to this subject matter makes it impossible to reach any conclusion as to the lessening of competition in a relevant market of containers for carbonated soft drniks only.

But even if the Government's original definition of this line of commerce, i.e., containers for both carbonated and [fol. 4220] non-carbonated beverages, should be deemed to have been established, it has failed to prove that the acquisition of Hazel-Atlas tends to lessen or has lessened competition in this line to any substantial degree. The percentage share of the relevant market in soft drink containers of Hazel-Atlas ranged from .03% in 1955 to less than .5% in 1957—in other words, a miximum of ½ of 1% of the relevant market. This insignificant share of the relevant market indicates plainly that Hazel-Atlas was not a significant competitor in this line of commerce and that there was no actual lessening of competition in any substantial degree by reason of the merger.

Again, the Government urges that there was a lessening of potential competition from Hazel-Atlas. I find, however, that the Government has failed to establish a probability that Hazel-Atlas would have become a significant competitive factor in this relevant market had the merger not taken place and has therefore not shown that there was a lessening of potential competition to any substantial degree.

[fol. 4221] IV

The next three lines of commerce for which the Government contends may be treated together. They are as follows:

(a) Containers for the toiletries and cosmetics industry;
(b) Containers for the medicine and health industry; and
(c) Containers for the household and chemical industry.

What the Government means by these definitions are containers for the products produced and marketed to the public by each of these industries. In each of these three lines of commerce the containers referred to include glass containers, tin cans and plastic bottles.

Even assuming that each of these separate lines of commerce has been established and that each constitutes a relevant market, the Government has failed to furnish the proof which would be necessary in order for me to find that the acquisition may lessen competition within any of such markets to any substantial degree.

In the first place, there is nothing from which I can find [fol. 4222] what the size of each of these relevant markets is. In the second place, there is insufficient evidence from which to find what the defendant's share of these relevant markets is. In the absence of such evidence, it is impossible for me to determine whether or not the effect of the acquisition may be substantially to lessen competition in these lines of commerce.

The plaintiff's suggestion that all of these lines of commerce be lumped together and viewed as a single line results only in confusion multiplied. There is insufficient in this record to establish either that there is any such separate line of commerce on the one hand, or, on the other, that competition in any such line of commerce may be substantially lessened.

V

The next line of commerce which the Government advances is the can industry. This includes all metal cans of every nature and description. The defendant concedes that

the can industry as so defined is a separate line of commerce.

However, I find that the evidence adduced by the Government is insufficient to establish that this acquisition may [fol. 4223] lessen competition in this relevant market to any substantial degree. In acquiring Hazel-Atlas the defendant did not acquire a can manufacturer but a manufacturer of glass containers. There is no proof in this record which establishes that the acquisition of this glass manufacturer by a manufacturer of cans and other products may lessen competition in the relevant can market to any substantial degree, nor does the evidence establish that potential competition in this market will be so lessened.

VI

The next line of commerce which the Government advances is denominated as the glass container industry. This includes all glass containers used for packaging. Here again, the defendant has conceded that this is a separate line of commerce.

However, the same conclusion must be reached with respect to this line of commerce as was reached with respect to the can industry line. The evidence adduced by the Government has failed to establish that there may be substantial lessening of competition in the glass container industry, potentially or otherwise, by reason of this acquisition.

[fol. 4224] VII

The next line of commerce which the Government advances is metal closures. These are the metal caps which are fitted over containers to close them, largely for glass bottles and jars. Only those made of tinplate are included. For reasons not clear to me, aluminum and plastic closures are excluded.

The Government has now limited this line of commerce to include only vacuum type closures and screw-thread and lug-type closures. It has chosen to exclude crown caps or closures from this line of commerce.

The White Cap Division of Continental Can makes vacuum closures but not non-vacuum closures. Hazel-Atlas

makes no vacuum type closures but only non-vacuum closures. The two are not in competition with one another. A line of commerce cannot be established by lumping together two non-interchangeable products used for different purposes. The Government has failed to establish such a line of commerce or relevant market.

VIII

Finally, the Government contended that the packaging industry, which included almost every conceivable type of [fol. 4225] packaging material used in the United States was a separate line of commerce. I have already found that the Government had failed to establish any such line of commerce or to show that there might be any substantial lessening of competition within such line of commerce if it existed, by reason of this acquisition. The Government's claim as to this line was dismissed at the end of its case.

In each of the lines of commerce for which the Government contends, it has also urged that the effect of the acquisition was to tend to create a monopoly. I find that the evidence fails to establish such a tendency in any of the lines of commerce specified.

The basic defect in the Government's case does not lie in its theories but in the nature and quality of its proof. Many of the propositions of fact on which the Government relies find support only in argument. Others rest on most insubstantial and evanescent evidentiary foundations. Statements of counsel as to what the facts may be or inferences based on incomplete if not misleading statistics or mere glittering generalities cannot be substituted for evidence, cannot be substituted for proof, and they cannot [fol. 4226] furnish a basis for finding the facts necessary to sustain the Government's case.

The evidence adduced by the Government is insufficient, both qualitatively and quantitatively, to establish that this acquisition has violated Section 7 of the Clayton Act in any respect. The Government has not established by competent proof that it is entitled to relief against this defendant.

Under these circumstances, there is no need to put the defendant to its proof and to place upon it the burden of

putting in extensive evidence to rebut a case which has not been made out. I conclude, therefore, that the defendant's motion for dismissal of the action must be granted.

As I have indicated, this decision does not constitute my opinion in this case. I will hand down an opinion at a later date dealing fully with the background of the case, the evidence in the record, the controlling legal principles, and my detailed findings and conclusions.

In view of the decision, which I felt in all justice to the parties and to counsel should be announced as soon as possible, the trial is now at an end, and I will make appropriate directions in my opinion as to the entry of judgment in [fol. 4227] favor of the defendant.

[fol. 4230] OPINION—April 16, 1963

BRYAN, District Judge:

This is a civil action by the United States to enjoin the proposed acquisition by defendant Continental Can Company, Inc. (Continental) of defendant Hazel-Atlas Glass Company (Hazel-Atlas) on the ground that such acquisition would violate § 7 of the Clayton Act as amended.[1] The court has jurisdiction over parties and subject matter.

The Government had previously attempted to block the acquisition by invoking a consent decree which had been entered against Continental in 1950 in a civil anti-trust suit under §§ 1 and 2 of the Sherman Act and § 3 of the Clayton Act in the District Court for the Northern District of California. On August 31, 1956 the California court held that the consent decree did not cover the proposed acquisition.[2] [fol. 4231] The consummation of the acquisition was delayed in the meantime at the Government's request. The Government then commenced this action. It moved for a preliminary injunction against consummation and sought a temporary restraining order pending the hearing and de-

[1] 15 U.S.C. § 18: "No corporation engaged in commerce shall acquire, directly or indirectly, the whole or any part of the stock or other share capital and no corporation subject to the jurisdiction of the Federal Trade Commission shall acquire the whole or any part of the assets of another corporation engaged also in commerce, where in any line of commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly. * * * "

[2] United States v. Continental Can Company, 143 F. Supp. 787 (N.D. Cal. 1956).

termination of its motion. The temporary restraining order was denied on September 13, 1956. On that day, Continental took over all of the assets, property, business and good will and assumed all of the liabilities of Hazel-Atlas, which since then has been operated as the Hazel-Atlas Division of Continental.

The Government withdrew its motion for a preliminary injunction on September 18, 1956 and this action became one for divestiture.

After some considerable time, the case was assigned to me for all purposes. Extensive pre-trial proceedings were conducted at which over a thousand pages of transcript were taken. The case then came on for trial.

The Government concluded its case after six weeks of trial during which it called some 78 witnesses. Over four thousand pages of testimony were taken. The Government introduced more than twelve hundred exhibits and the defendants more than five hundred.

[fol. 4232] At the conclusion of the Government's case defendants, pursuant to Rule 41(b), F.R.C.P., moved for a dismissal on the ground that upon the law and the facts the Government had shown no right to relief and that they were therefore entitled to final judgment on the merits. The motion was granted in a brief oral decision which stated only the conclusions reached. In view of the importance and complexity of the case a detailed opinion was to follow.

Before that opinion could be filed, the Supreme Court decided Brown Shoe Co., Inc. v. United States, 370 U.S. 294 (1962), its first decision dealing at any length with § 7 of the Clayton Act as amended in 1950. The Government then asked leave to submit material dealing with the effect of that case on the case at bar. This application was granted and both sides submitted briefs on this question. Consideration of the *Brown Shoe* case has not changed the conclusions which I reached at the end of the trial.

My opinion follows.

Defendants' motion under Rule 41(b) for a dismissal at the close of the Government's case, posed squarely the question of whether on the record, as it then stood, defend-

[fol. 4233] ants were entitled to judgment.

The motion was made on the ground that "upon the facts and the law the plaintiff has shown no right to relief." In an action tried to the court without a jury, the court, when such a motion is made at the close of plaintiff's case, "as trier of the facts may then determine them and render judgment against the plaintiff or may decline to render any judgment until the close of all the evidence."

There is no doubt as to the meaning and applicability of Rule 14(b). The test to be applied in a case tried to the court alone is quite different from that on a motion to dismiss or for a directed verdict in a jury trial. In the latter case the question is whether or not the plaintiff has made out a prima facie case sufficient to go to the jury and the court must view the evidence in the light most favorable to him.

In a trial to the court alone, however, the court is authorized under Rule 41(b), to evaluate and weigh all of the evidence presented by the plaintiff, draw such inferences therefrom as it considers reasonable in the light of the record, and determine at that stage whether plaintiff has sustained the burden of proof necessary to establish its right to relief were the case to end there. If the court undertakes to make such a determination and concludes [fol. 4234] that the plaintiff has not met this burden, the defendant is entitled to judgment on the merits.[3]

In this case, as the trier of the facts, I determined at the conclusion of the Government's case that it had failed to sustain its burden of showing by a preponderance of the evidence that the acquisition under attack violated Section 7 of the Clayton Act in any respect. I therefore directed that judgment be rendered against the Government.

I

Section 7 of the Clayton Act in the light of the Brown Shoe case

The Government's case is grounded solely on Section 7 of the Clayton Act as amended in 1950. There is no claim of violation or threatened violation of any provision of the Sherman Act. There is no charge of restraint of trade, monopolization or attempt to monopolize. This is strictly a Section 7 case.

Section 7 as amended forbids the acquisition of the stock or assets of one corporation by another "where in any line of commerce in any section of the country, the effect of [fol. 4235] such acquisition may be substantially to lessen competition, or to tend to create a monopoly."[4] The *Brown Shoe* case, decided on June 25, 1962, some twelve years after the 1950 amendment to § 7, is the first definitive interpretation of that section by the Supreme Court since its amendment.

The facts in the Brown Shoe case were entirely different from those in the case at bar. The specific holdings of the Court on the facts presented there are therefore not determinative of the problems posed here Indeed, *Brown Shoe* recognizes that the facts in each case in all likelihood will differ widely, that the framework of each industry is likely to be unique, and that each case must stand or fall on its own facts viewed within the framework of the industry pattern.[5]

However, the discussion in *Brown Shoe* of the legislative history and background of the 1950 amendment to § 7, the theory of the amended section, the interpretation to be given to it, and the principles and guidelines to be followed in applying it, is controlling.[6] *Brown Shoe* is the authoritative declaration of the law on the subject as it now stands

---

[4] 15 U.S.C. § 18.

[5] Brown Shoe Co. v. United States, *supra*, pp. 321-322.

[6] The legislative history of Section 7 and the 1950 amendment is reviewed exhaustively in *Brown Shoe* (370 U.S. pp. 311-323). Further general discussion here is unnecessary.

[fol. 4236] and the principles and guidelines which it lays down must be applied here.

Section 7 proscribes acquisition of either stock or assets where, as a result, competition in any line of commerce in any section of the country may be substantially lessened. It covers all mergers or acquisitions, horizontal, vertical or conglomerate.[7]

As *Brown Shoe* makes plain, however, the section does not prohibit all mergers. While the congressional intent was to arrest restraints of trade and monopolistic tendencies "in their incipiency and well before they have attained such effects as would justify a Sherman Act proceeding,"[8] there is no per se proscription against the acquisition of the stock or assets of one corporation by another. The statute is concerned only with those acquisitions which have demonstrable anti-competitive effects.[9]

It is clear, moreover, that the statute was directed neither at the possibility that anti-competitive effects might occur nor at certainty of anti-competitive effects already covered [fol. 4237] by the Sherman Act.[10] "[P]roof of a mere *possibility* of a prohibited restraint or tendency to monopoly will not establish the statutory requirement * * *."[11] The statute is concerned with the reasonable probability of the lessening of competition or tendency toward monopoly as a result of the particular acquisition under scrutiny—a showing that such effects are reasonably likely to occur. This is what the words "may be" as used in the statute mean.[12] The lessening of competition, moreover, must also be shown to be "substantial".[13]

Acquisitions are proscribed where substantial anti-competitive effects or tendency to monopoly are reasonably

---

[13] S. Rep. No. 1775, 81st Cong. 2d Sess., p. 3 (1950).

probably in *any* line of commerce in *any* section of the country. Thus, in order to determine wheether there are anti-competitive effects or tendency to monopoly, it is necessary in each case to define the lines of commerce in which the acquiring and acquired companies were engaged and the sections of the country affected. Anti-competitive effects and their substantiality cannot be evaluated in a [fol. 4238] vacuum. They can only be judged in terms of the particular markets or sub-markets affected—that is to say "within the area of effective competition." [14]

While Section 7 does not use the term "market", it is clear that "line of commerce" refers to a product market, and "section of the country" refers to a geographic market in which competition exists and in which the effects of the acquisition may be felt. A relevant product market must be a market which is meaningful in terms of competitive and commercial realities.[15] A relevant geographic market must embrace an economically significant section of the country in terms of competitive effects.[16]

Thus, relevant markets are neither economic abstractions nor artificial conceptions. They are rather specific areas where, viewed in the context of the facts of the particular case under consideration, there may be demonstrable anti-competitive effects as the result of the acquisition. The test [fol. 4239] then is whether the acquisition has demonstrable anti-competitive effects in any relevant product market in any section of the country.

Section 7 does not spell out any particular tests or standards for determining the relevant product markets or geographic areas which may be affected by the acquisition. Nor does it supply, either in quantitative or qualitative terms, any tests for determining whether the effects may be "substantially" to lessen competition. "However, sufficient expressions of a consistent point of view may be found in the hearings, committee reports of both the House

[15] Crown Zellerbach Corporation v. Federal Trade Commission, 296 F. 2d 800, 811, (9 Cir. 1961), *cert. den.* 370 U.S. 937 (1962).

[16] Brown Shoe Co. v. United States, *supra*, p. 320.

and Senate and in floor debate to provide those charged with enforcing the Act with a usable frame of reference within which to evaluate any given merger." [17]

Against this background the tests and standards to be used vary depending upon what may be appropriate in the light of a wide variety of factors. These factors include the nature, business and relationships of the acquired and acquiring companies, the markets which they serve, the kind and extent of competition in such markets, the pattern of the industry as a whole and the place of such companies in the industry.

Thus, in determining relevant product markets it has [fol. 4240] been deemed pertinent to examine such factors as the peculiar uses and characteristics of the product; its distinguishing physical characteristics; whether it is sold to distinct classes of customers; distinct price differentiation; sensitivity to price changes; reasonable interchangeability of use and demand; public or industry recognition of the market as a separate market entity; unique production facilities; and specialized vendors.[18]

In determining the geographic market pertinent factors include scale of distribution; locale of actual and potential buyers and of competing sellers; focus of competition; and whether regional markets interlock to form a larger market.[19]

None of these factors are conclusive in themselves and all must be "functionally viewed, in the context of [the] particular industry." [20] Mere mechanical or quantitative application of § 7 should be avoided and each case must be judged in the light of its own peculiar facts. Only within

such a setting can the probable anti-competitive effects of a merger be judged.[21]

[fol. 4241] In the light of these considerations the issues on which the Government had the burden of proof here were twofold. First, it was required to delineate the relevant product markets or submarkets in which it claimed that competition was adversely affected by the acquisition and the sections of the country affected. Second, it had to establish that in one or more of such markets or submarkets in any particular section or sections of the country, there was reasonable probability that the effect of the acquisition would be substantially to lessen competition or to tend to create a monopoly.

II

The merging companies

(1) Continental

Continental Can Company, Inc. is a New York corporation with its principal offices in New York City. It was organized in 1913 by the merger of three companies engaged in the manufacture of metal cans.[22] At that time American Can Company was the dominant factor in the can industry.

After its organization Continental went through a period [fol. 4242] of substantial internal expansion. Beginning in 1923 and for the next twenty years it continued to expand internally and also by acquiring some twenty-four companies in various sections of the country which were also engaged in manufacturing various types of cans, some of which had not been previously manufactured by Continental. It also acquired several companies which did not

---

[21] Brown Shoe Co. v. United States, *supra*, p. 340.

[22] The three original companies were Continental Can Company, a New Jersey corporation; the Export and Domestic Can Company, a New York corporation; and the Standard Tin Plate Company, a Pennsylvania corporation.

produce metal cans but made other packaging products. Continental acquired its last can manufacturer in 1944.

Since that time it has engaged in a program of diversification aimed at increasing the variety of products which it is able to supply.

Its acquisitions have included companies producing can manufacturing and can closing machinery, flexible packaging, plastic containers and other plastic products, paper containers and paperboard, fibre drums, crown caps and vacuum closures, and a miscellany of other products.

In 1956 it acquired Hazel-Atlas, Robert Gair Company, Inc., a manufacturer of paperboard and similar products, and White Cap Company, which manufactured vacuum type metal closures.

By that time it was and had been for a good many years the second largest metal can manufacturer in the country. It was a formidable competitor of American Can Company [fol. 4243] which had long been the leader in the industry.

When it acquired Hazel-Atlas Continental's principal business was the manufacture and sale of metal cans and other metal containers to industrial consumers for a wide variety of uses. In 1955 metal cans and other metal containers accounted for between two-thirds and three-quarters of its total dollar sales volume. It also manufactured numerous other products, including fibre drums, flexible packaging materials, plastic products (including plastic containers), paper cups and plates, crown caps, vacuum type metal caps, can closing machinery, and special defense items.

By 1955 Continental had 72 plants for the manufacture of its products at various locations throughout the United States. It also had plants in seven foreign countries, including Canada. Forty manufactured metal cans. Approximately 45,000 persons were in its employ.

Its net sales and operating revenues and net income for the years 1953, 1954 and 1955, in thousands of dollars, were:

	Net Sales and Operating Revenues	Net Income
1953	$554,436.	$15,680.
1954	616,163.	20,736.
1955	666,266.	24,172.

[fol. 4244] Its total assets as of December 31, 1955 were $381,917,000.

Including the Hazel-Atlas, Gair and White Cap acquisitions, for the year 1956 Continental had net sales and operating revenues of $1,010,268,000, and net income of $43,143,000, with total assets as of December 31, 1956 of $633,706,000.

Comparative 1955 combined figures for these four companies prior to acquisition, show net sales and operating revenues of $929,428,000, net income of $38,693,000, and total assets as of December 31, 1955 of $568,850,000.

(2) Hazel-Atlas

Hazel-Atlas was a West Virginia corporation with its principal office in Wheeling, West Virginia. It was organized prior to 1900 and, as a result of its acquisition by Continental, was dissolved on September 21, 1956.

Its principal business was the manufacture and sale of glass containers of various types to industrial consumers and of glass jars for home canning, both largely of the wide mouthed variety. It also manufactured glass tumblers, tableware, kitchenware, glass articles of special design for industrial use, screw type metal closures and closures for home canning glass jars. It appears to have been the third largest glass container manufacturer in the United [fol. 4245] States.

Hazel-Atlas operated plants at thirteen locations in various parts of the country, principally in the western Pennsylvania, West Virginia and eastern Ohio area, and had [illegible] warehouses. Its net sales and net income in 1953, 1954 and 1955, in thousands of dollars were:

	Net Sales	Net Income
1953	$79,250.	$3,112.
1954	79,174.	3,629.
1955	79,920.	3,393.

Its total assets as of December 31, 1955 were $37,884,000.

After acquisition by Continental the operations conducted by Hazel-Atlas were continued by the Hazel-Atlas Division of Continental and its operating figures were included in Continental financial statements. It does not

appear that there was any substantial change in the volume or character of business done by the Hazel-Atlas Division in the period between its acquisition and the trial.

Prior to its acquisition Hazel-Atlas did not manufacture or sell metal cans, plastic or paper containers, vacuum type metal closures, crown caps or any other product manufactured or sold by Continental or its subsidiaries.

On the other hand, Continental did not, directly or [fol. 4246] through subsidiaries, manufacture or sell glass containers or any other glass products, screw type metal closures, or any product manufactured or sold by Hazel-Atlas. It is uncontroverted that the two merging companies manufactured and sold no identical products.

III

The types of products and the separate industries involved

This case is concerned with three basic types of containers—those made of metal, glass and plastic. They are of a variety of shapes, sizes and end uses.

The three types of containers are produced by three recognized separate industries, each with its own structure and pattern, the metal can industry and the plastic container industry in which Continental was engaged, and the glass container industry in which Hazel-Atlas was engaged.[23]

[fol. 4247] In addition to the three types of containers the case also is concerned with three different kinds of metal closures used to close or seal products packed in containers. They are crown caps, vacuum type closures and screw and lug type closures. Continental produced crown caps and vacuum type closures and Hazel-Atlas pro-

[23] It may be noted that reference will be made to what is claimed to be an all encompassing "packaging industry". However, as will be pointed out, the evidence wholly failed to establish that there is any such relevant product market in this case. Nor was it established that there is any recognized separate industry or relevant product market comprising all metal, glass and plastic containers, or any general combinations of them.

duced screw and lug type closures. Closures will be discussed separately though there is no separate metal closure industry.[24]

(1) Basic types of products

(a) Metal cans

For Census Bureau statistical purposes the metal can is defined "as a single-walled container constructed wholly of tin plate, terne plate, blackplate or waste plate designed for packing products."[25] Such cans have distinct physical characteristics. They are rigid and unbreakable, but can be dented. Unlike plastic containers, they can be hermetically sealed and are impermeable to gases. They can be heat processed faster and are lighter than glass containers, and are not chemically inert.

The basic raw material used in can manufacture is tin-[fol. 4248] coated steel (tin plate), but some cans are made from uncoated steel (blackplate) or aluminum. Other raw materials include soldering compounds, paints, varnishes, lithographing inks, paper and cartons for packaging. The major factor in determining can prices is the cost of tin plate. Cans are generally sold f.o.b. the manufacturer's plant.

The products packed in metal cans are extremely numerous and varied and in fact cover a substantial segment of American industrial and agricultural production. However, for statistical purposes the Census Bureau has set up thirteen different general categories of metal cans all in terms of end use. The Bureau collects statistics from metal can manufacturers as to the amount of metal each consumes in the manufacture of cans in each of these categories.[26]

---

[24] See discussion *infra* pp. 35-40.

[25] G-1203. This definition excludes steel pails which are defined as "single-walled shipping containers having capacities of 1-12 gallons inclusive that are cylindrically constructed of steel sheet of 29 gauge and heavier."

[26] Under the regulations of the Bureau metal can manufacturers report the number of base boxes of steel consumed in the manufacture of cans in each category. A base box is a unit of area measurement. The Bureau does not pre-

The thirteen Census Bureau end use categories are fruit [fol. 4249] and vegetables (including juice); evaporated and condensed milk; other dairy products; meat (including poultry); fish and seafood; coffee; lard and shortening; soft drink; beer; pet food; oil open-top (1 quart and 5 quart) all other food (including soup and baby food cans); and all other nonfood.[27] A number of these categories plainly include a great number and variety of specific end uses for which no accurate further breakdowns are available.

Among the principal types of cans are "Packers" cans and "General Line" cans. "Packers" cans are normally used for food products though they are used for many nonfood products as well. They are round open-top or sanitary cans. The packer after filling the can puts the top on.

"General Line" cans are used both for food and nonfood products and have different kinds of fittings and different shapes. There are other types of cans also. All types of cans are manufactured from the same raw materials by the same production processes and with the same equipment.

Cans used for one type of product may be used for other types of products also, but they usually have different linings for different products. For example, substantially [fol. 4250] the same open-top can is used for food, pet food, motor oil and other non-food products.

---

scribe which specific end products fit into each category and this is left to the discretion of the individual reporting manufacturer.

The base box figures so reported are then converted by the Bureau into short tons of steel on the basis of conversion factors for each category. The comparative production figures in this record are those based on short tons of steel used in the production of metal cans reported by manufacturers as belonging in the various census categories of metal cans shipped.

There are no published figures of the actual number of cans shipped and there are wide differences in the product mixes in terms of sizes of cans produced by the various manufacturers.

[27] G-1203.

(b) Glass containers

There are two basic types of glass containers, the wide mouth and the narrow neck container.

Glass containers have distinct physical characteristics. They are rigid, chemically inert and impermeable to gases; can be hermetically sealed but are readily broken; and, unlike many cans, can be easily resealed after they have been opened. Glass containers are heavier than other types of containers and must be carefully packed for shipment to avoid breakage. Costs of shipment are therefore higher. They take longer to heat process than cans. Many narrow necked glass containers are suitable for re-use by bottlers and are returned by consumers to the bottler for such re-use.

Glass containers used for one type of product are often identical with containers used for widely dissimilar products. Thus, the same wide mouthed glass jar is used for peanut butter and silver polish, and the same narrow necked glass bottle is used for vinegar and liquid starch.

The basic raw materials used in the manufacture of glass [fol. 4251] containers are sand, lime and soda ash. Also required are the necessary labeling and coloring materials. Because of the need for careful packing for shipment to customers, corrugated cartons are used to pack the containers.

Cost of labor is the major factor in determining glass container prices. The corrugated shipping container represents 18-20% of the cost of the final product as shipped. Glass containers are generally sold on a delivered price basis with freight included in the price.

The Census Bureau publishes data as to glass container shipments. These statistics are grouped, in terms of end use, in the following fourteen categories: [28]

---

[28] The statistics are collected for the Bureau by the industry trade association, the Glass Container Manufacturers Institute, from its member manufacturers and are used as the industry totals. A number of manufacturers are not members of the Institute. Statistics are prepared on a physical volume basis measured in gross. They show container shipments by product groups as classified by the Institute with a basic division between narrow neck and

Narrow Neck: Food; medicinal and health supplies; household and industrial; toiletries and cosmetics; beverage, returnable; beverage, non-returnable; beer, returnable; beer, non-returnable; liquor; and wine.

Wide Mouth: Food, including fruit jars and jelly glasses; [fol. 4252] medicinal and health supplies; household and industrial; toiletries and cosmetics; dairy products; and packer's tumblers.

Each of these general end use categories is composed of hundreds of individual end use items. But no detailed breakdown figures on the end use categories are available.

(c) Plastic containers

Plastic containers are manufactured by various methods including blow molding and injection molding. They are made of such raw materials as polyethylene and polystyrene. Prices are principally determined by the price of raw materials. Some are sold on a delivered price basis and some are not.

Plastic containers have distinct physical characteristics. They are neither rigid nor transparent. They are not impermeable to gases, and cannot be hermetically sealed. Such containers are virtually unbreakable, but they cannot contain internal pressure and their ability to hold a vacuum is limited. They are lighter in weight than glass containers of equal capacity. They are electrostatic and therefore attract dust.

Plastic contdiners are of many shapes and sizes and include such items as bottles, jars, tubes, vials and bags. They [fol. 4253] are used to package many kinds of foods, drugs, cosmetics, detergents and industrial products including such widely diverse products as rust removers, baby lotions, ice cream, insect repellents, shoe polishes, pills, water, and deodorants.

---

wide mouth containers. It may be noted that the Institute's descriptions of the different end use categories (G-1205) are slightly different from those which Census apparently used. The Government relied on the latter, however, and I have used them here.

(2) Separate industries

(a) The metal can industry

This industry is composed of companies engaged in the manufacture of metal cans used to pack a large number and wide variety of different products. Most of the companies in the industry manufacture cans for sale to industrial and agricultural processing customers who, in turn, use them to pack their own products for marketing. Some companies, on the other hand, the so-called captive companies, produce cans for their own use in packing their own products.[29] Some of the captive companies produce cans for their own use and also sell to other users.[30]

A number of metal can manufacturers also manufacture tin-ware and other tin plate products. Some also produce [fol. 4254] other kinds of packaging materials and incidental items.

There are no reliable figures in the record as to the number of companies engaged in the manufacture of metal cans in the United States. Estimates run from seventy-five to over ninety. The largest is American Can Company. Continental is second. Either Campbell Soup (a captive manufacturer) or National Can Company is third. Other important manufacturers include Crown Cork & Seal Company, Heekin Can Company, J. L. Clark Company, Carnation Milk and Sherwin-Williams. American Can, Continental, National Can and Crown Cork & Seal, among others, sell cans throughout the country. Most of the other companies operate on a regional basis.

American Can, the industry leader, like Continental, manufactures a variety of products used by packers. In addition to metal cans it produces fibre, plastic and paper containers. It also manufactures machines for filling and closing both metal and fibre containers. Various other com-

---

[29] Such companies include Campbell Soup Company, H. J. Heinz Company, Hollingshead Corporation, Pet Milk Company and Otoe Food Products Company.

[30] Among these are Armstrong Paint Company, Sherwin-Williams Company, The Borden Company and Carnation Milk.

panies manufacturing metal cans also have diversified product lines.

In 1955 American Can shipped approximately 38% of the metal cans sold in the United States. Continental's shipments amounted to approximately 33%. American's [fol. 4255] shipments exceeded Continental's in nine of the thirteen Census categories. Together these two companies accounted for approximately 71% of the total metal can shipments in the country.

It appears that can companies sell their products directly to users. There is nothing to indicate that there are any jobbers or wholesalers who purchase cans for resale to their own customers and it may be assumed that there are none.

The trade association for this industry is the Can Manufacturers Institute. Its forty-nine members, limited to can manufacturers, include American, Continental, National, Crown, Heekin and Clark. Voting rights and representation on the Board are determined by the number of employees of the member companies.

The Institute has a professional staff of three. Its activities, carried on largely through committees, deal with various technical industry problems such as industrial relations, traffic, safety and research and include a limited amount of promotion on the advantages of the metal can.

A promotion and advertising program, jointly financed by the members of the Institute and tin plate manufacturers who supply raw materials for can manufacture, was carried on at one time. The program was dropped when the tin plate manufacturers withdrew financial sup- [fol. 4256] port. A recent program of advertising to promote soft drinks in cans was not conducted by the Institute but was financed exclusively by tin plate manufacturers.

Since 1957 the Institute has done no advertising and its only promotion work has been in connection with the celebration of the sesquicentennial of the tin can. The extent of the activities of the Institute and the effects, if any, which such activities may have upon the industry or upon the public are not reflected in the record.

The annual production of cans has increased substantially since the end of World War II when the industry

resumed its normal rate of growth after wartime curtailment of metal supply. Its facilities have also expanded substantially and continue to do so.

Since 1950 American and Continental have substantially maintained their market positions as the number one and number two companies in the industry respectively. However, the medium sized producers, with assets of less than $100,000,000 have not only participated in the growth of the industry but have increased their share in the market. The evidence did not show that there has been any reduction in the number of companies manufacturing cans since the Hazel-Atlas acquisition and, in fact, the number of companies engaged in the "Tin Can and other tinware [fol. 4257] industry"[31] was greater in 1957 than in 1950.

It did not appear that the initial capital investment needed to embark upon can manufacture is unreasonably high, that there is any obstacle to obtaining whatever technical knowledge is necessary or that there are any patent barriers to entry into the industry. Raw materials are plentiful and readily available.

There was little in the record as to the shape and pattern of the industry in terms of such factors as the markets which it serves, the nature of the competition which exists in such markets, pricing practices, its methods of buying, selling and merchandizing, the supply and demand picture or similar matters.

From all that appears the industry is prosperous, healthy and highly competitive. Competition has been and remains keen and vigorous. What the record presents is a generalized picture of a large, strong, and relatively stable but expanding metal can industry.

(b) The glass container industry.

This well-defined and recognized separate industry is composed of companies engaged in the manufacture of glass containers sold to industrial and agricultural customers for use in packing their own products. Glass containers are also sold to the public for home preserving.

[fol. 4258] The industry produces glass containers of a

---

[31] This is an Internal Revenue Service classification.

wide variety of types, shapes, sizes and colors for numerous end uses. A number of companies, including Owens-Illinois Glass Company and Hazel-Atlas, also produce glass table and kitchen ware and other glass products. Some also produce other products used by packers.

There are at least forty-two companies engaged in the manufacture of glass containers. By far the largest is Owens-Illinois Glass Company with almost 35% of the total production and with annual sales in 1955 of some $370,000,000 and earnings of some $27,000,000.[32] Anchor-Hocking Glass Company, Hazel-Atlas and Knox Glass, Inc. appear to follow in that order. The Hazel-Atlas share of the glass container market in 1955 was about 9.6% with net sales of some $79,000,000 and net earnings of approximately $3,000,000.

Owens-Illinois, in addition to glass containers, manufactures plastic containers, metal and plastic closures, corrugated shipping containers, various types of fibre and paperboard containers, closure machinery and a wide variety of other glass and plastic products. Other com- [fol. 4259] panies, such as Anchor-Hocking, also have diversified lines.

There are at least twenty companies in the industry with sales above or in the neighborhood of $10,000,000 a year. Most of these companies have been expanding their facilities and production and increasing sales at a rapid rate. There is nothing to indicate that smaller companies are not also prospering.

Five companies in the industry sell throughout the country. They are Owens-Illinois, Anchor-Hocking, Thatcher Glass Mfg. Co., Ball Bros. Co., Inc., and Hazel-Atlas. Other companies sell on a regional basis.

The trade association for the industry is the Glass Container Manufacturers Institute. Its membership consists of thirty-six glass container manufacturers, six closure

[32] These figures apparently include all of the products manufactured by Owens-Illinois and are not confined to glass container sales. The Hazel-Atlas figures are also inclusive but Hazel-Atlas, unlike Owens-Illinois, did not have widely diversified product lines.

manufacturers and twenty suppliers of raw materials and equipment.[33] Dues are assessed on the basis of sales volume and the Board of Trustees is composed of employees of the member companies.

The Institute has about forty-five paid employees. Its ac- [fol. 4260] tivities are carried on by standing committees. Members of the professional staff are assigned to each committee.

Activities include market research and promotion, the collection and dissemination of statistics concerning the industry, technical research, package design and specifications, the development of standard testing and quality control procedures, problems of freight rates, labor relations, and liaison work with government. The Institute does advertising and publicity for the industry but the evidence does not indicate how substantial this is or how effective such activities are.

As in the case of the metal can industry, there is virtually nothing in the record of significance regarding such matters as the markets served by the industry, the nature of the competition which exists in such markets, the problems faced by its customers, methods of selling and merchandizing, price structure or pricing practices, the supply and demand picture, or similar matters.

During World War II the tin place supply was greatly curtailed and the glass container industry was able to make substantial advances at the expense of the metal can industry. Since the war the glass container industry has continued its substantial growth and expansion and this process has not abated since the Hazel-Atlas acquisition. The growth of the glass industry has been more rapid than [fol. 4261] that of the can industry.

Numerous technical improvements have been made in the glass container which have increased its strength, resistance to breakage and overall utility, and have lightened

---

[33] A number of manufacturers are not members of the Institute, including Star City Glass Co., Wheaton Glass Co., T. C. Wheaton Co., Kerr Glass Manufacturing Co., Underwood Glass Co., Arkansas Glass Co., and Gallo Glass Co.

weight. These improvements have contributed significantly to the growth of the industry.

There appears to be no difficulty in entering the glass container industry and a number of new companies have recently entered and have had successful operations. There has been a continuous expansion of facilities by both large and small companies through new plant construction or additions to existing plants.

There was no evidence that the initial capital investment needed to enter the industry was unreasonably high or that there is any obstacle to obtaining whatever technical knowledge or facilities are necessary. Nor are there any patent barriers to entry. Raw materials are plentiful and readily available, as are shipping containers.

The industry is prosperous, healthy and highly competitive. Here again is a generalized picture of a large, strong, and rapidly expanding industry in which competition has been and remains keen and vigorous.

[fol. 4262] (c) The plastic container industry

The plastic container indutry is relatively new. It got under way in the mid 1940's. The industry has since grown rapidly and is still undergoing rapid expansion. Neither the size and scope of the industry nor the respective positions of Continental and other manufacturers in it can be determined with any reasonable degree of accuracy from the evidence in this record.

The larger companies in the industry include Plax Corporation, Injection Molding Company, American Can, Continental, Royal Manufacturing Company, Inc., Owens-Illinois, Wheaton Plastics Company and Foster-Grant Company, Inc.

The dollar sales volume of the industry is small compared with that of the metal can and glass container industries. Plax, the largest producer, had plastic container sales in 1959 of about $12,000,000, which it estimated to be 30% to 40% of such sales in the United States.

In 1955 Continental's sales of plastic containers amounted to $2,400,000, and according to its estimate it shipped approximately 9.3% of the plastic squeeze bottles sold in the United States in that year.

There are apparently thousands of small companies engaged in the manufacture of plastic containers. Some use [fol. 4263] the blow molding method of manufacture and others use injection molding.

Among the many types of plastic packaging materials produced by companies in the industry are bottles, jars, vials, boxes, folding cartons, tubs, tubes, carboys, tubes with metal ends, film and other flexible materials and bags. These containers are sold to a wide variety of industrial customers who pack their own products.

There is a Plastic Bottle and Tube Manufacturers Institute, organized in 1957, which is a division of the Society of the Plastics Industry, Inc. Its members are American Can, Continental, Foster-Grant, Injection Molding, Plax and Royal.

There was a paucity of information in the record about the activities of this Institute. It appears to collect statistics from its members, some of which apparently are published by the Department of Commerce but these figures are not in the record. Such statistics as are collected by the Institute concerning individual companies are destroyed when received and only overall totals are maintained. The Bureau of Census does not collect or publish statistics relating to the production of plastic containers.

There is no showing that the initial capital investment needed to enter manufacture of plastic containers is high. [fol. 4264] Nor are there any technical obstacles to such manufacture. Raw materials and labor are readily and plentifully available and patents constitute no barrier to entry into this field.

The number of companies manufacturing plastic containers is on the increase and has continued to increase since the acquisition. The industry is rapidly expanding and competition is keen and vigorous. There are no universe figures for the industry in the record and such statistics as there are concerning it are wholly unreliable and furnish no basis from which informed conclusions can be drawn.

This relatively new and expanding industry plainly has substantial potential. However, its overall dimensions and the extent to which it may be in competition with the

glass container and metal can industries remain, at best, obscure.

(3) Closures

The term "closures" refers to a miscellany of devices used by packers to close and seal containers in which products are packed. The various types include crown caps, vacuum type closures, screw and lug type closures, paper and foil caps, and closures for home canning. Some are made of tin plate, some of aluminum or plastic, and others of paper or foil.

As I mentioned earlier, prior to the acquisition Conti- [fol. 4265] nental produced crown caps and, after acquiring White Cap Company, vacuum type metal closures as well through that subsidiary. Hazel-Atlas did not manufacture either of these products. It manufactured screw and lug type metal closures and home canning closures. Continental did not.

(a) Crown caps are made of tin plate with cork or composition lining. They are used to close narrow neck glass bottles, primarily for beer and carbonated beverages. They are applied to the bottle by crimping and not by lugs or threads. They are not sold in competition with screw or vacuum type metal closures.

The largest producer of crown caps was Crown Cork & Seal Company, which was also a metal can producer. Other producers, in addition to Continental, were Armstrong Cork and Guttman. Though Anchor-Hocking and Owens-Illinois did not manufacture crown caps at the time of the acquisition, both of them had been for some time large manufacturers of beer bottles and beverage bottles.

In 1956 Continental shipped 17.1% of the crown caps sold in the United States, in 1957 18.4% and in 1958 18.5%.

(b) Vacuum type metal closures are made of tin plate or aluminum, with various kinds of linings. They may be of the side-seal, top-seal (or twist-off) or roll-on varieties. [fol. 4266] They are used on glass containers almost entirely for packing food.

Vacuum type metal closures are applied by closing machines which create a vacuum in the head space of the

container. The products to be packed are sterilized and steam is inserted into the area remaining between the food and the top of the jar, thus exhausting the air in the head space. The closure is then applied and when the product cools and the steam evaporates a vacuum seal is created.

Closing machines for the application of vacuum metal closures are leased or sold to packers by Continental through its White Cap Division and also by Owens-Illinois, Anchor-Hocking and Aluminum Comany of America. Vacuum closing machines for a particular type of vacuum closure made by different manufacturers, are interchangeable with similar machines made by other manufacturers, or may be made so with relatively minor modifications. Such machines cannot be used to apply screw type metal closures and they operate at much higher speeds than machines for the application of screw type closures.

The White Cap Company, now a subsidiary of Continental, is the leading manufacturer of vacuum type closures. Other manufacturers include Anchor-Hocking, Owens-Illinois and Crown Cork & Seal. In 1956 White Cap produced approximately 60% of the vacuum closures made from tin [fol. 4267] plate. A recent development, apparently pioneered by White Cap, is the twist-off vacuum closure which is used for the same general purposes as other vacuum closures.

(c) Some screw and lug type metal closures are made of tin plate with various kinds of linings. Others are made of aluminum or plastic. It does not appear that screw and lug type closures made of different materials have end uses substantially different from one another. Closures of this type are normally used on glass containers.

These closures engage the glass container by screwing into continuous threads in the neck of the container. They cannot be used where a vacuum is required and in general are not used for food products for which vacuum metal closures are needed because of spoilage problems. Screw and lug type closures are used on both food and non-food products.

There are at least 18 companies manufacturing screw and lug type metal closures, including Owens-Illinois, Crown, Ball Bros. and Hazel-Atlas. In 1958 Hazel-Atlas produced

approximately 4.7% of the screw and lug type metal closures shipped in the United States. There are several companies, including Owens-Illinois, which manufactured both metal and plastic type screw and lug type closures, the [fol. 4268] uses of which appear to be substantially interchangeable. From 24 to 36 companies make plastic screw type closures.

The statistics in the record relating to closures do not include metal closures used in home canning, alminum closures, plastic closures or paper caps, though Hazel-Atlas made home canning closures as well as screw and lug type closures for commercial packing. With the exception of home canning jars sold with closures attached, glass containers and closures for them are sold separately. Closures are sold by the manufacturer directly to packers and there appear to be no wholesalers or jobbers of these products. Closure customers generally have multiple sources of supply. There is no evidence that prices of one type of closure have any effect on the sales volume of any other types.

There is no shortage of raw materials necessary to manufacture closures. There was no showing that there were any substantial obstacles to entry into any of the closure fields.

Crown caps, vacuum type closures and screw and lug type closures have in the main quite different uses and do not significantly compete with one another. However, competition within each of the respective screw type, vacuum type and crown cap fields has been and remains keen and [fol. 4269] vigorous and there does not appear to have been any significant diminution in the number of companies engaged in these respective fields either before or after the acquisition.

IV

The contentions of the parties.

(1) Lines of commerce and sections of the country claimed to be relevant.

A year and a half before the commencement of the trial, the Government, in answer to defendants' interrogatories, specified with particularity ten separate lines of commerce which it claimed were adversely affected by the acquisition

under attack. The lines of commerce so specified remained unchanged throughout the exhaustive pre-trial proceedings in which the issues to be tried were carefully limited and defined, and during the six weeks of the trial itself.

The ten lines of commerce are as follows:[34]

[fol. 4270]

1. The packaging industry.
2. The can industry.
3. The glass container industry.
4. Metal closures.
5. Containers for the beer industry.
6. Containers for the soft drink industry.
7. Containers for the canning industry.
8. Containers for the toiletries and cosmetic industry.
9. Containers for the medicine and health industry.
10. Containers for the household and chemical industry.

The Government contended that the relevant geographic market in which adverse effects of the acquisition were felt in each of these ten lines of commerce was the United States as a whole. It contended also that in lines of commerce numbered 2, 3, 5, 6, 7, 8, 9 and 10 there were adverse effects in two separate sections of the country, as well, (a) the United States east of the Rocky Mountains, and (b) the United States west of the Rocky Mountains.

No discussion of the attempted distinction between the areas east and west of the Rocky Mountains is necessary here. The evidence wholly failed to establish that, in the context of this case, there were any differences between

[34] The lines of commerce are listed here in what seems to me to be the logical order in which they should be discussed. The order in which they were listed by the Government in its interrogatories, which I followed in my oral decision, was as follows:

1. Containers for the canning industry. 2. Containers for the beer industry. 3. Containers for the soft drink industry. 4. Containers for the toiletries and cosmetics industry. 5. Containers for the medicine and health industry. 6. Containers for the household and chemical industry. 7. The can industry. 8. The glass container industry. 9. Metal closures. 10. The packaging industry.

these areas or between either of them and the United States as a whole indicating that they constituted economically significant separate geographic markets in any [fol. 4271] of the lines of commerce specified. Nor was there evidence that such effects of the acquisition as might be felt were any different in different sections of the country. The only "section" of the country which was relevant was the United States as a whole. That is the geographic market with which we are conderned here.

The defendants agreed with the Government that the can industry and the glass industry were separate lines of commerce for Section 7 purposes. They contended, however, that the other eight lines of commerce specified did not in fact exist and that there were no such separate relevant product markets or sub-markets.

Hazel-Atlas, said the defendants, was engaged in two lines of commerce, glass containers and screw and lug type metal closures and these were the only relevant markets in so far as it was concerned. They said further that the only relevant product markets in which Continental was engaged were metal cans, plastic bottles, crown caps and vacuum type closures.

Thus defendants contended that there were but six separate and distinct relevant lines of commerce or product markets. Moreover, they took the position that the lines of commerce in which Hazel-Atlas and Continental were respectively engaged, were quite different and did not overlap to any significant degree.

[fol. 4272] (2) Claims as to anti-competitive effects.

The Government conceded that it had no proof that any person or firm, seller or buyer, suffered any actual injury as a result of this acquisition, although the trial took place more than three and a half years after it occurred. There were no complaining witnesses. None of the 78 witnesses whom the Government placed on the stand testified to any actual anti-competitive effects or tendency to monopoly. There was no evidence of actual anti-competitive effects or tendency to monopoly in this record.

The Government's case was predicated upon what it claimed were potential anti-competitive effects.

As its standards for determining whether such effects

were reasonably probable, the Government advanced four criteria referred to in the House Report on the 1950 amendment to the section.[35] It claimed that the acquisition (1) had eliminated in whole or in material part the competitive activity of Hazel-Atlas which had been a substantial factor in competition with Continental; (2) had increased the relative size of Continental to such point that its [fol. 4273] advantage over its competitors threatened to be decisive; (3) had resulted in an undue reduction in the number of competing enterprises; and (4) had established relationships between buyers and sellers which deprived their rivals of a fair opportunity to compete.

The Government also stressed a statement in the Senate Report on the 1950 amendment that the statute was intended "to cope with monopolistic tendencies in their incipiency and well before they have attained such effects as would justify a Sherman Act proceeding . . . ."[36] It emphasized prior acquisitions by Continental of companies in the metal can and other fields, and urged that when Continental acquired Hazel-Atlas, the process of acquisition had reached a stage where it was reasonably probable that anti-competitive effects would occur and that the acquisition was therefore unlawful.

The Government took the position that, while the anti-competitive effects referred to in the House Report might not be apparent presently, it was probable that they would occur in the future in each of the lines of commerce which it attempted to delineate.

[fol. 4274] Defendants, on the other hand, while conceding that the criteria referred to in the House Report might be relevant considerations in an appropriate Section 7 case and that, in appropriate circumstances, a continuing process of cumulative acquisition might become unlawful, insisted that there was no substitute for a showing that there be reasonable probability of substantial anti-competitive effects or tendency to monopolize in the product markets relevant to the case under consideration. They pointed out that the intention of Congress to cope with restraints of trade and monopolistic tendencies in their

---

[35] H. R. Rep. No. 1191, 81st Cong., 1st Sess., 8.

[36] S. Rep. No. 1775, 81st Cong., 2nd Sess. 4.

incipiency was carried out by the concept of reasonable probability embodied in the statute and that this was the sole standard to be applied to the particular facts of each case.

Defendants also pointed out that Section 7 cannot be applied mechanically or quantitatively but that each case must be decided on its own facts. They maintained, moreover, that in any event, the Government could not prevail since there was a complete failure of proof here.

They urged that Hazel-Atlas and Continental did not compete with one another to any significant degree and there was no reasonable probability that they ever would; that the merger was utterly devoid of anti-competitive [fol. 4275] significance; and that it had not resulted and there was no probability that it would result in any substantial lessening of competition or tendency toward monopoly in any of the lines of commerce delineated by the Government or in any other lines of commerce.

V

Uncommon features of the case

This case does not fit into any of the classic anti-trust patterns. It deals with three separate and distinct industries manufacturing separate and distinct types of products.

As the earlier discussion indicates, each type of container is made from different raw materials and each had different physical characteristics and properties. Different plant and machinery are required for each and the processes of manufacture are different. The different types of containers manufactured by these different industries are of wide varieties of sizes and shapes and are put to hundreds, if not thousands, of different end uses.

Concededly there was substantial and vigorous inter-industry competition between these three industries and between various of the products which they manufactured. Metal can, glass container and plastic container manufacturers were each seeking to enlarge their sales to the thou- [fol. 4276] sands of packers of hundreds of varieties of food, chemical, toiletry and industrial products, ranging from ripe olives to fruit juices to tuna fish to smoked

tongue; from maple syrup to pet food to coffee; from embalming fluid to floor wax to nail polish to aspirin to veterinary supplies, to take examples at random.

Each industry and each of the manufacturers within it was seeking to improve their products so that they would appeal to new customers or hold old ones. Hazel-Atlas and Continental were part of this overall industrial pattern, each in a recognized separate industry producing distinct products but engaged in inter-industry competition for the favor of various end users of their products.

It does not necessarily follow from this, however, that the acquisition of Hazel-Atlas by Continental falls within the ambit of Section 7 of the Clayton Act. That section of the act deals specifically with relevant product markets and the lessening of competition within them. The fact that there is inter-industry or inter-product competition between metal, glass and plastic containers is not determinative of the metes and bounds of a relevant product market.

[fol. 4277] As the Supreme Court said in the *Cellophane* case:[37]

> "Determination of the competitive market for commodities depends on how different from one another are the offered commodities in character or use, how far buyers will go to substitute one commodity for another. For example, one can think of building materials as in commodity competition but one could hardly say that brick competed with steel or wood or cement or stone in the meaning of Sherman Act litigation; the products are too different. This is the interindustry competition emphasized by some economists. See Lilienthal, Big Business, c. 5."[38]

---

[37] United States v. E. I. duPont de Nemours & Co. (Cellophane), 351 U.S. 377, 393 (1956). See also Kansas City Star Company v. United States, 240 F. 2d 643 (8 Cir. 1957), *cert. den.* 354 U.S. 923 (1957).

[38] Illustrations of inter-industry competition given in Lilienthal, Big Business: A New Era (1952), c. 5, referred to by Mr. Justice Reed, include copper and aluminum; coal and oil; cotton, wool and synthetic fibres; trucks, automo-

Thus the relevant product market for anti-trust purposes by no means includes all substitutes. In this connection the Court said in the *Times-Picayune* case:[39]

> "For every product, substitutes exist. But a relevant market cannot meaningfully encompass that infinite range. The circle must be drawn narrowly to exclude any other product to which, within reasonable [fol. 4278] variations in price, only a limited number of buyers will turn; in technical terms, products whose 'cross-elasticities of demand' are small."

This appears to be what the Court had in mind in *Brown Shoe* when it said:[40]

> "The outer boundaries of a product market are determined by the *reasonable* interchangeability of use or the cross-elasticity of demand between the product itself and substitutes for it." (Emphasis added.)

In this case the circle referred to in *Times-Picayune* cannot be drawn to include within the boundaries of a single product market the metal can, glass container and plastic container industries and their wide variety of products. Attempts by the Government here to combine these separate industries and their products or to combine separate and distinct products from separate and distinct industries into single product markets necessarily failed because appropriate distinctions were not made between inter-industry or overall commodity competition and the type of competition between products with reasonable interchangeability of use and cross-elasticity of demand which has Clayton Act significance.

[fol. 4279] The boundaries of a product market or submarket may only be determined "by examining such prac-

---

biles, buses and airplanes; iron, copper and plastic pipe; glass, concrete, brick and asbestos building and insulation materials, and *even glass, cans, and plastic bottles.*

[39] Times-Picayune Publishing Co. v. United States, 345 U.S. 594 (1953) at p. 612, fn. 31.

[40] Brown Shoe Co. v. United States, *supra*, p. 325.

tical indicia as industry or public recognition of the [market] as a separate economic entity, the product's peculiar characteristics and uses, unique production facilities, distinct customers, distinct prices, sensitivity to price changes, and specialized vendors." [41]

Nevertheless, the Government here has made an attempt to establish a product market embracing all of these separate industries and products and many more in the line of commerce which it denominated as the packaging industry. The theory upon which it proceeded on this line of commerce is illustrative of its failure to make the distinctions I have pointed out.[42]

Moreover, with the exception of the lines of commerce denominated as the metal can industry and the glass container industry, each of which were conceded to be separate product markets and the line denominated "containers for the beer industry" which I have found to be a separate product market, the Government also ignored these concepts in attempting to combine products produced by [fol. 4280] separate industries, which were not shown to have reasonable interchangeability of use or cross-elasticity of demand, into relevant lines of commerce. Examination of such practical indicia for determining product markets as were in the record did not establish that there were such lines of commerce. These lines of commerce were artificially carved out by the Government and did not conform to the realities of the marketplace.

We therefore do not have here the pattern of a horizontal combination between two companies which manufacture or sell the same products, as the Government seemed to assume. Nor are we concerned with the pattern of a vertical combination. Neither Continental nor Hazel-Atlas was engaged in any essential step in the processing, manufacture or sale of products made or used by the other.[43]

---

[41] Brown Shoe Co, v. United States, *supra*, p. 325.

[42] See discussion of "The packaging industry", pp. 66 to 70 *infra*.

[43] But see discussion of corrugated shipping cartons, *infra*, pp. 81-8 and containers for the beer industry, *infra*, pp. 87-94.

What we have here, basically, is a conglomerate combination in which one company in two separate industries combined with another in a third industry for the purpose of establishing a diversified line of products suitable for a variety of end uses to be sold to a wide range of customers with differing packing requirements.

> [fol. 4281] "Such a merger * * * does not have the effect of automatically foreclosing to competitors any market outlet or source of supply as in a vertical merger, nor does it have the effect of automatically eliminating a competitor as in a horizontal merger." [44]

Here the Government moved into virtually uncharted Section 7 territory. In the twelve years since Section 7 was amended there are apparently only two other cases raising this exceptional problem. They are United States v. General Motors (Euclid Road Machinery) which is currently pending in the District Court for the Northern District of Ohio, and the Procter & Gamble case before the Federal Trade Commission which has just been cited. A third case, United States v. General Dynamics, filed in this district on November 8, 1962 and as yet undetermined, may also involve the same problem to some extent.

To complete the background I should add that I have been unable to find any case dealing with a pattern of inter-industry and inter-commodity competition comparable to that which exists here nor in which the diversification of products, industries and consumers is so pervasive.

This is not to suggest that enforcement of Section 7 [fol. 4282] may not be extended beyond the range of any of the cases thus far decided. For, as both *Brown Shoe* and the legislative history which it reviews make clear, Section 7 is applicable to conglomerate mergers where the facts warrant.[45] But there must be evidence that the facts warrant such application.

Understandably the case of a conglomerate merger set in such a complicated inter-industry pattern as this presented great difficulties of proof for the Government. But

---

[44] Procter & Gamble Co., 3 C.C.H. 1961 Trade Reg. Reports (¶ 15,245; F.T.C. Orders), at p. 20,257.

[45] Brown Shoe Co. v. United States, *supra*, p. 317.

that does not mean that the Government's burden was lessened or that it was relieved from the obligation of establishing relevant product markets or of showing reasonable probability of substantial anti-competitive effects in one or more of them as a result of the acquisition. In fact, in the case of a conglomerate merger such as this, where such a wide diversity of factors bear on questions of relevant markets and anti-competitive effects within them, the Government must be at pains to examine in detail all practical indicia which might bear on both questions.[46]

[fol. 4283] In the case at bar the Government not only failed to do this but the evidence concerning such indicia as were examined was woefully inadequate. Even assuming that the theory upon which the Government sought to construct its line of commerce for the packaging industry, for example, were tenable, it conspicuously failed to adduce any evidence whatsoever to support its theory, as I shall point out in detail later. In the lines of commerce denominated containers for the soft drink, canning, toiletry and cosmetic, medicine and health, and household and chemical industries, moreover, its proof was also altogether deficient as to practical indicia showing that such product markets as these in fact exist. It failed to establish that these were relevant lines of commerce.

The Government's failure of proof was not confined to its attempted delineation of end use and other lines of com-

---

[46] The comments of the Federal Trade Commission with respect to the standards of proof required in such a situation are not inappropriate:

> "• • • the same tests apply as in any other matter coming within the purview of Section 7, but since a conglomerate acquisition does not have the above-mentioned 'automatic' effects of a vertical or horizontal merger, such a determination is necessarily difficult to make from a consideration of evidence relating solely to the competitive situation existing in the relevant market prior to the acquisition and to the pre-merger status of the acquired and acquiring corporations. Consequently, a consideration of post-acquisition factors is appropriate [as well]." Procter & Gamble Co., *supra*, p. 20,258.

merce. Its failure was equally evident with respect to anti-competitive effects in the can industry, the glass industry and the beer container lines of commerce which it was successful in establishing.

[fol. 4284] Plainly, in order to make out a case under the Act the Government was required to show either that the acquisition had actually resulted in a significant diminution of the vigor of competition or that there was reasonable probability that it would do so. Unless it showed that there were actual anti-competitive effects of a substantial nature, which it did not, the reasonable probability test had to be met. As I have mentioned, there is no evidence of actual anti-competitive effects in this record, substantial or otherwise and the Government did not proceed on that theory.

Thus, the Government had to establish the reasonable probability of substantial anti-competitive effects from this acquisition and it had to do so under the facts and circumstances of this case and within the framework and context of the industries and markets specifically involved.

The Government was not able to sustain this burden. Its case was based on what it claimed to be anti-competitive effects which *might* occur in the future. No doubt if the evidence here had shown that there was a reasonable probability that future effects of a substantial nature would occur, sufficient would have been shown to make out this [fol. 4285] element of the case.[47] But no such showing was made. It is a far cry from *might* occur to a reasonable probability of occurring.

Reasonable probability of the lessening of competition in the future is just as much subject to evidentiary proof as is actual lessening of competition. Mere speculation or conjecture cannot be substituted for proof of reasonable probability. Nor are mere possibilities that competition might be lessened in the future, or inferences to that effect, sufficient.

In the absence of evidence of reasonable probability of anti-competitive effects the Government has speculated as to what might occur and has substituted what are at best mere possibilities for reasonable probabilities.

---

[47] Brown Shoe Co. v. United States, *supra*,

For example, the Government laid great stress throughout on prior acquisitions by Continental and urged that the overall history of such acquisitions impels the conclusion that the Hazel-Atlas acquisition was repugnant to the statute.

It is plain that the Act requires intervention in a cumulative process of acquisitions where the effect may be a significant reduction in the vigor of competition in any line of commerce.[48] But this cannot be assumed. It can [fol. 4286] only be established by showing that such effects had in fact occurred or that it was reasonably probable that they would. There is no such proof in this record.

The evidence as to prior acquisitions here is confined to two documents which were answers by Continental in 1946 and in 1956 to inquiries made by the Government and passing references in a letter in which Continental outlined to the Anti-Trust Division its position with respect to the proposed acquisition of Hazel-Atlas.[49] All that these documents show is that Continental has, over a period of many years, acquired a substantial number of companies, or portions of companies, in a wide variety of businesses.

Many of the acquisitions were made a number of years ago in the 1920's and the 1930's. Many were extremely small. Some were the result of liquidation sales. Some appear to have been cleared with the Department of Justice or to have had its tacit approval. Some were located in Canada. Some of the companies acquired were subsequently sold.

None of the companies acquired in the ten years prior to suit were can companies. No glass company had ever [fol. 4287] been acquired before. As I will point out a little later, the objectives of the acquisitions carried out over the last ten years at least, and of a number before that, were to diversify Continental's product lines.

The Government did not show what the effects of any of these acquisitions were, cumulative or otherwise. There was no evidence that they had any anti-competitive effects in any of the industries or product markets to which they

---

[48] Brown Shoe Co. v. United States, *supra*, pp. 318, fn. 32, 333-334, 345, fn. 72.

[49] G-785, G-786, G-900.

were related. The Government's conclusion that anti-competitive effects will necessarily flow from this merger because of Continental's prior acquisitions is pure conjecture, unsupported by evidence.

Indeed, such evidence as there is tends to negative such a conclusion. Continental's letter to the Anti-Trust Division, outlining its position with respect to the proposed acquisition,[50] states its purposes and intentions in making the acquisition.

Plainly, purpose and intention are not in any way controlling in a Section 7 case. But purpose and intention are factors which may be taken into account together with all the other factors in the case in predicting the probable [fol. 4288] future conduct of the parties and the probable effect of the merger.[51] Viewed in that context purpose and intention may throw some light on the effects which might reasonably be anticipated from the merger.

The Government placed heavy reliance on Continental's letter stating the purpose of the acquisition. As expressed in that letter the purpose was a further diversification of Continental's various lines of products to include for the first time a glass container division.

The history of prior acquisitions by Continental indicates its design to diversify increasingly so as to be able to maintain independent lines of various kinds of materials used by packers of many kinds of products and to service a wider variety and number of customers. As a result of this program, apart from metal cans, other products which it had come to produce included fibre drums, kraft liner board, flexible packaging materials, plastic containers, crown caps, vacuum type metal closures, various types of can and closure machinery, paper cups and plates, and steel pails. By the acquisition of Hazel-Atlas, Continental further diversified its product lines to include glass containers and other glass products, screw and lug type [fol. 4289] metal closures and home canning closures.

There was no evidence that Continental's program of diversification resulted in the suppression of new lines which it acquired. Nor was there evidence that competi-

---

[50] G-900.

[51] Brown Shoe Co. v. United States, *supra*, p. 329, fn. 48.

tion in these lines was curtailed or that any pressures, either directly or indirectly, were brought in any of them which tended to create any anti-competitive effects. Though the case was tried almost four years after the acquisition, far from indicating that there had been any such post-acquisition effects, the evidence was to the contrary. This is especially significant in the case of a conglomerate merger such as this.[82]

The announced, and, indeed, actual policy which Continental followed was to encourage development of the new lines in separate corporate divisions and to promote intra-company competition so as to strengthen its overall ability to compete with other companies in the different industries and different product lines in which it was doing business.

There are no indications in the record that the acquisition tended either to weaken the position of Hazel-Atlas as a competitive factor in the glass industry or in any of its product lines, or to weaken Continental's position as [fol. 4290] a competitive factor in the metal can industry or in its product lines. Nor is there anything to show that such positions were so strengthened as to have any significant anti-competitive effects in any of the industries or markets involved here.

In the light of the situation in the metal can and glass container industries, the apprehension expressed by the Government that Continental was likely to eliminate or limit the manufacture of glass containers after the Hazel-Atlas acquisition or to eliminate or limit some of its can lines, is not only unsupported by the evidence but also unfounded. In fact any such course would have run counter to Continental's concept of the theory and purpose of its diversification program.

The Government views with alarm every advantage which Continental or Hazel-Atlas might gain as a result of the merger and sees in each the spectre of anti-competitive effects. But the mere fact that the competitive position of acquiring or acquired companies may be improved by a

---

[82] Procter & Gamble Co., *supra*, p. 20,258.

merger does not establish that the merger is harmful or has any of the proscribed anti-competitive effects.[53]

[fol. 4291] The test is not whether, as a result of a merger, either the acquired or acquiring company obtains advantages which help it to compete more effectively. Obviously were this so, any merger permitted under the Act could have no sound business justification. The object of the Clayton Act is not to discourage business from taking steps to compete more effectively but to keep competition vigorous and effective. Opportunities to offer improved products, to make cost reductions or to give better service to customers are not in themselves indications of anti-competitive effects. These are all legitimate business objectives. "It may well be that by effecting a better arrangement for a more profitable undertaking * * * competition would be stimulated rather than lessened."[54]

Thus, the Government could not have succeeded here merely by showing that there were competitive advantages accruing to the acquiring or acquired companies or both from the merger. It is the *anti*-competitive effects of the merger with which the statute is concerned—that is to say, the lessening of the vigor of competition, rather than the converse. Competitive advantages are not proscribed unless there is a reasonable probability that anti-competitive [fol. 4292] effects of some significance in the relevant product markets will result. No such showing was made.

The Government also contended that "concentration" in the industries and product markets involved resulted from the merger which should be considered as a key factor in establishing that there was reasonable probability of anti-competitive effects or tendency to monopoly.

Concededly Continental was a very large corporate entity. So to a much lesser degree was Hazel-Atlas. They stood second and third respectively in their industries and each had substantial shares in different product markets.

---

[53] Brown Shoe Co. v. United States; *supra*, pp. 319-320. See also Address by Attorney General Robert F. Kennedy, Economic Club of New York, Nov. 13, 1961.

[54] 96 Cong. Rec. 16,456 (1950) (Remarks of Senator O'Conor.)

It is not to be doubted that size and market shares are factors to be taken into account in determining anti-competitive effects and tendency to monopolize. But mere size or concentration alone are not decisive. As the Supreme Court has said, exclusively mathematical tests are to be avoided.[55]

Such tests are particularly inapposite where a conglomerate merger is under scrutiny. In such a situation the Supreme Court's stricture that the merger must be "functionally viewed, in the context of its particular industry"[56] [fol. 4293] becomes especially meaningful.

A conglomerate merger does not result in the elimination of a competitor but merely substitutes the competition of the acquiring company for that of the acquired company in the lines of commerce in which the acquired company was formerly engaged. Thus, such a merger does not in itself result in any increase in industry or product market concentration and the shares of the acquiring and acquired companies in their respective product markets are the same as they were before.

Of course, if the product markets served by the acquiring and acquired companies are closely tied together, it is possible that substantial competitive advantages may accrue which could result in changes of market positions. It was not shown that this was the situation here, however, and though, at the time of trial three and a half years had elapsed since the merger, there was no indication either that any such changes had occurred or were reasonably likely to occur.

The record here is replete with statistics. Basic figures have been combined, separated, recombined and then combined again. Many of these combinations have no sound statistical basis and are predicated on implausible hypotheses [fol. 4294] not supported by evidence. Figures have been placed in unnatural and illogical groupings without re-

---

[55] Brown Shoe Co. v. United States, *supra*, p. 321, fn. 36. See also A. G. Spalding & Bros., Inc. v. Federal Trade Commission, *supra*, pp. 625-626; Crown Zellerbach Corporation v. Federal Trade Commission, *supra*, p. 826.

[56] Brown Shoe Co. v. United States, *supra*, pp. 321-322.

gard to dissimilarity of products, separate and distinct industrial patterns or the realities of the marketplace. This was particularly evident in the proof concerning the last five lines of commerce where the Government unsuccessfully attempted to combine different products produced by different industries solely in terms of end uses.[57]

The 78 witnesses place on the stand by the Government included, in addition to one can manufacturer, 18 representatives of glass container manufacturers, several plastic container manufacturers, three minor food packers, and a number of firms manufacturing toiletries, cosmetics and drugs.

Yet the Government failed to adduce testimony from these witnesses from which inferences or conclusions could be reasonably drawn that there was reasonable probability of anti-competitive effects or monopolistic tendencies. These witnesses, instead, gave a picture of keen and vigorous competition within the industries and markets with [fol. 4295] which they were respectively familiar and between such industries and markets and the other industries and markets involved, both before and after the acquisition. None of them gave evidence tending to show either that the merger had in fact lessened competition in any line of commerce or that there was any reasonable probability of its doing so.

Viewing the evidence as a whole, quite apart from theory, there was a total failure by the Government to establish the essential elements of a violation of Section 7. As will be apparent from a discussion of the proof relating to each specific line of commerce, the Government did not lay either the statistical or testimonial foundations required to establish its case. It was this failure of proof which required the dismissal of the complaint and entry of judgment for the defendants.

---

[57] These lines of commerce are containers for the soft drink industry, pp. 95-102, *infra*, the canning industry, pp. 103-112, *infra*, and the toiletries and cosmetic industry, the medicine and health industry, and the household and chemical industry, pp. 112-122, *infra*.

VI

The proof as to the lines of commerce specified by the Government [58]

(1) "The packaging industry."

The claim of the Government as to this line of commerce [fol. 4296] was dismissed during the oral argument of defendants' motion made at the close of the Government's case.

The evidence in the record on which the Government relied to establish what it called "the packaging industry" product market was confined to the mid-1956 letter from Continental answering Department of Justice inquiries concerning its proposed acquisition of Hazel-Atlas.[59] In that letter Continental outlined its diversification program and stated it was attempting to provide "tailor-made packaging" for a wide variety of products. In discussing this program the letter used the generic but undefined term "the packaging industry."

As requested, the letter estimated the percentage of the national market held by Continental in various groups of products for the year 1955. The products listed included metal cans, steel pails, lithographed kitchenware made of tin plate, unspecified military items, can closing equipment, metal closures, cork products, low pressure laminates, injection molding, rigid plastic containers, squeeze bottles, plastic pipe and fittings, paperboard, paper products (including paper cups and plates, nested containers and fibre drums) and flexible packaging.

[fol. 4297] The estimates made by Continental of its share of the markets in these various products ranged from less than 2% in such product categories as paper board and injection moldings, to 31.4% in metal cans, and in the single instance of fibre drums, to approximately 80%. With respect to several products no figures were available from

---

[58] The lines of commerce will be discussed in the order in which they are listed at page 41, *supra*.

[59] G-900. See *supra*, p. 58.

which any informed estimates could be made and some of the products listed, such as plastic pipe, were no longer produced by Continental.

In addition to these product categories the Government apparently also sought to include within this line of commerce corrugated shipping cartons and other products manufactured by Gair, and glass containers, glassware, screw type metal closures and closures for home canning jars produced by Hazel-Atlas.

There was no definition of the boundaries of this alleged line of commerce in the record. Nor were there any universe figures for it. The Government offered in evidence a table purporting to compare the value of all packaging materials sold in 1957 and 1958 with the net sales and operating revenues of Continental for these years.[60] The table was excluded because there was no substantiation [fol. 4298] whatsoever of the overall figures which it contained. The comparisons which the table attempted to make between Continental's sales and revenues and the value of all packaging materials sold were shown to be utterly unsound statistically and entirely unsupportable. During the colloquy concerning the admission of this exhibit, it became apparent that the Government conceived of "the packaging industry" as involving a sales volume of more than ten billion dollars. The products which it sought to include fell into 43 general categories, each of which was sub-dividable into countless individual items. The products ranged from cooperage to grocery boxes, from transparent film to steel drums, from pill boxes to plastic and glass carboys, from fruit and vegetable baskets to plastic tubes and from Christmas wrappings to cigar boxes. Here we are veritably wandering in a sort of Clayton Act Wonderland where there is talk "of shoes—and ships—and sealing wax—of cabbages—and kings . . . ."[61]

It is manifest that the broadest application of the product market test of "reasonable interchangeability of use or

---

[60] G-803(5c) for id.

[61] Lewis Carroll (Charles Lutwidge Dodgson), *Through the Looking-Glass and What Alice Found There*, Chap. IV, Stanza 11.

cross-elasticity of demand" could not possibly encompass this wide diversity of products and there was no evidence [fol. 4299] that it did. Nor was there any evidence concerning industry or public recognition of the market, peculiar characteristics and uses of the products involved, unique production facilities, distinct customers, distinct prices, sensitivity to price changes, specialized vendors, or any of the other practical indicia by which a product market may be determined. [62]

Moreover, the record does not even show the names of the companies which were claimed to be a part of the industry, to say nothing of where they were located, what their annual sales were, or anything about them. There is nothing at all in this record from which it could be found that a relevant "packaging industry" product market exists.

Furthermore, there was no evidence at all about competition within this alleged market, let alone anti-competitive effects. In sum, there was complete failure of proof.

(2) "The metal can industry."

The defendants conceded that this line of commerce, as delineated by the Government, was a separate and relevant product market, and I have so found. Thus, the Government's burden was confined to establishing that, in this [fol. 4300] product market, there was reasonable probability of substantial anti-competitive effects resulting from the acquisition.

The Government claims that in this line of commerce, as a result of the acquisition:

(a) Continental's increase in size and diversity, and its consequent ability to offer a full line of container products, gave it an advantage over smaller and less diversified can manufacturers which threatened to be decisive.

(b) Entry into the industry was made more difficult and more unlikely than prior to the merger, and the possibility of new entry was significantly decreased.

(c) It was probable that similar mergers would be trig-

---

[62] See discussion *supra*, pp. 10-11.

gered and that such further acquisitions would make effective competition less likely.

(d) Continental's incentive to push metal cans as against glass or plastic containers was reduced, and it was therefore less likely to be an industry innovator and pioneer.

(e) And finally, there was a tendency toward monopoly because the merger tended "to aggravate a general oligopolistic trend" in the industry.

[fol. 4301] We are dealing here with the effects of the merger in a specific line of commerce—the metal can industry. Unless the probability of substantial anti-competitive effects were shown in that industry, the Government case as to this line of commerce necessarily failed.

The Government's difficulty here was the same that it encountered so frequently in this trial. Its claims are pure speculation and, as far as I can discern, are not supported by any proof that it was reasonably probable that the claimed results would follow.

a. The Government urged that Continental obtained an advantage over its competitors in this industry which threatened to become decisive because of its ability after the merger to offer a "full line" of metal, glass and plastic containers, closures of various types and closure machinery. But there was no testimony that a can manufacturer obtained any particular competitive advantage by offering a full line of container products.

The only can manufacturer who testified was the Chairman of the Board of National Can, the No. 3 company in the industry, which manufactured general line and packers' cans only. His testimony was to the effect that Na-
[fol. 4302] tional was expanding its operations; that it had built a new plant as late as 1956; that competition in the industry was "tougher"; but that National's earnings figures had gone down somewhat since 1956 though to what extent was not shown. He did not testify that there was any competitive advantage to be obtained in the can industry from offering a full line of products. Nor did he indicate that whatever decline in earnings National had had since 1956 was in any way ascribable to the Hazel-Atlas-Continental merger.

No other can manufacturer was called to testify. No one else testified on this subject. There were no documents or figures in the record supporting the Government's contention.

Plainly Continental, by its diversification program, expected to be able to compete more effectively against the strong competition in this highly competitive market.[63] But on this record it would be sheer speculation to conclude that because this was so, anti-competitive effects were likely to occur, to say nothing of competitive advantages which threatened to become decisive. There was no evidence of any such probabilities.

b. Much the same can be said of the Government's contention that the acquisition made new entry into the industry more difficult and significantly reduced the possibility [fol. 4303] of such entry. The only evidence which might be considered to bear any relation to this contention is the testimony of the National Can Board Chairman that there had been no new company among the six top producers since 1935, and that of the Board Chairman of Owens-Illinois Glass concerning the metal can business which that company carried on between 1936 and 1944.

The National Can Chairman did not testify that there was undue difficulty in entering the metal can industry at any time. This can scarcely be inferred from the fact that competition in the industry was keen and vigorous and becoming increasingly so. It is of course always difficult to enter a highly competitive industry. But the Clayton Act was surely not designed to make an industry less competitive as as to encourage new entrants. It was designed to insure that competition remained keen and vigorous.

As to the Owens-Illinois experience, it appeared that this company acquired various metal can companies in 1936, made a profit from its can business immediately before the war and disposed of the business in 1944 when, because of the war, it was difficult to get the necessary supply of tin plate. It then sold its can business to Continental for $7,500,000. Continental did not acquire any other metal

---

[63] See discussion supra, p.

[fol. 4304] can company in the ensuing sixteen years up to the time of the trial.

There was no other evidence in the record bearing on this contention. There was no showing that the amount of capital required to enter the industry was unreasonably large, that any unobtainable know-how was required, that there were any patent barriers to entry, or that any other factors made entry difficult for anyone desiring to go into the business. Indeed, there was no evidence at all concerning problems of entry at the time of the merger or subsequently.

Once again the Government's claim was based on sheer speculation unsupported by proof.

c. There was no showing that this acquisition would trigger further acquisitions of glass companies by can companies. To sustain this contention the Government seized on a passing mention by the Executive Director of the Glass Container Manufacturers Institute that he had heard a rumor to the effect that a relationship had recently been established between American Can and Wheaton Glass Company. The subject was dropped there and never referred to in the evidence again. The Government made no effort to call either American Can or Wheaton to find out anything about this. There was nothing to show the nature of the arrangement, the reasons for it, what it was all about, [fol. 4305] or indeed that it in fact existed. Nor was there anything to show that if it did exist it had any connection with or bore any relation to the Continental-Hazel-Atlas merger.

d. The Government fared no better on its claim that as a result of the merger Continental was likely to lose the incentive to push can sales at the expense of glass. The Government introduced no evidence showing either that there had been or was likely to be any slackening of effort to push can sales. On the contrary, as has been pointed out, the object of the merger was diversification, and Continental was actively promoting intra-company competition between its various product lines.[64] Since by far the largest propor-

[64] *Supra*, pp. 58-61.

tion of Continental's business was in metal cans, it scarcely seemed likely that cans would suffer at the expense of glass.

Moreover, subsequent to the merger Continental actively engaged in a vigorous research and promotion program in both its metal and glass container lines. In the light of the record and of the competitive realities, the notion that it was likely to cease being an innovator in either line is patently absurd.

e. Finally, the Government's claim that the acquisition [fol. 4306] would tend toward monopoly in the can industry rests on no firmer footing than the other claims just discussed. What the Government said it meant by this claim was that the merger would "tend to aggravate a general oligopolistic trend in an industry."

As far as I can discern, what the Government relied on in terms of specifics was that Continental had widely diversified its product lines by acquiring other companies engaged in different businesses and now has assets and sales in excess of one billion dollars.

The Government placed in the record figures purporting to show the share of Continental in the combined metal can and glass container industries based on alleged total unit production. At best these figures rest on a somewhat shaky statistical foundation. But even accepting them at face value, Continental's share of the combined industries in 1957 was less than 25% and it remained in second place behind American Can which does not produce glass containers. The competition in both industries has consistently been keen and vigorous. There are many strong competing companies in both industries and there was no evidence of any diminution of competition. No reasonable probability that the merger will tend to create a monopoly was shown or could reasonably be inferred.

[fol. 4307] (3) "The glass container industry."

This line of commerce, as delineated by the Government, was also conceded by defendants to be a separate and distinct product market and I have found that it was. Here, too, the Government's only obligation was to establish reasonable probability of substantial anti-competitive effects in a recognized product market.

Its claims were in large measure the same as those it made with respect to the metal can industry. It contended that the increased size and diversity of Continental after the merger, and its ability to offer a full line of container products gave it a competitive advantage in the glass container industry that threatened to become decisive; that entry into the industry had been made more difficult by the merger; that the acquisition would trigger self-defensive similar acquisitions; that there was less incentive for Continental to push glass at the expense of cans or plastics; and that there was a tendency toward monopoly in the industry.

All of these contentions failed for lack of evidence to support them. Little needs to be added here to what has been already said under the metal can line. Only additional features specifically bearing on the glass container industry will be discussed.

The evidence on which the Government relied to establish [fol. 4308] the likelihood of increased difficulty of entry into the industry as a result of the acquisition is illustrative of how flimsy its proof was on much of this case. The major emphasis was placed on a letter from Emhart Manufacturing Company, a producer of glass forming machinery, to the AntiTrust Division in 1958.[65] The Government urged that a paragraph of the letter headed "Glass Container Business Requirements" stated the factors showing difficulty of entry into this field. A reading of the paragraph on which the Government relies is illuminating:

> "It is Emhart's opinion based on its experience that an essential requirement in entering the glass business is to obtain the services of at least one good man of executive or managerial caliber, experienced in the art of manufacturing glassware. A great deal of know-how is required, but the glass technology and engineering services of Emhart and others specializing in this industry are available. Machine operators are usually obtained from the unions. A large amount of capital is required. A real problem exists in finding a market

[65] G-364.

for new production in competition with established manufacturers."

It is difficult to understand the claim that this paragraph supports the Government's position. The paragraph certainly does not show that entry into the glass container industry is any more difficult than would normally be ex-
[fol. 4309] pected in a well established highly competitive industry. The only indication as to what the statement "a large amount of capital is required" means is a proposal which Emhart made to Gallo Wine Company in 1956 with reference to the establishment, from the ground up, of a plant to meet Gallo's substantial wine bottle requirements. Emhart estimated the cost as slightly more than three million dollars, surely not an unreasonably large capital requirement for the institution of such an enterprise.

The Government's reliance on the failure of the Neville Island Glass Company in 1947, to show difficulty of entry in 1956, is just as far removed from reality.

This small company never got off the ground and lasted less than a year before it went into a Chapter X reorganization and was thereafter liquidated. As appears from the Section 167 report of its Trustee in Reorganization,[66] the company was doomed from its inception due to egregious under-capitalization, inadequate facilities, and incompetent management. Its failure, occurring nine years before the merger and thirteen years before the trial, proves precisely nothing.

As against this evidence, or lack of it, it appears that five new companies using Emhart machinery, and six other new companies, have in fact entered the glass container
[fol. 4310] field since 1950, some independent and some captive. In addition, new production facilities have been placed in operation throughout the industry at a rapid rate, the growth and expansion of the industry have been rapid, and competition has consistently been keen and vigorous.

The Government also urged that Hazel-Atlas obtained competitive advantages in the glass container industry which threatened to become decisive because the Gair Division of Continental manufactured corrugated shipping

[66] Defendants' Exh. J.

cartons in which glass containers are usually shipped. This is the one instance in this case where the Government contended that there was an aspect to the merger of a vertical nature since the shipping carton represents a not insignificant part of the cost of the glass container as shipped. But here again the proof failed to support the theory.

Owens-Illinois and Anchor-Hocking, among other major glass container companies, produced corrugated shipping containers for their own use. Other companies used local suppliers in the vicinity of their plants, generally more than one local supplier. Yet others, such as Ball Bros., both manufactured such containers themselves and brought locally.

Corrugated shipping containers are readily available in any quantities required. There was nothing in the record [fol. 4311] to show that Hazel-Atlas, which before the merger was third in the industry and did not manufacture cartons, or any other company which did not do so, was under the slightest competitive disadvantage against manufacturers who made their own. Nor was there any evidence that any significant competitive advantage was to be gained by producing cartons, much less a decisive advantage.

The Government's next contention was that significant competitive advantages in the glass container industry were likely to accrue to Continental as a result of the acquisition because it produced crown caps which were used to close glass beer and beverage bottles, vacuum type closures used to seal hermetically glass jars, and vacuum closure machinery. Once more the evidence failed to support the Government's theory.

There was nothing at all about any competitive advantages to be derived by a manufacturer who produced both glass bottles and crown caps. As I shall point out a little later, Hazel-Atlas did not manufacture beer or beverage bottles or any other narrow neck bottles on which crown caps are used, to any significant extent, nor was there any likelihood of its doing so.[67] On the other hand, Anchor- [fol. 4312] Hocking and Owens-Illinois were large manu-

[67] See pp. 90-91, 99-100, *infra*.

facturers of beer and beverage bottles. They did not manufacture crown caps. Their consistent positions in the industry make it manifest that they suffer no disadvantage from that fact. Plainly the crown cap contention has no merit.

As to vacuum closures and vacuum closure machinery—of the eighteen representatives of glass manufacturers who testified, seventeen did not refer to the subject of such advantages at all. The only glass manufacturer who mentioned it, the Vice-President of Brockway, indicated that there might be a sales advantage in selling both vacuum closures and glass containers. He said, however, that there was no reason why his company could not manufacture vacuum closures if it wished but that it had never chosen to do so. Significantly enough, according to his testimony, the sales of Brockway had risen from twenty-three million dollars in 1954 to fifty-one million dollars in 1959. It can scarcely be said that Brockway was significantly disadvantaged.

Owens-Illinois and Anchor-Hocking also make vacuum closures and machines for applying them. There was no evidence that any competitive advantages over other glass container manufacturers accrued to them because they did so.

The theory was also somewhat tentatively advanced by the Government that the Hazel-Atlas Division of Conti-[fol. 4313] nental would have a significant competitive advantage in the glass industry by having access to the confidential customer lists of Continental. The Government offered no proof whatsoever to sustain this theory and it was without support in the record.

In addition the Government advanced the converse of the proposition which it urged with respect to the metal can line—that as a result of the merger Continental was likely to lose the incentive to push glass container sales at the expense of cans. In view of what has been said concerning the purpose of Continental's diversification program and the course it pursued after the merger, it is no more likely that Continental would slacken its efforts to promote glass than that it would slacken its efforts to promote cans. Indeed, if it had planned to do so there would have been lit-

tle, if any, point to acquiring Hazel-Atlas, a major glass container producer.

Whether the Government's claims as to the effects of the acquisition in the glass container industry be considered separately or in combination, it showed no reasonable probability of substantial anti-competitive effects or tendency to monopoly in this industry as a result of the acquistiion.

[fol. 4314] (4) *"Metal closures."*

There are several types of closures used to close or seal containers, as I have already mentioned. They are made of a variety of materials, including tin plate, aluminum, plastic and paper.

The Government excluded from its "metal closure" line of commerce closures made of aluminum, plastic and paper and there were no statistics with respect to such closures in the record. It also excluded crown caps and home canning closures, both made of metal (tin plate). Thus the line of commerce which the Government defined as "metal closures" included only two types of metal closures—vacuum type closures and screw and lug type closures. The former were produced by Continental in its recently acquired White Cap Division but not by Hazel-Atlas, and the latter were made by Hazel-Atlas but not by Continental.

The proof offered by the Government failed to establish that vacuum type closures and screw and lug type closures can properly be combined into a single product market. In fact the evidence was to the contrary.

There was no public or industry recognition that such a product market existed. There was no showing of interchangeability of use, cross-elasticity of demand or cross-sensitivity of prices between the two distinct types of prod-
[fol. 4315] uct which the Government sought to bracket together. There were no distinct classes of customers or any specialized vendors for both products. Production facilities for the two were quite different.

These products do not have the same characteristics or end uses. Vacuum closures, whether of the side-seal, top-seal or roll-on variety, are used almost exclusively for heat sterilized food products packed in glass containers where a vacuum is required to prevent spoilage. Screw type clos-

ures of metal and plastic, on the other hand, are used both for foods and non-foods. There was no showing that screw type closures were used on foods which require vacuum packing, and, as far as appears here, they are generally used to pack different food products from those which require vacuum closures and for non-food products as well.

Vacuum closures are applied by machine. A number of companies which produced vacuum closures, including Continental (White Cap), Owens-Illinois and Anchor-Hocking, also produced and sold or leased machinery for applying them. The closure machinery made by one company can be used to apply vacuum closures made by other companies, in some cases with and in some cases without minor modifications.

However, machines which apply vacuum closures cannot be used to apply screw type closures. They operate differ- [fol. 4316] ently and much more speedily than screw type closure machines.

These two types of closures do not compete with one another to any significant degree, if at all. Each is in a quite distinct and separate line of commerce and I so find. Indeed, it appears that the Government has abandoned its contention that this combination of products constitutes a separate line of commerce by failing to request a finding to that effect.

In view of the failure to establish this as a line of commerce it is unnecessary to discuss anti-competitive effects of the acquisition within it, though, in any event, proof of such effects was wholly lacking.

(5) *"Containers for the beer industry."*

This is the first of the lines of commerce which the Government sought to define in terms of end use. It is composed of metal cans and glass bottles sold to brewers and used to package beer.

The proof indicates the following:

Beer can only be packaged in metal cans or glass bottles. The cans and bottles used to package beer are suitable only for that purpose.

Beer generates specific pressures which are peculiar to it.

[fol. 4317] Beer cans and bottles are therefore structurally designed to resist such pressures and are not suitable for liquids such as carbonated beverages which generate different pressures. Beer cans and bottles are made in the same sizes in terms of capacity. Cans used for beer have special linings. Because of the characteristics of glass, beer bottles need not be lined. Thus, beer cans and beer bottles not only have the same end uses but have some common characteristics.

Brewers constitute a distinct and limited class of customer for both and they are sold to no other customers. Either one or the other may be used by the brewer as he chooses.

The trade associations of both the metal can and glass container industries have made extensive studies of the competition between beer cans and beer bottles and the inroads which they have respectively made on one another. Individual manufacturers, including Continental, have made similar studies. Each industry and the individual manufacturers in each were actively engaged in promoting the sale of one container as against the other.

Individual manufacturers of beer containers in each industry are sensitive to competition from the other. There was recognition in each industry of virtual interchangeability of use and cross-elasticity of demand between the two types of containers used for this purpose.

[fol. 4318] Manufacturers of beer cans and beer bottles showed considerable interest in the prices charged for the competing container and it is a fair inference that there was some price relationship between the two.

Of course, in view of the fact that defendants' motion to dismiss was granted at the close of the Government's case only one side of the picture was presented. At that stage of the case, however, the proof adduced by the Government, standing as it did uncontradicted, established prima facie that this was a relevant product market.

The basis on which the defendants' motion to dismiss as to this line of commerce was granted was not therefore the Government's failure to establish the relevant product market but rather its failure to establish the reasonable probability of substantial lessening of competition or tend-

ency to monopoly in the market as a result of the Hazel-Atlas acquisition.

The statistics on which the Government relied to show the scope and extent of this product market were based on unit sales of cans and bottles.[68] These figures are of questionable accuracy with respect to beer can units because of [fol. 4319] the method of computation used,[69] and with respect to beer bottle units because no weight was given to the fact that most beer bottles are returnable and are refilled an average of twenty-two times by the brewer.

Nevertheless, the figures in the record were an indication of the overall size of the market. According to these figures shipments of beer cans and bottles exceeded 8.8 billion units in 1955, 9.3 billion in 1956, and 9.6 billion in 1957. This was plainly a large product market.

Although at one time almost all packaged beer was sold in bottles, in a relatively short period the beer can made great headway and may well have become the dominant beer container. Beer cans represented approximately 83% of the total in 1955 and approximately 83.7% in 1957, though, as has been noted, the failure to give weight to the returnable bottle factor distorts these figures.

[fol. 4320] Continental's share of the beer can market, measured by units shipped, ran from 43% in 1955 to 46% in 1957. Its share of both beer can and beer bottle shipments, disregarding the returnable bottle factor, ran from 36% in 1955 to 38% in 1957. It is apparent that Continental had a sizeable share of the total product market.

The participation of Hazel-Atlas in the product market is in sharp contrast. Before the merger in 1955 Hazel-Atlas shipped only 8/10ths of one percent of the total beer bottles

---

[68] G-801(1d), (2d), (3d).

[69] The unit figures are arrived at by converting base boxes of tin plate to short tons of steel and then applying a conversion figure to the tonnage to arrive at a unit figure. The conversion figure is based upon a hypothetical number of beer cans which might have been produced from each short ton of steel consumed. Although the formula used is related to methods used by the Bureau of Census, the reliability of the outcome was not demonstrated.

shipped, disregarding the returnable bottle factor. It shipped only 2/10ths of one percent of returnable beer bottles. In 1957, over a year after the merger, its total beer bottle shipments, again disregarding the returnable bottle factor, had barely advanced to 1.1% of the total beer bottles shipped.[70] There were no figures as to its shipments of returnable bottles in 1957.

These figures show only the extent of the Hazel-Atlas participation in beer bottles and not in the market composed of beer cans and beer bottles together. Its share in this overall market was only 14/100ths of one percent in 1955 and 17/100ths of one percent in 1957. The Hazel-Atlas share of the beer container product market was completely [fol. 4321] insignificant and indeed practically non-existent.

At the time of the merger for all practical purposes Hazel-Atlas was not a competitive factor in this product market, nor had it ever been. The acquisition of Hazel-Atlas by Continental could not have lessened existing competition in the market to any remotely significant degree and there is no evidence that it did. Nor was Continental's position in the market strengthened to any significant degree by the acquisition. It remained in second place behind American Can and its role in the market was not appreciably affected.

The Government did not stress the claim that there was any actual lessening of existing competition in this line of commerce as a result of the merger. It contended, instead, that there might be anti-competitives effects in the future because the potential of Hazel-Atlas as a competitor in the manufacture of beer bottles had been eliminated. The difficulty with this position was that the evidence failed to show that, had the acquisition not taken place, there was any reasonable probability that Hazel-Atlas would become a significant competitive factor in the manufacture of beer bottles.

At the time of the acquisition Hazel-Atlas was primarily a manufacturer of wide mouth containers which could not [fol. 4322] be used for beer and had relatively few machines for the manufacture of narrow neck bottles. It did not

[70] G-801(1d), G-800I.

make amber glass, required for most beer bottles, in any quantity. It was not able to produce beer bottles economically. Though it filled an occasional order it did not consider itself to be a manufacturer of beer bottles.

There was evidence that some of its wide mouth manufacturing machinery could have been converted to narrow neck manufacture at relatively little expense and that it would have been able to convert its flint glass tanks to the manufacture of amber glass had it desired to do so. But the record is devoid of evidence that it had any intentoin of so doing, or any reason for such a step which could have been taken only at the expense of its regular product lines.

Hazel-Atlas had no surplus capacity and its production was fully occupied with supplying its customers in the glass lines in which it had significant sales. Its plans to build a new plant in Plainfield, Illinois, had been deferred due to heavy increase in the costs involved. There was no intention, in any event, of using the proposed plant for the manufacture of beer bottles or of converting any of its existing facilities to such use. The Plainfield plant was planned for the purpose of producing the regular Hazel-Atlas product [fol. 4323] lines in the general Chicago area so as to bring it closer to that market and reduce fregiht costs.

Such scraps of evidence as there are concerning Hazel-Atlas's miniscule manufacture of beer bottles do not indicate that there was any likelihood of its becoming a significant competitor in the beer bottle field. There was a rumor that Hazel-Atlas was selling a few beer bottles on the West Coast in 1956 but there were also indications to the contrary. Two Hazel-Atlas salesmen in 1953, when it manufactured no beer bottles at all, referred to Owens-Illinois beer bottle prices in two unsolicited letters to the company. A Hazel-Atlas officer, in a speech made in 1954, made brief reference to limited experiments in amber glass. That is all there was on this subject. It was plainly not enough.

Of course, there was always the *possibility* that Hazel-Atlas might, at some undetermined time in the future, for some undetermined reason, have undertaken to become a significant manufacturer of beer bottles. That, however,

was mere speculation and by no means met the reasonable probability test.

There was no evidence in the record of any reasonable probability that the effect of the acquisition would be substantially to lessen competition or to tend toward monopoly [fol. 4324] in the beer container market.

(6) "Containers for the soft drink industry."

The Government attempted to define this line of commerce, in terms of end use, as comprising metal cans and glass bottles used to package "soft drinks." However, it is difficult to understand just what the Government intended the term "soft drinks" to mean.

The statistics produced to support this line of commerce are confusing. The table as to shipments of glass containers included in this line of commerce was headed "Beverage containers, returnable and non-returnable."[71] The table for metal can shipments included in the line was headed "Soft Drink Containers."[72]

"Beverages" apparently included bottled water, a variety of fruit juices and other unspecified drinks. One Government statistician, testifying on these tables, said that they included "mostly soft drinks" but that bottled water in carboys was also included. On the other hand, a [fol. 4325] food technician called by the Government testified that he considered soft drinks to be in the food category. Some fruit juice containers were classified as food containers, and orange drink in wide mouthed glass jars was classified under the heading "Dairy Products."

The Government's statistics were taken from Census Bureau figures, which in turn were derived from figures supplied by the Glass Container Manufacturers Institute. The Institute classified "beverages" as applying "to all bottles for soft drinks and water, carbonated or non-

[71] G-801(1e).

[72] G-801(2e). These statistics are predicated on the same theoretical computations as were used for beer cans —that is to say, unit base boxes of steel converted into short tons of steel, converted in turn into can units.

carbonated • • •." But this does not aid materially in resolving the confusion.[73]

There appeared to be no definition in the record of the term "soft drinks" as used in the metal can table but I will assume, for purposes of this discussion, that it includes at least carbonated and non-carbonated beveraegs.[74] [fol. 4326] The figures for glass and metal containers were combined in a third table purporting to show total container shipments of "glass and metal soft drink and beverage containers."[75] This is the table on which the Government relied to establish this line of commerce.

Assuming the line includes both carbonated and non-carbonated beverages, and perhaps other products, there is no evidence to establish that this is a separate and distinct product market.

The boundaries of the market were undefined and there was no showing of interchangeability of use or cross-elasticity of demand between the various types of containers

---

[73] For example, G-1205 gives the following instructions for reporting to the Institute production of containers for dairy products:

> "This classification applies to all containers used by dairies. It includes milk and cream bottles, and it also includes cottage cheese jars, *orange and chocolate drinks when not in narrow neck beverage bottles.*" (Empbasis added.)

I assume that orange and chocolate drinks, when in narrow neck bottles are classified under beverages and, therefore, come under "soft drinks." But to confuse matters further, fruit juices, when in narrow neck bottles are included under containers for foods.

[74] There is no evidence to indicate whether or not G-802, Table 2e, the Government's table on metal soft drink containers lumps metal containers for both carbonated and non-carbonated beverages together, but in order for these figures to be at all relevant on this line of commerce they must be consistent with those used for glass containers and with the term "soft drinks" as used by the Government.

[75] G-801(3e).

included. In fact, carbonated beverages generate even more pressure than beer, and bottles and cans used for those purposes must be specially designed to withstand such pressures. They have different physical characteristics from bottles and cans used for other soft drinks.

The practical indicia to be examined did not show that a product market consisting of carbonated and non-carbonated beverages and soft drinks exists and I have found that no such market was established.

However, after the case was concluded there were indi- [fol. 4327] cations that the Government's position changed and that it then sought to have this line of commerce confined to carbonated beverages only. If this be so, the Government shifted its position with respect to this line at a very late date indeed. But assuming this change in position to be permissible, the Government is faced with the difficulty that no record was made to support its altered theory.

There were no universe or total unit figures and no breakdown figures in the record showing shipments of carbonated beverage containers, taken by themselves, as distinguished from soft drink and beverage containers generally. In the absence of such figures it is manifestly impossible to determine the extent of such a market or the shares of Continental, Hazel-Atlas and other manufacturers in it.

But quite apart from the failure of the Government to establish a carbonated beverage product market consisting of metal cans and glass bottles, it failed to show any anti-competitive effects of the merger in such a market, if it existed.

After considerable initial difficulty, metal can manufacturers developed a can strong enough to resist the pressures generated by carbonated beverages. These cans had ad- vantages which distinguished them from glass bottles, in- [fol. 4328] cluding unbreakability, greater lightness in weight, lack of necessity for return, faster chilling and less storage space requirements. However, the cost as compared with the bottle, and particularly the returnable bottle, was and continued to be high. The metal can for carbonated beverages was conceived of as a luxury package to be sold at a premium price with a resulting increase

in the overall sale of carbonated beverages rather than a decreased use of bottles by beverage manufacturers.

However, can manufacturers made strenuous efforts to promote the use of metal cans for carbonated beverages as against glass bottles. Despite these efforts, taking into account the estimate that returnable beverage bottles are reused twenty-five times, not more than 1½% of all soft drinks sold were packaged in metal cans and the cans used for this purpose constituted less than 1% of overall can production.

Continental's share of this small market for metal soft drink containers ranged from 36% in 1955 to 26% in 1957.

Disregarding the important returnable bottle factor, the Hazel-Atlas percentage of total shipments of glass beverage containers was only 0.04% in 1955, 0.08% in 1956 and 0.6% in 1957.[16] It would, of course, be very much smaller were [fol. 4329] weight given to the returnable factor. In 1955 Hazel-Atlas shipped no returnable beverage bottles. The Hazel-Atlas share of total glass and metal soft drink and beverage containers shipped, once again disregarding the returnable bottle factor, was 0.03% in 1955, 0.07% in 1956 and 0.48% in 1957.

Thus, as in the case of beer containers, the Hazel-Atlas share of the product market consisting of metal and glass containers for soft drinks and beverages was so insignificant as to be for all practical purposes non-existent. Indeed, in 1955, prior to the acquisition it was only 3/100ths of one percent, even less than in the case of beer. Were any figures for carbonated drinks alone available in the record it cannot be assumed that Hazel-Atlas's percentage of this market would be any more significant.

Moreover, Continental's share in the total market was far from large, even with the returnable bottle factor disregarded. If that factor be disregarded, its share of the total shipments of glass and metal soft drink and beverage containers was 7.2% in 1955, less than 5.4% in 1956, and

---

[16] The percentage figures for 1955-1956 shown as 0.1% for each year in G-801 are incorrect. I have used the correct figures.

less than 6.2% in 1957.[11] Taking the returnable factor into [fol. 4330] account, however, as previously indicated, Continental's share of the market was so small as to be insignificant in terms of the overall market which the Government delineated.

Thus Hazel-Atlas was not a significant factor either in the theoretical beverage and soft drink container market or in the theoretical carbonated drink container market, nor had it ever been. In view of the limited acceptance of cans for these end uses Continental was scarcely more of a factor. Hazel-Atlas did not compete in these markets and the acquisition did not lessen competition in either of them to any remotely significant degree.

The Government also contends, as it did with respect to beer, that Hazel-Atlas was a potential competitor in the manufacture of beverage bottles and that anti-competitive effects may arise because such potential competition was eliminated by the merger. However, it was not established that there was any reasonable probability that Hazel-Atlas would have become a significant factor in the manufacture of soft drink bottles had the acquisition not taken place.

While Hazel-Atlas had produced a few satisfactory beverage bottles prior to the merger, its experience in this field [fol. 4331] was extremely limited and it had made only minor and very tentative efforts to sell such a product. Its facilities for decorating beverage bottles were inadequate, it had no franchises from any of the large bottlers such as Coca Cola which required their bottle manufacturers to be franchised, and the Hazel-Atlas management felt that small bottlers were not desirable customers since they were poor credit risks. With the exception of a brief passage in a speech by a Hazel-Atlas officer in 1954 which pointed out some of its difficulties in this area, there was nothing in the record indicating any likelihood that it would become a significant competitor in this field. The

---

[11] Continental's shares of the overall market for 1956 and 1957 as shown on G-801(3e) include the bottles produced by Hazel-Atlas during those years.

conclusion that it might have become so at some indeterminable time in the future is mere speculation.

The Government also urged that the acquisition reduced the incentive of Continental to press its metal can line for packaging soft drinks. There was not the slightest evidence to support this theory. Quite apart from the considerations regarding Continental's diversification program, already discussed, there was in fact no reduction in Continental's activities in promoting soft drink cans after the acquisition.

Thus I find that the Government failed to establish either a line of commerce consisting of "containers for the soft [fol. 4332] drink industry" or a line consisting of containers for carbonated beverages. Moreover, even had it done so there was no showing of any reasonable probability that the effect of the acquisition would be substantially to lessen competition or tend to monopoly in either of such product markets.

(7) "Containers for the canning industry."

The line of commerce which the Government denominated "containers for the canning industry" included all metal cans and glass containers for the end uses of "canning" food. "Canning" was specifically defined by the Government as "the process of sterilizing foods, including juices, by heat and hermetically sealing them in tin cans and glass containers."

The Government's case as to this line of commerce was predicated on its definition of "canning." Yet the statistics concerning metal cans and glass containers which it placed in evidence to support this line [78] cannot be equated to its definition. These statistics related to glass and metal containers used for foods generally and were not limited to containers for foods which were heat sterilized and hermetically sealed. Though a number of foods are hermeti- [fol. 4333] cally sealed when packed, many are not hermetically sealed and many others, though hermetically sealed, are not heat sterilized. Containers for all of these kinds of food were nevertheless included in the Government's figures.

---

[78] G-801(1c), (2c), (3c).

The tables introduced did not show which of the containers included were used to pack either heat sterilized or hermetically sealed foods, or both, and which were not. Some of the products included, moreover, such as coffee, were not even considered to be foods.[79]

Thus there were no universe figures in the record as to the amount of containers used for canning food as this term was defined by the Government, or any showing as to Continental's share of the metal cans, Hazel-Atlas's share of the glass containers, or their combined share of the containers of both types shipped for such end uses.

"Containers for the canning industry" was one of the [fol. 4334] lines of commerce specified by the Government before the pre-trial sessions began and its definition of this product market remained unchanged until after the case had been concluded. However, after defendants, upon argument of their motion to dismiss, had pointed out the deficiencies in the Government's proof as to this product market, the Government abandoned its claim that there was such a line of commerce. It then advanced for the first time the theory that the process of heat sterilization should not properly be included as a factor in defining this line and that only hermetic sealing was significant.

Thus, after all the evidence was in, the Government attempted to substitute an entirely different line of commerce for the one which it had theretofore consistently advanced. The new line was composed of glass containers and metal cans used to pack hermetically sealed foods and its boundaries were quite different from those of the line on which the case had been tried and on which the defense had been conducted.

However, the Government was in no better position to

---

[79] Excluded from the Government's definition of canned foods by one or both of the food experts who testified for the Government, were such items as coffee, mayonnaise, vegetable oil, shortening, syrup, concentrated fruit juices, pasteurized whole milk, pasteurized barbecue sauce, maraschino cherries, green and Spanish olives, peanut butter, nuts, condiments, frozen fruits and vegetables. Some items such as vinegar, pickles, fruit preserves and fruit jellies were excluded by one expert and included by the other.

sustain this new line of commerce than it had been to sustain the old. It was apparent that the statistics in evidence combined both containers for foods which were hermetically sealed and those for foods which were not. For example, they included undetermined amounts of con-
[fol. 4335] tainers used to pack a large variety of products such as mayonnaise, mustard, honey, whole milk and baking powder, which were not hermetically sealed. Indeed the figures included metal cans and glass containers used to pack all types of food in the following categories: Fruits and vegetables (including juices); evaporated and condensed milk; other dairy products; meat (including poultry); fish and seafood; coffee; lard and shortening and all other food.

Thus the Government's statistics on its revised theory of this product market did not give any universe figures for shipments of glass or metal containers, or both, used to pack hermetically sealed foods. Its figures were not and could not be broken down to show totals for foods hermetically sealed and those not hermetically sealed. Nor was there anything in the record from which to ascertain the amounts of cans in either category produced by Continental or by other manufacturers in the metal can industry, or the amounts of glass containers in either category produced by Hazel-Atlas or others in the glass container industry.

Thus, the Government's position in substance boiled down to this—that on the basis of statistics covering containers used for packing all types of food, whether hermetically sealed or not, and with no showing as to the proportions
[fol. 4336] of containers used for hermetic sealing it sought to have the court find a line of commerce consisting of metal cans and glass containers used to pack hermetically sealed foods only.

It is manifestly impossible on the basis of such figures to determine the boundaries of a product market consisting of metal and glass containers for hermetically sealed foods. Nor can it be ascertained, in terms of end uses, what products were packed in hermetically sealed containers and what products were not.

Moreover, there was no showing that there is any public or industry recognition of such a product market or sub-

market. Nor did any of the other indicia for determining whether there was such a relevant product market show that such a market or sub-market exists.

There remains only what appears to be some suggestion by the Government that there might be a product market consisting of metal cans and glass containers used to pack all of the types of food products included in the Government's statistics.

Such a line of commerce commends itself neither to logic nor to the realities of the market place. It not only includes a vast number of disparate products but it excludes a large number of similar products. If milk bottles are [fol. 4337] included, as they apparently are, why are paper milk cartons excluded? If screw top glass jars for hard candies are included, why are not cellophane bags for such candy also included? If jars and cans for spices are included in the market, why not cardboard containers, with or without metal ends, for spices?

Again, as in the case of the claimed product market for hermetically sealed foods, there was no public or industry recognition of any such product market as was suggested. The metal cans and glass containers included within it do not have the same physical characteristics and uses. Their shapes, sizes and other characteristics differ widely, depending upon the type of food to be packed in them. The characteristics of metal cans and glass containers used for packaging food do not differentiate them from cans and glass containers used for other purposes. Metal or glass food containers were not sold differently or shipped differently from non-food containers.

There was no showing of reasonable interchangeability of use or cross-elasticity of demand as between metal and glass containers used for packing food. At least sixty categories of foods are packed either in cans entirely, or almost entirely, or in glass entirely, or almost entirely.[80] [fol. 4338] The Government went to some pains to have F.B.I. agents observe, on the shelves of chain stores in Atlanta, Chicago, Los Angeles and Washington, D.C., food products of different kinds, a number of which were available both in glass and metal containers, and a number only

[80] Defendants' Exh. N.

in glass or only in metal. But, except in limited instances, there was no information as to such factors as differences in price, size or quality of the products packed in the containers which were compared. There was no explanation as to why such differences in packing as there were occurred.

There are literally thousands of packers purchasing containers for packing hundreds of food products. The only three packers who were called to testify packed between them only 25 different food products. They represented but a tiny segment of the packing industry and of the products which the industry packed and there was no showing that they were representative. Only eight of the twenty-five products packed by these witnesses were packed in both glass and cans. The small quantity of string beans packed in glass did not sell. A few boiled onions were packed in glass because, for some obscure reason, "eye appeal" was important to certain people purchasing boiled onions. In the case of other of the eight products packed in both glass and cans, only glass was used for consumer sizes and only cans for the large institutional sizes.
[fol. 4339] The three packers called made it clear that different kinds of machinery and different cooking processes had to be used for packing in glass and packing in cans.

It can scarcely be said that this testimony shows any general interchangeability of use or cross-elasticity of demand as between glass and cans. The fact that in some instances similar products were packaged in two or more different types of containers, or that at times one kind of container has supplanted another in the packing of the same product, does not show that different types of containers are generally commercially interchangeable.

Choice of type of container in which to pack a particular product may be dictated by a variety of factors, including traditional or changing preferences of the buying public, eye appeal, the nature of the trade to be served, the physical characteristics of the product to be packed, the type of packing process required, distance to outlets, and other diverse factors. But the record is barren as to the extent to which specific factors of this nature affect the choice of metal or glass containers in which to pack the enormous

varieties and kinds of food products included within the broad range claimed for this product market. [81]

[fol. 4340] Metal cans and glass containers used for packaging food do not have unique production facilities. The manufacturing equipment and processes and the raw materials for each, far from being interchangeable, are entirely different. Moreover, as has been mentioned, the machinery used to pack food products in glass containers and the packing process are different from that used for packing in metal cans.

There was no evidence to show that the thousands of packers of food products who purchase metal cans or glass containers, or both, fall into any categories of distinct classes of customers. In fact, one of the glaring deficiencies in the Government's proof on this line of commerce, and elsewhere in the case, was its failure to make any detailed inquiry into the customer pattern.

Nor was there any evidence of a distinct price structure for metal cans and glass containers used for food products, or of correlation or correspondence of prices between them. Indeed, the paucity of evidence on the subject of prices and pricing practices was another major deficiency in the Government's proof.

There are no specialized vendors of containers used for food products. Can manufacturers and glass manufacturers each sell their own products directly to users who in most instances have multiple sources of supply. There are apparently no jobbers or wholesalers who sell either cans [fol. 4341] or glass containers, or both.

Much of what has been said concerning a product market consisting of metal and glass containers used to pack all types of foods applies also to a market composed of such containers for hermetically sealed foods only. Such limited examination as was made in this case of the practical indicia

---

[81] For example, ground coffee is packed 99% in cans and paper bags and less than 1% in glass. Soluble (or instant) coffee, on the other hand, is packed 99% in glass and 1% in cans. Catsup is packed in glass for the consumer market and in cans for the institutional market. (Defendants' Exhibit N.) There is no explanation of these differences.

for determining whether a product market exists did not establish that there was any line of commerce consisting of metal cans and glass containers used either for packing food products generally or for food products hermetically sealed.

It is therefore scarcely necessary to discuss the question of proof of anti-competitive effects in such product markets. It is sufficient to say that the Government failed to show any reasonable probability of substantial anticompetitive effects or of tendency to monopoly in these areas as a result of the Hazel-Atlas acquisition.

(8) *"Containers for the toiletries and cosmetic industry;"*

(9) *"Containers for the medicine and health industry;"* and

(10) *"Containers for the household and chemical industry."*

In each of these three lines of commerce respectively the Government sought to include, in terms of end use, glass, metal and plastic containers of every type used by the in- [fol. 4342] dustry designated. Since such statistics and figures as were introduced to support these lines of commerce are inextricably confused and cut across all of them, and since the problems concerning them are in essence the same, they will be discussed together.

Each of the groups of manufacturers categorized as an "industry" produce a very wide range of products and use containers to package their products of many diverse kinds, shapes, sizes, materials and characteristics. For example, the numerous products packed by a representative group of companies in the toiletries and cosmetic industry include dentifrices, cosmetics, deodorants, face creams, bath salts, lipsticks, face powder, shampoos, colognes, hair dressings, medicated powders, analgesics, hand creams, nail polish, eye shadow, and hair spray. The containers used in packaging such products include glass containers, glass aerosols, metal aerosols, aluminum foil, paper, collapsible metal tubes, including lead and aluminum tubes, brass cases, plastic containers, both squeeze type and others, cloth, cans

and paperboard boxes. Glass containers of various kinds are used more frequently than the others.

Manufacturers grouped in what is called the household and chemical industry manufacture an even wider range of products running into the hundreds, if not the thousands. [fol. 4343] To mention only a few, there are such disparate products as car wax; embalming fluid; insecticides; silver polish; inks; hydrochloric, nitric, sulphuric and other acids; chlorination liquids; rust removers; pet cleaners; weed killers; glue, blueing; and photographic chemicals. The containers used range from small cans to large glass carboys to fibre drums and include a wide range of materials.

What is called the medicine and health industry covers the whole range of medical and health products, including such items as prescription drugs, topical lotions, foot powders, rubbing alcohol, merchrochrome, throat and mouth sprays, eye drops and ear drops, cough syrups and cough drops, first aid kits, absorbent cotton and bandaids. Again the varieties and types of containers used to package the various products produced are extremely wide.

While it is apparent that the number of products produced by each of these industries is exceedingly large and varied, the scope of the respective industries was not shown by the evidence. There were no figures showing the extent of these industries and it cannot be determined which companies or which products are included in them and which are excluded. The statistics in the record do not show either unit or dollar figures for metal or plastic con- [fol. 4344] tainers used in packaging products in these industries either separately or combined. It is impossible to determine what share Continental or Hazel-Atlas had of the container business in these fields either before or after the acqusiition.

The statistical tables of Continental's metal can production include a category covering all non-food products and indicate that in 1955, 1956 and 1957 Continental shipped approximately 30% of the total shipments of such containers.[82] This figure includes cans for such products as pet food and motor oil which plainly do not come within the

[82] G-801(2f).

compass of any of the industries with which the three lines of commerce under discussion here are concerned. There was nothing to show what percentage of Continental's non-food metal can shipments fall into these categories nor what the shares of Continental are in the overall shipments of containers for use by these industries.

There were no figures at all showing what percentage of plastic containers for these industries were sold or shipped by Continental, though there is an estimate that Continental sold between 7 and 9% of polyethylene bottles, tubes, jars and carboys and about 6% of the plastic squeeze bottles shipped in 1955.[83]

[fol. 4345] The three industry classifications used to delineate these lines of commerce were taken from the Bureau of Census categories for the glass industry. The Bureau of Census figures, expressed in totals only, and not broken down by individual companies, were in turn obtained from the Glass Container Manufacturers Institute which used these categories to collect statistics from its members.[84] The Census Bureau used quite different categories in collecting figures for the metal can industry and had no figures at all for the plastics industry.

There were figures indicating that in 1955 Hazel-Atlas shipped about 10% of the narrow neck bottles and about 40% of wide mouth glass containers for the household and chemical industry. It also shipped about 9% of narrow neck glass containers and 28% of wide mouth glass containers for the toiletries and cosmetic industry, and about 6% of narrow-neck and 25% of wide mouth glass containers for the medicine and health industry.[85]

But there were no totals for plastic and metal container shipments to these three industries. Nor were there any totals for the combined shipments of glass, plastic and metal containers to them with which to compare the Hazel-Atlas figures, or any showing of what the Hazel-Atlas [fol. 4346] share of such totals might be.

---

[83] G-810.

[84] See fn. 28, *supra*, p. 22.

[85] G-800.

Apart from its failure to produce evidence showing the size and scope of the product market said to be embraced within these three lines of commerce, the Government also failed to show any other factors establishing that such lines of commerce existed.

There was no public or industry recognition of any such product markets either separately or in combination.

There was no showing that the containers which were sought to be included had peculiar characteristics and uses. The wide variety of sizes, shapes and kinds of containers and of different products packed in them has already been referred to. Plastic containers could not be used at all to package a goodly number of products because plastic is too porous. There are other differences between the products sought to be included such as the use of opal glass jars to package certain types of products and flint glass jars and bottles for others; the peculiar characteristics of the plastic squeeze bottle and of the aerosol type of container; the differences in design, decorative features and fitments of various types of containers; and the differences in weight between glass, metal and plastics. Moreover, there are many other materials used to package products included within these indutry categories which are excluded entirely [fol. 4347] from consideration here without explanation.

It was not shown that the general characteristics and uses of the various types of containers used for packing products in any one of these industries were the same or that their characteristics and uses necessarily differentiated them from containers used in other industries, or, indeed, for other purposes entirely. Containers used by these industries were not sold or shipped differently from any other containers.

It did not appear that there was any reasonable interchangeability of use or cross-elasticity of demand between containers made of these different materials. It is true that glass container, plastic container and metal container manufacturers are each seeking to promote their lines of containers at the expense of other lines, and that all are attempting to improve their products or to develop new ones so as to have a wider customer appeal. But, as has

been pointed out, this, in itself, does not establish reasonable interchangeability.[86]

Here, as in the case of foods, the choice of container may be dictated by a wide variety of factors, as the testimony of the witnesses from companies engaged in the manufacture of toiletries and cosmetics showed. In this field [fol. 4348] plainly the matter of customer appeal is of paramount importance. The physical characteristics of the product to be packed and the nature of the trade to be served also have a major effect on the choice of a container for a particular product.

It is true that manufacturers from time to time may shift a product from one type of container to another. But there does not appear to have been any general shifting back and forth as between the containers used for a given product. Packaging changes are made only after careful research and investigation and are normally permanent in character. For example, switches for a particular end use from glass to plastic and back from plastic to glass do not appear to occur.

The Government lays some emphasis on the packaging of light duty detergents. Such detergents in powder form were originally packed in paper containers. When light duty liquid detergents were developed they were first packaged in glass containers since no other container was functionally suitable. After a modification in the product formula, light duty liquid detergents changed from glass to metal containers. Most of them now are packed in plastic containers and apparently the product has never returned to the container from which it was shifted.

Again, as in the case of foods, the Government intro- [fol. 4349] duced evidence as to observations of F.B.I. agents of products on the shelves in chain stores and department stores. These observations indicated that some products were sold in containers made of glass, plastic and metal, some of glass and metal, and some of metal and plastic. Other products, on the other hand, were sold only in one type of container.

But, as in the case of foods, with limited exceptions, no observations were taken as to differences in sizes, prices,

---

[86] See *supra*, pp. 47-50.

or quality of products, the uses for which they were intended, or any other factors which might determine the choice of the container for them. There was no showing that the products packed in containers made of the same material represented any substantial proportion of the total number of products included within these industries. On the contrary, it appears that in the larger stores, at least, there were thousands of products on the shelves which might be classified as sold by these industries and the products found in containers made of the same materials represented only a small proportion of the total.

As to the medicinal and health and household and chemical industries, there was no evidence that there were any distinct classes of customers engaged in purchasing all three types of containers, though some overlap could cer- [fol. 4350] tainly be expected in view of the great number of different products being packed by these industries.

As to the toiletries and cosmetic industry, certainly the principal toiletry and cosmetic manufacturers normally purchased all three types of containers. This again was to be expected in view of the large number of different kinds of products which they packaged and is of no particular significance in the line of commerce context.

There was no distinct price structure for the three kinds of containers included within these lines of commerce. It appears that plastic containers have been and remain considerably more expensive than glass containers. While a number of toiletry and cosmetic manufacutrers take some account of differences in prices between the various kinds of containers, as they would be expected to do, it does not appear that this is a dominant or controlling factor in selling a container for a particular product. While manufacturers of one type of container pay some attention to the prices of other types, it was not shown that there was any correlation or correspondence of prices between the three types of containers.

There is no evidence that there are any specialized vendors for containers of these types. Manufacturers sell [fol. 4351] their own products directly to users who appear to have multiple sources of supply.

Here again the Government failed to establish the lines of commerce which it specified either separately or in com-

bination. There is no showing that there are any product markets consisting of metal, plastic and glass containers for use by the toiletry and cosmetics, medicine and health, or household and chemical industries. Inter-industry competition between plastic, metal and glass manufacturers in the sale of containers to package some products included within these industries there no doubt is, but separate relevant product markets in the anti-trust sense were not shown to exist.

Again, since no lines of commerce have been established there is no necessity for discussing the Government's claims as to anti-competitive effects of the acquisition in such lines. It should be said, however, that none of the numerous witnesses representing toiletry and cosmetics manufacturers or the representative of the largest plastics containers manufacturer who testified with respect to these lines of commerce, indicated that the Hazel-Atlas acquisition had had or was likely to have any effect of any kind on their own businesses or generally. All gave a picture of healthy competitive conditions both before and after the acquisition with no suggestion of any anti-competitive effects or tendency to monopoly.

[fol. 4352]

VII

Conclusion

The evidence in the record at the close of the Government's case has been weighed not only as a whole but as to each of the ten lines of commerce on which the Government relied until the end of the trial, as to such possible alternative lines as the Government suggested after its case had been concluded, and as to any other product markets which may have existed. Such inferences have been drawn from the evidence on each aspect of the case as were reasonably justified.

After doing so, I concluded that the proof submitted by the Government established only three of the ten lines of commerce or relevant product markets which it attempted to delineate in this case—the metal can industry, the glass container industry and containers for the beer industry. As to these product markets I found that there was no

proof of any reasonable probability of substantial anti-competitive effects or tendency to monopoly in any of them as a result of the acquisition of Hazel-Atlas by Continental.

I also concluded that the proof failed to establish that any of the other lines of commerce which the Government [fol. 4353] delineated or suggested were in fact relevant product markets or sub-markets. In addition, I concluded that there was no evidence in the record establishing any relevant product markets or sub-markets other than those relied upon or suggested by the Government.[87]

Moreover, even assuming that any such product markets existed, I have found there was no proof of any reasonable probability of substantial anti-competitive effects or tendency to monopoly as a result of the acquisition in any of them.

Thus, the Government wholly failed to sustain its burden of proof in this case.

Some measure of its failure of proof here can be gathered from a comparison with the proof adduced in the *Brown Shoe* case. I do not mean by this to suggest that the proof in *Brown Shoe* sets any minimal standards for determining Section 7 violation. However, such a comparison is illustrative of the deficiencies in the Government's proof in the case at bar.

[fol. 4354] The *Brown Shoe* case involved a merger, both horizontal and vertical, of two companies in a single, well-recognized, separate industry. In the case at bar, on the

---

[87] I found that vacuum type closures and screw and lug type closures while not forming a product market in combination, each constituted a separate product market. These products did not compete with one another to any significant degree. Their respective product markets were not areas of effective competition in the context of this case and were not "relevant" in that sense. (See pp. 85-87, *supra*.)

The plastic container industry was a recognized separate industry (see pp. 33-35, *supra*) and may constitute a separate product market. However, the Government made no attempt to establish such a relevant product market here.

other hand, the merging companies were each in different industries and the merger was almost entirely of a conglomerate nature. I have already pointed out the different problems presented by conglomerate mergers and horizontal or vertical mergers, the difficulties of proof in a conglomerate case and the neeessity in such a case for detailed examination of all of the factors which might bear on relevant product markets and anti-competitive effects within them.[88]

In the light of the differences between the two types of cases, it is particularly significant that the proof in *Brown Shoe* which impelled the Court to strike down the acquisition there, went far beyond the proof adduced in the case at her.

For example, in *Brown Shoe* there was "[t]estimony in the record from numerous independent retailers, based on their actual experience in the market, demonstrat[ing] that a strong, national chain of stores can insulate selected items from the vagaries of competition in particular locations and that the large chains can set and alter styles in footwear to an extent that renders the independents un-[fol. 4355] able to maintain competitive inventories."[89] There was also evidence "that [the merger] creates a large national chain which is integrated with a manufacturing operation. The retail outlets of integrated companies by eliminating wholesalers and by increasing the volume of purchasers from the manufacturing division of the enterprise can market their own brand at prices below those of competing independent retailers."[90]

Moreover, the proof in *Brown Shoe* established lines of commerce within a single industry, well recognizable in terms of the commercial realities. There was detailed testimony as to specific and demonstrable anti-competitive effects in each of these lines of commerce in specifically defined economically significant geographic markets.

It was on evidence of this nature, taken in conjunction with proof of the market shares held by the combining com-

---

[88] Supra, p. 53.

[89] Brown Shoe Co. v. United States, *supra*, at p. 344.

[90] *Ibid.*

panies and the trend toward concentration in the industry, including Brown Shoe's own part in that trend, that the Court found that the Brown Shoe—Kinney merger violated Section 7.

[fol. 4356] Here, in contrast, seven of the ten lines of commerce which the Government attempted to carve out were artificially contrived and were neither recognized as separate product markets nor comported with market realities. Beyond this, as to no product market in the case at bar was there evidence from competitors in the relevant industries, from buyers of the products involved, or from any other sources, that there was reasonable probability of any anti-competitive effects, substantial or otherwise, or any tendency to monopoly as a result of this acquisition.

Lacking evidence to sustain its burden, the Government speculated as to what might happen as a result of the acquisition. In the light of the record these speculations were at best mere possibilities. There was no proof of reasonable probability that such anti-competitive effects as the Government foresaw were likely to occur or that, if any of them did occur, they would be substantial.

It has been said that "* * * mergers are a common form of growth; they may lessen, increase, or have no effect upon competition. A merger as such involves no necessary connotations of coercion, dominance or lack of effective competitive pressures."[91]

[fol. 4357] As far as the record here shows the merger under scrutiny in this case had no such connotations and, in fact, had no significant effect upon competition in any product market. This merger was not shown to be one of those proscribed by Section 7 of the Clayton Act.

Thus, at the end of the Government's case it was apparent that the Government had not succeeded in establishing any violation of Section 7. Defendants were therefore entitled to judgment which will be entered accordingly.

NOTICE OF APPEAL TO THE SUPREME COURT OF THE UNITED STATES—Filed June 14, 1963

I. Notice is hereby given that the plaintiff, United States of America, hereby appeals to the Supreme Court of the United States from the final judgment entered in this action on April 16, 1963, dismissing the complaint at the close of the government's case under Rule 41(b), F.R. Civ. P. This appeal is taken pursuant to 15 U.S.C. 29.

II. The clerk will please prepare a certified transcript of the record in this cause for transmission to the Clerk of the Supreme Court of the United States, and include therein the entire record before the district court, including the pleadings, the transcript of testimony, the exhibits submitted by the parties and this notice of appeal.

III. The question presented by this appeal is whether the government met its burden of establishing that the acquisition by Continental Can Company of Hazel-Atlas Glass Company violated Section 7 of the Clayton Act, so that the district court erred in granting defendants' motion to dismiss at the close of the government's presentation of evidence.

Lionel Kestenbaum, Melvin Spaeth, William H. McManus, Attorneys for the Plaintiff.

Dated: June 14, 1963.

[fol. 3] GOVERNMENT'S EXHIBIT 3

April 2, 1954.

Mr. J. M. Nester, President
Obear-Nester Glass Company
East St. Louis, Illinois

Dear Joe:

Please pardon the delay in replying to your letter of March twenty-fourth in which you enclosed the letter sent out by Continental Can Company to mothers in the St. Louis area.

Your letter of March fourth did not reach here until March eighth, shortly before my departure for the West Coast where I attended the annual West Coast meeting, did some work on the carbonated beverage situation in that area, and gave some help to Frank Wright in connection with his work in handling the West Coast activities.

Both of these letters from Continental burn me up. The first one is really very vicious in its handling of breakage and glass chips and of course the second one is greatly exaggerated as to the savings that could be affected by purchasing of baby food in cans.

The way I figure it, in order to accomplish the amount of savings shown, 2.73% of all the baby food in the United States would have to be sold in St. Louis, which has only .56% of the population of the country.

Other than this it shows that the can industry is beginning to fight back more aggressively in this field where it is losing ground to glass. You will be interested to know that the 1953 figures, just obtained from the National Canners' Association by 'phone shows that glass packed baby food represented 62.1% of the market in 1953. This is up one percentage point from the 61.1% of the market in 1952.

Continental are taking the most direct means possible by using direct mail to the mothers. In many states it is possible to obtain the names of new mothers from the official records and I think it is the custom of most of the baby food packers to do direct mail promotion in this way. This is obviously smart, since mothers represent a rela-

tively small percentage of the population and advertisements placed in general circulation magazines have a con-
[fol. 4] siderable proportion of "waste" circulation when you are just trying to reach the mothers.

Also, I am sure that we would find that Continental are picking the border line markets where glass and cans are splitting the business somewhere near fifty-fifty, to see if they can reverse the trend to glass there. If successful, presumably they would spread their efforts.

My thoughts at present as to the best way of putting pressure on them to tone down the viciousness of their letters would be to get Libby, McNeill and Libby, Heinz or one of the other of the baby food packers who uses considerable quantities of cans to put the pressure on them and point out that they are hurting the preserved foods industry in general, and their customers in particular with these tactics. I think we could probably get them to clean up their copy by this means.

This brings up once more the whole subject of whether or not we should jump in and do some real promotion on baby food now that the trend is running in our direction, and we have almost a two to one position in the market. This may be the time to put the pressure on.

As you may know, Heinz are doing a great job in California and although we have not been able to find out how their sales are going, they have succeeded in getting very wide distribution with their glass, so that in many retail outlets the Heinz and Beech-Nut glass packed section equals or exceeds the Gerber canned section.

I am sending copies of the two letters which you have been good enough to send to me to our Marketing Committee, and scheduling the subject for discussion at the meeting on April fourteenth. I will be interested in talking with you about the subject when you are here on the fifteenth.

Meanwhile, Joe, I wonder if I could ask you to obtain, if possible, from whoever turned these letters over to you, samples of all letters they may be receiving from the baby food packers, particularly Beech-Nut or Libby, McNeill and Libby.

The latest report I am able to find is one dated in January, 1950 which shows that those two companies are the

only ones in glass in the St. Louis market. If further shows that Libby had a 53% distribution position in the stores there and Beech-Nut only a 1.6% which leads me to believe that they were just introducing Beech-Nut at that time. I presume they now have a considerably larger part of the market. Do you have any way of knowing how the matter does stand there now? Could you tell which brands are in glass and what proportion of the display space they occupy in the average store.

Until the Committee gives me freedom to contact the baby food packers, it is difficult for me to obtain this type of information except in those cities where the local news- [fol. 5] papers conduct an annual survey of distribution of household products in their area. It happens that right now neither of the St. Louis papers are conducting such surveys.

Thanks very much, Joe, for your interest in sending these things along to me and I hope that I have not bored you with this long letter of reaction.

With kindest regards to you and the family,

Sincerely, R. L. Chaney, Director, Market Research and Promotion.

[fol. 6] GOVERNMENT'S EXHIBIT 14

March 4, 1957.

Mr. R. C. Langsett
Armstrong Cork Company
Lancaster, Pennsylvania

Dear Bob:

The consumer attitude survey which touched upon ice cream toppings, about which I spoke to Russ Thompson at the Canners Convention, was our 1954 nationwide survey of consumer attitudes, conducted by Ford Sammis & Company.

Using a scientifically selected sample of about 10,000 consumers, this nationwide survey should accurately rep-

resent the attitudes of all housewives, as it was distributed by region, size of city, age groups, income level, etc. on a scientific basis.

Enclosed are 5 copies of a photostat of page 8 from this report which shows 41% of the consumers preferring glass jars for ice cream toppings against 36% who preferred cans, with a 23% "no preference" group whom we believe should be swinging to glass as a result of our nationwide advertising.

I hope these will be helpful to you and since I presume you never saw the original survey from which this was taken, I am enclosing copy #7 of this whole survey so that you can see the material I am sending in its context.

Under the rules by which we operate, these surveys are sent out to our members on a library loan basis and so as soon as this one has served its purpose we will ask that you return it to us.

It was good to see you in Chicago, Bob, and I hope you continue to enjoy living in the East.

With warmest regards.

Sincerely yours, R. L. Cheney.

[fol. 7] GOVERNMENT'S EXHIBIT 24

June 20, 1958.

Mr. J. S. Heuisler
Maryland Glass Corporation
2147 Wicomico Street
Baltimore 30, Maryland

Dear Stan:

As requested, I have made a quick study of the present economic relationship between bottles made from the new linear or "high-density, low-pressure" polyethylene and glass bottles. I also give you below some thoughts on the market competition that this new polyethylene bottle offers to glass.

We understand this plastic (which is trade marked "Marlex-50" by Phillips Chemical Company but is also

manufactured by other companies under different names) sells to bottle makers for about 35¢ a pound. The most optimistic figures I have been able to find as to the eventual cost of this material is 28¢ a pound.

If we assume that the cost of glass at the feeder is $30 a ton (the best estimate I can develop here) and that the cost of forming the plastic containers is the same as the glass container, when we know the relative weights of the bottles we can get an approximation of their comparative costs. I have chosen a pint-size bottle for comparison and find that when made of linear polyethylene it weighs 20 grams or 0.72 ounces. A similar bottle in glass weighs 8½ ounces. That is, the glass bottle weighs about 12 times as much as the plastic bottle. At 35¢ a pound for the polyethylene, material costs become $700 a ton but we need only 1/12th as much to make the same number of bottles, so that the polyethylene bottle will cost about twice as much as a glass bottle. At 28¢ a pound for polyethylene this relationship drops down to 1.6 times as much as glass. [fol. 8] Freight savings also enter in and the 11/67 pounds difference between the weight of a case of 24 pint glass bottles and 24 pint polyethylene bottles would come to 4.3¢ per case at 100 miles, 5.6¢ per case at 200 miles, and 6.8¢ per case at 300 miles from the shipping point. To arrive at this I have assumed freight rates of 37¢ per CWT, 48¢ per CWT, and 58¢ per CWT, respectively. These are the rates in this part of the country pertaining to household bleach, a typical household product that might possibly be bottled in this material.

At six case per gross this brings added freight costs on products packaged in the glass bottles to 25.8¢ per gross at 100 miles, 33.6¢ per gross at 200 miles, and 40.5¢ per gross at 300 miles.

These calculations seem to tie in pretty well with the figures given in the story starting on page 92 of the June 1958 issue of Modern Packaging Magazine describing the use of this type of polyethylene bottle by Breck's.

That article states that the plastic bottles cost approximately twice the glass and after allowing for shipping savings the plastic containers still cost 20% more than glass. They go on to point out in this article that while "when polled in market tests, a significant majority of

women request products in plastic containers, yet they buy glass rather than plastic when they shop. They are not yet convinced of the prestige and functional qualities of the plastic package." As we all know, the economics of the situation is only one of many factors in the selection of a particular package by the consumer. The qualities of the container other than cost may be far more important than the cost.

While it is true that the new linear polyethylene is only one-fifth as permeable to most products as the conventional type polyethylene, it *is* still permeable and compares unfavorably to glass in this respect.

Here are some figures taken from the Technical Bulletins put out by Phillips Chemical Company about their "Marlex-50." Listed is the percentage weight lost for the given product that will occur during one year's time when stored in Marlex-50 polyethylene bottles at 80°F. temperature:

[fol. 9] Clorox	0.33%
Carbon tetrachloride	80.3 %
Pentane	299.3 %
Benzine	142.0 %
Ethyl acetate	8.70%
Ammonium hydroxide	1.57%

These were based on tests of four months duration using 4-ounce Boston round-shape polyethylene bottles. What it means is, for example, that all the pentane would be gone in about a third of the year and all the benzine in about nine months.

While the rate of permeation of the new polyethylene may be lower than that of conventional polyethylene, it certainly cannot be said that any permeation is a good thing and therefore this is a distinct disadvantage of the polyethylene bottle. In addition to this is the fact that the bottle is not transparent but only translucent, that they have a feel which does not give the impression of cleanliness, and that on the counters of the stores dust tends to accumulate and cling to these bottles, giving them a poor appearance. This last feature alone has probably done more to slow up the sale of products in the older polyethylene bottle than any other factor.

Summing it all up, there is not doubt that the light weight

and increased strength of the new linear polyethylene bottle, together with its improved physical and chemical properties over the old polyethylene will increase the potential market for bottles made of this substance. Glass has a great many advantages and a strong consumer preference which will make any invasion of the markets now enjoyed by glass containers by linear polyethylene bottles a relatively slow and difficult process.

I will let you know any additional information I may uncover during my forthcoming trip.

With kindest regards,

Sincerely, R. L. Cheney.

RLC/bg

[fol. 10] GOVERNMENT'S EXHIBIT 31

October 21, 1958.

Mr. William J. Green
Thatcher Glass Manufacturing Company, Inc.
375 Park Avenue
New York 22, New York

Dear Bill:

Here are our GCMI statistics for Septe[illegible] and the first nine months of the year. I have a flag up to get Department of Commerce figures to you immediately on their release, but in the event they do not come through before you make your talk, it is my estimate that they will show glass container shipments for the first nine months to be 0.6% ahead of 1957.

As of the end of August, Department of Commerce figures were running 1.3 percentage points above ours in relation to the cumulative period this year against last year.

Other items which might be of possible use to you are as follows:

1. Attached clipping from Food Field Reporter of October 13, 1958, "Hazel-Atlas To Close Two Of Its Factories." This is evidence of the trend of our industry to decentralization and I should think it could be used as a springboard to show the foresight which

your company has exercised in its plant locations, being several years ahead of many others in the industry in this respect.

2. Clipping from Food Field Reporter of October 13, 1958, "Labor To Influence Can Prices In 1959." This frankness on the part of Mr. Stolk can only mean that the can industry anticipates trouble on the cost price squeeze from here on and is preparing its customers for increases which in my opinion will be greater than those necessary in our industry. In other words, I think our competitive position as against cans is going to improve.

[fol. 11] 3. The contrary is probably true with regard to our competition with plastic bottles. The declining cost of polyethylene and the ability to make lighter weight bottles from the new linear polyethylenes (which are also more impervious than the other polyethylenes) spells increasing competition for glass from this source.

However, it can be pointed out that in the field where polyethylene has so far made its principal "inroads" (that of toiletries and cosmetics) the glass container industry has enjoyed its greatest rate of growth. Against an index of 1947-1949 equals 100, glass container shipments for toiletries and cosmetics at the end of 1957 stood at 195 as against an index number of 146.2 for the overall glass container industry.

Further than that, it is evident that for the next two or three years at least, the plastic bottle will be offering its principal competition in the household chemical field to cans (for detergents) rather than to glass since we still have a very substantial economy advantage as well as the well known advantages of impermeability and chemical inertness,—except where long freight hauls are involved. Also, new products in the chemical field (Lestoil, for example) keep coming along which are not chemically compatible with other materials in glass and cumulatively they bring large new volume into the industry.

4. In connection with the foregoing, we are able to look forward to the advances which are unquestionably going to take place in our industry in the direction of lighter, stronger, more economical glass containers as a result of the scientific research being done.

The Glass Container Research Corporation is concrete evidence of the effort that is being made in this direction and inasmuch as we are utilizing only 1% [fol. 12] of the theoretical strength of our material, the research scientists tell us that we will undoubtedly be increasing the strength utilization of our material by five or six times within the next ten years.

5. At long last it appears that we are on the threshold of a real sound opportunity to greatly expand the use of the no-deposit beer bottle. Reports from Pittsburgh indicate that the cone top "Little Brown Jug" bottle being used for "Tech" beer by Pittsburgh Brewing Company is having tremendous success. I was told just the other day by Knickerbocker that their sales of beer in one-way bottles are growing in New England and following the ban in Vermont, it has taken hold there again very well.

Of particular interest is the fact that Container Corporation has recognized the potential of the new lighter weight no-deposit beer bottle and tell us that they plan to take advantage of the general apprehension on the part of the brewers that the cost of cans are eating up their profits, by the introduction of a new wrap around six pack carrier with fully automatic equipment for the brewery at a cost of less than $30.00 per carrier.

According to their figures, the new bottle with this six pack carrier would make economically possible the sale of six one-way bottles in a carrier, for from 7 to 9¢ per carrier less than six cans. Their sales manager is starting on a nationwide tour this month to attempt to get this established.

6. As to the coming year, the latest forecast we have from the Econometric Institute (copy attached and

paragraphs marked) is that they expect our industry to wind up with 1958 shipments 1.5% below the record 1957 level. (They expect that the heavy shipments in September have borrowed against October and that the last quarter will be lighter than the last quarter of 1957.)

[fol. 13] They forecast that the twelve months ending June 30, 1959 will show a 1.5% increase over the corresponding twelve months a year earlier and they tell us over the phone that the forecast which they will give at our meeting at Sea Island will indicate that they expect the third quarter next year to continue at about this 1.5% higher rate for 1958.

I will watch for further timely items including the Department of Commerce figures and will get them to you as fast as they appear.

I thought you might like the foregoing at this time so that you could be thinking about it.

With kindest regards,

Sincerely, R. L. Cheney.

[fol. 17] **FOREWORD**

167

In May, a five-man Market Survey Committee, consisting of:

F. P. Pollock, Chairman

J. S. Algeo

E. F. Ball

C. G. Bensinger

and W. V. Fisher

was asked to undertake a broad survey, for the purpose of analysing the market problems facing the glass container industry, with the following broad objectives:

1. To evaluate the competition from other container materials in our various markets, and

2. to formulate a positive approach toward the promotion of glass containers in these markets.

The writer was asked to handle the mechanics of this project under the direction of the committee; and he has personally carried out most of the field work, statistical research and analysis. However, to help secure guidance in the use of the most effective market research techniques, the services of Mr. Ford Sammis, Marketing Economist, have been widely used. (Interviews with the manufacturers of competitor packaging materials and with packers and chain stores were handled by Mr. Sammis or his trained interviewers.)

In the course of this project I have travelled over 40,000 miles, have talked with representatives of the U. S. Department of Commerce and Agriculture, a great many members of G.C.M.I., with the managers of some 15 trade associations, the research directors of Corning Glass Works, Hartford Empire Company, Wyandotte Chemical Company, Battelle Memorial Institute, and of several members of this industry, and many others in related fields, and with such people as financial analysts, magazine editors and home economists. I have made an extensive library research of all magazine articles bearing on the subjects involved, which have appeared in the past three years.

[fol. 18]

It would be my purpose before any further steps were taken, to complete my calls upon members of G.C.M.I., for the best part of what I have learned has come from the intelligent, practical people in our industry with whom I have talked.

The valuable and whole-hearted cooperation of General Manager, Mr. Victor L. Hall, and all of my other associates on the G.C.M.I. staff is gratefully acknowledged.

The Problem

The glass container industry is faced by a number of alarming surface indications that competition from other container materials may be rapidly increasing in agressiveness and potential effectiveness.

The first phase of our problem is, of course, to measure the relative position of the glass container industry and its several powerful opponents in the ensuing battle for a larger share of the over-all packaging market.

Next, we have to count the possible cost of lost markets against the cost of defending them; and again, the cost of developing new markets as against the value of these markets to the industry.

Or, to borrow a term from the new science of "Operations Research", we may, in a non-professional way, apply the "Principle of Least Regret". We shall endeavor, as near as possible, to measure all the factors in the equation mathematically. Then perhaps we can determine whether it is wiser to look the other way, save our money, and hope the bugaboo will go away; or, perhaps to take a calculated risk, and make an investment out of present profits (such as they are) in a campaign which gives promise of winning the battle for wider markets and increased profits.

R. L. Cheney

New York, New York
November 25, 1953

WHAT IS HAPPENING *in the* OVER ALL PACKAGING INDUSTRY?

[fol. 20]

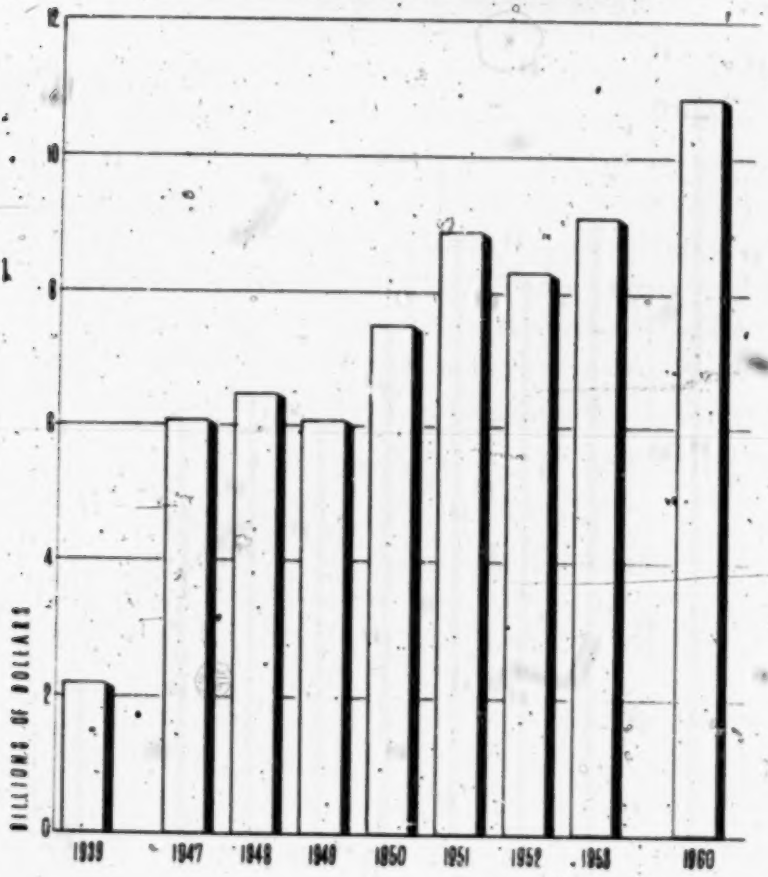
The glass container business is part of a large and growing industry: The packaging industry. It is a $9,000,000,000 industry today, and McGraw-Hill Publishing Company forecasts it will reach a value of $10,850,000,000 by 1960.

Figures on this chart became available for the first time in July, 1953. Data for 1947 and 1951 were prepared by the Division of Interindustry Economics, Bureau of Labor Statistics. Data for other years represent estimates by McGraw-Hill Publishing Company, utilizing the same sources and techniques used by the Bureau of Labor Statistics.

[fol. 21]

1676

PACKAGING
A $9 BILLION INDUSTRY



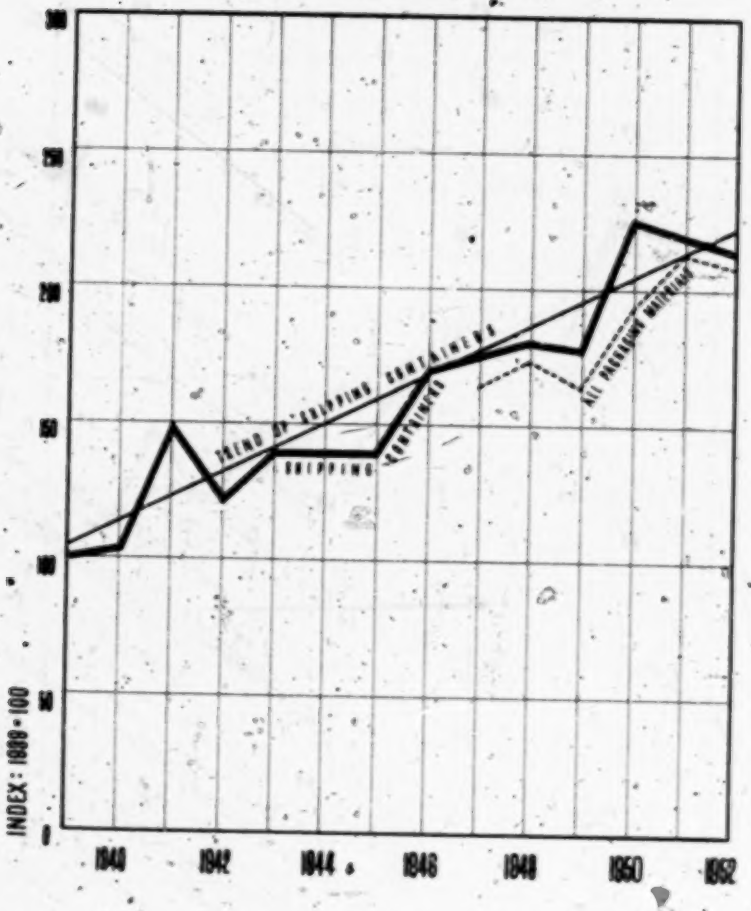
[fol. 22]

The use of corrugated and solid fibre shipping containers is generally considered to be indicative of the trend in the use of retail size packages. On this chart the solid red line shows the year-to-year shipments of the shipping containers in thousands of square feet of paperboard used in their manufacture, plotted as index numbers based on the year 1939 equals 100. The dotted line represents an index (1939 equals 100) of total packaging volume, as set forth in the preceding chart. The trend line of shipping containers as shown here will be used on subsequent charts as a basis for comparing the growth of the different packaging materials. It will be noted here that the total of all packaging materials falls somewhat below this trend line in recent years, indicating that small packaging (retail sizes) is growing somewhat faster than the over-all packaging market.

[Vol. 23]

1678

The PACKAGING MARKET IS EXPANDING



[fol. 24]

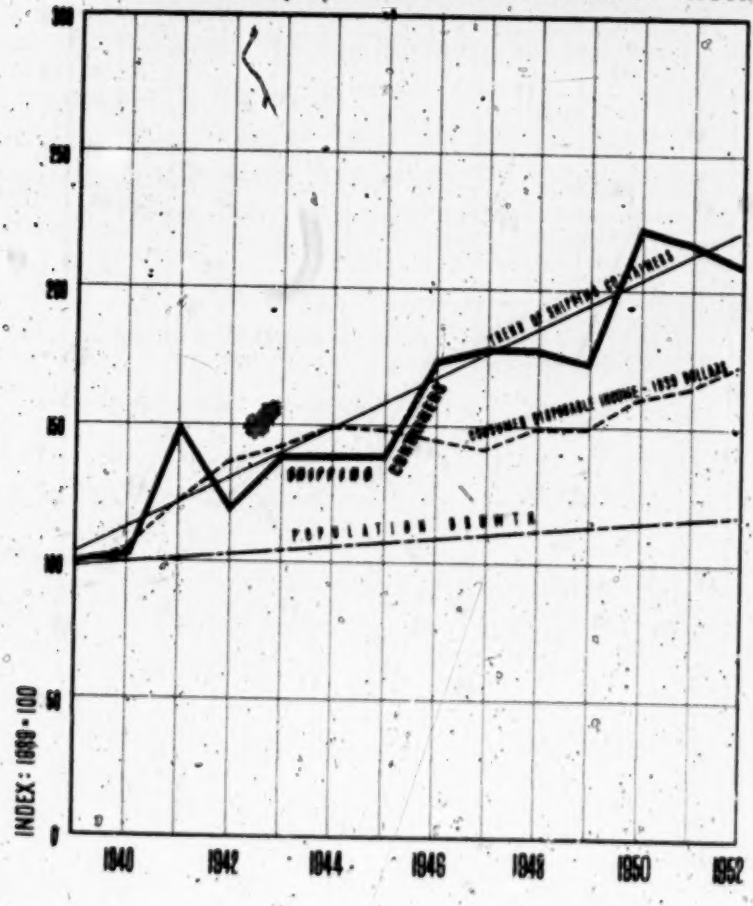
Here it will be seen that our trend line of the packaging industry is rising much faster than is population, and even faster than consumer disposable income. The latter is shown in 1939 dollars to eliminate the effect of inflation and to make this line comparable to the container trend line which is based on physical units.

[fol. 25]

1680

The PACKAGING MARKET is GROWING

faster than population or consumer income



④

[fol. 26]

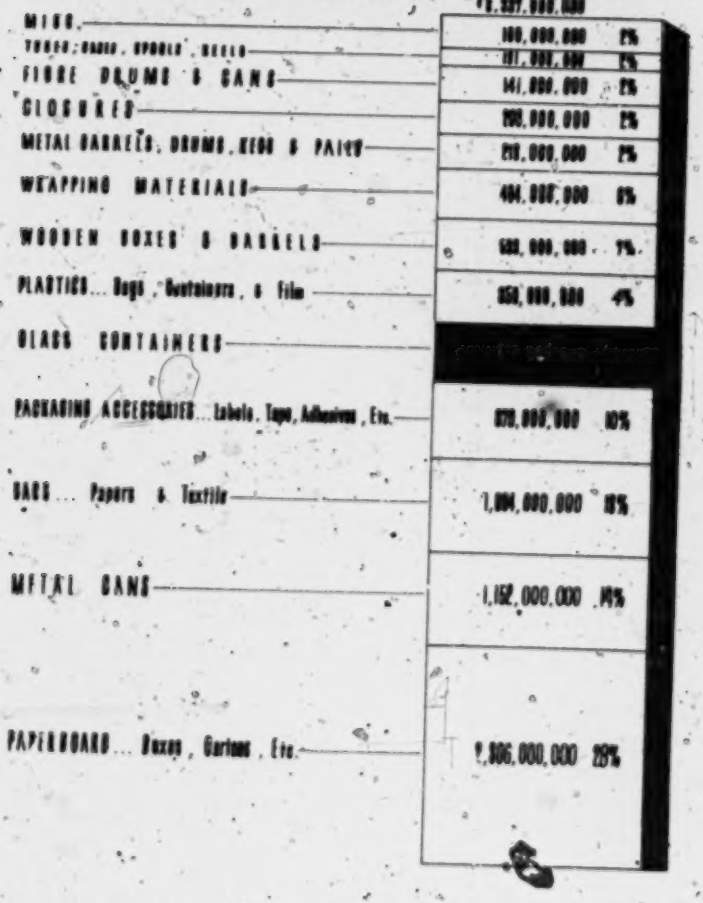
Here is the way the $8,592,000,000 packaging market is broken down. Note that glass containers represent 8% of the total and closures 2%. Metal cans represent 14%, and all paperboard boxes, cartons, etc. -28%. Note that this chart is in dollars, and represents the 1952 output of these packaging materials. Obviously, dollar value represents about the only common denominator in which these different materials can be compared.

The data are McGraw Hill estimates for 1952, based on Bureau of Labor Statistics figures for 1951. These estimates are purchaser values, obtained by adding estimates of marketing charges (such as transportation, warehousing, trade margins and excise taxes) to the manufacturer's value. Value of imports are included and exports are excluded.

[fol. 27]

GLASS CONTAINERS

have 8% of the packaging market



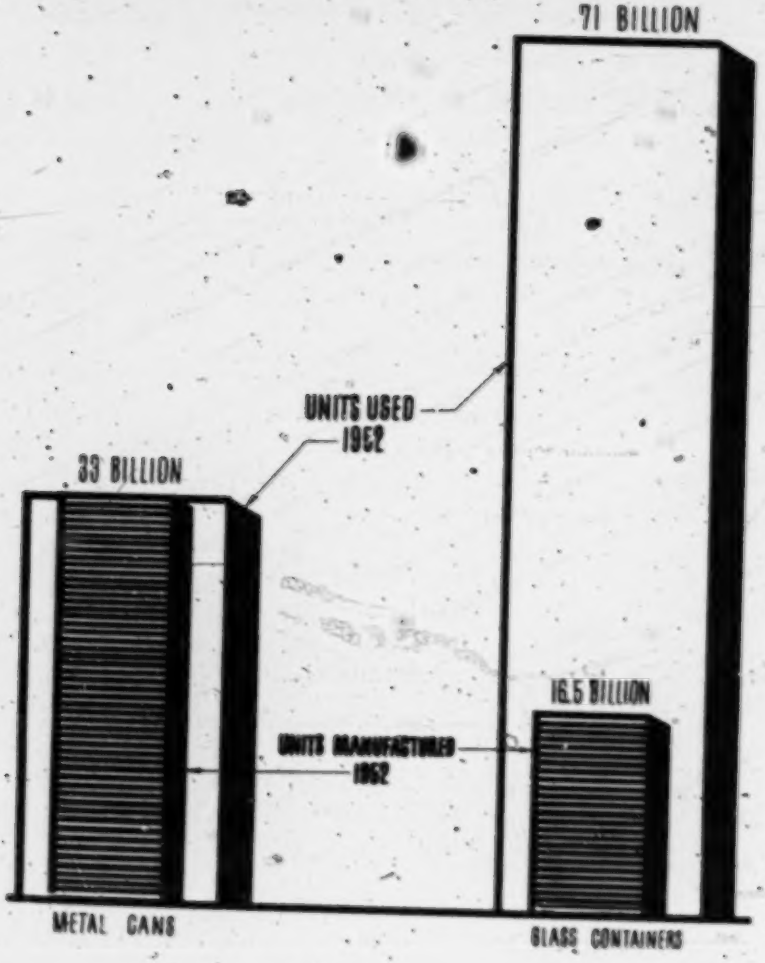
(5)

[fol. 28]

Because of the fact that many glass containers such as milk bottles, carbonated beverage bottles and beer bottles are re-used many times, glass containers are actually the most widely used rigid containers. Through a study of closure statistics we are able to determine that over twice as many glass containers "went to market" last year than metal cans. This, in spite of the fact that the can industry received almost twice as many dollars for their product as did the glass container industry, as indicated by the number of units actually manufactured in 1952.

Note. On all subsequent charts showing glass container volume, the data represent units actually shipped, and do not take re-use into account.

More GLASS CONTAINERS ARE USED THAN CANS

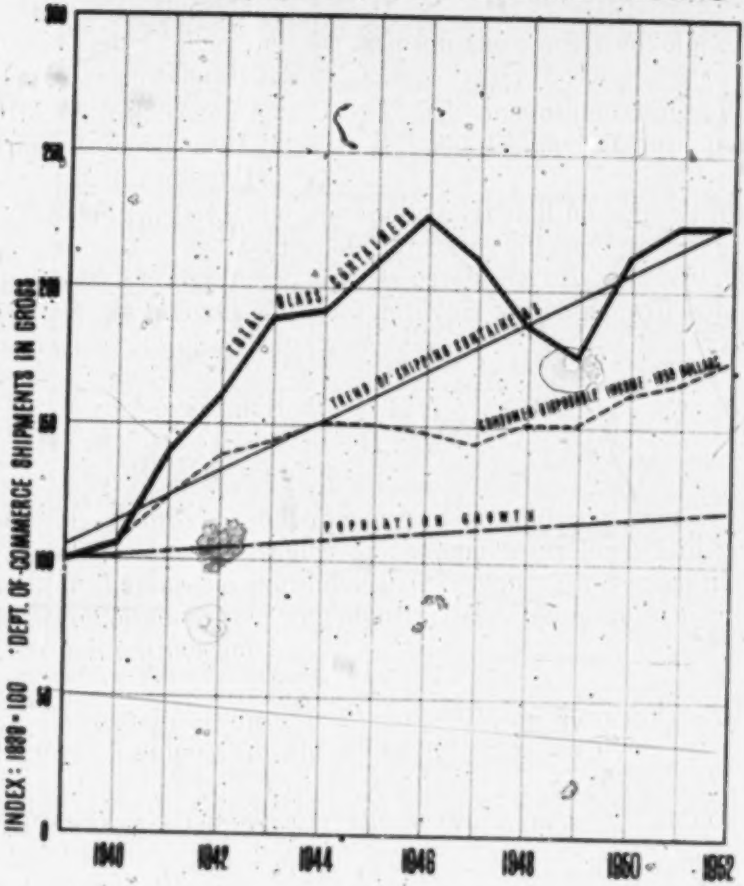


Here it will be seen that even though we have lost a part of our wartime "bulge", the use of glass containers continues to grow faster than population or consumer disposable income. Glass containers have kept pace with our over-all trend line of packaging, although there seems to be some evidence of a leveling off in 1951 and 1952. This chart shows glass container shipments in gross, (not dollars) converted to index numbers in which the year 1939 equals 100.

[fol. 31]

GLASS CONTAINERS are GROWING

faster than population or consumer income



(1)

[fol. 32]

The various end uses of glass containers are not expanding at the same rate. When glass container shipments are broken down into the four broad categories(*) of the industries we serve, we find food and chemical containers have retained a large measure of their wartime expansion, and continue to enjoy a higher rate of growth than the packaging industry as a whole. Beverage containers, while influenced by the normal ebb and flow of the returnable bottle business, seem generally to be trending above the rest of the packaging industry.

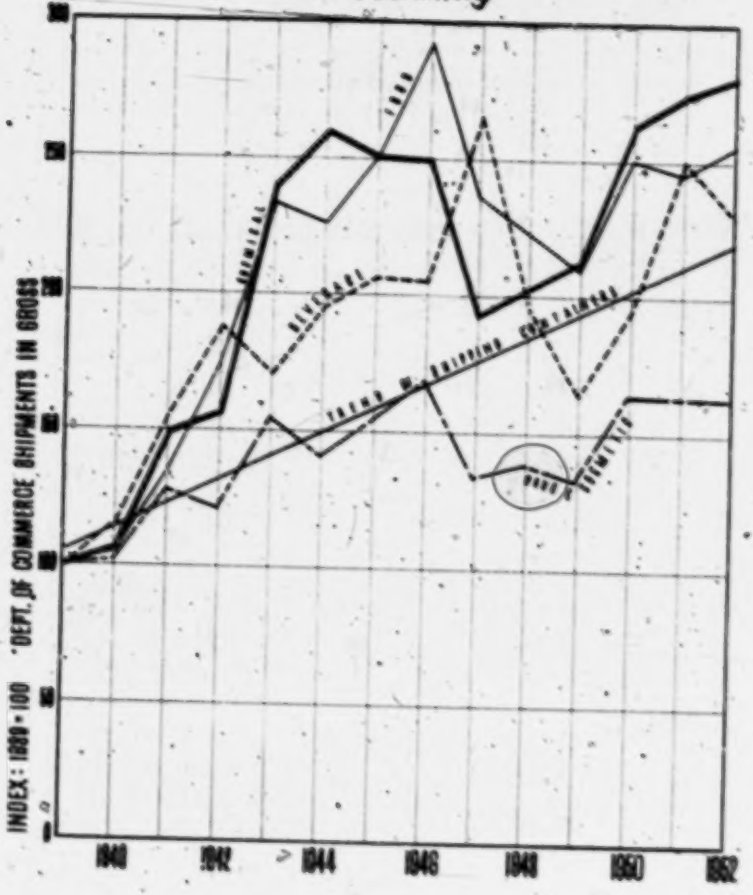
It is in the drug and cosmetic container categories where glass has been losing position. Glass container business in these fields is falling well below the general trend of packaging, and as will be seen later, hardly keeps pace with the growth of population.

(*) Almost all, if not all, companies in the glass container industry manufacture containers suitable for packaging most of the products now packaged or considered packagable in glass. Many containers may be used interchangeably for various products, and consequently, for most purposes, it is erroneous and improper to speak of a type, or a class, or a line, or a category, of glass containers as something separate and apart. For all practical purposes a glass container is a glass container, regardless of end use, or shape, or size, or other characteristics. In terms of a market analysis, however, we feel it is proper to indulge in classification by end or product uses, since it is the use of glass containers for these various products which we hope to stimulate as against the use of other packaging materials. Hence, when we refer to categories, or lines to types or classes of glass containers, we are really describing the end use for which the shipments were made.

[fol. 33]

FOOD · CHEMICAL · BEVERAGE GLASS CONTAINERS
are growing at high rate

DRUG & COSMETIC GLASS CONTAINERS
are declining



WHAT HAS BEEN HAPPENING *in the* GLASS CONTAINER INDUSTRY ?

[fol. 35]

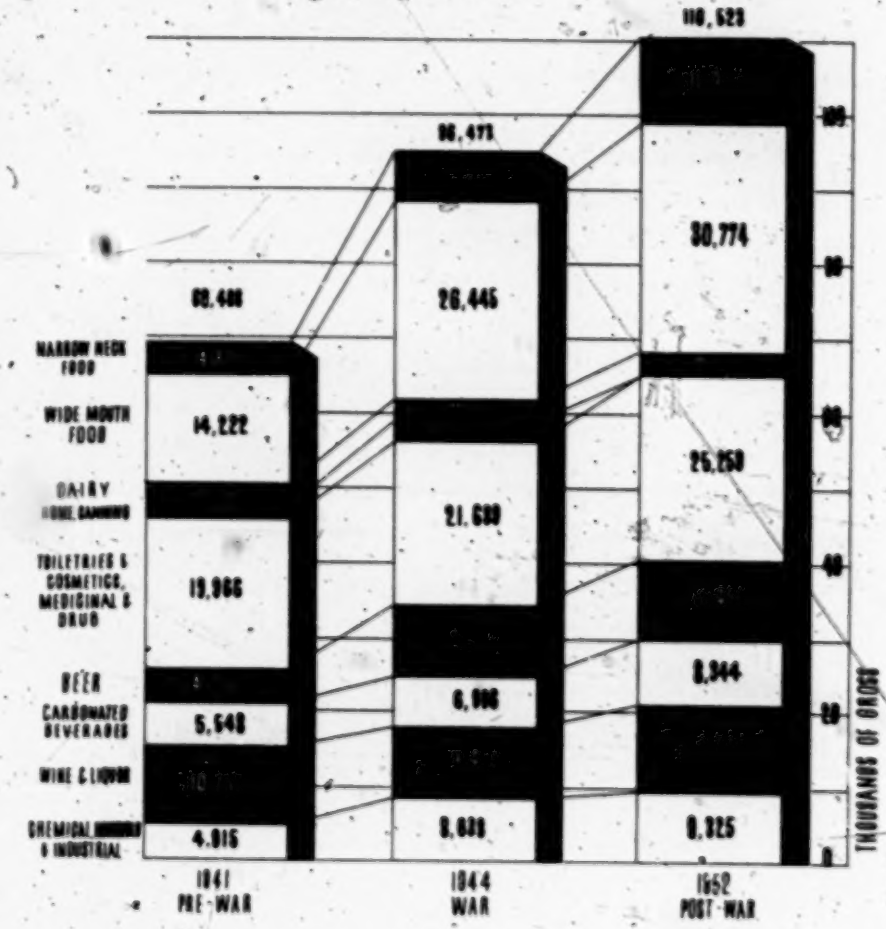
So much for the over-all packaging industry and the position of glass containers therein. In the series of charts which follow, we will take a long-range look at glass container shipments by individual classes of products.

Because all these charts are in terms of index numbers (1939 equals 100) in order to show trends, relative volume of the different classes of product is not apparent on the charts.

This bar chart, which shows pre-war, wartime, and post-war volume in thousands of gross, may be used for reference while studying the trend charts which follow.

GLASS CONTAINER SHIPMENTS

by classes



Prior to World War II the glass container industry was following a rather well defined upward trend which if continued through 1952 would have resulted in a volume last year representing about 154% of 1939, or approximately 76 million gross. As it was, the magnificent production job this industry did during the war to meet the packaging needs of the country during critical metal shortages carried glass shipments way above the pre-war trend.

Following the war, some decline took place, followed by a sharp rise and then a leveling off. The post-war trend is not as well defined as pre-war, but it is not unreasonable to assume that it is picking up approximately the same pre-war trend, except at a considerably higher level.

1952 sales of about 111,000,000 gross (226% on the basis of 1939 equals 100%) is 46% above the 76,000,000 gross which would have been forecast for that year in 1939 without the artificial situation created by the war. It would have taken the glass container industry until 1968 to reach its present 1952 volume on a projection of the pre-war trend.

[fol. 38]

GLASS CONTAINER SHIPMENTS
All Classes

(11)

[fol. 39]

Narrow neck food bottles have maintained their wartime growth better than any other glass container line, as will be seen by comparision with the following charts. With 1952 sales standing at 324% of 1939, or almost 12,000,000 gross, it is evident that the public, having had an opportunity to buy syrups, salad oil and many other liquid food products in glass bottles, has made known its preference for this type of package in no uncertain terms.

[fol. 40]

GLASS CONTAINER SHIPMENTS

Narrow Neck Food

(12)

[fol. 41]

The wide mouth food jars experienced the greatest wartime increase of any type of commercial glass containers except beers reaching a peak of 332% of 1939, or 34,675,000 gross in 1946. This was to have been expected as the wartime restrictions on metal cans hit this field of packaging more heavily than any other. Only the limitations of the productive capacity of the glass container industry prevented this category from going much higher. That the level of the wide mouth glass food container business has been sustained at such high post-war levels is very encouraging, and largely accounts for the present highly satisfactory rate of operation in the industry. 1952 shipments of almost 31,000,000 gross represent about 294% of 1939 shipments of this type of ware.

[fol. 42]

GLASS CONTAINER SHIPMENTS
Wide Mouth Food

(13)

[fol. 43]

This chart clearly shows two things:

(1) The cyclical nature of business in the returnable container field. Dairies tend to stock up on bottles and then work from their "float" for several years.

(2) The other thing it shows is that unlike practically all other types of glass containers, milk bottle sales have barely kept pace with population increases. Index of per capita shipments is shown by light black line. That they are as high as they are (having lost a substantial portion of the retail store business to paper containers) is due only to rapid growth in the dairy business as a whole, and to increases in the per capita consumption of milk.

[fol. 44]

GLASS CONTAINER SHIPMENTS

Dairy Products

[fol. 45]

At first glance this chart may not fully convey the plight of the home canning jar business. However, it will be seen that our index year (1939) was in itself a very poor year and was near the end of a long downward trend following the depression-born rush of home canning jar business in 1931-2. The victory garden program and other wartime stimulation to home canning is amply manifested here, carrying shipments of home canning jars to a 1943 peak of 4,358,000 gross. The inventory of these food jars in the hands of the housewife following seven years of all-time high production can be imagined. Couple this with the declining interest in home canning and the increasing number of packers' ware jars now carrying home canning finishes, and it is apparent why present shipments are well below 1939 and less than 1,000,000 gross per year.

The general decline in home canning activity is indicated in the following statistics from the U. S. Department of Commerce on the combined shipments of complete home canning closures and lids. (These are the only years for which data are available):

1947 - 19,313,112 gross

1948 - 21,525,040 gross

1951 - 16,234,185 gross

1952 - 15,228,324 gross

[fol. 46]

GLASS CONTAINER SHIPMENTS
Home Canning Jars

(15)

[fol. 47]

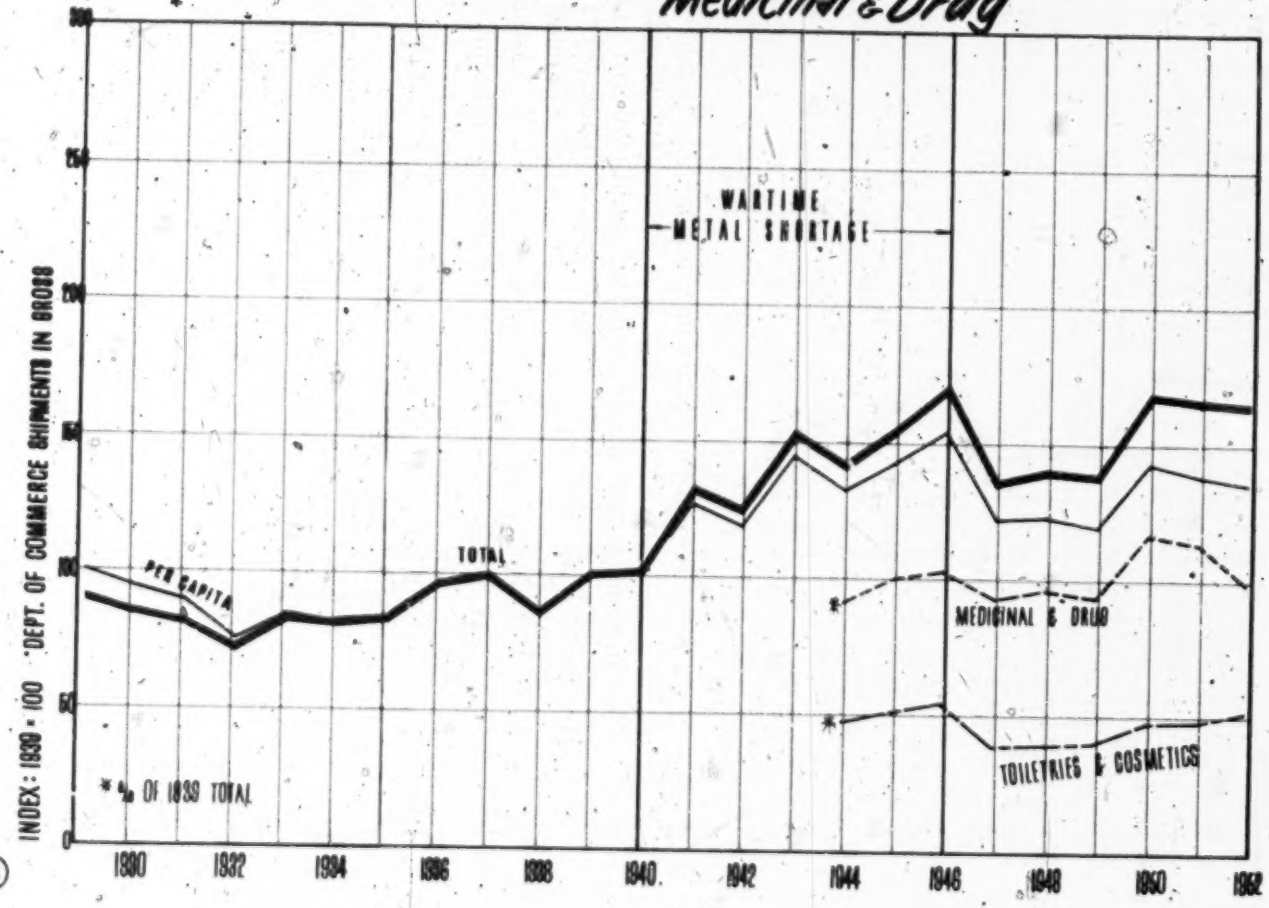
These classes are plotted together on one chart as they are not separated on available data for the years prior to 1944. It will be noted that unlike most types of glass containers, they did not receive any great stimulation during the war. The products represented here are traditionally glass packed products, and so there was no major conversion to glass to take place. Also, the trend in the medicinal field has been away from medicines in liquid form such as "patent medicines" to pills and capsules frequently packaged in paper or foil. It is in this field, too, that plastic containers have made most of their inroads.

The solid black line represents per capita shipments of the two categories of ware combined. Per capita shipments in 1952 were only 38% above the 1939 level.

The breakdown between medicinal and drug ware and toiletry and cosmetic ware has been shown from the year 1944. Although it is not, perhaps, statistically valid to do so, these two separate types have been shown as a percentage of the total of the two categories in 1939 so that for any year the two categories added together will be found to total the combination shown by the heavy line on the chart. However, these two subsidiary lines bear no direct relation to the percentage scale based on 1939 equals 100.

GLASS CONTAINER SHIPMENTS

Toiletry & Cosmetic
Medicinal & Drug



[Tol. 46]

1203

[fol. 49]

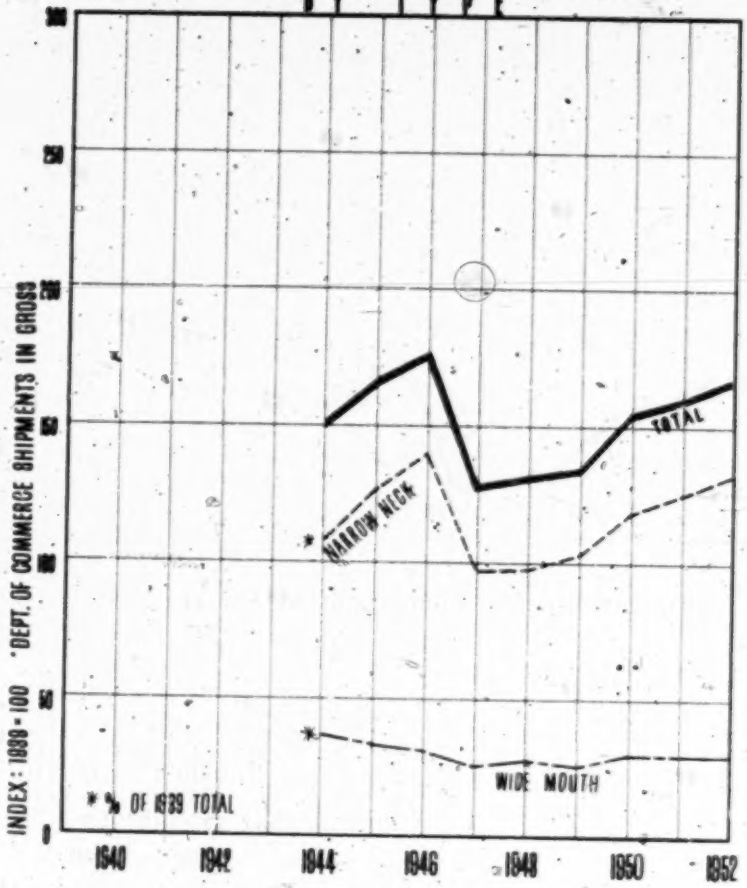
Here the toiletry and cosmetic category is broken down into wide mouth and narrow mouth containers for the years for which this information is available. This shows narrow neck containers in this field to be faring better than wide mouth, and also to be experiencing greater fluctuation than the wide mouth jars.

On this chart and the following chart, both narrow and wide mouth shipments are expressed as a percentage of total shipments for 1939.

[fol. 50]

1705

SHIPMENTS OF
Toiletry & Cosmetic Containers
BY TYPE



(17)

[fol. 51]

This chart shows the breakdown between wide mouth and narrow mouth medicinal and drug containers. Wide mouth containers in this field have experienced a more stable trend than narrow neck, but have not increased at as rapid a rate.

[fol. 52]

SHIPMENTS OF
Medicinal & Drug Containers
BY TYPE

 [fol. 53]

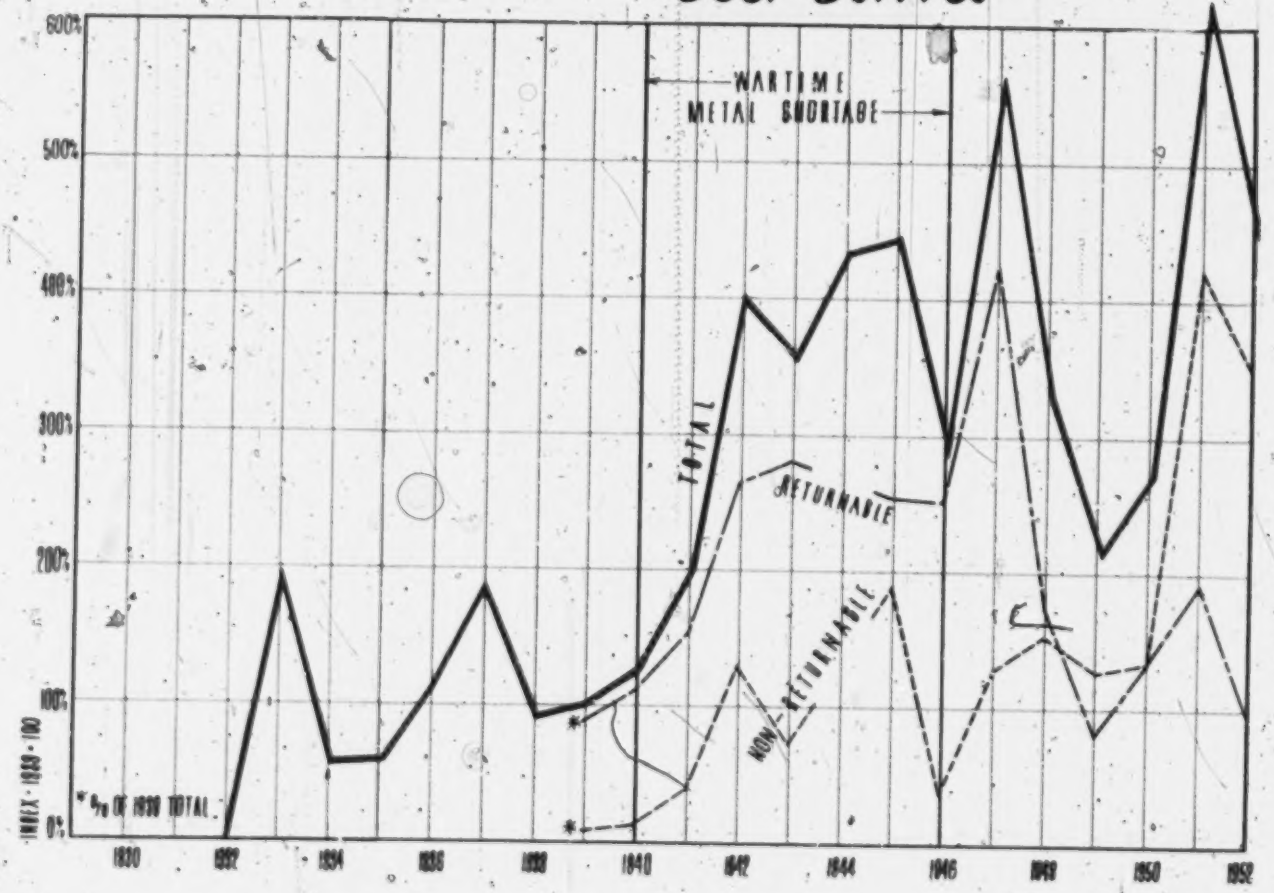
Starting with Repeal, this chart covering beer bottles discloses the customary cyclical nature of the sale of returnable bottles, and reflects significantly certain other influences.

It is to be noted that the vertical scale on this chart is just one-half that of the other glass shipment charts in order to accommodate the imposing peaks encountered in 1947 and 1951.

The peak in 1937 is partly attributable to the introduction of the Steinie beer bottle, and the 1947 peak to the postwar restocking of returnable bottle "floats". The 1951 peak, representing a spectacular increase in One-way bottles and a substantial one in returnable bottles, can be attributed partly to the promotional efforts in behalf of the One-way beer bottle, and particularly to the can shortage arising from the Korean War.

GLASS CONTAINER SHIPMENTS

Beer Bottles



[Vol. 54]

1209

[fol. 55]

Shipments of soft drink bottles show the periodic peaks characteristic of a returnable bottle market, and the very heavy restocking of starved "floats" in the post-war year of 1947, when sugar rationing became inoperative. Recovery from the 1949 slump has been very rapid and were it not for the threatening can competition, the future for this line of bottles would look very promising. Per capita shipments of beverage bottles in 1952 were 221% of the 1939 level.

[fol. 56]

GLASS CONTAINER SHIPMENTS

carbonated & non-carbonated BEVERAGE BOTTLES

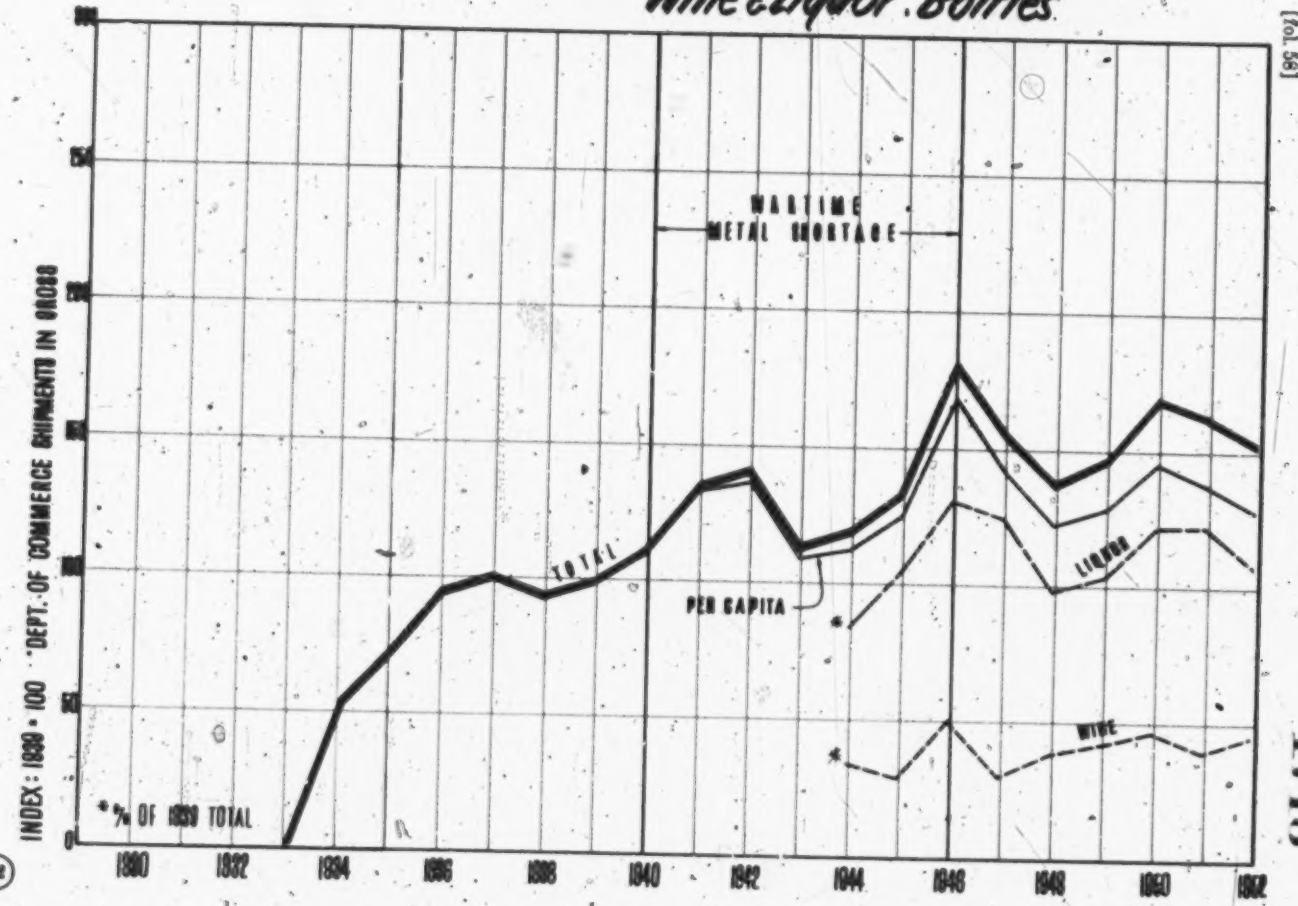
[fol. 57]

Following its steady rise from the repeal of Prohibition to the early war year of 1942, the curve for wine and liquor bottles levels off appreciably in a curve which barely keeps pace with the population growth. 1952 per capita shipments were only 29% above 1939.

The two elements of this curve, -liquor bottles and wine bottles,- are shown from the year 1944 on. Data for the separate lines were not available prior to that year. As noted on a previous chart, these lines are plotted to show the relative size of the volume of containers used for packaging these two products, so that they will add up to the total of the heavy line on the chart. Consequently, they cannot be properly related to the percentage figures based on 1939 equals 100 at the left-hand margin of the chart.

GLASS CONTAINER SHIPMENTS

Wine & Liquor Bottles



[Vol. 58]

1713

(21)

[fol. 59]

The chemical, household and industrial category shows a post-war usage of glass containers exceeded only by narrow neck foods. Wartime production of ware for these purposes showed a marked increase, and the post-war decline has been considerably less than for other classes of ware. A very gratifying upward trend continued to be manifested in 1952.

[fol. 60]

GLASS CONTAINER SHIPMENTS

Chemical, Household & Industrial Containers

(22)

[fol. 61]

From the foregoing charts, it has been evident that the various categories of glass containers reacted differently during and after the war. When glass containers are considered solely from the standpoint of end use, the difference in effect of the war become even more apparent.

This chart shows glass containers by end use. In some instances, it has been necessary to make estimates because of lack of available data, but in all cases figures have been checked with several authorities to secure as much reliability as possible.

The bars at the bottom of the chart include certain classes of product which were hardly affected by the war - toiletries and cosmetics, liquor, milk bottles, and several food products, principally seasonings.

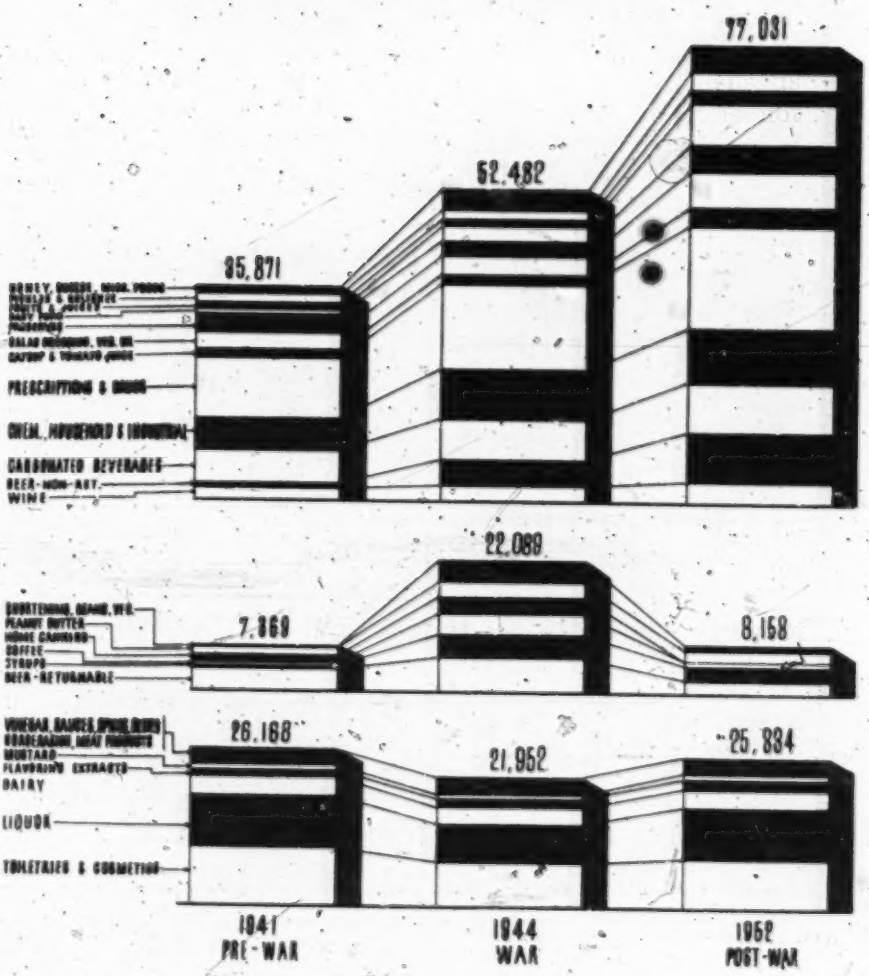
The center bars portray end uses where the stimulation of war measures didn't "take". Volume in these lines have dropped back to pre-war levels.

Products shown in the upper bars increased use of glass during the war, and have increased still more since the war. These are the products that are makin; the glass container market grow at the present time..

1717

END USES OF GLASS

(Thousands of Gross)



[fol. 63]

It is evident from some of the changes that have taken place in the glass container industry since, before the war, that changes must have been taking place in competitive industries, also. The following series of charts portray the trend of principal packages competing with glass containers since 1939.

WHAT HAS BEEN HAPPENING *in* COMPETITIVE INDUSTRIES?

[fol. 65]

We now return to our line showing the trend of shipping containers, which we believe to represent the best possible measure of the trend of the general small retail package industry. This line is shown in all of the competitive container charts as a trend reference. On this chart the index is based on 1940 equals 100, as 1940 is the first year for which data on metal can shipments is available.

It will be noted that over-all the can industry has never recovered the position it lost during the war. Food cans in particular are way below the general packaging trend, and are hardly keeping pace with the growth in population. One reason for this is, of course, the invasion of the canned food markets by frozen foods, and the long period of relative prosperity which permits even the lower socio-economic group to buy more fresh fruits and vegetables out of season.

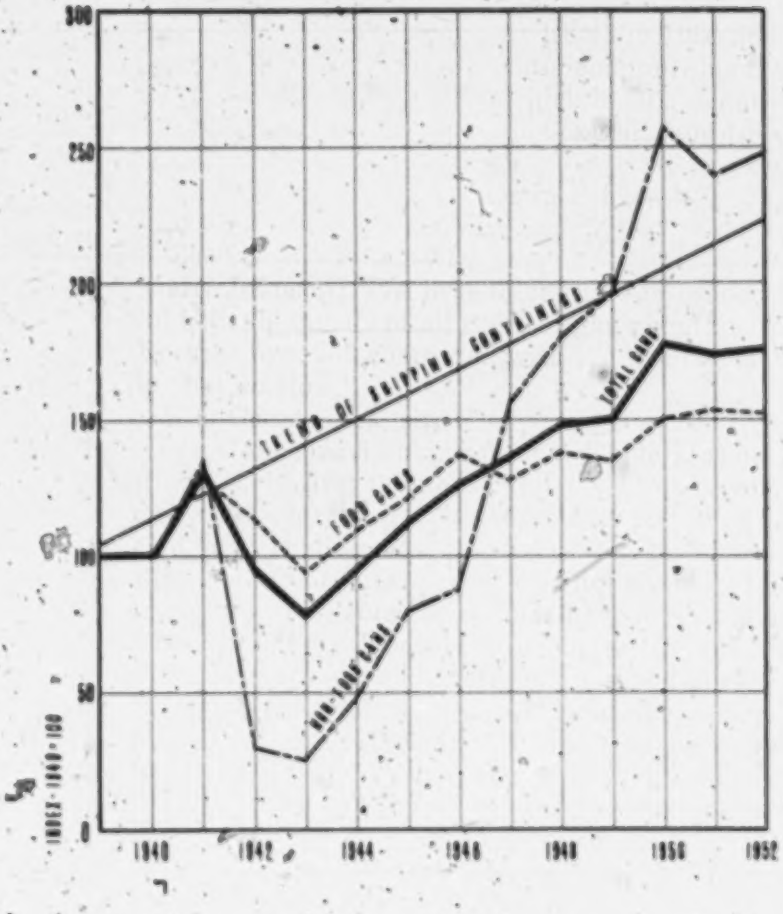
Another reason is that glass has retained some of the markets which cans lost during the war. Reference to chart 11 shows that glass and cans both moved to new plateaus after the war, one up and one down.

The rapid recovery evidenced by non-food cans reflects principally the rapid growth in the use of beer cans, and also the return of "general line" cans to the market, following ware-time restrictions. The great importance of the beer can to the health and welfare of the metal can industry becomes very evident here.

[fol. 66]

METAL CANS

1721



25

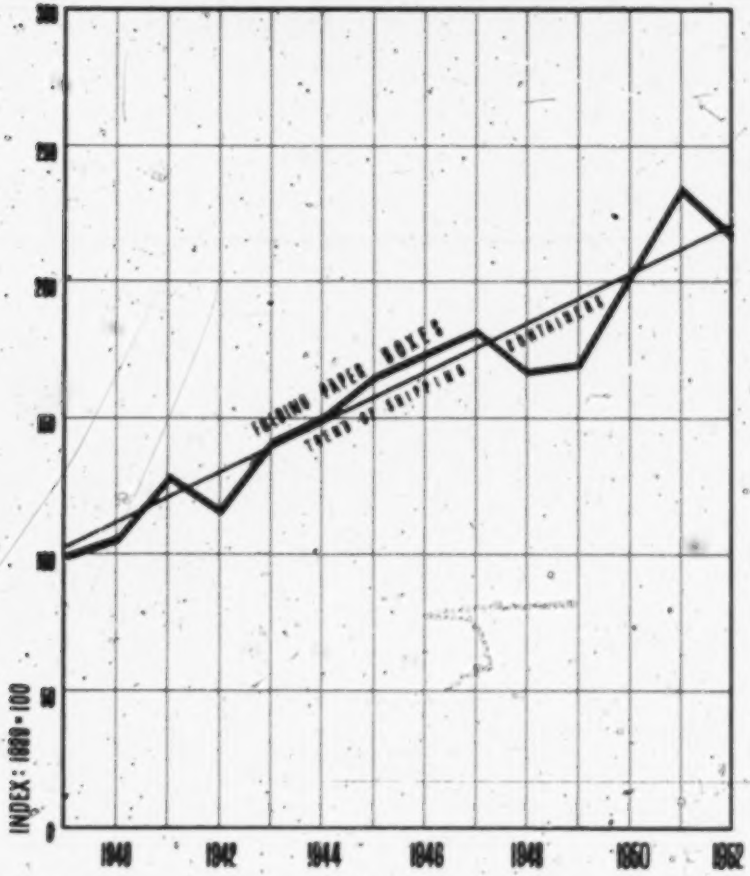
[fol. 67]

Folding paper boxes, it will be readily seen, clearly follow the general trend of packaging. It will be recalled that this trend represents a rate of growth considerably in excess of the population, and even in excess of the consumer disposable income.

[fol. 68]

Folding PAPER BOXES

1723



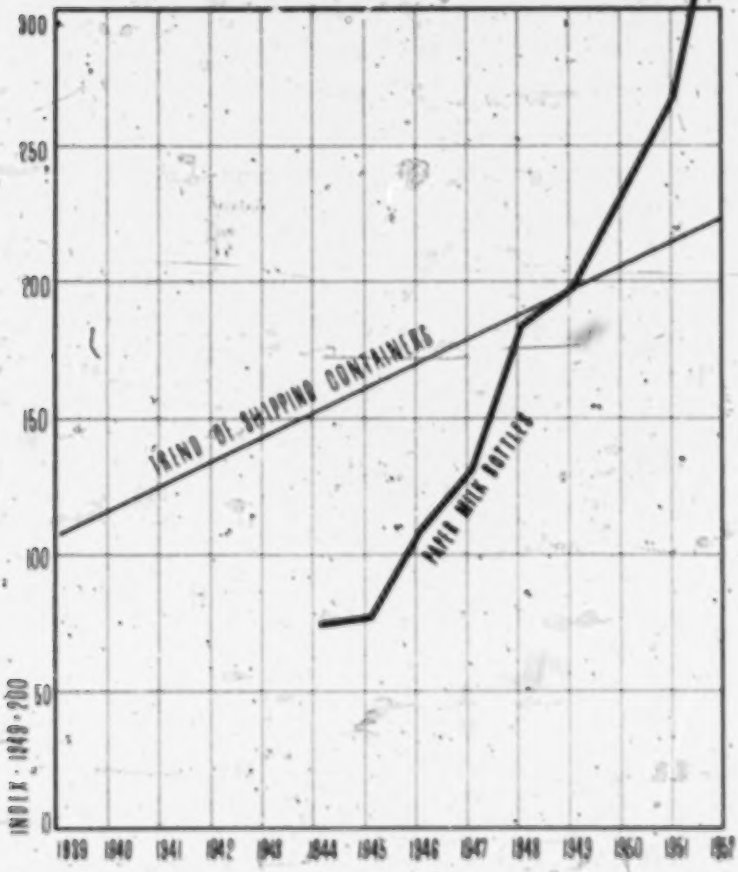
[fol. 69]

The chart speaks for itself and the glass container industry is only too well aware of the invasions made by this aggressive competitor into a traditionally glass container market.

Continued growth of paper milk bottles will depend largely upon whether they succeed in invading the home delivery market, an end toward which they are vigorously addressing themselves at present.

[fol. 70]

PAPER MILK BOTTLES



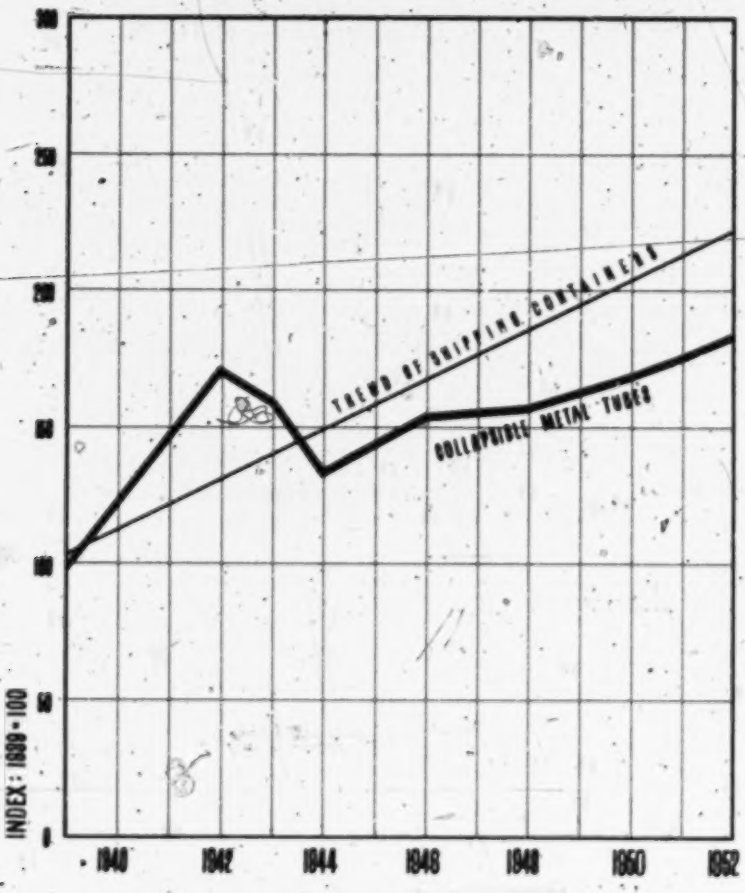
[fol. 71]

Collapsible metal tubes, curtailed during the wartime due to metal shortages, have failed to recover their pre-war position and are following a trend that lags considerably behind the growth of the general packaging market. It is presumed that this results from their loss to collapsible tubes made of plastic materials and to other plastic containers.

[fol. 72]

1727

Collapsible METAL TUBES



[fol. 78]

Polyethylene is the "glamor boy" of the packaging industry. As a raw material, polyethylene has many uses other than in packaging. The chemical industry predicts that polyethylene will be the first billion pound per year plastic.

It has long been said that plastics would never represent a substantial threat to the glass container industry until a suitable material could be developed from by-products of the petroleum or the coal industries. The cellulose group of plastics has never offered promise of economic ability to compete with glass.

Polyethylene was selling at 49¢ a pound when this survey was undertaken in May. In November, the third cut in polyethylene prices within a year had reduced the price to 41¢ a pound. It is predicted that the eventual price will be in the neighborhood of 30¢ a pound. Careful studies indicate that at this figure, polyethylene squeeze bottles can compete economically with glass, particularly in sizes of 4 oz. capacity and less.

Polyethylene flakes (the raw material for the bottles) were produced at the rate of 125,000,000 pounds per year in 1952. New plants already under construction will bring production to 345,000,000 pounds in 1954 and 420,000,000 pounds in 1955. This will put production ahead of demand next year, for the first time. This should be a strong stimulus to the further development of polyethylene containers, which have heretofore been held back by raw material shortages.

160,000,000 polyethylene bottles were blown in 1952 and it is estimated that four times that number will be turned out in 1954.

A polyethylene bottle weighs about one-fifth as much as the comparable glass bottle and is not susceptible to impact breakage. Polyethylene is an excellent moisture barrier and it is chemically satisfactory to contain most of the products presently sold in glass containers. However, it is permeable to oxygen and carbon dioxide as well to essential oils, and will swell in the presence of certain vegetable and animal oils. Polyethylene bottles cannot withstand sterilizing temperatures. It is expected that as soon as the supply becomes adequate, considerable research will be thrown against this product in an effort to eliminate these objections. Experimental data already available indicate that eventually they will solve these problems.

[fol. 75]

Although less spectacular than polyethylene in its long-range possibilities, polystyrene represents an important factor in the future packaging field. It does not give the hope of eventual low cost that polyethylene does, but it has many good qualities. Production of the raw material shows signs of leveling off at about 400 million pounds per year. It has been impossible to determine what portion of this production is going into containers at present, and the product has many other uses.

Polystyrene can be made crystal-clear, colored, or opaque. Polystyrene containers have been quite breakable and subject to crazing and splitting. However, annealing processes recently developed improve its physical qualities considerably. It is rigid (not squeezable). It is subject to "solvent crazing" and also crazing when subjected to direct sunlight or other sources of ultra-violet light. It has good chemical durability but is still incapable of withstanding sterilizing temperatures.

Metal foil and plastic film are growing rapidly in the packaging field, although accurate statistics do not seem to be available. Liquid products such as syrup are going into laminated foil and film "unipack" envelopes for individual servings, as are instant coffee, tea, and many dairy products.

[fol. 76]

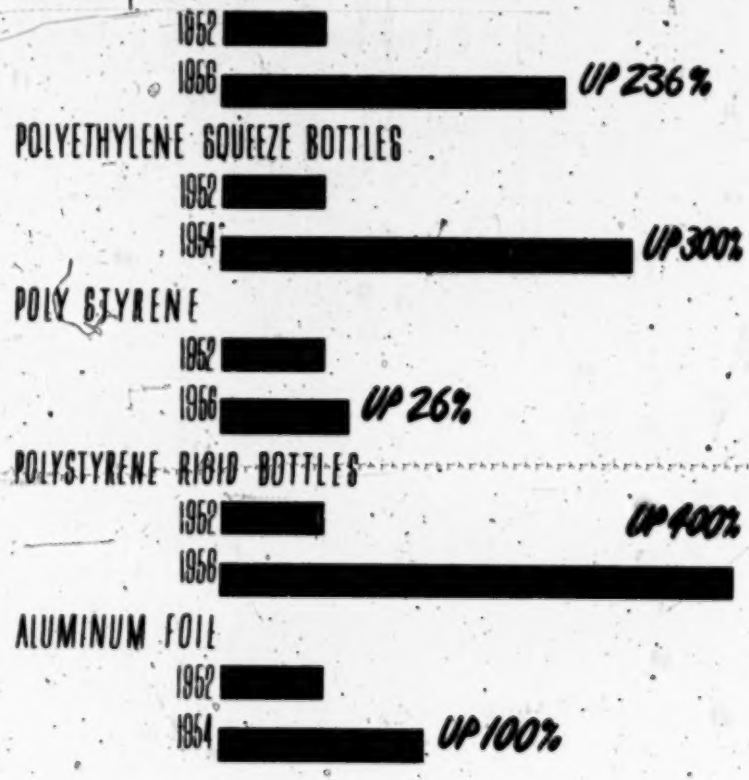
(30)

[fol. 78]

17333

New Materials are POTENT FUTURE THREAT

ANTICIPATED PRODUCTION



COMPETITION IS BECOMING STRONGER

★MORE AGRESSIVE

★EMPHASIS ON PRODUCT PROMOTION RATHER THAN BRAND

★NEW MATERIALS, WITH NEW PROPERTIES AND GLAMOUR OF NEWNESS

[fol. 81]

The competitors of glass containers are aggressively advertising their products, and taking advantage of the appeal of newness where they have this.

The Can Manufacturers Institute spent approximately $1,000,000 a year for consumer advertising from 1944 through 1948. American Can Company is spending at the rate of $400,000 a year to consumers and $70,000 a year in trade journals.

Continental Can Company is spending about $700,000 a year on consumer advertising and $65,000 on trade papers. Ex-Cell-O Corporation (Purepak Division paper milk containers) is spending about $425,000 on consumer advertising and $35,000 on trade papers. Plax Corporation (polyethylene bottles) is spending at the rate of $250,000 per year to consumers and $20,000 in trade journals.

DuPont's Cellophane Division is spending at the rate of $350,000 per year to consumers and $25,000 in trade journals, and about $1,600,000 on newspapers, network radio, and television for "products" and "institutional" advertising in which occur very frequent references to their packaging films and to polyethylene, both films and bottles.

C & C Beverages, plugging their beverages in tin cans and including many unfair but damaging references to glass, were spending $20,000 per month in newspapers this past summer, and undoubtedly considerably larger sums for a very heavy program of spot radio and television.

Above figures represent expenditures for space and time only. Total advertising budgets are considerably higher than these figures indicate.

COMPETITIVE MATERIALS ARE BEING PROMOTED AGGRESSIVELY

with emphasis on product rather than brand

[fol. 83]

Many competitive products are being promoted even more aggressively with packers and chain stores than with the public.

DuPont has spent hundreds of thousands of dollars promoting cellophane for "impulse buying" among manufacturers of bread, crackers, candies, etc. Each division of this company maintains extensive sales crews to detail the trade.

[Fol. 84]

TRADE PROMOTION IS AGGRESSIVE

Too

 [fol. 83]

A review of the advertising of competing industries discloses that their main drive is not for consumer recognition of an individual company's product, but rather to promote their general type of container material in competition with other container materials. And the one container material which all three major competitors (cans, paper, and plastics) center their attack on is glass.

To ignore this challenge is to run the risk of an unprofitable future in a declining market. To meet the challenge and vigorously compete for a larger share of the over-all packaging market offers the hope for a profitable and expanding future for the glass container industry.

MAJOR COMPETITION

In the

PACKAGING INDUSTRY

is

PRODUCT *vs* PRODUCT

CANS *VS* GLASS

PAPER *VS* GLASS

PLASTICS *VS* GLASS

HOW DOES GLASS COMPARE *with* COMPETITVE CONTAINER MATERIALS?

[fol. 89] 1744

It takes many varied attributes to make a good container material. Each container material excels in certain attributes. Each has certain products for which it is the best adapted container material.

This chart portrays an evaluation of the most important attributes of various types of containers made by Preston Laboratories, Butler, Pennsylvania. Versatility of glass is evidenced by its rating of Good or Excellent in 20 attributes out of 24, whereas its nearest competitor scores 16 out of 23.

However, the two points on which glass rates "Poor" often prove critical in the choice of a container; namely, weight and impact strength.

A study of the chart will disclose the strong and weak points of all principal container materials.

E - EXCELLENT
G - GOOD

1745

[fol. 91]

In 1951 "Sales Management" Magazine surveyed the opinion of housewives regarding containers. On this chart are listed, in the order of their importance to the housewife as disclosed by this independent survey, the features they look for in a package. Again we find glass with the best over-all rating, - winning Excellent or Good in the five most important categories.

It would appear that the glass container industry can justifiably claim to have the best package for many products and that glass has several important qualities which, if better understood by the public, should prevent invasion of its markets and open many broader markets to it. Glass has the ultimate in a smooth sanitary surface, which other container manufacturers strive mightily to approach while few even come close.

The weaknesses of glass containers (as to weight and impact strength) cry out for increased attention from the technologists.

[fol. 93]

Psychological factors, or the "feeling" which people have about glass containers or competitive containers, might involve such things as the aesthetic, - the beauty or social acceptability, the confidence inspired by the ability to see the contents and the feeling that it is safer to store leftovers in glass than in other containers. Whether real or imaginary, such preferences or prejudices could well be strong enough to offset the cost of greater shipping weight.

"Conversely, so long as the danger of glass breakage continues to be exaggerated in the public thought, that factor will be a resistance to the use of glass.

The glass container industry needs to find out the prejudices as well as the preferences of consumers and the trade regarding glass and other types of packages in order to pre-empt this knowledge to increase sales of glass containers.

[fol. 94]

PSYCHOLOGICAL FACTORS MAY DETERMINE CHOICE OF CONTAINER

ABSTRACT QUALITIES MAY PROVE MORE IMPORTANT THAN CONCRETE QUALITIES

IMAGINED ADVANTAGES OFTEN OUT-WEIGH REAL ADVANTAGES

PREJUDICES & PREFERENCES OF THE MARKET, WHEN LEARNED, MAY BE USED TO OUR ADVANTAGE

1750

[fol. 95]

It is regrettably true that we tend to forget or overlook the advantages we enjoy from familiar persons, places or things. Like the dog in Aesop's Fables who dropped the real bone from its mouth in order to grasp the seemingly more desirable one reflected in the water. Glass container users may be swayed by the imaginary advantages of other containers if not reminded of the good they are already enjoying.

[fol. 96]

GLASS HAS A PECULIAR PSYCHOLOGICAL PROBLEM

GLASS IS THE OLDEST
GLASS IS FAMILIAR
GLASS IS TAKEN FOR GRANTED

GLASS MUST BE KEPT NEW & GLAMOROUS
by
PUBLICITY
TECHNICAL IMPROVEMENTS

THE PUBLIC MUST BE MADE
GLASS-CONSCIOUS *By*
PROMOTING INTRINSIC
ADVANTAGES *of* GLASS

[fol. 98]

IF GLASS HAD JUST BEEN INVENTED-

EVERYONE WOULD BE EXCITED OVER THIS AMAZING NEW MATERIAL WITH:

SPARKLING BEAUTY
UNEQUALED CLARITY
CHEMICAL INERTNESS
IMPERMEABILITY
TASTELESSNESS
ABSOLUTE CLEANLINESS

But

GLASS IS TAKEN FOR GRANTED - VULNERABLE TO ATTACK FROM NEWER, MORE GLAMOROUS MATERIALS

[fol. 100]

HOW MUCH BUSINESS DOES GLASS STAND *to* LOSE OR GAIN ?

There is not a single glass container manufacturer who is not or will not soon be confronted with the active competition or potential competition indicated on these charts. The present glass container volume in these fields is shown in terms of 1952 shipments in gross.

[fol. 102]

Each item on this chart can be substantiated by actual competitive activity disclosed in information from reliable sources. The size of the potential loss in each case is an estimate based on a study of the individual items.

For example, pickles in tin cans are an actuality in Canada, where the packers claim a superior product due to lack of over-cooking during sterilizing. Lithographed cans have long been a popular container for preserves and jams in Canada. The Tea and Coffee Trade Journal carried a recent article to the effect that can manufacturers are perfecting a can for soluble coffee which is being eagerly awaited by the packers.

The findings of this survey contradict the predictions of certain financial houses that the glass container industry stands to lose as much as forty per cent of its volume to the polyethylene bottle. While the estimates shown here are conservative, they are based upon a knowledge of the glass container industry and a first hand study of the requirements of its users, and the possibilities are large enough to warrant a positive promotion program by the industry.

The first column shows estimates of possible losses based upon the properties of polyethylene and polystyrene as they exist today. The second column assumes that advances in plastic technology will result in greatly improved physical properties as to permeability, chemical resistance to oil, and ability to withstand sterilizing temperatures, which advances will almost certainly be made.

[fol. 113]

(1) BASED ON PRESENT PLASTICS TECHNOLOGY
(2) BASED ON PROBABLE ADVANCES IN PLASTIC TECHNOLOGY

[fol. 114]

Now, let us see what these potential losses in business amount to in aggregate. Even though the individual estimates are believed to be conservative, the total potential loss if the glass container industry should fail to defend these markets is alarming. The indicated 25 million to 33 million gross loss over the period indicated would considerably more than offset general gains attributable to population increase.

[fol. 115]

SUMMARY

1770

POSSIBLE LOSSES to COMPETITIVE CONTAINERS

(in gross per year)

METAL CANS	13,200,000
PAPER	2,900,000
PLASTIC CONTAINERS	6,900,000 / 14,900,000
PLASTIC FILMS	1,000,000
METAL FOIL	600,000
TOTAL	24,600,000 / 32,600,000

(50)

[fol. 116]

However, there is another side to the coin, and herein lies a tremendous challenge to the glass container industry. Here again, an effort has been made to keep the estimates on the conservative side. Nevertheless we come up with the imposing total of 70 million gross of potential new business for the glass container industry.

The evaporated milk and baby formula business could be the outgrowth of the G. C. M. I. studies in the aseptic canning field. The business in powdered coffee will depend not only on conversion from ground coffee, but upon glass containers holding the preference of the public and the trade in this field. The same is true of the dried milk and cream business.

In all cases success will depend on continued technological improvement in glass containers, particularly as to weight and breakage - but of greatest importance would be positive efforts through advertising, publicity, and promotion to convince the public of the advantages of glass.

Intelligent, forceful, and persistent means must be used to convert the growing public demand for convenience into increased sales for glass containers, rather than for competitive packages, - particularly in the field of single - trip carbonated beverage and beer containers.

A potential new market of 70 million gross per year should certainly be worth the effort.

[fol. 117]

1772

POSSIBLE GAINS

PRODUCT	POTENTIAL (ANNUAL GROSS)	PRESENT PACKAGING (ANNUAL GROSS)	
FOODS			
BABY FOOD	4,400,000	CANS	4,400,000
EVAPORATED MILK & BABY FORMULAS	4,000,000	CANS	15,400,000

CHEMICALS, HOUSEHOLD & IND.	2,000,000	CANS - PAPER - NEW PRODUCTS	
TOTAL	70,350,000		

CONCLUSIONS

In terms of our problem, as stated in the Foreward, it seems to me that the conclusions of our study, shown in this chart and the one that follows, indicate that:

(1) Our competition is strong - not to be ignored.

(2) We need to raise the value of our product in the eyes of the public.

(3) To do so would protect present markets and open up broad new markets, and

(4) The prize would be worth the effort.

To raise the value of the glass container in the opinion not only of those who empty it, - but also of those who buy, fill, distribute and sell it we must:

(1) Actually continue to improve it physically, - to lighten it and strengthen it, and increase its utility and beauty and convenience.

(2) Reduce the over-all cost of the finished glass package to everyone involved, and

(3) Explain it, sells its advantages and strengthen preferences, all along the line.

To do this requires stepped up:

Market Research

Technical Research

Design Research

Glass handling engineering, and

Effective educational advertising and publicity.

CONCLUSIONS

1. THE PACKAGING MARKET IS EXPANDING
2. GLASS CONTAINER VOLUME, ABNORMALLY BOOSTED BY WAR, SHOWS SIGNS OF LEVELING OFF
3. COMPETITIVE CONTAINERS ARE ALL GROWING, NEW MATERIALS AT RAPID PACE
4. COMPETITION IS AGGRESSIVE, ACTIVELY PROMOTED, HAS THE GLAMOR OF NEWNESS
5. GLASS IS TAKEN FOR GRANTED, VULNERABLE TO ATTACK FROM NEW MATERIALS
6. THE INDUSTRY DOES NOT ENJOY ESTEEM OF OPINION LEADERS TO WHICH IT IS ENTITLED

7. GLASS STANDS TO LOSE UP TO 28% OF PRESENT VOLUME, OR GAIN 62%

8. GLASS HAS OPPORTUNITY NOW, *BEFORE NEW MATERIALS BECOME ENTRENCHED*, TO PROTECT PRESENT FRANCHISE AND SECURE NEW MARKETS

9. TO MAINTAIN POSITION, GLASS CONTAINER INDUSTRY MUST . . .

a. RESEARCH THE MARKET, STUDY ITS PSYCHOLOGY

b. KEEP UP-TO-DATE, IN DESIGN AND TECHNICAL IMPROVEMENTS

c. ERASE PUBLIC MISCONCEPTIONS ABOUT INDUSTRY & ITS PRODUCTS

d. FIGHT AGGRESSIVELY, WHERE COMPETITION IS KEEN AND GLASS IS "RIGHT"

WHAT WE CAN LEARN *from* OTHER INDUSTRIES

[fol. 141]

In an effort to benefit by the experience of other industries, we have called upon and studied in detail the plans of six important trade associations and have studied the marketing plans of several others. The six are mentioned on these charts with an indication of the lessons to be learned from each.

[fol. 142]

BASIS FOR PLANNING

BIENNIAL CHECKS ON PROGRESS

CONSISTENT, FORCEFUL PROMOTION

AMERICAN MEAT INSTITUTE RESEARCH FOUNDATION

[fol. 143]

1798 Of most direct benefit to the Glass Container Industry were the study of the plans of the American Meat Institute and the Pennsylvania Grade Crude Oil Association. The former is particularly noteworthy because of its intelligent use of market research, and its consistent forceful advertising program guided thereby. A preliminary consumer survey by Elmo Roper disclosed their basic problem: almost everybody liked meat, however many people had a guilt complex about eating meat, as the food faddists had sold them on a bill of goods that somehow eating meat was harmful. It was not difficult to obtain much sound medical testimony to the effect that this general belief was in error. It is very impressive to see the gradual change in consumer attitude depicted in Mr. Roper's surveys made in 1947, 1949, 1951, and 1953. By 1953 meat had regained its old-time number one position in the favor of the American public as a source of protein. Theirs has been a most effective program.

From Pennsylvania Grade Crude Oil Association we could learn two very important lessons. First, is the value of consistency, and "keeping at it". Although their budget has varied little from year to year and has never been much over $250,000 per year, it has continued uninterrupted for 30 years, and the deep impression made upon the public consciousness is known to all. A second thing they have to show us is a tight economical administration which drains off a minimum of funds for "frills" and applies the major part to the productive advertising.

TIGHT ECONOMICAL ADMINISTRATION...
A PATTERN FOR GCMI

(1)

[fol. 145]

1800 We will now outline the framework of a plan of action for the glass container industry designed to meet the requirements summarized in the conclusions of the industry survey just reviewed.

The plan includes fact-finding (market research) to insure a solid foundation. It then procedes to suggest possible industry-wide activities to supplement the good work already being done by individual companies directed toward the continued improvement of the physical properties of glass containers (technical research and design research); and increased efficiency in the packaging operation (glass handling research).

Greatest emphasis is given to advertising and publicity since consumer and user understanding of and preference for glass containers is the final determining factor as to the size of future glass container markets.

With the exception of the market research phase, - which we can define quite clearly now, the other phases of this recommended plan should be recognized as nothing more than tentative outlines for the purpose of determining the approximate cost of an effective effort. The details, if the plan were adopted, would be modified or completely changed according to the findings of the market research and the recommendations of the expert individuals or agencies who would be engaged to carry them out.

[fol. 146]

A PLAN OF ACTION *for the* GLASS CONTAINER INDUSTRY

- MARKET RESEARCH
- TECHNICAL RESEARCH
- GLASS HANDLING RESEARCH
- DESIGN RESEARCH
- ADVERTISING & PUBLICITY

MARKET RESEARCH

These facts are self-evident. We need only recall the example of the American Meat Institute to appreciate the value of market research in determining the most effective approach to marketing problems, and the danger of missing the mark completely without such guidance.

MARKET RESEARCH

is essential in modern marketing

BECAUSE . . .

* CONTAINER CHOICE RESTS ULTIMATELY WITH CONSUMERS AND RETAILERS

* PSYCHOLOGICAL FACTORS AND PREJUDICE INFLUENCE CHOICE

* MARKETS ARE CONSTANTLY CHANGING IN CHARACTER, HABITS, AND THINKING

Here is the basic information we would develop and keep up to date through market research. Such information, it will be seen, would be fully as essential to guide technical and design research as it would promotional effort. It would tell us what we need to know to make our product more desirable and more functional for the public.

Properly conducted, it can be "imaginative research", discovering potential new markets for glass containers. Thus it would keep industry thinking dynamic.

[Vol. 151]

1806

MARKET RESEARCH

provides basic information

1. FIND OUT PREFERENCES AND PREJUDICES ON CONTAINERS
2. DETERMINE RELATIVE ADVANTAGES OF GLASS AND COMPETING CONTAINERS IN MINDS OF MARKET
3. UNCOVER MISCONCEPTIONS ABOUT GLASS
4. STUDY HABITS OF USE AFFECTING PREFERENCE AND DESIGN
5. DISCOVER POTENTIAL NEW MARKETS WHERE DISSATISFACTION EXISTS
6. KEEP ABREAST OF CHANGING TRENDS

(1)

Market Research program outlined here is scientifically designed to give the necessary answers as to public and group opinions within an accuracy of approximately 5%. This, while not adequate for predicting an election, would be perfectly sound for our purposes.

The plan would be to conduct the first bi-annual study before launching any promotional effort to insure that the effort will be guided in the proper direction. This study would then be repeated every two years to measure the effectiveness of the industry program and modify the approach as needed. These re-surveys would also uncover new opportunities and new threats to the industry in time to take advantage of this knowledge.

Spot surveys would be of the nature of the recent survey of the California Baby Food Market, as the need for these special studies appeared.

The continuous data collection would be carried on by a girl in the GCMI office specially trained in statistics and market research, so as to keep the market survey you have just reviewed up to date, with periodic bulletins to the industry covering developments of interest.

[fol. 153]

MARKET RESEARCH PROGRAM

1808

BI-ANNUAL MARKET STUDIES

10,000 CONSUMER FAMILIES
2,000 RETAILERS
100 WHOLESALERS AND CHAINS
50 PACKERS
100 OPINION INFLUENCING AGENCIES

SPOT SURVEYS

ON SPECIFIC PROBLEMS, WHEN AND AS NEEDED

CONTINUOUS DATA COLLECTION

GOVERNMENT STATISTICS
STATISTICS ON COMPETITION
CLIPPINGS
REPORTS ON NEW PRODUCTS

[fol. 134]

The figure for the bi-annual market study shown in this budget indicates the yearly cost. It represents an estimate of $70,000 for each such study, conducted every other year. This may seem to be a low figure, but we have every reason to believe that we can obtain such a study, complete with the highest type of analytical interpretation of the meaning of the findings to the industry.

[fol. 155]

MARKET RESEARCH

1810

BUDGET

	ANNUAL BUDGET
BI-ANNUAL MARKET STUDIES	$35,000
SPOT SURVEYS	20,000
CONTINUING DATA COLLECTION	5,000
TOTAL	$60,000

In weighing the importance of technical research to an industry such as ours, it is well to consider that the chemical industry as a whole invests over 450 million dollars per year in technical research, the majority of it in the field of organic chemistry which includes the many so-called "plastic" materials which represent one of our most aggressive competitors.

It is also interesting to know that according to a recent Conference Board report all manufacturing industry in the United States is spending an average of 2% of net sales on research. (Incidentally, 46.5% of this expenditure comes from government funds). The Conference Board report also shows that the Stone, Clay, and Glass industry in 1951 spent 1.3% of net sales on technical research (of which only 7% was supplied by the government).

1812

TECHNICAL RESEARCH

In recommending sound consideration of supplementary technical research, the fine work of individual glass container companies and the Preston Laboratories, as well as other interested organizations should not be discounted. However, the rapid pace of modern industry advancement seems to call for a broader effort.

TECHNICAL RESEARCH

HAS SPAWNED MANY NEW AND
IMPROVED COMPETING
PACKAGING MATERIALS

IN ONE SENSE WE HAVE BEEN "OUT RESEARCHED"

THE QUESTION ...

IS IT POSSIBLE THROUGH TECHNICAL
RESEARCH TO LEARN HOW TO PRODUCE
LIGHTER, STRONGER, GLASS CONTAINERS?

IT PROBABLY IS,

BECAUSE ...

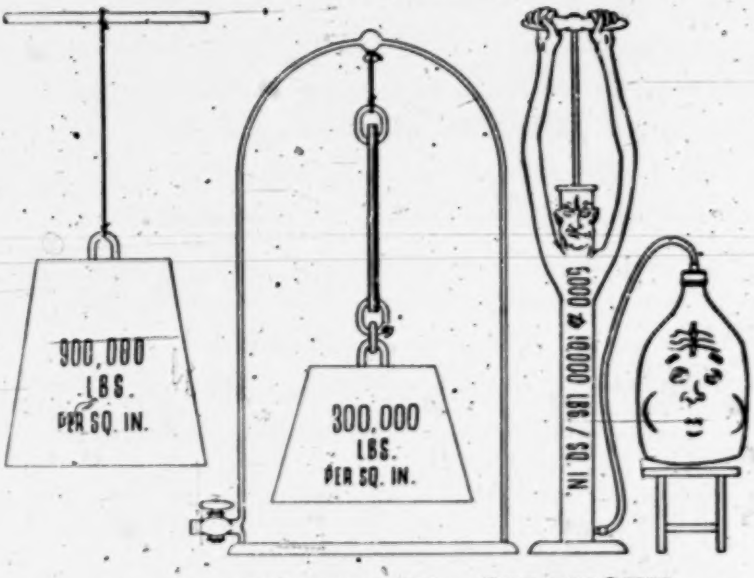
1815 [fol. 160]

It is well known that a high silica glass fibre can be made which has a tensile strength of nine hundred thousand pounds per square inch, - four times as strong as steel.

It is not quite so well known that experiments at Corning Glass Works have shown that glass need not be drawn into a fibre in order to exhibit these high strengths. They have had glass rods the size of a pencil sustain weights representing stresses of 300,000 pounds per square inch upon the glass for six months on end, - when they were maintained in a vacuum. As soon as the valve is opened and the atmosphere admitted to the presence of the glass, apparently the moisture in the atmosphere causes the strength to drop to less than 10,000 pounds per square inch within ten minutes.

We know that in a bottle we do not retain more than five to ten thousand pounds per square inch of this inherent strength of glass. If through research we could unlock the scret of these high strengths and apply it to bottles, we would have the answer to our weight and breakage problems. Even an increase of 1% in the retained strength would double the strength of our bottles.

We are UTILIZING only ONE PERCENT



of the INHERENT STRENGTH of GLASS

If we were to apply the terms of the investment business to investments made in research, we would say that "blue chip" research projects are those which will, almost without fail, give a return on the investment within a reasonable length of time.

Naturally, whatever is done in the field of technical research would have to be determined by a committee of the top research men from our industry. What is shown here is in the way of a "for instance", - an example of which might be done. The type of research institute referred to would be one such as Battelle Memorial Institute, Armour Research Institute, or Arthur D. Little Company.

A wild cat project is one whose outcome cannot be foreseen at this distance, but if successful, would bring tremendous returns on the original investment. The one suggested here is the one which might unlock the secret of glass strength. It would benefit the whole glass industry and it's reasonable to expect that the other parts of the glass industry would join with us in financing such a project if we were successful in finding the university and the right people to do the job.

TECHNICAL RESEARCH PROGRAM

1. TWO "BLUE CHIP" PROJECTS
   AT A RECONIZED RESEARCH INSTITUTE ...
   a. "THE CAUSE AND CURE OF CHECKS"
   b. "COATINGS FOR GLASS CONTAINERS"
   ... THE OUTPUT OF A FEEDER TO BE RENTED FROM A GLASS COMPANY FOR EXPERIMENTAL WORK

2. ONE "WILD CAT" PROJECT
   AT A UNIVERSITY ...
   "THE BASIC STRUCTURE OF GLASS AND GLASS SURFACES"
   ... A JOINT PROJECT WITH THE OTHER GLASS INDUSTRIES
   ... A JOB FOR TOP-FLIGHT, SOLID-STATE PHYSICISTS
   ... THE RESULTS TO BE PUBLISHED

It takes time to get started on basic research. It will be very difficult to assemble the right people and it is not expected that full scale operation on the university project could be achieved sooner than in the fourth year. The fourth year budget as shown would probably be a maximum, as it is difficult to see how you could spend at a rate much higher than this.

[fol. 165]

1820

TECHNICAL RESEARCH BUDGET

1. INSTITUTE PROJECTS...

a. "CAUSE AND CURE OF CHECKS" $75,000.

b. "COATINGS FOR GLASS CONTAINERS" 75,000.

2. UNIVERSITY PROJECTS...

"Basic Structure of Glass & Glass Surfaces"

	TOTAL	GCMI SHARE
FIRST YEAR	$100,000.	$ 50,000.
SECOND YEAR	100,000.	50,000.
THIRD YEAR	200,000.	100,000.
FOURTH YEAR AND AFTER	250,000.	125,000.

TOTAL GCMI FIRST YEAR $200,000.

1821

GLASS HANDLING RESEARCH

[fol. 167]

1822

This subject has been under discussion for over two years by the Container Design and Specification Committee.

It is generally acknowledged in the industry that more work should be done, particularly with the equipment manufacturers in order to provide glass packers with the best possible material aids towards increasing their efficiency and thereby reducing the cost of goods packaged in glass.

[fol. 168]

1823

GLASS HANDLING RESEARCH

IS NEEDED TO BROADEN
GLASS CONTAINER MARKETS

BECAUSE ...

THE RETAILER, THE DISTRIBUTOR,
THE PACKER AND THE EQUIPMENT
MANUFACTURER
STAND BETWEEN US AND
THE CONSUMER

(15)

There are many other ways and means besides those listed here whereby a glass handling engineer on the G.C.M.I. staff could be effective in improving the science of glass packaging.

GLASS HANDLING RESEARCH

will get Action through...

- PERSONAL CONFERENCES WITH EQUIPMENT ENGINEERS
- TRADE PAPER ARTICLES
- TALKS TO ASSOCIATIONS AND OTHERS
- CLASS IN UNIVERSITY "CANNERS AND FREEZER" SCHOOLS
- CURRICULA FOR UNDERGRADUATE SCHOOLS
- BULLETINS TO GLASS CONTAINER COMPANIES
- WORK ON SPECIAL PRODUCTS WITH SELECTED PACKERS
- DISTRIBUTION OF BLUE PRINTS
- COOPERATION WITH GCMI DESIGN RESEARCH PROGRAM

This is largely an educational job and it will not be an effort to duplicate the work of the many fine glass handling engineers who are presently working in the field for individual glass companies. As a matter of fact, this G. C. M. I. engineer could assume the responsibility of the overall educational job, thereby releasing individual company engineers to devote full time to their own problems.

[fol. 172]

1827

GLASS HANDLING RESEARCH PROGRAM

ONE MAN, A COMPETENT GLASS HANDLING ENGINEER WORKING FOR GCMI, CAN GET RESULTS THROUGH SPARKING COOPERATIVE EFFORT

between...

EQUIPMENT MANUFACTURERS
PACKERS' ASSOCIATIONS
UNIVERSITIES
TRADE PAPERS
SELECTED PACKERS

(18)

1828

[fol. 173]

This budget should be self-explanatory and since it is very modest, the practical results should surely outweigh the costs.

[fol. 174]

GLASS HANDLING RESEARCH 1829

BUDGET

SALARY	$12,000
TRAVEL & BUSINESS ENTERTAINMENT	5,000
REPRINTS, FOLDERS, BLUEPRINTS	10,000
	$27,000

OFFICE, STATIONERY, ETC., INCLUDED IN M & R DIVISION EXPENSE

(19)

1830

DESIGN RESEARCH

[fol. 176]

It has been suggested that a consulting industrial designer from outside the industry, accustomed as he is to studying the appearance and the functioning of consumer items in the trade and in the home, could come up with ideas which could be adapted by the Container Design and Specification Committee to G. C. M. I. recommended designs, giving them greater appeal and therefore greater acceptance and wider use. This would also stimulate progress in the thinking of the committee to make its work more effective.

An example of what might have been done is found in the dairy container field. A designer could well have hit upon the idea of square milk bottles with its great saving advantage prior to the introduction of the paper milk bottle which might have somewhat retarded the invasion of that portion of the glass container market.

[fol. 177]

1832

DESIGN RESEARCH

CAN INCREASE GLASS HOUSE EFFICIENCY THRU...

LONGER RUNS AND FEWER MOLD CHANGES

GIVING GOOD RECOMMENDED DESIGNS MAXIMUM APPEAL TO CONSUMER, RETAILER, PACKER

FOSTERING THEIR WIDER USE THRU...

- PUBLICITY
- TRADE PAPER ADVERTISING
- PRESTIGE VALUE OF OUTSIDE DESIGNER
- MORE GLAMOROUS NAMES

FURNISHING GLASS CONTAINER SALESMEN WITH...

- SELLING IDEAS, IN BULLETINS
- BROCHURES SHOWING POSSIBILITIES OF INDIVIDUALITY THRU LABEL TREATMENT, ETC.
- BULLETINS SHOWING FILLING LINE ADVANTAGES OF RECOMMENDED DESIGNS

[fol. 178]

Such an industrial designer, supplementing the market research program, might well, through imaginative design and research, develop new uses for glass containers or so increase the appeal of present containers as to widen their use.

[fol. 179]

DESIGN RESEARCH

1834

CAN BROADEN THE MARKET FOR GLASS CONTAINERS by...

ANTICIPATING MARKET NEEDS AND FORESTALLING POTENTIAL COMPETITION

DEVELOPING THE RIGHT CONTAINER FOR NEW PRODUCTS NOT NOW IN GLASS

WIDENING PRESENT USES THRU MORE FUNCTIONAL DESIGN

STIMULATING BOLD DEPARTURES FROM TRADITION TO KEEP DESIGNS MODERN

REDUCING COSTS TO PACKERS

KEEPING PACKAGE DESIGNERS CONSCIOUS OF GLASS, ITS DESIGN POTENTIALITIES

MAKING PUBLIC AWARE OF NEWNESS OF GLASS, THRU PUBLICITY AND EXHIBITS

(22)

[fol. 180]

1835

In addition to the activities already mentioned, a design research program should include the sponsoring of competition among industrial design students and photographers so that when they go out into industry and are called in on packaging problems they will be favorably inclined toward glass.

At present the plastics industry is virtually pre-empting this important means of market development.

[fol. 181]

1836

DESIGN RESEARCH

Program

COMMISSION CREATIVE DESIGNER TO . . .

- SEEK OUT NEW USES FOR GLASS CONTAINERS
- RECOMMEND FUNCTIONAL DESIGNS FOR THEM
- FASHION NEW DESIGNS FOR SPECIFIC OLD PRODUCTS
- SUBMIT IDEAS FOR PROMOTING USE OF GCMI RECOMMENDED DESIGNS

COMMITTEE ON CONTAINER DESIGN AND SPECIFICATION

- CONSIDER DESIGNER'S RECOMMENDATIONS AT BI-MONTHLY MEETINGS
- DIRECT PREPARATION OF DRAWINGS, PUBLICITY, ADVERTISING, BULLETINS AND BROCHURES
- SPONSOR COMPETITION AMONG INDUSTRIAL DESIGN STUDENTS AND PHOTOGRAPHERS

GLASS HANDLING ENGINEER, COOPERATING

[Vol. 187]

DESIGN RESEARCH 1838

BUDGET

COMMISSIONS FOR DESIGN SERVICES	$15,000
PRIZES AND EXPENSES OF CONTESTS AND EXHIBITS	5,000
	$20,000

1839

ADVERTISING *and* PUBLICITY

[fol. 185]

It is not enough to have the best container. The consumer, the packer the retailer, the distributer and their employees all exercise a choice which can operate either for or against glass containers.

They must be made to understand and to recall the advantages of glass, through educational advertising and publicity.

Several association executives have told me of a valuable by-product of their association advertising programs. Such programs almost invariably increase the morale and self-esteem of the industry, and raise the value of the industry product in the thinking of their sales people. This results in better sales effort.

[fol. 186]

ADVERTISING and PUBLICITY

1841

is needed for Glass Containers

BECAUSE . . .

* GLASS IS TAKEN FOR GRANTED
* MISCONCEPTIONS MUST BE CORRECTED
* PREJUDICES MUST BE OVERCOME
* COMPETITION IS ADVERTISING HEAVILY
* ACCEPTANCE IS NOT ENOUGH . . .
  ACTIVE PREFERENCE MUST
  BE SECURED

[fol. 187]

The accumulated evidence of this survey points unmistakably to the fact that the glass container industry has a product which is susceptible to successful promotion.

[fol. 188]

1843

ADVERTISING and PUBLICITY

can effectively increase glass container sales...

* CORRECTING MISCONCEPTIONS WILL REMOVE PREJUDICE, CREATE ACCEPTANCE
* MAKING PUBLIC CONSCIOUS OF GLASS WILL AWAKE DORMANT PREFERENCE
* PROMOTION OF DRAMATIC QUALITIES OF GLASS WILL CREATE ACTIVE CONSUMER DEMAND
* CREATION OF CONSUMER DEMAND WILL ENCOURAGE PACKERS TO USE GLASS

(11)

[fol. 189]

1844

The final copy strategy would not be determined, of course, until the results of the consumer survey were at hand and until advertising and publicity agencies had been selected.

This program would need genius level treatment to keep it from being too abstract, but such treatment could be obtained from proper agency selection.

ADVERTISING and PUBLICITY

STRATEGY

DRAMATIC PRESENTATION...

TO CREATE GLASS CONSCIOUSNESS
TO MAKE A FORCEFUL IMPRESSION

ATTACK ON A BROAD FRONT...

BABY FOOD... BEER ... FRUIT ... MILK ... ETC.

ALTERNATE ADS ... SELLING ANY ONE
USE SELLS ALL, BECAUSE IT ALL
SELLS GLASS AS A CONTAINER

CENTRAL THEME APPLICABLE TO
ALL GLASS CONTAINERS

"IT'S BETTER IN GLASS"

[fol. 191]

With the present day high cost of magazine space and television time and production it is absolutely essential to have total impact, which means using the newest techniques to obtain publicity which is sometimes referred as to uncontrolled impact (since editors may change your wording to conform to their use of the material) in addition to the controlled impact of advertising where you tell your message just as you want it to appear.

EMPHASIZE DIFFERENT QUALITIES FOR DIFFERENT USES ...

BABY FOOD..."NOTHING PROTECTS LIKE GLASS"
BEER..."IT TASTES BETTER IN GLASS"
FRUITS..."YOU CAN SEE IT'S BETTER IN GLASS"
MILK..."IT KEEPS BETTER IN GLASS"

CONTINUITY...

KEEPING EVERLASTINGLY AT IT
BRINGS SUCCESS

TOTAL IMPACT...

CONSUMER ADVERTISING
TRADE ADVERTISING
PUBLICITY

1848

[fol. 193]

It has sometimes been said that the glass container story is too abstract to be told in a general advertising program.

It is true that continual repeating of the excellent but somewhat timeworn motto "See What You Buy, Buy in Glass", is not enough to strongly affect consumer preference.

The question is, for example, how do you convey the fact that glass is chemically inert?

[fol. 194]

1849

DRAMATIC WAYS
CAN BE FOUND...
TO TELL THE STORY OF
THE ADVANTAGES OF GLASS

such as...

(38)

1850

[fol. 195]

Here is the way Corning Glass Works did it in a very effective advertisement which appeared in Business Week Magazine.

[fol. 196]

[Illustration omitted]

[fol. 197]

Here is an example of what an advertising and publicity program for the glass container industry might cover. However, as previously stated, this is not a final recommendation. The choice of media and the whole plan of campaign can only be developed when the experts from the advertising and publicity agencies have been brought into the picture.

It must be emphasized that extremely skillful treatment will be needed and strong demands will have to be made upon the agencies.

Again, the impact available through the free channels of publicity must be skillfully used to back up the advertising.

[fol. 198]

1853

ADVERTISING and PUBLICITY Program

ADVERTISING...

- CONSUMER MEDIA
- TRADE PAPERS

PRINTED MATERIAL...

- CONSUMER BOOKLETS
- SCHOOL BOOKLETS
- TRADE BOOKLETS
- PACKER BOOKLETS
- STORE DISPLAY MATERIAL

PUBLICITY...

- NEWS STORIES, PICTURES
- MAGAZINE FEATURE ARTICLES
- COLUMNISTS
- WOMEN'S PAGES
- HOME ECONOMISTS
- TELEVISION TIE-UPS
- MOTION PICTURE TIE-UPS
- EDUCATIONAL MATERIAL FOR SCHOOLS
- TRADE PAPER PUBLICITY
- INTER-INDUSTRY COOPERATION

[fol. 199]

The best available advice from advertising consultants and the managersand agencies handling other association programs, concur in the opinion that program for the glass container industry sould incorporate a minimum of $1,000,000 for time and/or space to be effective.

The allowance here for printed material covers the "merchandising" of the program which would be accomplished through direct mail to the glass container companies, their salesmen and the trade.

ADVERTISING and PUBLICITY BUDGET

Recommended Program

ADVERTISING	
SPACE AND/OR TIME	$1,100,000.
PRODUCTION	165,000.
PUBLICITY	
SERVICES, EXPENSES	80,000.
PRINTED MATERIAL	
PRODUCTION & DISTRIBUTION	110,000.
TOTAL	$1,455,000.

[fol. 201]

1856

Overall ORGANIZATION and BUDGET

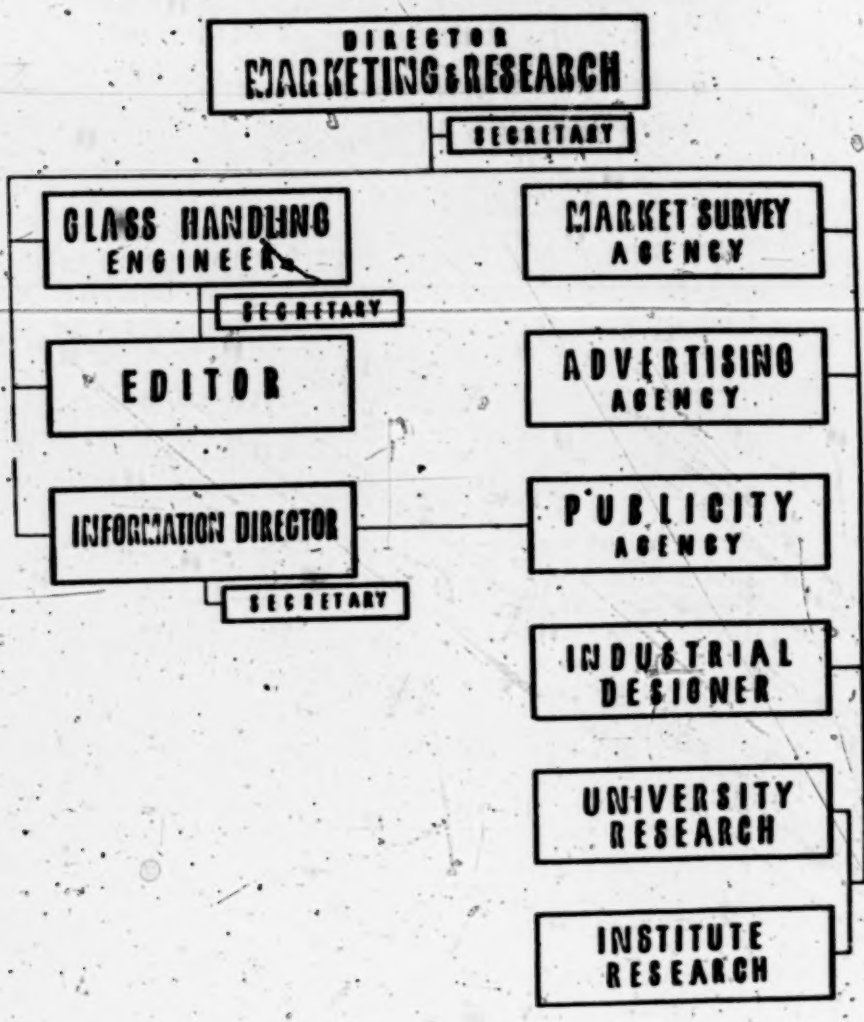
[fol. 202]

The organization shown here represents a tight, economical operation, costing considerably less than the normal allowance for management and overhead.

It contemplates that the account executive and copy writer of the advertising agency will fulfill the function of advertising manager.

The Information Director will originate publicity releases and will handle such promotional activities as speeches at conventions, etc.

ORGANIZATION CHART

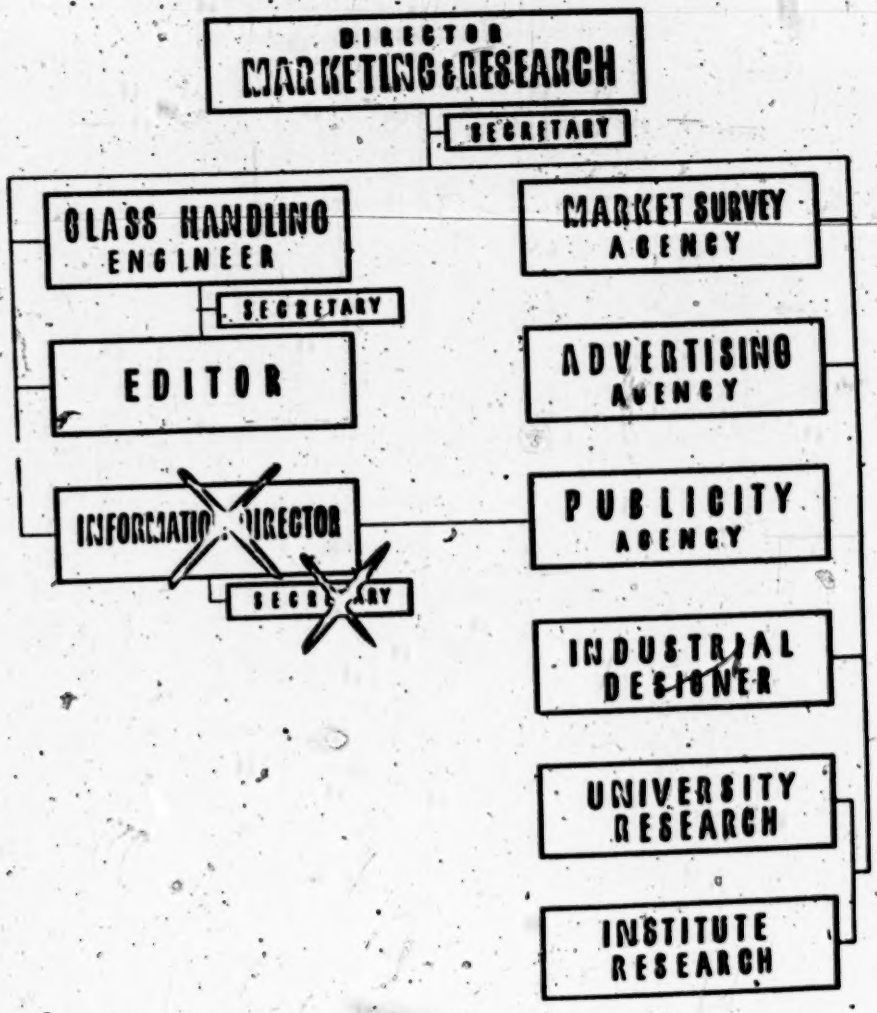


1859

[fol. 204]

On a minimum program basis, the Information Director and his secretary could be eliminated, by reducing the emphasis placed on publicity and transferring more of the work to a publicity agency.

MINIMUM PROGRAM ORGANIZATION CHART



1861

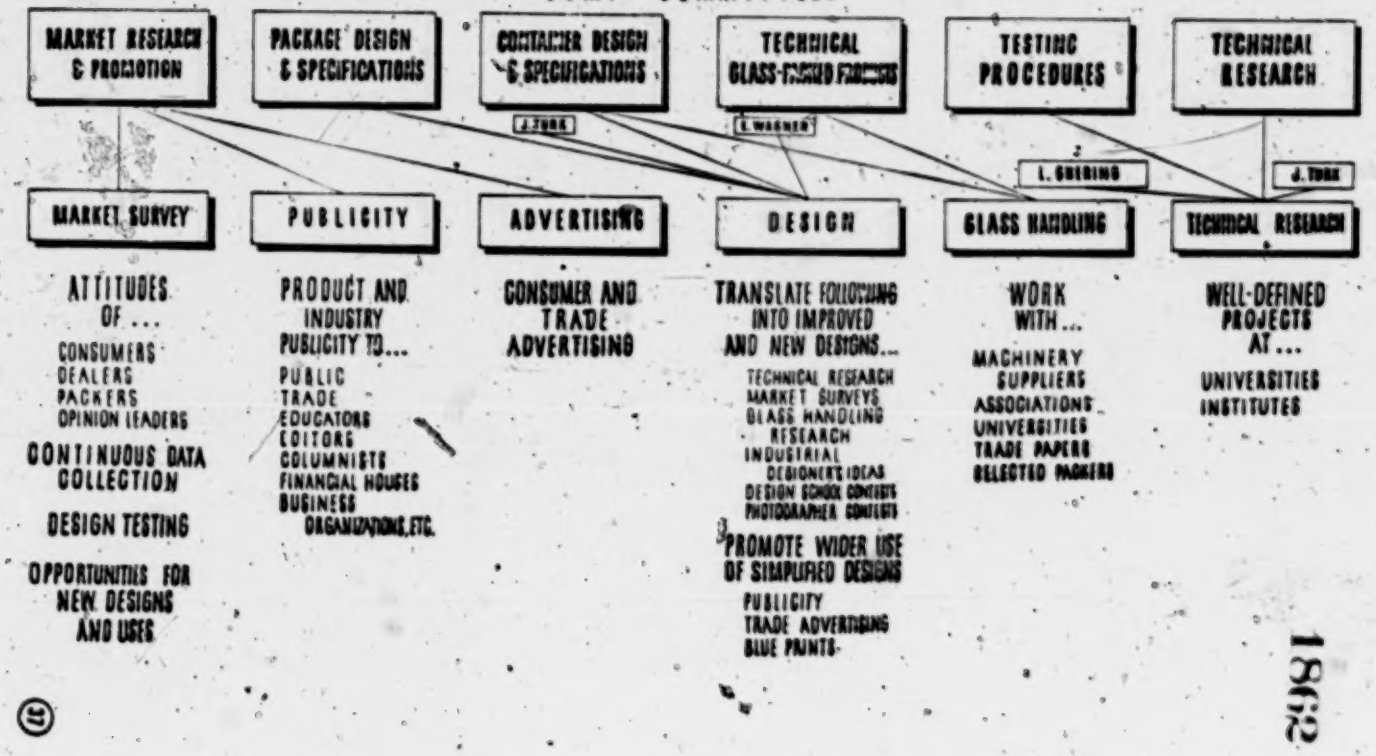
[fol. 206]

This chart shows how the proposed activities would be integrated into the present G. C. M. I. structure for effective control and guidance, and to draw upon the talents of industry committee members.

ORGANIZATION CHART

FUNCTIONS

GCMI COMMITTEES



1868

[fol. 208]

The total of the budget as shown here, represents about 3/10 of 1% of the glass container industry's annual dollar sales.

Glass Container Manufacturers Institute, Inc.
99 Park Avenue
New York, New York

Attention: Mr. Richard L. Cheney, Director Market Research & Promotion Division.

Subject: Philadelphia Store Audits—Baby Food.

Gentlemen:

Transmitted herewith is a summary report on the store audits conducted in Philadelphia super-markets on baby food sales for the period of November, 1954 to October, 1955.

Respectfully, Ford Sammis.

[fol. 214] How the Audits Are Conducted

A carefully selected group of 15 super-markets spread out over the Philadelphia Metropolitan Area represent the panel used in these audits.

Trained auditors visit each store every 8 weeks and take an actual physical inventory of all items being studied, counting warehouse stock as well as shelf stock. An audit is made of the store's invoices to determine the exact number of units of each item received by the store since the previous inventory.

Sales of each item are then computed according to the formula

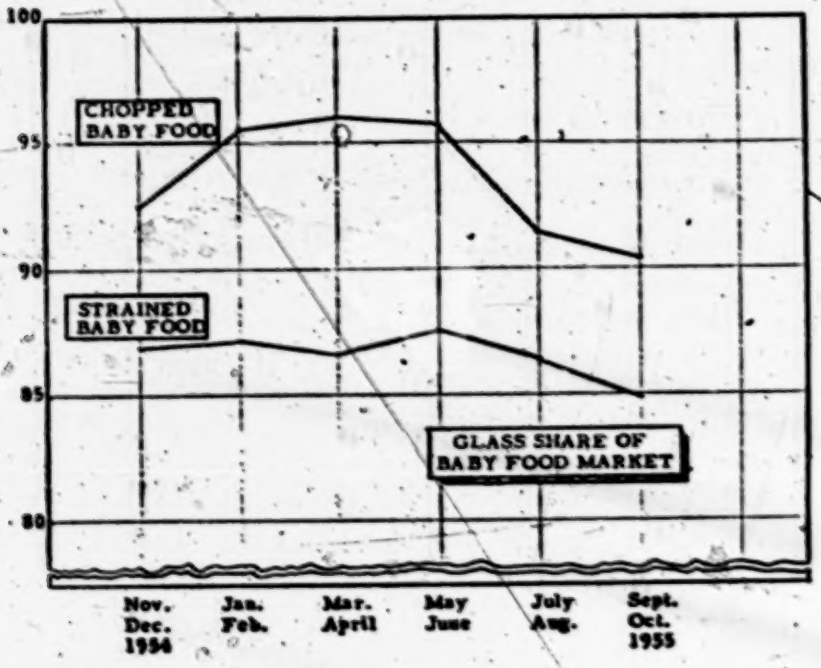
Opening inventory
plus
Purchases received
less
Closing inventory
equals
Sales during audit period.

This is an accurate, proven method of determining consumer purchases.

[fol. 215] Summary

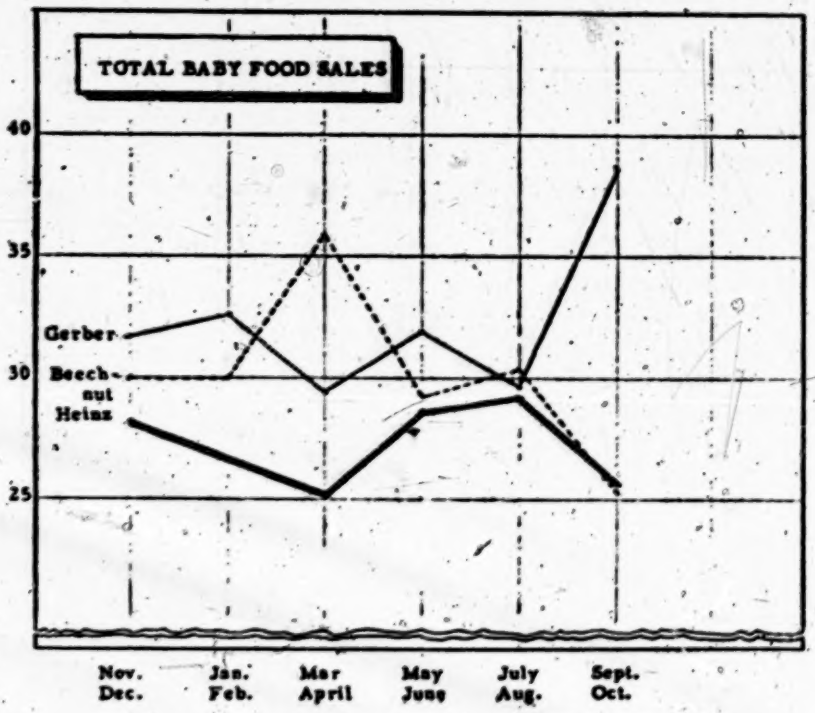
During the entire period covered by these audits, baby food in the Philadelphia area has been sold predominnately in glass. Glass has represented from 86.2% to 89.3% of total sales during the period of November, 1954 to October, 1955.

Glass has been in a stronger position in the chopped baby food field than with strained variety, which has been true in Los Angeles, also.



[fol. 216] Chopped baby food represents about 20% of total baby food sales in Philadelphia, in comparison with 35% of total sales in Los Angeles. This indicates that Los Angeles, the proverbial mecca of dieters and crackpots of all sorts, goes in stronger for adult consumption of baby food. (Or else its youngsters turn athletic at an early age and chomp chopped food when infants in Philadelphia are still only able to gum-chew the strained variety.)

Gerbers is the leading brand in Philadelphia, but by no means as great a margin as it enjoys in Los Angeles. Heinz and Beechnut are close neck-and-neck seconds to Gerber, particularly in the chopped food field.



[fol. 217] Sales of Baby Food in Philadelphia Food Stores

	1954		1955			
	Nov. Dec.	Jan. Feb.	Mar. April	May June	July Aug.	Sept. Oct.

Subject: Baby Food Container Situation—1956

Gentlemen:

This report summarizes data on baby food containers from G.C.M.I. national consumer and retailer surveys during the past three years, and from store audits conducted in Los Angeles stores since October, 1954. In certain instances, where applicable, reference is made to a consumer survey conducted throughout California in 1953 for the West Coast Sub-Committee.

The charts used are those shown at the Semi-Annual Meeting of G.C.M.I. at Phoenix in November, 1956.

All data in this report apply to the area West of the Mississippi, where tin and glass are in active competition for the baby food market. East of the Mississippi, baby food sales and preference have been 90% glass for several years.

Respectfully, Ford Sammis.

Attention: Mr. Richard Cheney

Gentlemen:

Transmitted herewith is report on "Survey of California Baby Food Market." This survey was conducted to secure factual information required to determine the following objectives:

(1) Can sales of baby food in glass jars be increased in California?
(2) Will promotion by Glass Container Manufacturers Institute be effective in increasing sales?
(3) Approximately how much will it cost to do the job, and how long will it take to show significant results?
(4) What strategy and what media will accomplish the task most effectively and efficiently?

This report covers the findings from surveys of 800 mothers with babies under 2 years old, 200 grocery stores, and 34 wholesaler and chain store headquarters. Samples used in the surveys represent a balanced cross-section of the entire State of Calfiornia.

Recommendations are presented in a separate letter to the West Coast Sub-Committee on Market Research and Promotion.

Respectfully, Ford Sammis.

Management Consultants

New York, Washington, Boston, Chicago, San Francisco,
Los Angeles

60 East 42nd Street
New York 17, N.Y.
February 23, 1955.

Mr. Richard L. Cheney
Director of Market Research
Glass Container Manufacturers Institute Inc.
New York, New York

Dear Mr. Cheney:

The visual material contained herein was presented to the Beer Bottle Marketing Sub-Committee on February 16, 1955.

The Committee requested photostats of this material, as it was presented, for further study.

Summary of Conclusions

The Baltimore success of one-ways will be difficult to reproduce because of elements unique to the Baltimore situation. These elements are:

1. Motivation—a highly motivated leading brewer was a key factor in the one-ways' success.
2. Environment—the nature of the Baltimore market peculiarly favored one-ways.
3. Action—exceptionally skillful action was taken on the part of the Baltimore brewer in the important areas of selling, pricing, promotion, and advertising.

The failure of one-ways in Detroit can be traced to a far less favorable combination of motivation, environment, and action in that market.

[fol. 238] Report Organization

The report is divided into the following major sections:

Nature of the study
Appraisal of the Baltimore market for one way bottles
Cost, margin, and price data of a leading brewer
Summary of factors affecting the success of one-ways in Baltimore
Market comparison—Baltimore versus Detroit
Why the Baltimore success will be difficult to duplicate.

Exhibits are found at the end of the report.

We appreciate the opportunity of working with you on this very interesting assignment.

Respectfully submitted, McKinsey & Company.

Attention: Mr. Richard L. Cheney, Director
Market Research & Promotion

Subject: Distribution & Sales of One-Way Beer Bottles in Virginia—October, 1956

Gentlemen:

This report covers a survey made among 136 off-premise beer outlets in Virginia during the latter part of October, 1956—5 months after sale of one-way bottles became legal. Store panels surveyed cover all types of outlets—supermarkets, small grocery stores, on-off sale taverns, service post exchanges, and drug stores. Each type of store was represented in the sample in proportion to its importance as a beer outlet, as determined by a consumer survey conducted in June, 1956.

Sales data were obtained from store manager's estimates of their sales. While not as reliable as actual store audits, the data are believed to be reasonably accurate because Virginia stores are required to pay cash on delivery for all beer, giving store managers intimate knowledge of beer purchases.

Respectfully, Ford Sammis.

Subject: Consumer Survey Among Virginia Beer Drinkers, January, 1957.

Gentlemen:

This survey of personal interviews with 1037 beer drinking families was conducted in January, 1957, as a follow-up on a similar survey made in June, 1956, when one-way bottles were first legalized for off premise sale in Virginia.

Interviews were distributed equally in Alexandria, Richmond, Norfolk, and Roanoke. Advertising campaigns were conducted in the first three cities throughout the last six months of 1956 by G. C. M. I. and certain breweries sponsoring one-way bottles. Roanoke was used as a control market.

Reference is made to reports on the first consumer survey and on distribution surveys of retail beer outlets, for complete analysis of the Virginia beer situation.

This survey was conducted for the confidential information of your Institute and member companies.

Respectfully, Ford Sammis.

Glass Container Manufacturers Institute

Market Research & Promotion Division

BB-#16

October 22, 1958.

To the Beer Bottle Manufacturers

Gentlemen:

Several people from our industry were invited to an informal meeting in the offices of Container Corporation of America on the 16th floor of 99 Park Avenue, New York, to see a new wrap-around style of six pack carrier for the new one-way beer bottle presently shown on the GCMI tentative drawing C-16600-T.

Their presentation was very interesting and they indicated that they would shortly have machines available that could automatically package six bottles of beer in this wrap-around carrier and insert four of the carriers in a case along with a divider.

These wrap-around six pack carriers will be sold for something less than $30.00 per thousand and the automatic machines were quoted at $15,000 to $18,000 each and they have a speed of about 300 bottles per minute. They will probably be sold or leased to brewers.

The Container Corporation also had two or three ideas on outer cartons (to hold four to six packs) which they presented.

Mr. Robert M. Bennett, a sales manager of Container Corporation, will be glad to furnish any interested glass container manufacturers with samples and information on these items.

Within two weeks he plans a cross-country trip to make a presentation to a number of regional and national brewers in hopes of selling some installations.

Attached in dittoed form are figures which he presented to the meeting showing their estimates of packaging ma-

terial costs covering this bottle in their wrap-around six pack (at $29.25/M), in two types of outer packs:

(a) A special case with short, die-cut top flaps designed to catch under the crowns, and
(b) Full height trays

[fol. 246] Estimates for cans in both trays and forty-eight pack, RSC cartons are also shown, and comparisons made between the two forms of packaging.

You will note in the attached charts, figures covering returnable partitions which is their suggested method of getting the empty glass to the brewer in the outer case, which will in turn be used by the brewer. Something of this kind is necessary since the glass company will not handle the six packs but they will be furnished flat to the brewer.

Each page has blanks in which the reader may insert his own estimates where they differ from theirs.

I am sure Mr. Bennett will be glad to answer any questions any of you may have about this new six pack carrier.

We felt it was a matter of sufficient interest that it should be relayed to you in the present form.

Sincerely, R. L. Cheney.

To the Beer Bottle Manufacturers

Subject: Trends in Beer Packaging

Gentlemen:

Enclosed is a chart showing graphically the trends in beer packaging as between returnable bottles, one-ways and cans.

You will note that returnable bottles continue to lose position and that most of their loss has moved into cans although 1956 and 1957 showed some leveling off in this trend toward cans and some small improvement in the position of one-way bottles.

We do not have data on quart bottles and so the position of glass may be somewhat better than this chart shows.

Sincerely,

R.L. Cheney

Enclosure.

To the Beer Bottle Manufacturers

ONE WAY BEER SALES IN VIRGINIA

Gentlemen:

We have just received our first report from the Virginia Alcoholic Beverage Control Board, of actual sales of beer in No Deposit bottles in that state. In their letter of January 21, 1957, they define these data (shown below) as:

"a tabulation of beer sales in cases by container types for the months of July, August, and September, 1956. This tabulation is 99% complete and is based on monthly reports to us by licensed Virginia distributors."

COMMONWEALTH OF VIRGINIA
Case Sales of Beer by Container Types
July - August - September, 1956

	Non-Ret.	%	Ret.	%	Cans	%	Total
July	59,726	4.0	502,080	33.6	931,855	62.4	1,493,661
August	69,658	4.8	501,582	35.0	862,613	60.2	1,433,853
September	56,334	5.1	413,132	37.6	630,379	57.3	1,099,845
Totals	185,718	4.6	1,416,794	35.2	2,424,847	60.2	4,027,359

For comparison we summarize on the attached sheet data previously sent you, covering earlier periods when No Deposit bottles were not permitted in Virginia.

Sincerely,

R. L. Cheney

ONE WAY BEER SALES IN VIRGINIA

Gentlemen:

From the Virginia Alcoholic Beverage Control Board we have just received the figures shown below for the months of October, November and December, 1956:

COMMONWEALTH OF VIRGINIA
Case Sales of Beer by Container Types
October - November - December, 1956

	Non-Ret.	%	Ret.	%	Cans	%	Total
October	68,021	6.2	416,031	37.6	621,104	56.2	1,105,156
November	49,545	5.2	376,310	39.2	534,169	55.6	960,024
December	51,929	5.2	384,571	38.3	566,569	56.5	1,003,069
Total	169,495	5.5	1,176,912	38.4	1,721,842	56.1	3,068,249

We repeat here the figures for July, August and September given you in Bulletin BB-#6 dated January 29, 1957:

July	59,726	4.0	502,080	33.6	931,855	62.4	1,493,661
August	69,658	4.8	501,582	35.0	862,613	60.2	1,433,853
September	56,334	5.1	413,132	37.6	630,379	57.3	1,099,845
Total	185,718	4.6	1,416,794	35.2	2,424,847	60.2	4,027,359
6 Months Total	355,213	5.0	2,593,706	36.6	4,146,689	58.4	7,095,608

As before, these represent a tabulation of beer sales in cases from virtually all licensed Virginia distributors.

For comparison we summarize on the attached sheet data previously sent you covering earlier periods when No-Deposit bottles were not permitted in Virginia.

Sincerely,

Attachment.

To the Soft Drink Bottle Manufacturers

SOFT DRINK CAN STATISTICS

Attached is a table showing Department of Commerce figures on short tons of tinplate used in the manufacture of soft drink cans for the first nine months of 1958 compared with the same period in 1957 and 1956.

These data are also shown in graphic form.

On the basis of investigations made in the field by certain of our member companies we estimate that approximately 50% of the soft drinks canned in this country are shipped offshore to Army PX, Navy ships stores, and similar installations.

Non-Returnable Bottle Shipments

Shipments of one-way soft drink bottles for the first nine months of 1958 total 1,041,000 gross and represented a decrease of about 0.6% below shipments for the same period of 1957.

To the Soft Drink Bottle Manufacturers

Gentlemen:

The attached report is sent to you at the suggestion of the Committee on Market Research and Promotion.

In view of the current activities in the promotion of canned beverages, the Committee felt you might find this useful in reminding your bottler customers of the heavy promotion which GCMI continues to put behind carbonated beverages in glass bottles.

This is a very substantial "total impact" program, using a broad array of advertising, publicity and promotional tools, but directed to the right targets; and it represents spending where it counts. It has the cumulative effect of being in the fourth continuous year of activity.

Extra copies of the report are available.

Sincerely,

R. L. Cheney

SOFT DRINK CAN STATISTICS

Attached is a table showing Department of Commerce figures on short tons of tinplate used in the manufacture of soft drink cans for the first quarter of 1958 compared with the first quarter of 1957 and 1956.

These have also been plotted on graphs showing 1954 as well, for your information.

Non-Returnable Bottles Growing

Shipments of one-way soft drink bottles for the first quarter of 1958 were 16.3% over first quarter of 1957.

SOFT DRINK CAN STATISTICS

Attached is a table showing Department of Commerce figures on short tons of tinplate used in the manufacture of soft drink cans for the first half of 1957 compared with the first half of 1956 and 1955.

These have also been plotted on graphs showing 1954 as well, for your information.

1957 Beverage Can Sales Leveling Off

The earlier gains over 1956 were not sustained in the second quarter, and shipments for the first six months stand at 7.9% above 1956, and somewhat below 1955.

Non-Returnable Bottles Growing

Shipments of One-Way soft drink bottles for the first six months of 1957 were 8.5% over 1956.

Returnables showed further gains in July, reducing the lag behind 1956 for the first six months to 12.3%.

These have also been plotted on graphs showing 1954 as well, for your information.

1957 Shows Upturn in Beverage Cans

You will note that for the first time in three years the sale of tin cans for carbonated beverages has turned upwards and for the first quarter of the year stands 35.2% above 1956.

Non-Returnable Glass Bottles Growing

For the first four months of 1957 one-way glass bottles for carbonated beverages are up 6.2% over 1956.

Returnable soft drink bottles are off 32.7% for the first four months although shipments started to pick up in April with a 17.7% gain over April 1956.

SOFT DRINK CAN STATISTICS

Starting with May of this year the Department of Commerce has been giving monthly statistics of tin plate used in the manufacture of soft drink cans. These appear in "Facts for Industry - Metal Cans." (Series M75D) Corresponding months of last year and year-to-date figures are shown.

1955 Shows Marked Decline in Beverage Cans

Figures just received for August show soft drink can shipments to be down 47.2% from August 1954; and year-to-date, down 33.6% from last year.

Glass Bottles Show Gain

Conversely, shipments of one-way glass bottles for soft drinks were up 74.5% in August over August 1954, and up 22.1% for the year-to-date.

Returnable bottles show even larger gains: 78.0% for the month and 34.0% for the year-to-date.

A tabulation of the beverage can figures is attached, along with a chart showing the trend.

CAN COMPANIES

CARBONATED BEVERAGE PROGRAM

At a panel discussion held at the meeting of the Illinois Bottlers of Carbonated Beverages in Chicago on March 3, 1955 Mr. Arthur Staley of Continental Can Company made two announcements of interest.

He stated that final statistics showed that the number of carbonated beverage cans produced in 1954 was between 450,000,000 and 500,000,000 cans. If all had been filled, - and he inferred that they had not, - this would represent considerably less than 2% of the total soft drink business in 1954.

The other announcement which he made was to the effect that Continental Can Company, American Can Company, and the steel industry as a whole would announce within one month an extensive advertising program in support of carbonated beverage cans.

TREND TO SMALLER SIZES

We think the following excerpt from Len Kanter's column in the February 20 issue of FOOD TOPICS (page 41) to be worth your special attention:

NEW TASTE TREATS

Gradually, with the greater impetus on self-service, combined with new taste desires of our populace, plus a fast tempo of living and convenience, the shift in canned goods has been towards smaller sizes. Surely, every operator must take this shift of consumer desires into his planning for the size of gondolas and facings of the individual important vegetable items.

Canned goods which for some time had been taking a back seat in sales certainly can offer a continued profit for every operator, when we recognize that the canned goods department of every super is still the very base of our existence.

The advent and greater importance of the 8-ounce and 10-ounce can cannot be over emphasized. I know, and every statistical report will prove the one fact, that as we get to smaller and smaller units of cans, our profit structure improves. Who among us can fight with the combination of satisfying the consumer in stocking the smaller cans and thus also increase our operational profit?

In 1955, consumers spent an estimated 67 billion dollars for food. It is important to remember that in the same year the per capita consumption of canned vegetables jumped an important 38% over the years 1935-1939. Today, 6% of all canned vegetables are in 8-ounce cans, compared to a 3% figure registered only five years ago.

Gondola space, plus performance, plus service to consumers, add up to only one thing: the 8-ounce cans and 10-ounce cans are easily the two most important sizes to be considered in our canning marketing fervor.

1943

Glass

Surely, the time is ripe for us to reconsider the entire stocking of our supers. Are we carrying the proper sizes not only of cans, but also the numerous products in glass? Perhaps, we are filling up our gondolas with products in sizes that do not warrant the space they presently occupy. The time of carrying items for variety only or to please a limited number of customers is past. It behooves us to closely reconsider every item of merchandise, in retrospect.

Glass containers should enjoy a substantial part of this expanding market for 8 and 10-ounce sizes in fruits, vegetables and specialty items. Perhaps your sales organizations will want to give this special attention.

R. L. Cheney, Director
Market Research and Promotion

SOFT DRINK CAN STATISTICS

Attached is a table showing Department of Commerce figures on short tons of tinplate used in the manufacture of soft drink cans for the year 1956, to date, compared with 1955.

These have also been plotted on graphs showing 1954 as well, for your information.

1956 Shows Continued Decline in Beverage Cans

It will be noted that use of tinplate for carbonated beverage cans for the first six months of 1956 represents a decline of 11.6% compared to the same period for 1955, and a 33.1% decline compared to the same period for 1954.

Non-Returnable Glass Bottles Holding Their Own

For this same period, shipments of one-way glass bottles for carbonated beverages are virtually the same for the first six months of 1955 and are up 19.3% over the same period of 1954.

Returnable soft drink bottles continue to show gains, the first six months of 1956 being 12.7% above 1955 and 43.8% above 1954.

TO: The Industry

FROM: John B. Carroll

SUBJECT: Beer Container Trends--Year 1957.

National beer consumption in 1957 amounted to 84,353,800 barrels, approximately 1.0% below total beer consumption in 1956. While total packaged beer decreased fractionally from its 1956 total, draft beer was down 3.0% from the previous year.

Beer can shipments in 1957 amounted to 54,238,500 gross, an increase of 3.2% over 1956 shipments. Non-returnable beer bottle shipments totaled 8,494,000 gross, an increase of 3.2%. Returnable bottle shipments amounted to 2,343,000 gross, a decrease of 5.5% from the previous year's totals.

Nearly 35.0% of all packaged beer went into cans in 1957. Non-returnable bottles accounted for 5.4% of the total packaged market. Returnable bottle shipments accounted for the remainder, 59.8%.

In checking earlier annual reports, we have noted the following change in total packaged beer market participation.

	Percentage of Packaged Market		
Period	Cans	Non-Returnable	Returnable
Year 1951	20.6	6.8	72.6
Year 1957	34.8	5.4	59.8

[fol. 301] 4952 GOVERNMENT'S EXHIBIT 75

CONTAINER MANUFACTURERS INSTITUTE, INC
99 PARK AVENUE • NEW YORK 16, N. Y.
MURRAY HILL 2-8999

6-183
August 25, 1958

TO: The Industry

FROM: John B. Carroll

SUBJECT: Beer Container Trends--First Half of 1958

The total volume of beer sold during the first half of 1958 amounts to 40,714,900 barrels, which is a decrease of 1.0% from the same period last year. Both packaged volume and draft for this period showed slight decreases from the same period last year.

Returnable bottle shipments in the first half of 1958 amounted to 2,914,000 gross, 33.9% more than shipments in the first half of 1957. It accounted for 58.5% of total packaged volume.

Non-returnable bottle shipments amounted to 4,126,000 gross, a slight increase over the 4,089,000 gross for the same period last year. Its share of the market was 5.5% of total packaged beer volume.

Beer can shipments reached 27,169,900 gross, an increase of 1.2% over the same period last year. It accounted for 36.0% of total packaged beer volume as compared with 35.2% last year.

[fol. 308] Why The Study Was Done

[fol. 309] There is a great deal of competition for shelf space in the supermarket. New products are perpetually introduced and existing products turn up in an increasing number of diverse sizes and packages. This variety poses a serious problem for the grocer.

On the one hand, he is besieged by salesmen and pressured by consumers. On the other hand, he has only a limited amount of shelf space at his disposal.

Accordingly, he must constantly cut and trim, adjust and improvise, eliminate slow-moving products as he takes on others which he hopes wil move in volume.

These decisions are difficult ones to make, particularly since the pressure of each day's problems makes it almost impossible for him to proceed according to any systematic plan.

[fol. 310] The present study was undertaken as a contribution in this area—to provide facts which will be of help to the grocer in deciding how best to utilize glass jars and cans in planning the arrangement of his shelves.

There are many product areas in which no particular packaging competition exists. Rickles, for example, are almost universally packaged in glass, while soups are packaged in cans. Many other products, however, are available to the consumer in both types of packaging. And most important in this area are the packaged fruits and vegetables, which not only account for a good share of total grocery volume, but also fill a substantial portion of the grocer's shelves.

Accordingly, we have singled out the fruit and vegetable sections of the modern supermarket for study. With respect to these sections, we have tackled the following problems

Assuming that the grocer wants to maximize sales, which of several alternatives should he adopt? Should he con-[fol. 311] centrate on glass jars, or should he concentrate on cans? Or, should he carry some combination of glass jars and cans? Should he carry some products in cans only and other products in jars only, or should he carry the same products both in cans and in jars? What proportion of glass jars to cans should he carry on his shelves? And how, finally, should he handle the different types of pack-

aged products? Should he concentrate all glass jars in a separate glass section or should he disperse them throughout his fruit and vegetable sections?

The experiments in this study were designed to answer these questions.

[fol. 312] How The Study Was Done

[fol. 313] The study was conducted in four large modern supermarkets of the Giant Chain in the Washington, D. C. area. The following four stores participated:

Store A #32—40 Arlington Blvd., Falls Church, Va.
Store B #20—8706 Georgia Avenue, Silver Springs, Md.
Store C #31—4804 Indian Head Highway, Maryland
Store D #29—3336 Wisconsin Ave., N. W., Washington, D. C.

With the cooperation of the Giant Chain Management, and of the managers of the four stores, the packaged fruit and vegetable sections of the stores were turned into a laboratory from April 8, 1957 to July 2, 1957. During this time, two series of experiments were conducted in the stores. These experiments consisted of systematically rearranging the shelves of the stores for two-week periods, and of measuring resulting sales.

At the end of each two-week period, a detailed audit was taken of the fruit and vegetable sections of the stores. Furthermore, two full time research supervisors visited *each* of the four stores (two times a day on Mondays, Tuesdays, and Wednesdays, and three times a day on Thursdays, Fridays, and Saturdays) to make certain that the shelves had not been disturbed except for the normal flow of merchandise from them. The same research supervisors kept daily counts of the movement of products from the shelves. [fols. 314-315] Making use of the bi-weekly audit data, of delivery records, and of the detailed daily reports of the supervisors, it was possible to compute the volume of movement of each of the products involved in the experiment for each of the four stores, for each of the two-week periods.

Thus, we are now in a position to assess the effects on sales of the various experimental shelf display patterns which were instituted in the course of the study.

GCMI-Giant Study

Attached is your copy of the GCMI-Giant Stores Study consisting of three parts as follows:

1. A 24-page booklet reporting pertinent results of this extensive GCMI merchandising study.
2. Seven single sheets—blue—presenting detailed reports on individual products covered in the Study.
3. A "how-to-use"—background bulletin.

Reference to the booklet will show you that this is a very carefully conducted, well-authenticated study of the dramatic merchandising power of glass packaging for retail food store items.

It is our hope that this booklet with its enclosed work sheets will serve as a productive sales tool for the sales departments of GCMI glass container and closure member companies, serving to demonstrate to packers the sales possibilities of glass packs, and thereby opening up new or enlarged accounts.

Quantity copies of this booklet are available upon request. Each copy will be sent with the seven work sheets enclosed inside the front cover and instruction sheets attached.

R. L. Cheney, Executive Director and Marketing Manager.

[fol. 317] How to Use the GCMI-Giant Study

This is a research study on how glass sells. It is for your use with fruit and vegetable packers who ought to put part of their pack into glass containers—or expand glass packs which they already have.

You may also find it useful for other products—such as

juices, health and beauty aids, spices, household cleaning aids, beer, etc.

When you call on a packer:

1. Use the booklet to give him findings for *all* products; to show the over-all merchandising power of the glass container.
2. Then use the Individual Product Data Sheet which fits his *specific* sales problem.
3. Leave a copy of the booklet—and of the Individual Product Data Sheet—with him. (Additional copies are available to GCMI members on request.)
4. Use the material with discretion. Before making your call, examine it carefully to see how it can best fit into your sales story.

Background

The GCMI-Giant Study gears into three *basic* areas of food merchandising:

The way women shop in today's supermarkets.

The retailer's need for maximum sales in *presently available shelf space.*

The packer's desire to increase *over-all* sales

How Women Shop In Food Stores

Research shows us that—

—Written shopping lists are disappearing.

—Customers depend increasingly upon the *store itself.* In the words of Progressive Grocer's Super Valu Study: "She looks for reminders within the giant shopping list that is the supermarket." DuPont studies show that instore decisions have gone up 20% in the last 10 years.

[fol. 318] —Yet in today's big food marts (again, by Super Valu) to *really* shop the store she must *see* 260 items every minute.

—And the mental labor involved in making the many in-store decisions required, causes her to shop in a semi-dazed condition.

Therefore, anything which causes her to shop *more* slowly: which attracts her attention and brings her *out* of the daze caused by shopping.

Produces Greater Store Sales Over-all—and Particularly for Items She Will *See* and Buy on Impulse:

The GCMI-Giant Study gives retailers and packers an important new profit idea, comparable in selling power to "related item displays," "loss leaders," etc.

Glass Containers In Engineered Merchandising.

It proves, by careful research, that glass containers are a *merchandising tool* for both packer and retailer—

—They work like actual Point of Sale material, like bright spots of color in a black and white ad; acting as "stoppers" for customers wandering listlessly past supermarket shelves.

—So, for the retailer, they not only sell *themselves*—but they produce sales for items in other containers as well. They produce greater store sales over-all, with present shelf space.

—For the packer they create *extra* sales. This is *plus* business—not just a swap of sales in glass for sales in tin.

Attention: Mr. Richard L. Cheney, Director Market Research and Promotion Division

Gentlemen:

Transmitted herewith is report on "Survey of Consumer Preference For Food Containers," conducted at your request for the information of your Institute and its member companies.

Purpose of this survey was to study fields where glass containers have not been traditionally used, to investigate.

(a) Extent and strength of consumer preference for glass or other types of containers in each field,
(b) Consumer motivations affecting container preference—why certain containers are preferred, why other types are not liked,
(c) Characteristics of the market for each type of product.

Emphasis has been placed on consumer preference because, in the final analysis, that is what determines the type of container which will ultimately be used for any given field.

Respectfully, Ford Sammis

[fol. 321] Survey of Consumer Preference for Food Containers

	Page
Description of Survey	1
Summary	3
Baby Food	5
Coffee	10
Intermittent Use Products	16
Salad Oil	21
Dry Milk	23
Ripe Olives	25
Chocolate Sauce & Ice Cream Toppings	27
Acid Products	30
Impulse Items	34

[fol. 322] Description of Survey

The survey consists of personal interviews with 8,021 housewives, conducted in 94 cities, towns, and rural areas in 42 states. The sample represents a complete and representative cross-section of all U. S. families, balanced in proportion to population by geographic regions, size of city, socio-economic level, race and other market characteristics. Rural areas and farms have been included in proper proportion. Field work was done during August, 1954.

Statistical accuracy is insured by the large sample, which permits detailed analysis of the findings. The census regions illustrated on the map below have been used for regional breakdowns.

In considering the data, it should be realized that all reason questions were "open-ended." The answers recorded were those given voluntarily by respondents on their own initiative, without any reasons being suggested to them. This survey, therefore, reflects those factors that are at the top of consumers' consciousness.

[fol. 323] Summary

Major findings of this survey of food products which have not been traditionally packed in glass are as follows:

1. Glass has secured dominant consumer preference positions in baby food and instant coffee, where it has been in general use for several years, although it lags behind cans in the regular coffee field. Consumer preference is

   7.4 to 1 for glass for baby food
   5 to 1 for glass for instant coffee
   2.4 to 1 for cans for regular coffee

2. Strong latent demand exists in several new fields where glass containers are not now generally used, including

   Intermittent use products (not used up in one serving)
   Products with high acid content
   Impulse items

3. Glass is preferred for many intermittent use products, such as condiments, cooking ingredients, spreads, spices, prepared sauces, rice, salt, etc. Consumer preference on four selected intermittent use products are

   4 to 1 for glass for salad & cooking oil
   4 to 1 for glass for dry milk
   2.6 to 1 for glass for ripe olives
   1.1 to 1 for glass for chocolate sauce & other ice cream toppings

[fol. 324] 4. Glass is preferred for acid products, like tomato juice, tomato sauce, tomato paste, sauerkraut, lemon juice, fruit juices, Consumer preference is

   1.5 to 1 for glass for tomato juice

5. Glass containers stimulate sales of impulse items, where decision to buy is made after consumer sees product in stores. Consumers like eye appeal and visibility of product in glass containers for impulse items such as

   Specialty products, not regularly purchased
   Products with high color or eye appeal
   Products were quality varies among brands
   Products that are unique in appearance

6. Basic qualities of glass motivate consumer preference. For products studied in this survey, chief reasons consumers like glass containers are

   Safe for storing foods in container after opening
   Visibility of contents
   Ability to reseal tightly
   Ease of handling and opening
   No effect on flavor
   Eye appeal, attractiveness

Promote Positive Advantages 38

Trade Problems 40

[fol. 328] Purpose

To study preferences, prejudices and habits affecting use of glass containers, comprehensive national surveys were conducted during August, 1954, among consumers, retailers, wholesalers and chain store organizations.

Omnibus Coverage

Utilizing a broad approach, 28 different product classifications have been investigated, involving over 3¼ million individual answers to questions asked in more than 12,000 personal interviews conducted by trained investigators. Actually, this project represents 5 or 6 separate surveys, all conducted concurrently.

Complete Cross-Section of Population

Because container choice rests ultimately with consumers, major emphasis has been placed on study of consumer habits, preferences and prejudices.

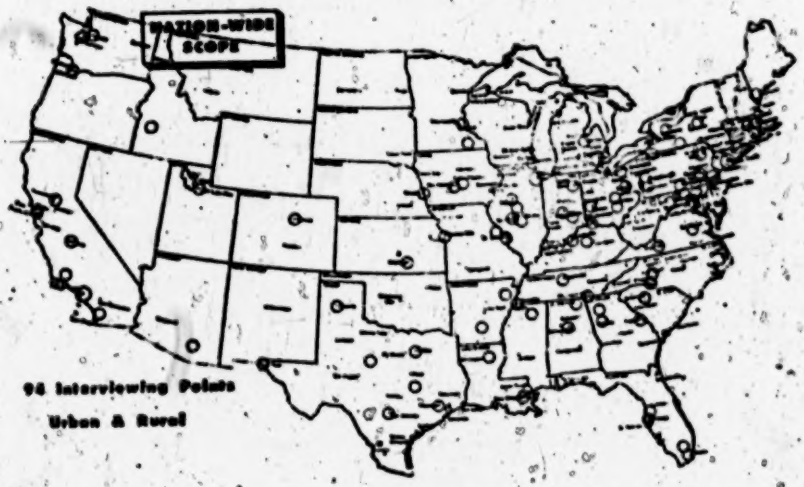
The consumer survey consists of personal interviews in homes with 8,000 housewives, 1,000 men and 1,000 children. All three samples have been balanced geographically, by city size, by socio-economic level, by age, and other market characteristics. Rural areas and farms were included in proper proportion.

The survey thus represents a complete and representative cross-section of the entire U. S. population.

[fol. 329] The retailer survey consists of nation-wide samples of 1,200 grocery stores and 600 drug stores (balanced in proportion to size of store) and spot samples of 100 liquor stores and 100 hardware stores. In addition, depth interviews have been conducted with officials of representative wholesale and chain organizations in various parts of the country.

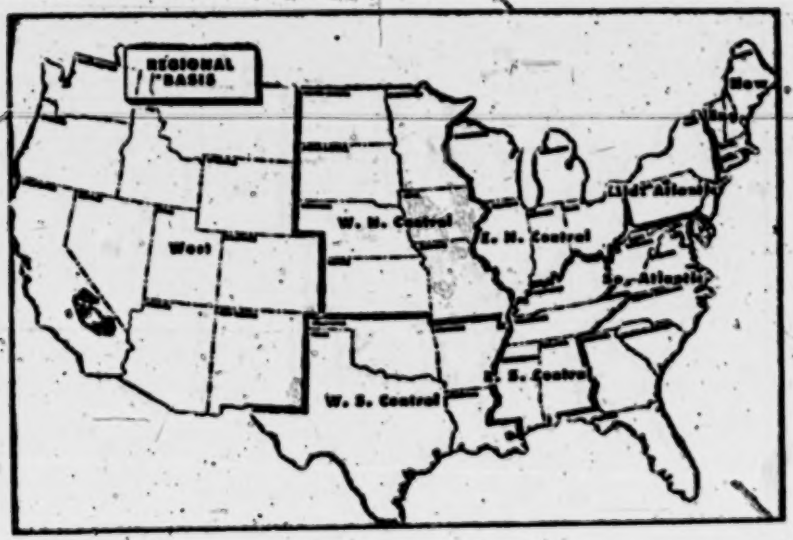
Nation-Wide Scope

Interviews were conducted in 94 interviewing points in 42 states, as shown by the red circles on the map. This provides geographic dispersion and insures that the survey reflects local variations in habits and preferences.



[fol. 330] Regional Basis

The large samples provide statistical accuracy and also permit detailed analysis by geographic regions. The Census regions illustrated on the map have been used in this study as the most useful common denominator.



The vast fund of facts accumulated in this survey will be presented in separate reports on beer, soft drinks, baby food, milk and other product classifications. This is a general summary of the major findings—a quick bird's-eye view of the whole picture.

In order to facilitate the most practical application of the survey data, this report is divided into 3 sections:

First—How does glass stand in consumer preference?
Second—What markets are most critical?
Third—How can present positions be improved?

Gentlemen:

Transmitted herewith is a summary report on the National Consumer Surveys on Glass Containers conducted in October, 1955. This is the second annual survey in G.C.M.I.'s continuing market research program, and consists of two parts:

(a) National survey of 4,000 housewives, representing a complete cross-section of all families in the United States.

(b) Test market surveys totaling 4,600 interviews, representing cross-sections of the total population (men, women and children over 10) in Akron, Dallas, Milwaukee, Los Angeles and Washington, D. C., where special campaigns were conducted on soft drinks and milk.

Objectives of G.C.M.I.'s continuing market research program are:

1. To measure market trends on basic factors affecting sales of glass containers.
2. To intensively study specific problems of current importance. In the 1955 survey, the principal specific problem surveyed was effectiveness of the G.C.M.I. advertising campaign.

3. To develop new facts on consumer and trade preferences, prejudices and habits affecting glass and competing containers, thus continually adding to our storehouse of knowledge.

Charts in the attached report are grouped under these three headings.

Respectfully, Ford Sammis.

Subject: National Market Survey on Glass Containers, 1956

Gentlemen:

This report is a summary of the national market survey conducted in August, 1956. Charts are those shown at the Semi-Annual Meeting at Phoenix, Arizona on November 13.

The survey consists of personal interviews with nation-wide cross-sections of

5103 housewives
2554 men
1254 retail grocery store managers.

Data on baby food from the 1956 national survey have been presented in a separate report.

Respectfully, Ford Sammis.

[fol. 336]

National Market Survey On Glass Containers—1956

Summary & Table of Contents

For details, see page

Beer

Glass preference is increasing, and can sales have now reached their consumer preference level, indicating a slow-down in future growth 1

Soft Drinks

Glass preference is increasing. Can sampling is slowing up and can sales are not growing, due to lack of consumer preference and poor distribution 4

Milk

Glass preference has decreased slightly for home-delivered milk in medium size cities and for store-bought milk in small towns and rural areas. Store buying is on an increasing trend 14

Dry Milk

Paper boxes have outstripped glass in consumer preference, because brand leaders are packed in paper 17

Liquid Detergent

Can preference is increasing steadily, now outweighs glass 3½ to 1, due to use of cans by all leading brands. Consumer acceptance of liquid type for heavy duty detergent is low 20

General

Preference is shifting for tomato juice, holding steady for instant coffee. Many opportunities exist for glass-packed fruits and vegetables 24

Tomato Juice	12

DYNAMICS OF THE CONTAINER MARKET

CONTAINER DYNAMICS

Every consumer product tends to standardize on a single type of container. Glass has become the standard, traditional container for a host of products, including catsup, salad dressings, salad oil, instant coffee, prune juice, mayonnaise, peanut butter, jams and syrup. Other products have standardized on tin cans - regular coffee, evaporated milk, dog food, and most fruits, vegetables and juices.

However, no traditional market is ever secure for any type of container. Marketers are apt to try out new containers at any time, in their constant search for ways to increase sales.

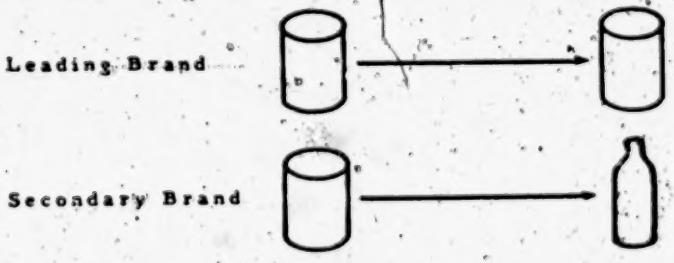
When this happens, the result is a period of container competition, which may run through one or more of three separate stages.

Container Competition - Stage 1

Consumers usually have an inherent preference for a particular type of container for any given product. They also have definite brand preferences. When brand preference and container preference come into conflict, brand preference usually proves to be the stronger. But not always, and not for all persons.

A new container can become a potent sales force for a brand, if strong consumer preference exists (or is promoted) for that type of container. Recognizing this, secondary brands are constantly trying out new types of containers as sales incentive. While leading brands are ordinarily satisfied to maintain the status quo, secondary brands are willing to gamble to improve their positions.

Stage 1 of container competition occurs when a new type of container is first introduced by a secondary brand.



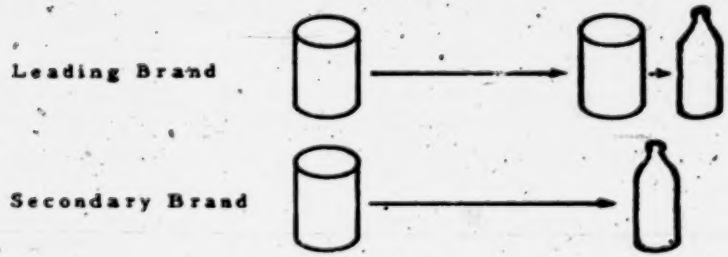
Stage 1 was reached in the instant coffee field during the past year. Folger test-marketed tin cans for their instant coffee in more than a dozen midwest markets. In spite of special promotions, the new container did not take hold with the public, and has recently been withdrawn from the market. Glass remains the standard instant coffee container, at least for the time being.

[fol. 342] 1988

Container Competition - Stage 2

If a secondary brand increases its sales during the period when it is introducing a new type of container, the sales increase is usually attributed to the new container, by marketer and competitors alike. Advertising, product changes or other factors may actually be more important than the new container, but circumstantial evidence points to the container.

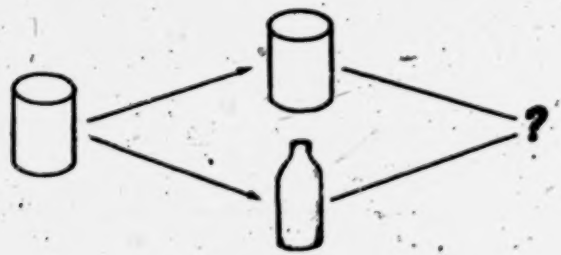
Leading brands are not prone to sit idly by while competitors cut into their share of the market. They tend to cover competitors' bets by offering both traditional and new types of containers to their customers. This creates Stage 2 of container competition.



Container Competition - Stage 3

When leading brands are available in a choice of containers, consumers container preference is no longer in conflict with their brand preferences. They can have the brand they want in the container they want. Sales of leading brands under these circumstances seek the level of consumer preference for each type of container.

If preference for one type of container greatly exceeds preference for the other type, the products then tends eventually to standardize once again on a single type of container - the container most consumers prefer. This process is subject to promotion of container by brand marketers or container manufacturers. The alternate outcome can be favorable to either the new or the traditional container.



Container competition has recently gone through all three stages in the fields of regular coffee, salad oil, and soft drinks. Cans have won out for coffee, glass for salad oil and soft drinks.

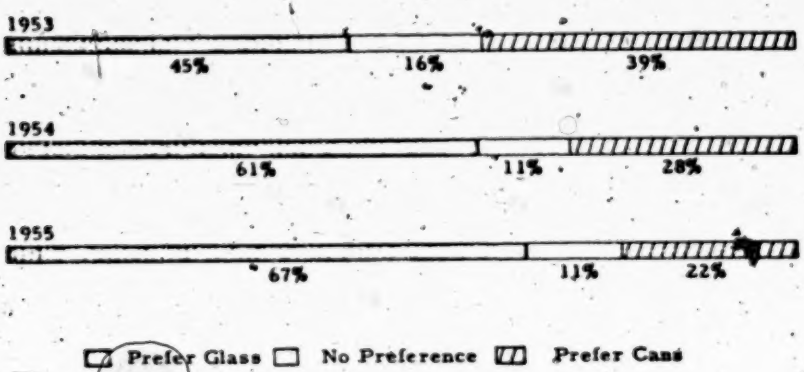
Other fields where glass is currently engaged in container competition with other types of containers are described in the following case studies, presented in chart form.

BABY FOOD
(WEST OF MISSISSIPPI)

CONTAINER COMPETITION IN STAGE ONE

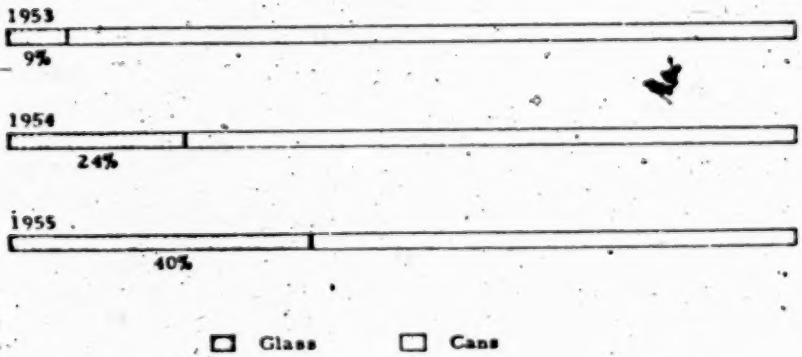
BABY FOOD
(WEST OF MISSISSIPPI)

CONSUMER PREFERENCE HAS BEEN IN FAVOR OF GLASS



BABY FOOD
(WEST OF MISSISSIPPI)

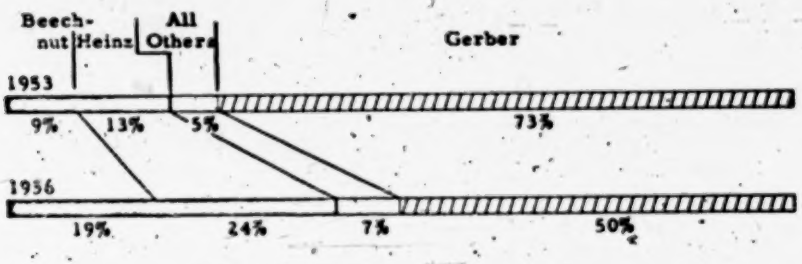
GLASS SALES ARE CATCHING UP WITH CONSUMER PREFERENCE



[fol. 346] 1992

BABY FOOD
(WEST OF MISSISSIPPI)

BRAND LEADER MAY SOON BE FORCED INTO GLASS TO OFFSET SALES DECLINE.



COMMENTS

Container competition in the baby food market is confined to the area West of the Mississippi. In the East, glass has over 90% of the market.

Consumer preference in the West is 3 to 1 in favor of glass, and glass sales are growing rapidly toward the preference level. In 1953, Beechnut was the only brand offered in glass in this area. Heinz was in cans in 1953, and had 13% of the market. Since switching to glass, its share has gone up to 24%, and Beechnut has increased to 19%.

Store audits conducted in a panel of Los Angeles super-markets reveal the following sales trend:

SALES OF BABY FOOD IN LOS ANGELES SUPER MARKETS

	% in Glass
Oct. - Nov. 1954	34%
Dec. - Jan 1955	36
Feb - Mar	37
April - May	40
June - July	34
Aug - Sept.	39
Oct. - Nov.	38
Dec. - Jan. 1956	43
Feb. - March	43

Heinz and Beechnut gains (in glass) have been at the expense of the brand leader, Gerber (in tin). It is reported that Gerber has started to offer both glass and tin in several Western markets. This indicates that baby food container competition is now entering Stage Two.

DRY MILK

CONTAINER COMPETITION IN STAGE TWO

[fol. 348] 1994

DRY MILK

GLASS HELD DOMINANT CONSUMER PREFERENCE POSITION BEFORE CARNATION ENTERED FIELD.

WITH CONTAINER AND BRAND COMPETITION, PREFERENCE HAS SHARPENED. GLASS HAS GAINED, BUT OTHER CONTAINERS HAVE GAINED MORE.

Prefer Glass No Preference Prefer other Containers

DRY MILK

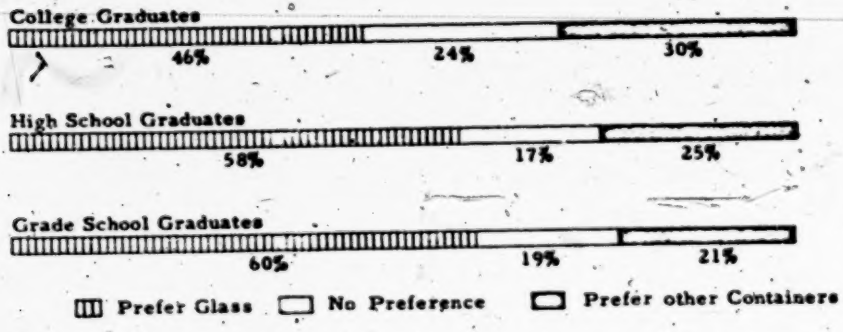
GLASS IS STRONGEST EAST OF THE MISSISSIPPI

Prefer Glass No Preference Prefer Other Container

[fol. 349]

DRY MILK

COMPETING CONTAINERS HAVE GREATEST STRENGTH AMONG OPINION LEADERS



[fol. 350]

1996

DRY MILK

COMPETITION IS STRONGER WITH YOUNGER HOUSEWIVES.

COMMENTS

Before Carnation entered the market in a paper box, there was no active container competition in the dry milk field. Preference among users was heavily in favor of glass, but 40% had no preference on container.

During the past year there has been active container competition between leading brands. Carnation has merchandised its paper box and Pet has featured its glass jar in TV commercials. Result has been to focus consumer attention on container and to sharpen container preference (81% of all users now have a definite container preference). Glass is still the preferred container, but has not gained relatively as much as competing containers.

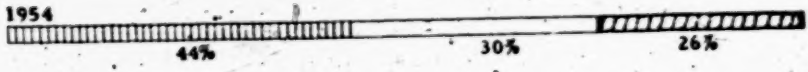
Dry milk container competition has recently entered Stage Two: Pet is now offering a giant size in paper box, retaining glass jars for regular size package.

LIQUID DETERGENT

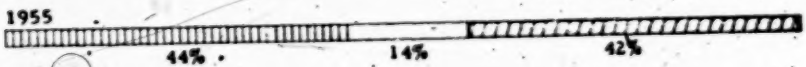
CONTAINER COMPETITION IN STAGE THREE

LIQUID DETERGENT

INTRODUCTION OF LIQUID LUX IN CANS MET A LARGE WAITING CONSUMER PREFERENCE.

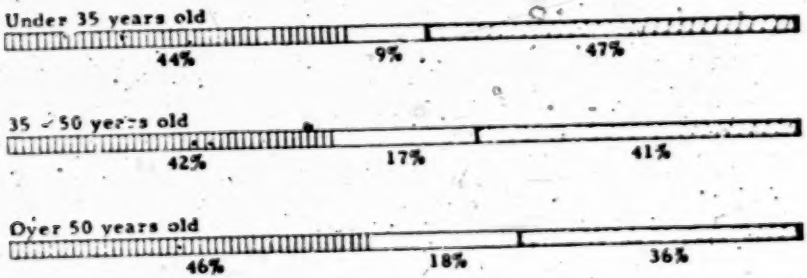


LIQUID LUX FOCUSSED ATTENTION ON CONTAINER, CREATED INCREASED PREFERENCE FOR CANS, FORCED P & G TO OFFER CANS IN SELF DEFENSE.



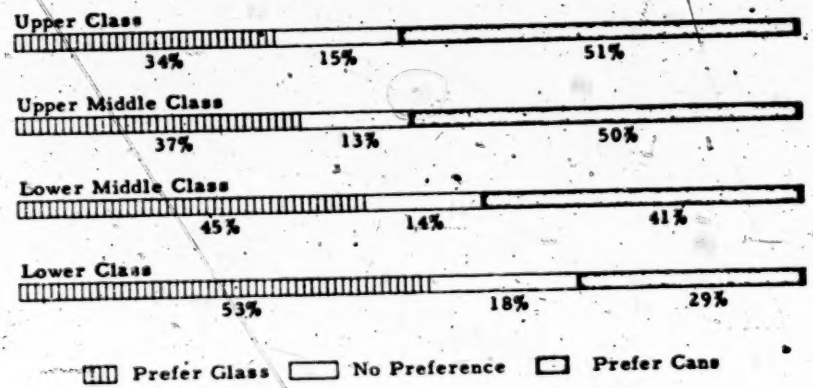
LIQUID DETERGENT

EVENTUAL OUTCOME LOOKS FAVORABLE TO CANS, BECAUSE YOUNGER PEOPLE PREFER CANS



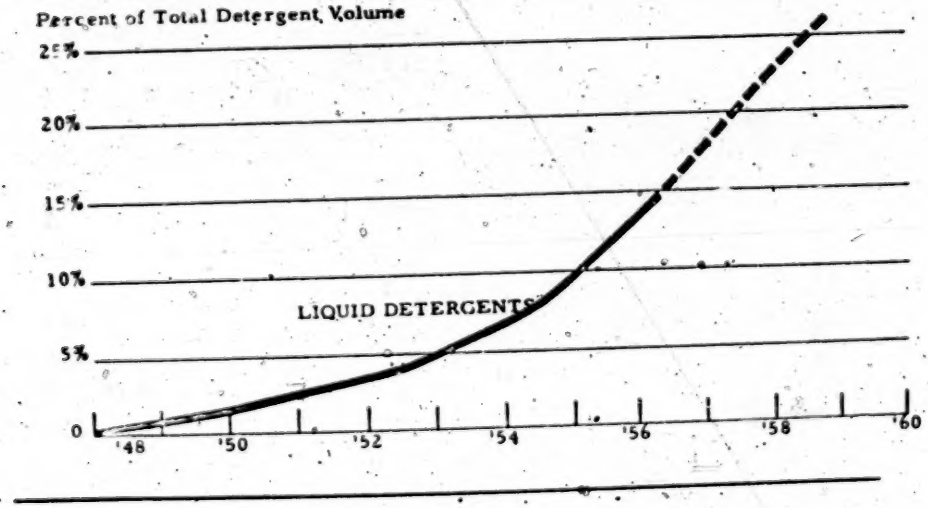
LIQUID DETERGENT

OPINION INFLUENCING GROUPS PREFER CANS



LIQUID DETERGENT

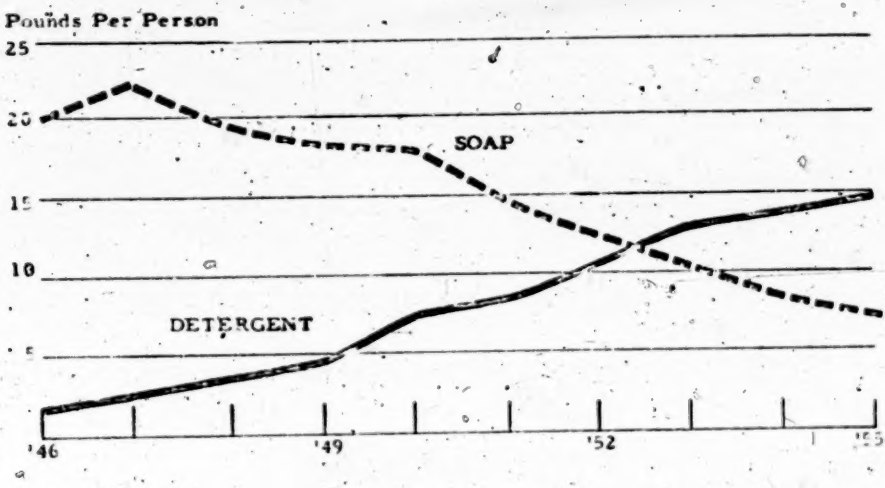
ULTIMATE WINNER OF LIQUID DETERGENT CONFLICT MAY GAIN THE ENTIRE DETERGENT BUSINESS.



[fol. 354] 2000

LIQUID DETERGENT

LIQUID DETERGENT WINNER MAY TAKE OVER SOAP VOLUME, TOO



COMMENTS

In the short period since Liquid Lux entered the market in cans, container competition has progressed rapidly to Stage Three. The brand leader, Joy, is now packed in both glass and tin, and many other brands have introduced tin cans.

Container competition is not confined to dishwashing detergents. All major brands are starting to pack heavy duty detergents in cans. Several marketers feel that eventually all detergents will be sold in liquid form.

Primary impetus for spreading use of cans for liquid detergent is the [illegible] success of Liquid Lux. Within the industry, this success is attributed to Lux's drip-proof can. However, a pilot survey among consumers indicates that the can was relatively unimportant factor. The most important factors in buying Liquid Lux have been (1) the well-known, well-established Lux name, (2) the fact that Liquid Lux is a very good product—exceptionally [illegible] and easy on the hands.

[fol. 355]

2001

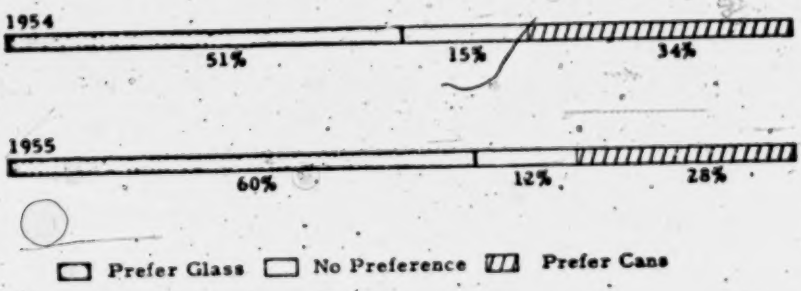
TOMATO JUICE

POTENTIAL CONTAINER COMPETITION

AN OPPORTUNITY FOR GLASS

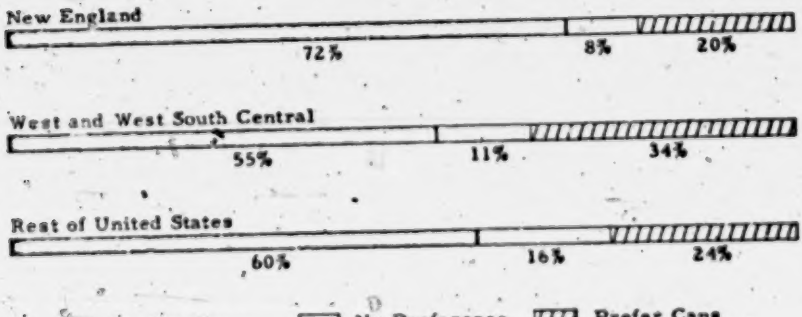
TOMATO JUICE

CONSUMER PREFERENCE IS 2 TO 1 FOR GLASS, AND GROWING STRONGER



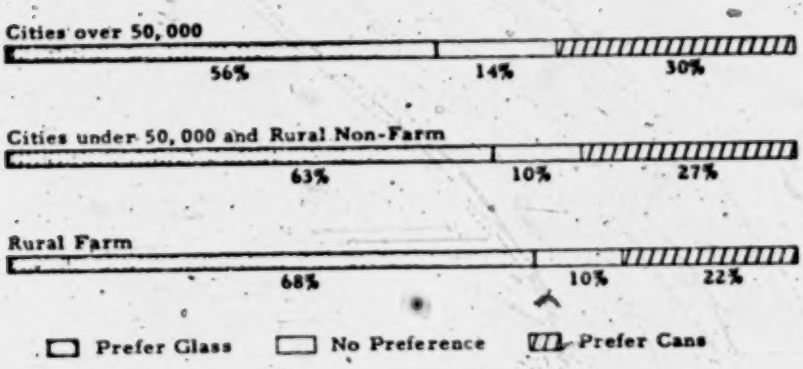
TOMATO JUICE

ACCEPTANCE OF GLASS IS HIGH IN ALL AREAS



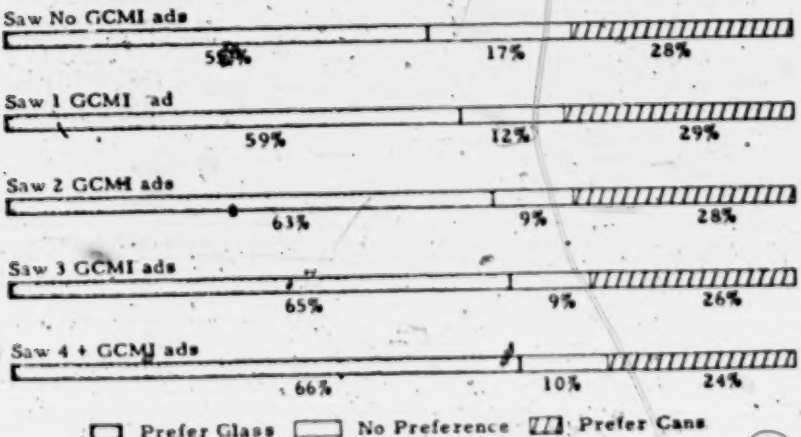
TOMATO JUICE

SMALL TOWN AND RURAL MARKETS OFFER BEST OPPORTUNITY



TOMATO JUICE

GLASS PREFERENCE CAN BE INCREASED THROUGH ADVERTISING



[fol. 358] 2004

TOMATO JUICE

POTENTIAL VOLUME IS LARGE.

90% of all U. S. families are users

Annual Sales = 4,650,000 gross units

Glass now has less than 4% of tomato juice volume

165,000 Gross ■

If sales paralleled consumer preference, glass would have

2,700,000 Gross [redacted]

If this goal is accomplished, all will eventually go to glass

4,650,000 Gross [redacted]

COMMENTS

Glass packed tomato juice has been on the market for some time, but none of the brands packed in glass have wide consumer acceptance. Therefore, glass accounts for only 4% of total tomato juice sales.

Consumer preference for glass is so high that glass sales would increase materially if one or more of the major brands offered a glass pack, particularly if the container were featured in advertising and merchandising.

Glass preference is growing, the increase during the past year being most noticeable in New England. A well-known packer comments as follows on this point:

"It so happens that for the past couple of years we carried on an extensive advertising campaign in New England - one of our better markets for our Tomato Juice in glass, and we have shown very excellent results in total volume of sales which would bear out the decided improvement in preference as shown in your report."

White Sulphur Springs, West Virginia

May 22, 1957

FORD SAMMIS & COMPANY

[fol. 360]

Glass Container Motivations

[fol. 361]

CONSUMERS ARE NOT NORMALLY CONTAINER CONSCIOUS

BRAND PREFERENCE MAY OUTWEIGH CONTAINER PREFERENCE

(% of those preferring glass who use glass)

TOMATO JUICE

BABY FOOD (West Coast)

A principle early established in the motivational research studies conducted for GCMI is that consumers are not normally "container conscious." They are inclined to take containers for granted, without devoting much thought to them, and concentrate their attention on the product inside the container.

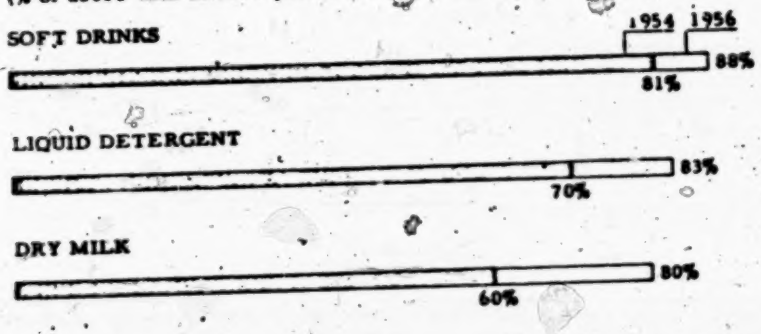
A corollary to this principle is that brand preference usually outweighs container preference. For example, in the chart above, it is shown that only 5% of those who prefer glass for tomato juice actually buy tomato juice in glass. While this is partly caused by spotty distribution of glass-packed tomato juice, lack of distribution is not a controlling factor in a similar situation existing for baby food. On the West Coast, where baby food is available in both glass and tin in practically every super-market, only 49% of those who prefer glass actually buy glass-packed baby food.

CONTAINER CONSCIOUSNESS

IS INCREASING

THE "NO PREFERENCE" GROUP IS GETTING SMALLER

(% of users with definite preference on containers)



Consumer consciousness of containers becomes more prevalent and active under two conditions:

(1) When containers are brought to their attention, particularly through advertising

(2) When a choice of containers is available for a specific product.

It is only natural, therefore, that container consciousness has been increasing during the past two years, as a result of advertising by GCMI and manufacturers of other containers, coupled with active container competition in the fields of fresh milk, dry milk, liquid detergents, beer and soft drinks.

For those products, the result of increased container consciousness has been to sharpen consumer preference for one container or another. For example, in 1954, only 81% of all soft drink users had a definite container preference, the remaining 19% having no preference between cans and bottles. By 1956, all but 12% had acquired a definite container preference.

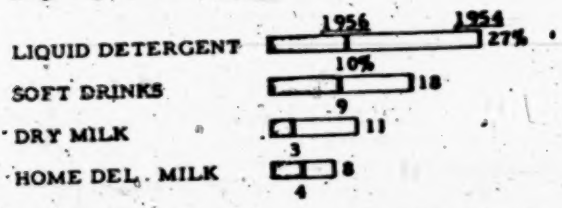
With liquid detergents and dry milk, the increase in container consciousness and preference is even more marked.

[fol. 363]

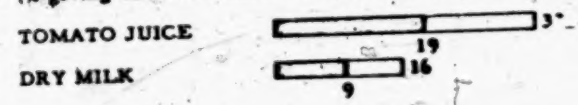
ATTENTION IS FOCUSSING ON SPECIFIC CONTAINER QUALITIES

"HABIT" IS A LESS IMPORTANT MOTIVATION

(% giving habit as reason for preferring glass containers)



(% giving habit as reason for preferring competing containers)

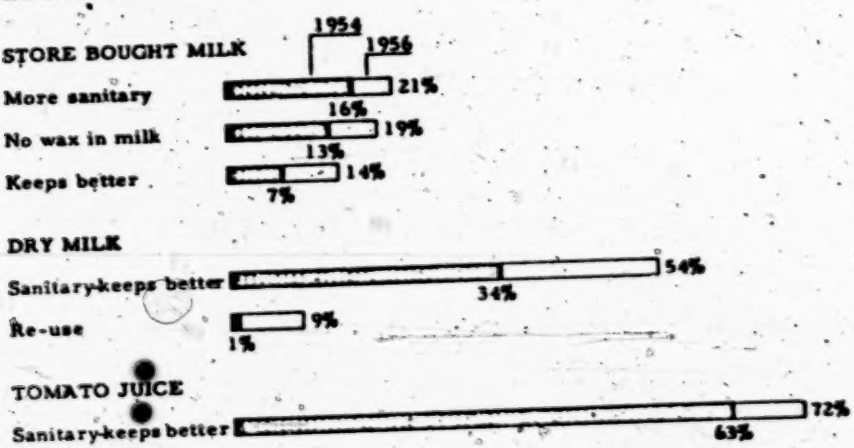


A concommitant of the recent increase in container consciousness has been focussing consumer attention on specific container qualities.

This is illustrated in the chart above by decrease in the generalized reason of "habit" as a motivation for preference of both glass and competing containers.

In 1954, 27% of those preferring glass jars for liquid detergent gave habit as a reason for preference. In 1956 as a result of consciously considering the advantages of glass vs. tin cans for this product, mention of habit dropped to 10% being replaced by such specific qualities as visibility of contents, ease of handling, and attractive appearance.

SANITARY FEATURES OF GLASS GAIN INCREASED RECOGNITION



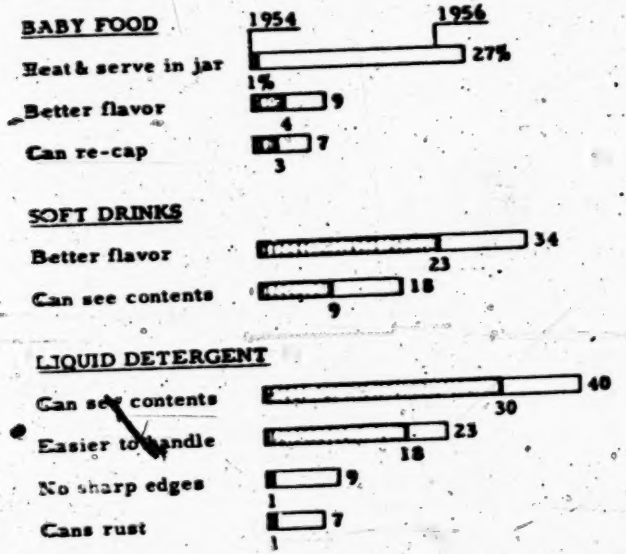
The three qualities of glass containers that have evidenced the greatest gains in consumer acceptance and recognition are: sanitary features, flavor, and transparency.

Increased impact of the sanitary features of glass (germ-free, lack of product contamination, safe storage of unused portions in opened containers) are apparent for store-bought milk, dry milk, and tomato juice. With dry milk this factor is the major motivation, being mentioned by 54% of all who prefer glass jars, an increase from 34% mention in 1954.

Re-use, though minor, is a motivation of growing importance with dry milk. So is freedom of wax in the milk for store-bought fresh milk.

[fol. 365]

MORE IMPORTANCE ATTACHED TO FLAVOR AND VISIBILITY



Better flavor, as a reason for preferring glass, was mentioned by more persons in 1956 than in 1954 for baby food and soft drinks. The increase for soft drinks was 23% to 34%.

Visibility of contents has increased for both soft drinks and liquid detergent. In the latter product, the increase has been from 30% to 40% of all who prefer glass.

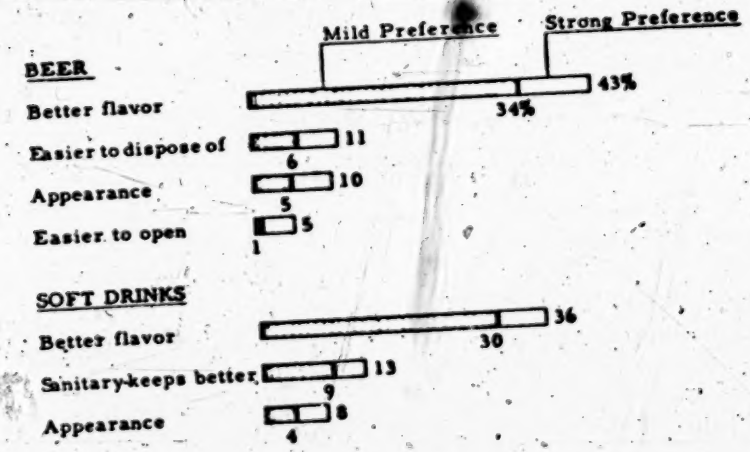
One of the most dramatic examples of rapid emergence of a minor factor into a major motivation has occurred with baby food. In 1954, so little mention was made of ability to heat and serve in the container that no place was made for it in the IBM code of reasons for preferring glass baby food jars.

By 1955, heating in and serving from glass jars was listed by so many consumers that an investigation of causes was instituted. It was traced down to a single commercial on the GCMI television program where this use was dramatically demonstrated.

The agency inserted this appeal into magazine copy in the 1955-56 campaigns, and the result is that this factor is now the second most important motivation for baby food jars, being exceeded only by ability to store unused portions safely in the opened jar.

[fol. 366]

STRENGTH OF PREFERENCE IS FOUNDED ON SECONDARY AS-WELL AS MAJOR MOTIVATIONS

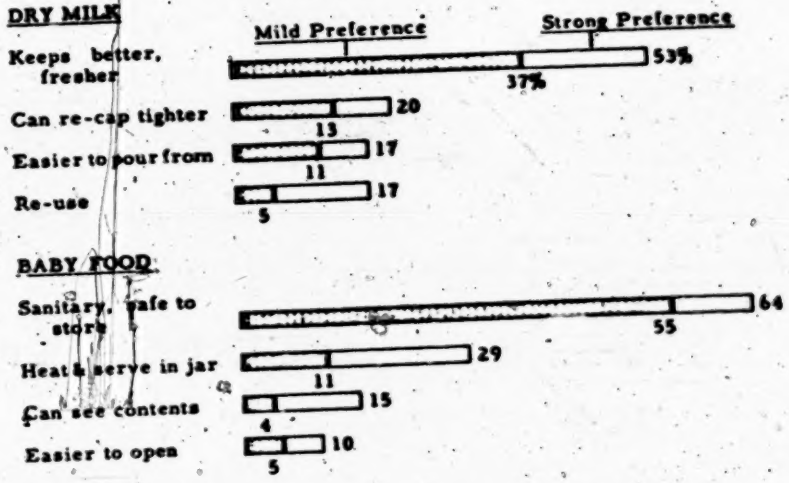


Rating of relative importance of various motivations is shown later on in this report for eight different products. The charts on this and the following page show that it isn't just the major factors that create strong preference for glass.

With beer, better flavor was mentioned by 43% of those having a strong preference for glass, but by only 34% of those whose preference for glass may be classified as mild. Better flavor, therefore, is a factor that creates greater strength of preference. So are the factors of ease of disposal, appearance, and ease of opening.

For soft drinks, the principal factors creating strong glass preference are flavor, sanitary features, and appearance.

[fol. 367]



Ability to safely store unused portions in the container is the principal factor affecting strength of preference for dry milk and baby food.

For dry milk, ability to re-cap and ease of removing contents are secondary factors. Re-use works in reverse, being less important to those who have a strong preference than to those having a mild preference.

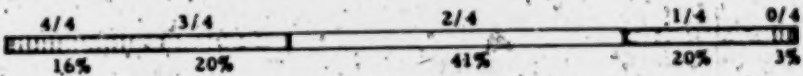
For baby food, ability to heat and serve in the container, visibility of contents and ease of opening are secondary factors creating strong preference for glass.

[fol. 3624] 2014

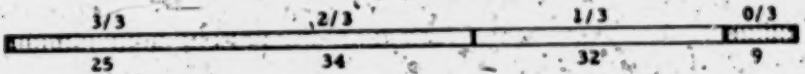
CONTAINER PREFERENCE DOESN'T CARRY OVER BETWEEN PRODUCTS

THERE IS VERY LITTLE "GENERAL" GLASS PREFERENCE

Preference For Glass - Users of 4 Products



Preference For Glass - Users of 3 Products



It was pointed out in 1954 that consumers consider each product as completely independent and different, as far as containers are concerned. The same consumer may prefer tin cans for beer; glass bottles for soft drinks. Container preference doesn't naturally carry over from one product to other products.

Such a carryover is, of course, an objective of GCMI's promotional campaign and is part of the advertising strategy. But it will take time to change consumer psychology and thought habits.

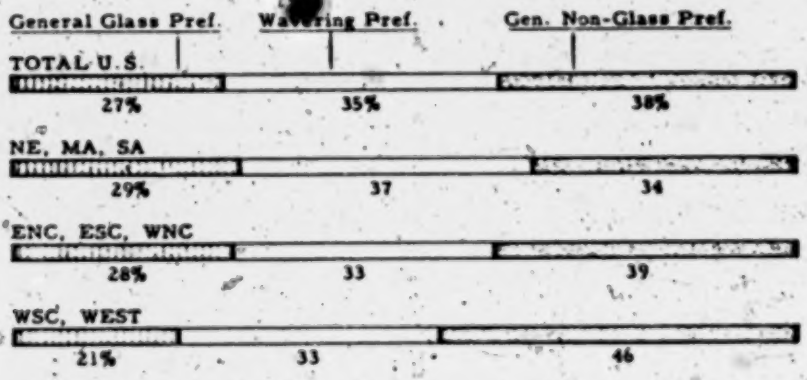
In an attempt to measure the degree of glass preference carryover between products existing at the present time, four products were selected where there might be a reasonable expectancy of inter-relation in container preference. These products were: liquid detergent, dry milk, fresh milk, and tomato juice.

It was found that among users of all four products, 16% preferred glass for all of them, 20% preferred glass for three out of the four, with 41% completely divided on container preference. In like manner, the majority of persons who use three of the four products, prefer glass for either one or two of the three products they use.

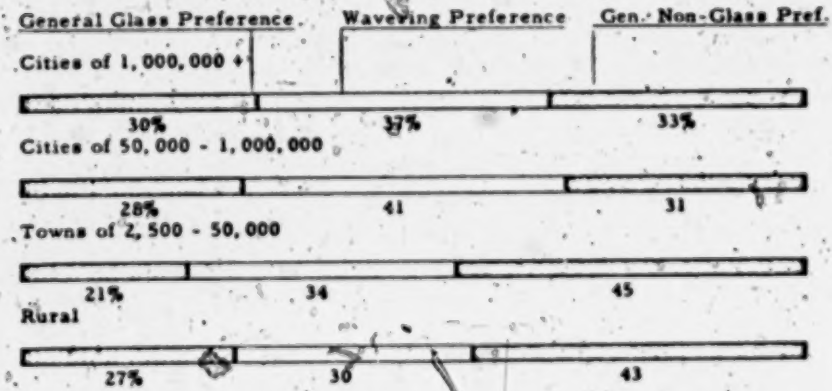
It may be concluded that from this that a certain amount of "general glass preference" exists, but its extent is limited at the present time to less than one-fourth of the population.

[fol. 369]

"GENERAL" GLASS PREFERENCE IS STRONGEST IN NORTHEAST, WEAKEST IN WEST



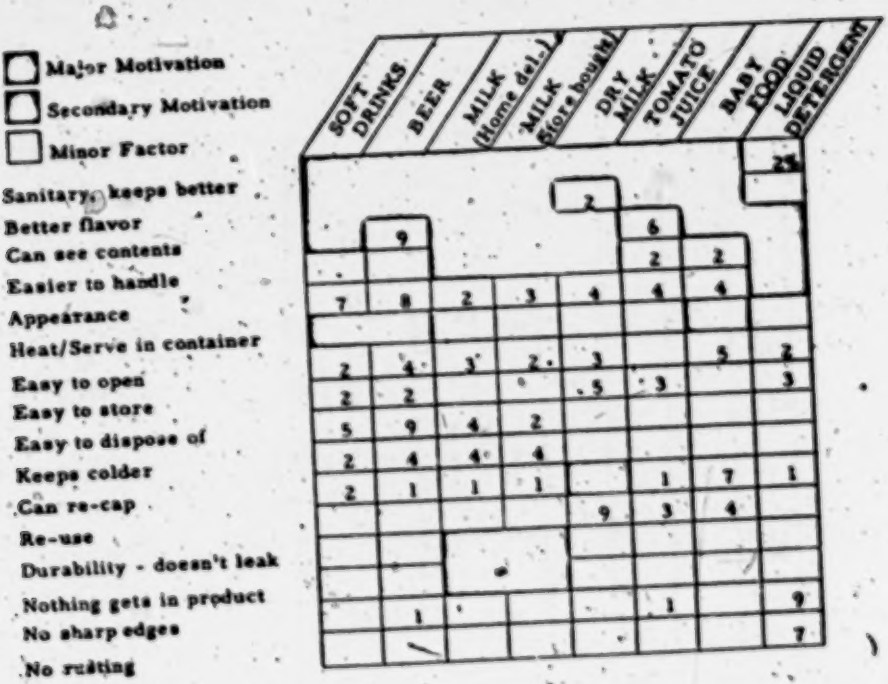
"GENERAL" GLASS PREFERENCE IS STRONGEST IN LARGE CITIES



From the chart on the preceding page, it may be considered that those who prefer glass for 3 or 4 out of four products used, or 2 or 3 out of 3 products used, possess "general glass preference." The above charts show geographic and city size variations.

General glass preference is strongest in Northeastern states, weakest in the West. It is also strongest in large cities, weakest in small towns.

EACH PRODUCT INVOLVES DIFFERENT MOTIVATIONS, WITH VARYING EMPHASIS



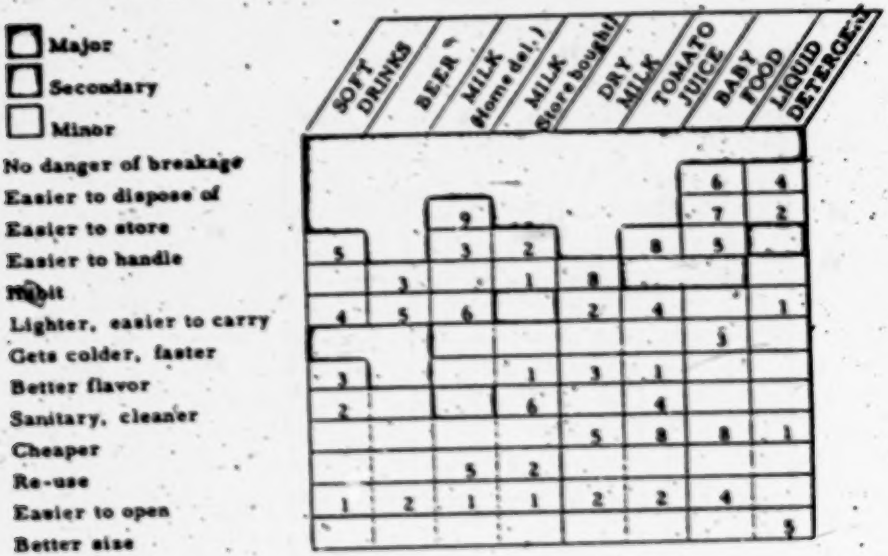
This chart sets forth the motivations for preferring glass for eight different products. Figures represent the percent of those preferring glass who mentioned each factor as a reason for prefereece.

Factors have been classified into major, secondary and minor factors for each product by color symbols. It will be noted that the sanitary features of glass are the most generally applied major factor, closely followed by better flavor. However, relative importance of these and other factors vary considerably from product to product.

Motivating factors are listed in the order of relative importance among all product classes combined.

(Note: Heat/Serve in container means "like to drink out of bottles" for beer and soft drinks.)

MOTIVATIONS ON COMPETING CONTAINERS



Danger of breakage is the most generally mentioned reason for preferring some other container than glass. It is a major motivation for competing containers with soft drinks, tomato juice, baby food and liquid detergent, and a secondary factor for all other products.

Ease of disposal of competing containers is the next most important factor working against glass, being a major factor with fresh milk and dry milk.

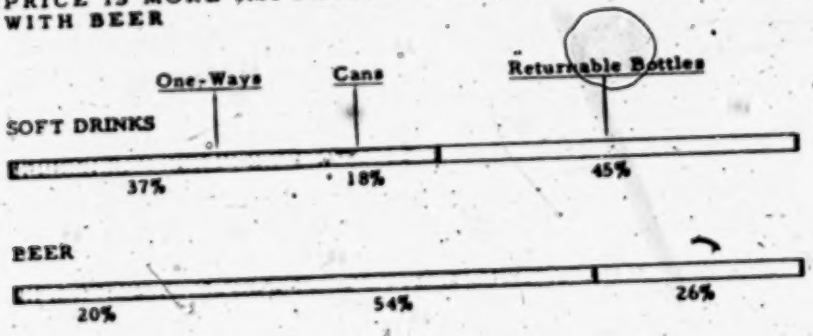
Factors are listed in their relative importance for all products combined.

[fol. 372]

PRICE IS IMPORTANT ONLY

WITH BEER AND SOFT DRINKS

PRICE IS MORE IMPORTANT WITH SOFT DRINKS THAN WITH BEER

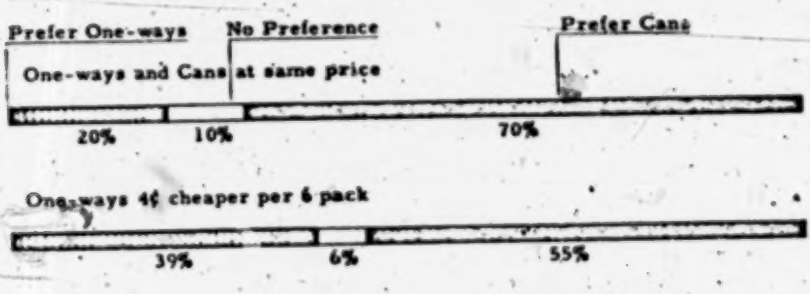


The chart above illustrates preference between cans, one-way bottles, and returnable bottles with the only difference in price being 2¢ refund on returnable bottles when taken back to the store. Preference for returnable bottles under these conditions is, in effect, a measure of extent of price consciousness among consumers.

For soft drinks, 45% prefer returnable bottles over either of the disposal containers. For beer 26% prefer returnable bottles. It may be concluded that price is a factor with both beer and soft drinks, but is more important with soft drinks.

[fol. 37;]

PRICE DIFFERENTIAL DOUBLES PREFERENCE FOR ONE-WAYS VS. CANS FOR CONSUMER'S FAVORITE BRAND OF BEER

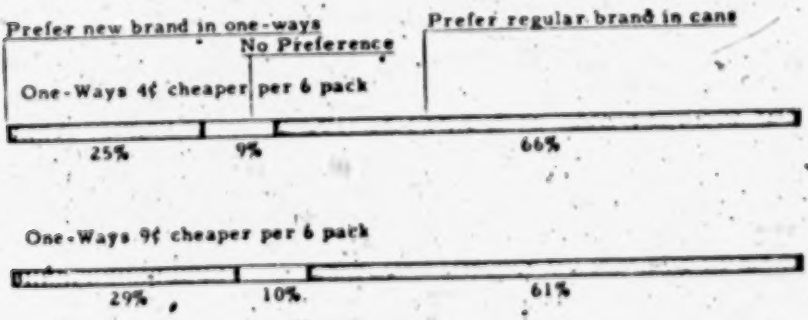


(Survey of Virginia Beer Drinkers - June, 1956)

In the survey of Virginia beer drinkers conducted in June, 1956, consumers were asked to choose between one-ways and cans for their favorite brand (a) at the same price and (b) with one-ways priced 4¢ lower per six pack. 20% chose one-ways at the same price as cans, 39% chose one-ways when they were 4¢ cheaper.

A NEW BRAND CAN GAIN 25% OF BEER MARKET WITH PRICE DIFFERENTIAL ON ONE-WAYS

Another approach used in this survey was preference between consumer's favorite brand in cans and some other brand in one-way bottles (a) 4¢ cheaper per six pack, and (b) 9¢ cheaper. 25% chose the other brand in one-way bottles at a 4¢ differential, and when the differential was increased to 9¢ preference for one-way bottles went up to 29¢. This has been confirmed by actual sales tests in Norfolk where one-way bottles priced at 6 99¢ have secured 23% of total beer sales in stores carrying one-ways.



(Survey of Virginia Beer Drinkers - Jan. 1957)

Attention: Mr. Richard L. Cheney

Subject: Consumer Preferences & Motivations on Containers, 1954-1957

Gentlemen:

Transmitted herewith are reproductions of charts shown before your Semi-Annual Meeting at Virginia Beach on October 1, 1957, together with a transcript of my remarks.

This presentation represents both a summary of the 1957 national consumer survey and important trends which have taken place since 1954 in the container field.

Very truly,

Ford Sammis

Consumer Preference & Motivations On Containers

1954 - 1957

[fol. 377]

CONSUMER PREFERENCE FOR GLASS

1954 - 1957

- Since 1954, there have been many changes in consumer preferences on containers. Out of nine important products, consumer preference has remained static on only three -- home-delivered milk, beer, and baby food.

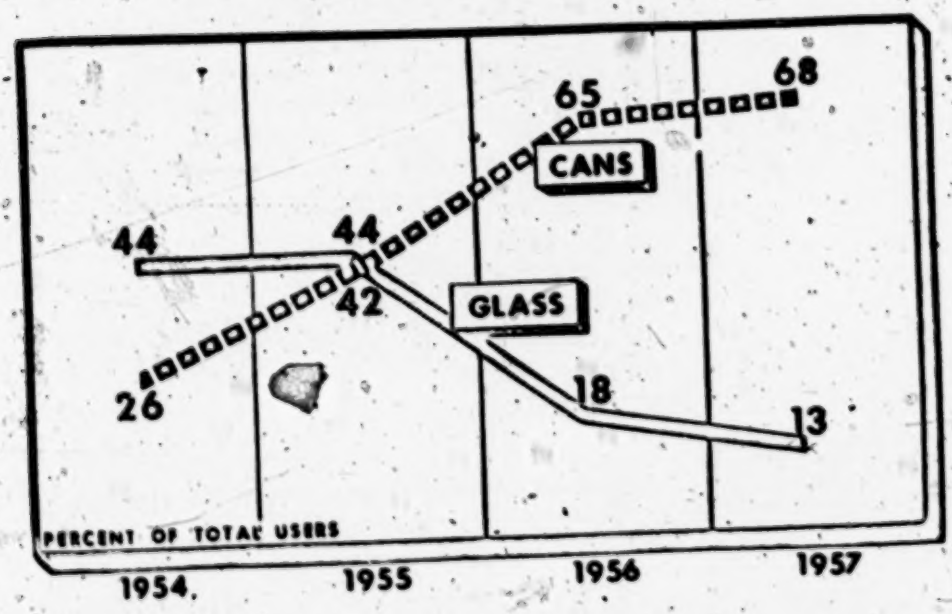
Preference for glass has increased materially for store-bought milk, soft drinks, and fruits and vegetables. Glass has lost ground in consumer container preference for liquid detergents, dry milk and tomato juice.

What has happened since 1954 in each of these product classifications is shown on the following charts.

(Fol. 378)

LIQUID DETERGENT-

CONSUMER CONTAINER PREFERENCE



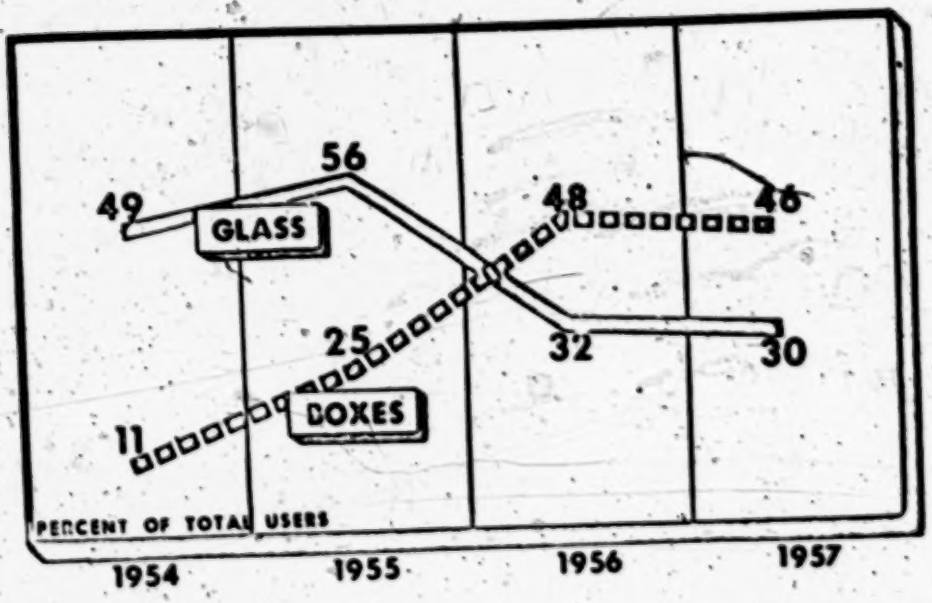
In 1954, 44% of all liquid detergent users preferred glass, in contrast to 26% preference for tin cans. By the following year, can preference had caught up to glass, and has continued to climb since then to its present position of 63%.

During 1956 and 1957, a large number of brands were introduced to the market in cans. Joy is the only leading brand still packed in glass jars, and Joy is available in cans as well as jars. During this period, preference for glass has dropped rapidly to the low level of 13% in 1957.

[Vol. 379]

DRY MILK

CONSUMER CONTAINER PREFERENCE



In 1954, glass enjoyed almost a 5 to 1 preference over cardboard boxes among dry milk users.

Carnation, with its new type of non-hygroscopic dry milk packed in a cardboard box, has made great gains in consumer acceptance since 1955, and is currently in No. 2 sales position. Along with Carnation's increase in sales has been a corresponding increase in preference for boxes to a current level of 46% of the market.

Glass preference has dropped to 30%.

[fol. 380]

DRY MILK-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
STAY FRESHER	34%	49%
DOESN'T CAKE	-	25
Easier to handle	16	10
Can See Contents	12	6
Habit	11	6
Re-use	-	7
Can Re-cap	20	5

BOXES

	1954	1957
EASIER DISPOSAL	3%	20%
STORES BETTER	10	20
NO BREAKAGE	24	19
EASIER TO HANDLE	5	14
HABIT	-	12
BRAND IS IN BOXES	-	11
Cheaper	1	7
More Sanitary	32	5

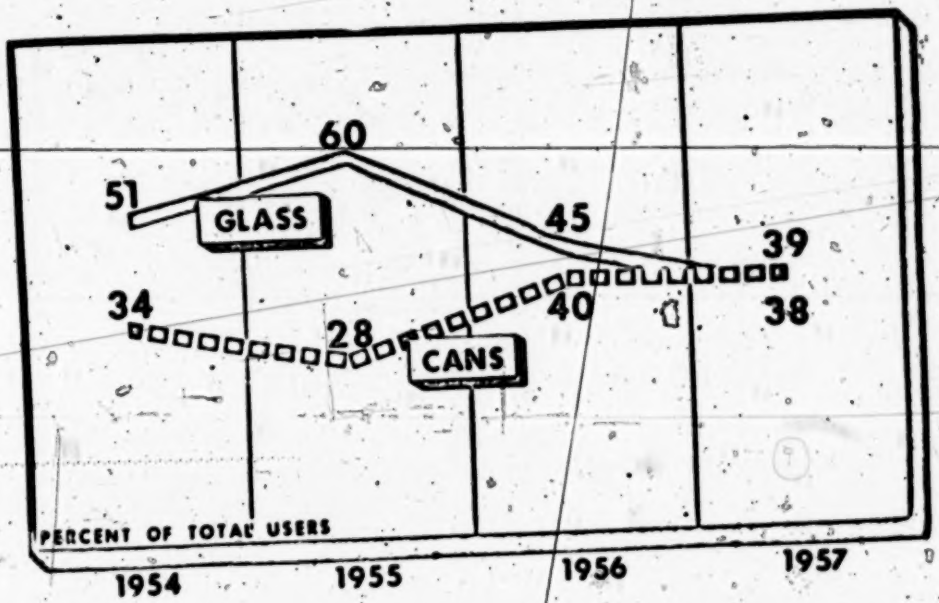
Principal motivation for preferring glass for dry milk is its ability to keep the product fresh, without caking. This quality wasn't recognized as much in 1954, before Carnation was put on the market, as it is today, when consumers have had a chance to compare hygroscopic products, like Pet, with the non-hygroscopic Carnation, which doesn't require an air-tight container to remain non-caking.

Easier disposal and better storage, principal box motivations, have increased in importance since 1954. Danger of breakage of glass, on the other hand, is less important than 4 years ago.

[Vol. 381]

TOMATO JUICE-

CONSUMER CONTAINER PREFERENCE



In spite of the fact that only a small percentage of the tomato juice pack is marketed in glass, 38% of all tomato juice users prefer glass. This is equal to the preference for tin cans.

During the previous 4 years, glass preference was even higher than it is now -- 60% in 1955. The decline is believed to be due to the increased percentage being packed in small size cans, eliminating the need for storing unused portions in the container. Under these circumstances, the major advantage of glass doesn't come into play.

[fol. 382] 2028

TOMATO JUICE-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
STORE IN JAR		67%
BETTER FLAVOR		23
Habit		5
Can See Contents		4
Re-use		3
More Attractive		3

CANS

	1954	1957
NO BREAKAGE	20%	29%
HABIT	33	22
BRAND IS IN CANS		18
STORES BETTER		15
Cheaper		6
Sanitary		5

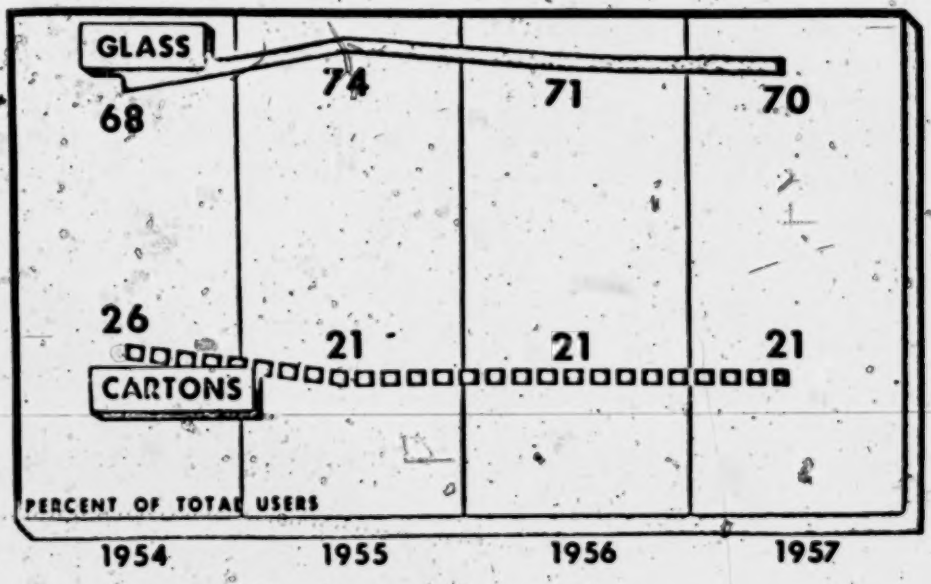
The dominant reason for preferring glass for tomato juice is consumers' belief that unused portions can safely be stored in glass, mentioned by 67% of those preferring glass. While this factor is non-operative in relation to small size cans which are used up in a single serving, it might become important when coupled with possible price savings of large size glass containers vs. small single-use tin cans.

Secondary motivation for glass is better flavor.

There are no strong basic reasons for preferring tin cans for tomato juice, except price (mentioned by 6% of those preferring tin cans).

HOME-DELIVERED MILK-

CONSUMER CONTAINER PREFERENCE



There has been virtually no change in consumer preference for home-delivered milk containers during the past three years. Glass remains in a dominant position, with 3 1/2 times the preference of cartons.

HOME-DELIVERED MILK-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
CARTONS LEAK		28%
MORE SANITARY	20	27
BETTER FLAVOR		25
NO WAX IN MILK	14	23
EASIER TO HANDLE	16	10

Habit	11	6
Gets Colder	10	5

CARTONS

	1954	1957
EASIER DISPOSAL		72%
NO BREAKAGE		27
STORES BETTER		11
Re-use	2	7
More Sanitary		6
Easier To Handle		6
Lighter		5

There have been no changes (except re-use) in any of the factors motivating preference for cartons. The dominant motivation is easier disposal, mentioned by 72% of those preferring cartons for home-delivered milk.

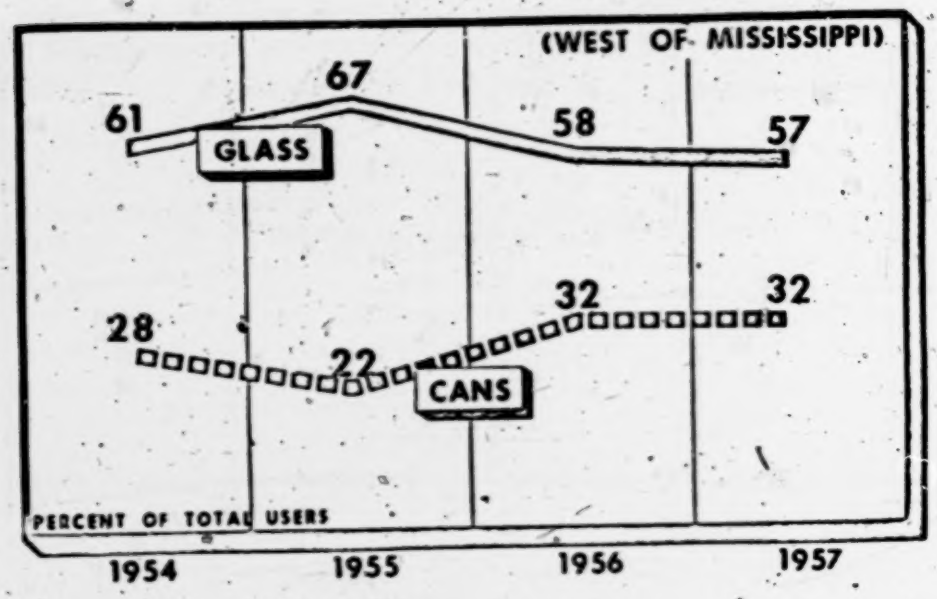
On the other hand, several changes have taken place in relative importance of reasons for preferring bottles. "More sanitary" has increased in importance, from 20% to 27%. This factor has been stressed in G. C. M. I. advertising. "No wax in milk" has increased from 14% to 23%, which may be a result of the "clean taste" appeal used in G. C. M. I. ads.

Several minor factors have decreased in mention.

[fol. 385]

BABY FOOD-

CONSUMER CONTAINER PREFERENCE



This chart relates only to the area west of the Mississippi, where glass jars are in competition with tin cans for the baby food market.

Container preference has remained fairly stable during the last four years in the baby food field. Preference for glass has consistently been above 57%, can preference has not risen above 32%. Thus, in consumer preference, glass leads tin 2 to 1, whereas almost the reverse situation exists in sales, due to the dominance of Gerber, the only major brand still packed in tin in this area.

BABY FOOD-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
STORE IN JAR		80%
HEAT & SERVE IN JAR	-	11
Habit	4	7
Better Flavor		6
Can See Contents		6
Easier To Handle		4
Re-use	8	3

CANS

	1954	1957
NO BREAKAGE		35%
CHEAPER	13	30
BRAND IS IN CANS		20
HABIT		17
Stores Better	21	4
Easier To Handle	13	4
Lighter	8	3

In 1954, Beechnut was the only brand in glass in the area West of the Mississippi, and its distribution and sales penetration was so low that few baby food users had had any direct experience with glass-packed baby food. Asking their preference on container was therefore largely a hypothetical question.

Since then, Heinz has entered the market in glass and there is hardly a super-market that doesn't carry glass-packed baby food. An interesting change in motivations has developed from the 1954 hypothetical situation to the condition of actual experience existing in 1957.

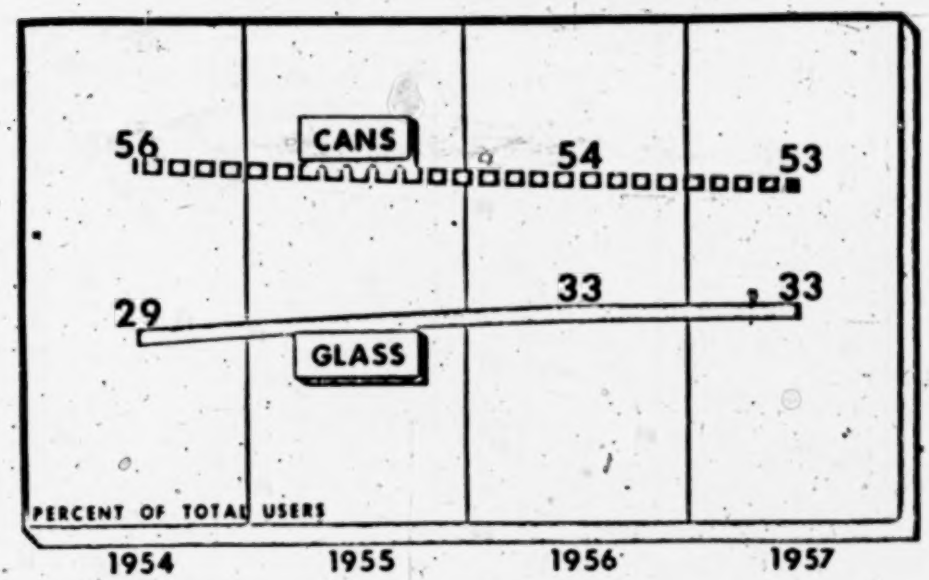
As consumers have been able to see cans and jars side by side, they have changed their minds regarding cans' supposed superiority on storing better, easier to handle and lightness. Conversely, it has become apparent to more of them that cans are cheaper, which has made this a major motivational factor.

Increased experience with glass has brought about a lower valuation placed on re-use.

[fol. 387]

BEER-

CONSUMER CONTAINER PREFERENCE



Beer container preference has exhibited no violent fluctuations, but there has been a slight increase in acceptance of glass as a beer container, as shown above. This chart represents preference between cans and one-way bottles at the same price. One-third of all beer drinkers currently prefer one-way bottles over cans.

[fol. 388]

BEER-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
BETTER FLAVOR	36%	55%
DRINK FROM CONTAINER	12	19
Keeps Better		13
Can See Contents	6	10
Easier To Handle	2	6
Gets Colder		6
Habit		6

CANS

	1954	1957
GETS COLDER	26%	44%
STORES BETTER	26	35
NO BREAKAGE	23	32
BETTER FLAVOR		19
EASIER DISPOSAL		10
Lighter		6
Easier To Handle	1	6
Drink From Can	8	5

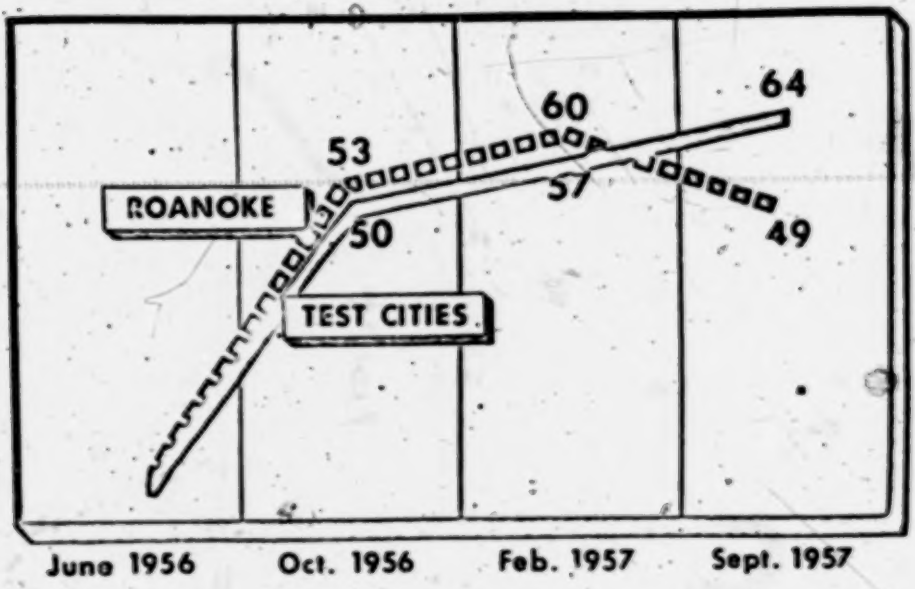
Motivations, unlike preference, have undergone considerable change in the beer field. All major motivations for both cans and one-way bottles are getting stronger, indicating that consumers are giving more serious consideration to beer containers.

Better flavor for bottles has increased from 36% to 55% of those who prefer bottles. The factor of drinking from the bottle is also up.

For cans, there is greater importance of getting colder (which also means gets cold faster and stays cold longer), ease of storage, and no danger of breakage. Liking to drink from the can is less important.

BEER-

ONE-WAY DISTRIBUTION IN VIRGINIA



In June, 1956, one-way beer bottles were legalized in Virginia. Several brewers entered the market with one-ways, accompanied by radio and TV advertising. GCMI conducted a newspaper advertising campaign in three test markets - Alexandria, Richmond and Norfolk.

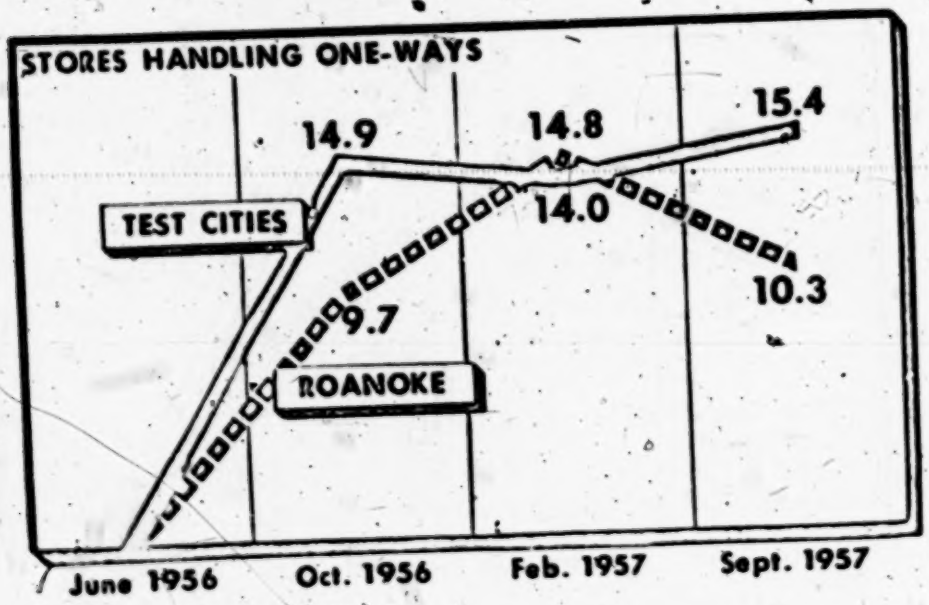
This chart shows the percentage of beer outlets handling any brand of one-way bottles in the three test markets, and in Roanoke, a control city where no advertising was done.

One-ways achieved 50% - 53% distribution in both test and control cities within four months after legalization, going up to 57% - 60% by February, 1957. Since then, distribution has dropped off in Roanoke, where no advertising was done, but has continued to climb to 64% in the test cities.

[Col. 3B]

BEER-

ONE-WAY SHARE OF MARKET IN VIRGINIA



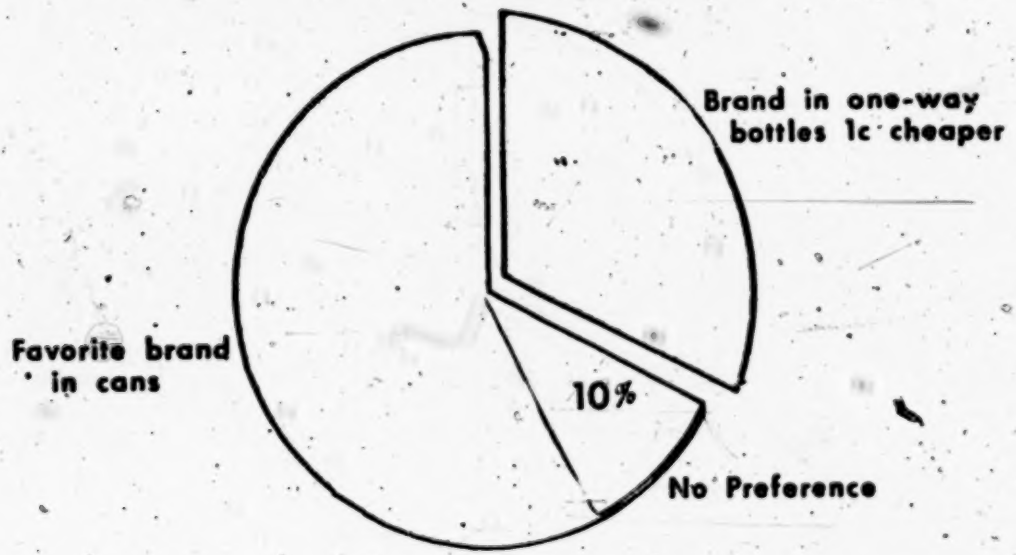
In the test cities, one-way sales climbed rapidly within four months to 14.9% of total beer sales in those stores handling one-way bottles. Sales have stayed at this level ever since, increasing slightly to 15.4% in September, 1957.

In Roanoke, where no advertising was done, sales increased at a slower rate, but reached a level equal to the test cities in February, 1957. Since then, however, Roanoke sales have declined to 10.3% of total beer volume.

[fol. 321]

BEER-

FAVORITE BRAND IN CANS VS. SOME OTHER BRAND IN ONE-WAY BOTTLES, 1c CHEAPER



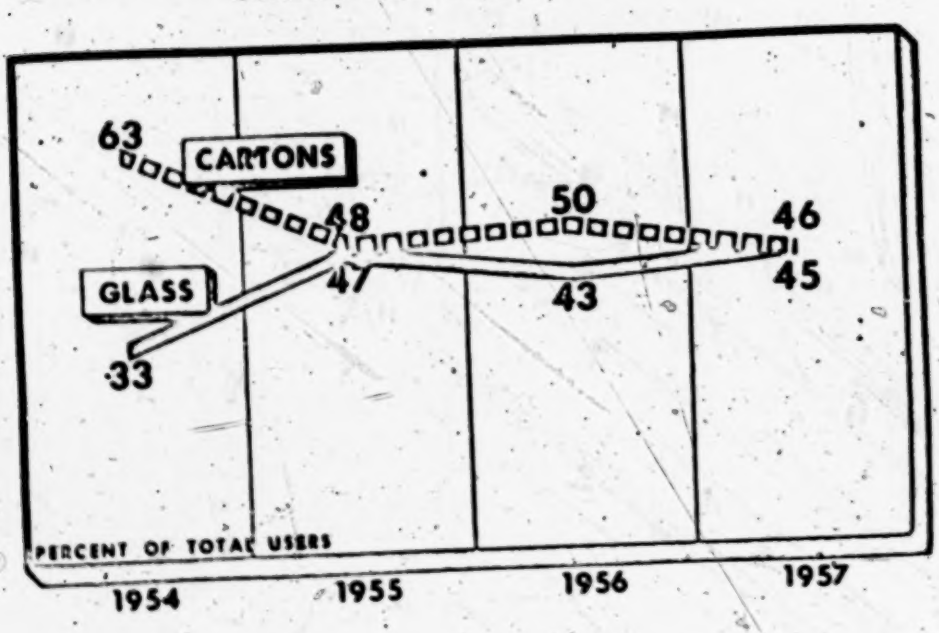
In Virginia, the three brewers who achieved greatest success with one-way bottles priced them at 6/99¢, compared with 6/$1.08 for sectional brand cans and 6/$1.25 for premium brand cans.

Under this price situation, surveys conducted in Virginia indicated that 29% of all beer drinkers would switch from their favorite brand in cans to a lower priced brand in one-way bottles. Sales results in the Norfolk area confirmed this finding.

To determine whether this same sensitivity to lower price existed in other parts of the country, the same question was asked of all beer drinkers in the national survey sample in August, 1957. 32% indicated they would switch to some other brand in one-ways, if that brand were 1¢ cheaper.

STORE-BOUGHT MILK-

CONSUMER CONTAINER PREFERENCE



In 1954, it was found that a surprisingly large 33% of all store buyers of milk preferred glass bottles, even though practically no milk was sold in bottles through stores at that time.

Since then, preference for bottles has increased to 46%, slightly higher than the existing preference for cartons.

[fol. 393]

STORE-BOUGHT MILK-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
CARTONS LEAK		33%
MORE SANITARY	16	30
NO WAX IN MILK	13	30
BETTER FLAVOR		23
Easier To Handle	14	7
Can See Contents	10	5
Gets Colder		5

CARTONS

	1954	1957
EASIER DISPOSAL	67%	72%
NO BREAKAGE		19
STORES BETTER		10
More Sanitary	3	8
Lighter	20	7
Easier To Handle	2	6
Re-use		4
Habit		4

The principal motivation for cartons is easier disposal (not having to take bottles back to the store), mentioned by 72% of those preferring cartons. "Cartons are lighter," which was an important reason in 1954 has dropped to only 7% mention in 1957, probably because few persons can remember what it used to be like to carry bottled milk home from the store.

A number of changes have taken place in bottle motivations. "More sanitary" and "no wax in milk" have doubled in importance, becoming major motivations. (See comments on G.C.M.I. advertising under Container Motivations for home-delivered milk).

2040

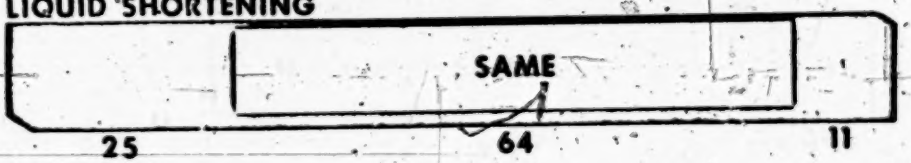
[for 394]

SALAD & COOKING OIL

CONSUMER CONTAINER PREFERENCE

USE, COMPARED TO YEAR AGO

LIQUID SHORTENING

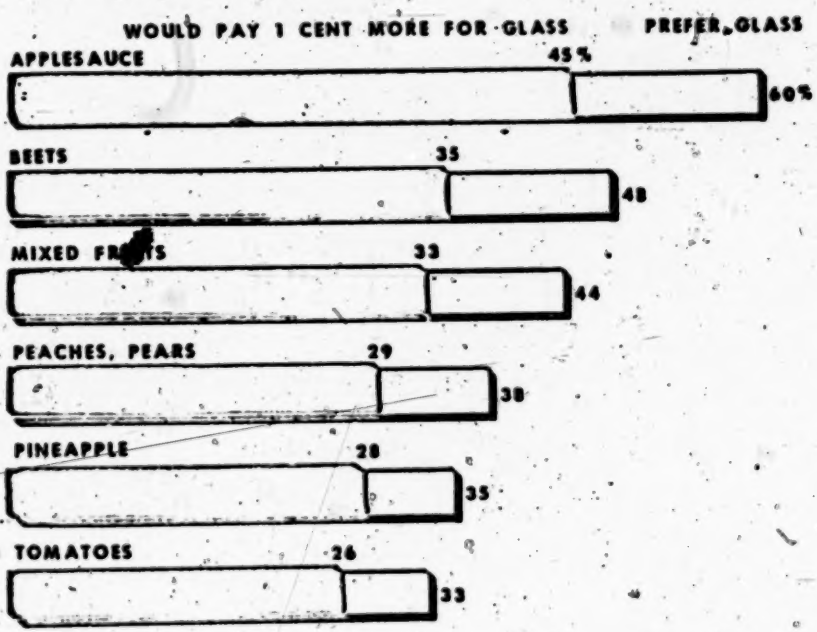


SOLID SHORTENING

As shown by the top bar, 68% of all salad oil users prefer glass, giving glass a 5 to 1 ratio over tin.

The two bottom bars reveal a trend from solid to liquid type shortening that is currently taking place. 20% are using less solid shortening than they did a year ago. 25% are using more liquid shortening.

FRUITS & VEGETABLES



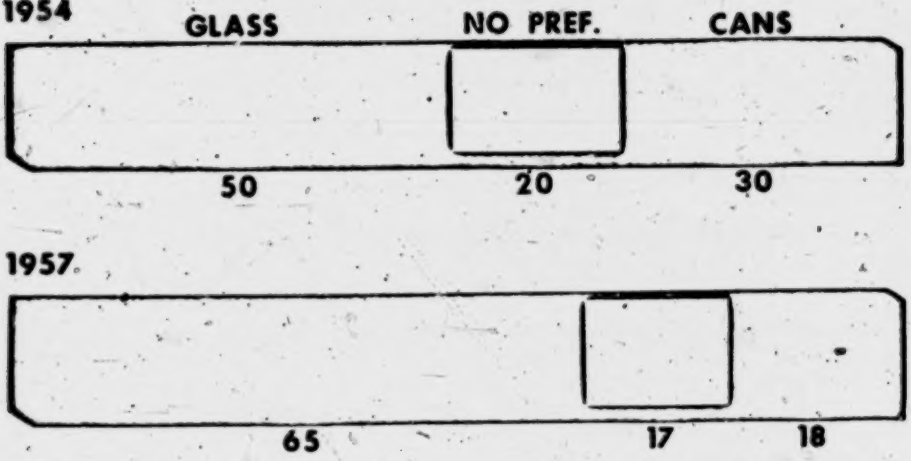
The total lengths of the bars above (red plus yellow) show the percentage of users who prefer glass for each product listed. The red portion of the bars reflects the percent of users who would pay 1¢ more per jar to obtain glass.

It is obvious from this chart that there exists not only wide acceptance of glass in the fruit and vegetable field, but also that there is a genuine consumer demand for glass.

60% of all applesauce users prefer glass; 45% are willing to pay 1¢ more per jar for glass. The same situation, in lesser degree, exists for the other products shown.

SOFT DRINKS-

CONSUMER CONTAINER PREFERENCE



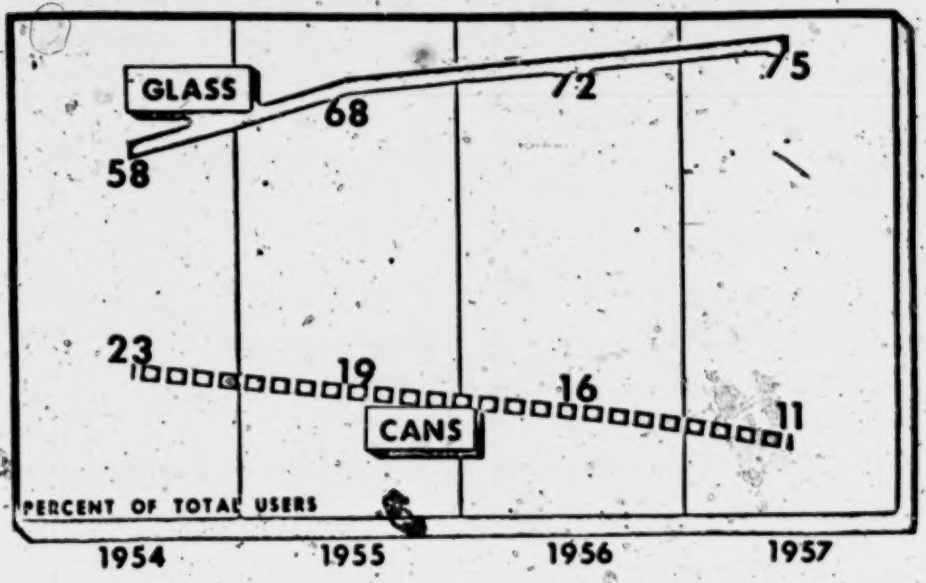
Consumer preference for bottles as a soft drink container has increased from 50% to 65% since 1954. Conversely, can preference has decreased from 30% to 18%. This chart covers a complete cross-section of soft drink users - men, women and children of all ages.

[fol. 397]

2043

SOFT DRINKS- WOMEN

CONSUMER CONTAINER PREFERENCE



To show the trend in soft drink container preference year by year, the above chart on women drinkers only indicates that can preference has been steadily declining, while bottle preference has been steadily rising.

This chart, and the preceding one, reflect preference between cans and one-way bottles at the same price, which measures preference for container material without extraneous factors. A measure of preference which takes into account the 2¢ differential on returnable bottles is as follows:

	All Users	Men	Women	Children
Prefer returnable bottles	55%	43%	54%	62%
Prefer one-way bottles	22%	27%	27%	15%
Prefer cans	9%	12%	6%	9%
No preference	14%	16%	13%	14%

[Vol. 386] 2044

SOFT DRINKS-

CONTAINER MOTIVATIONS

GLASS

	1954	1957
BETTER FLAVOR	24%	37%
DRINK FROM BOTTLE	18	27
SANITARY		14
CAN SEE CONTENTS	8	13
HABIT		12
Easier To Handle	3	9
Can Re-cap	2	5

CANS

	1954	1957
NO BREAKAGE	39%	54%
GETS COLDER, FASTER	11	22
STORES BETTER	13	18
EASIER DISPOSAL		12
Better Flavor		8
Easier To Handle	1	7
Habit	1	5
Lighter		4

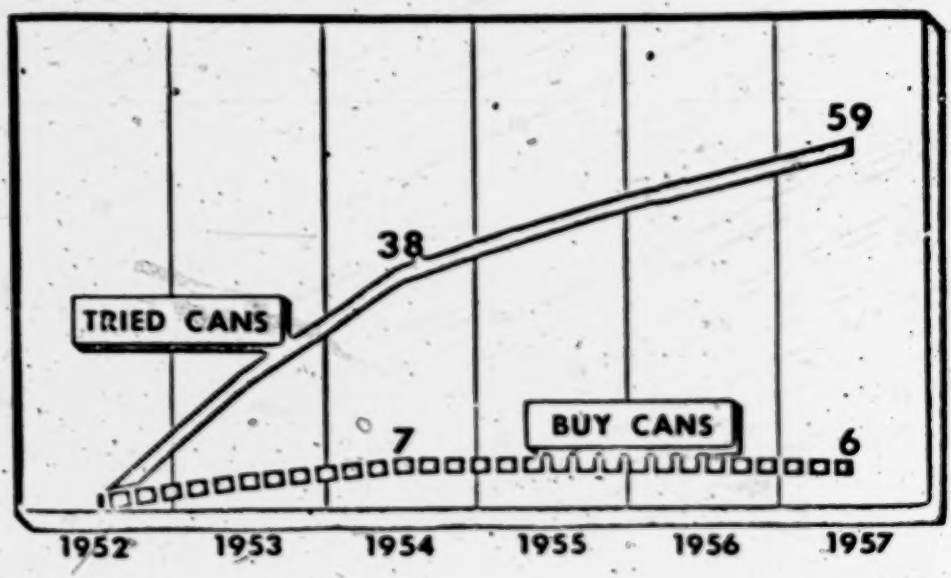
Better flavor and drinking from bottle are leading reasons for preferring bottles for soft drinks. Both have increased in importance since 1954, along with visibility of contents and ease of handling.

No danger of breakage is the most important factor affecting can preference. Since can preference has declined to the hard core of real can lovers, this factor has become of greater significance percentage-wise.

2045

SOFT DRINKS-

SAMPLING & SALES OF CANS



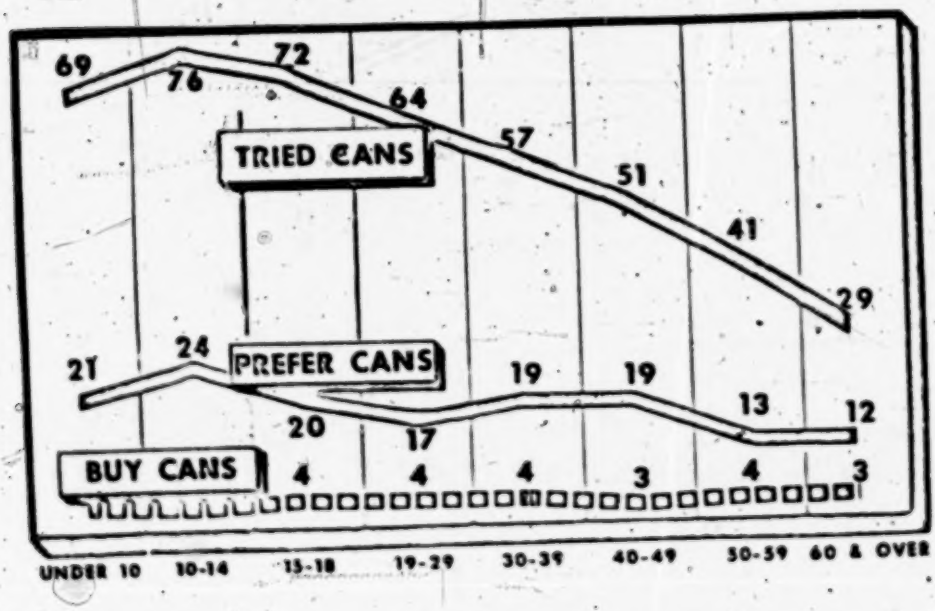
It is possible to reconstruct from G. C. M. I. national consumer surveys a complete history of can penetration since canned soft drinks were first put on the market in 1952.

Within two years, bottlers of canned soft drinks had succeeded in getting 38% of all soft drink users in the United States to try their product. By 1957, a total of 59% had tried canned soft drinks, but rate of penetration of the market is slowing down.

In spite of this wide sampling campaign, few persons have switched permanently to cans. At no time since 1952 have more than 7% of total soft drink users been regular purchasers of cans. Furthermore, most of those who buy cans also buy bottles, more bottles than cans.

SOFT DRINKS-

CAN PENETRATION BY AGE GROUPS



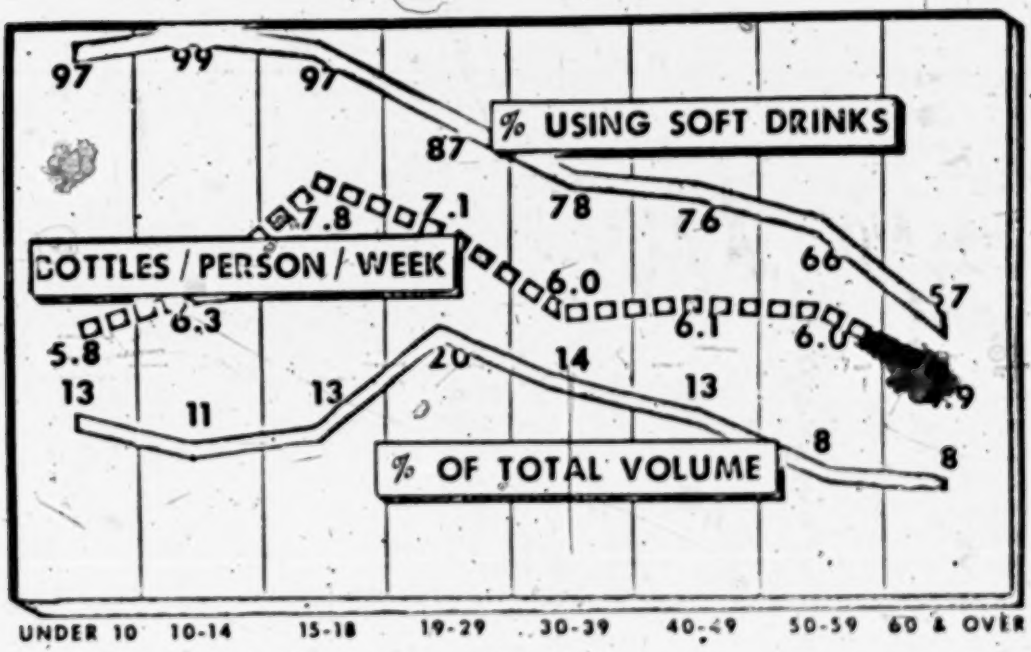
Canned soft drinks have had their greatest success with children, reaching their peak in the 10 - 14 year age group (sub-teenagers). 76% of this group have tried cans.

Penetration of the can-sampling campaign falls off steadily as age increases. Only 29% of the 60 and over group have tried canned soft drinks.

Preference for cans over one-way bottles decreases slightly with age, but regular use is steady. However, sales of canned soft drinks don't constitute over 4% of total soft drink purchasers in any age group.

SOFT DRINKS-

CONSUMPTION BY AGE GROUPS



This chart shows soft drink consumption by age groups, regardless of type of container.

The top bar represents percent of total persons (both sexes) in each age group who use soft drinks. The dotted bar shows the average number of bottles per person per week for soft drink users in each age group.

It is obvious that soft drinks are virtually a universal beverage among children and teen-agers, with highest per capita consumption among the high school group. Extent of use drops off steadily as age increases, but per capita consumption remains at a level plateau of 6 bottles per week until age 60.

The bottom line represents the percent of total soft drink volume consumed by each age group. The 10-18 year old group (covering two columns of the chart) accounts for 24% of total volume. However, from an advertising standpoint, the 19-39 group may be more important, since they not only account for 34% of total volume themselves, but are also the parents of the high per capita children.

[fol. 402] GOVERNMENT'S EXHIBIT 85

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, New York

April 14, 1954

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Co., Inc., J. S. Algeo—Hazel-Atlas Glass Company, C. G. Bensinger—Owens-Illinois Glass Company, E. J. Costa—Crown Cork and Seal Company, J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation, J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

E. F. Ball—Ball Brothers Company, Inc., F. H. May—Foster-Forbes Glass Company.

Others Present:

R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, J. W. Fisher—Ball Brothers Company, Inc., V. L. Hall—GCMI.

1. Call to Order.

The meeting was called to order by Chairman Pollock, who presided. Mr. Cheney acted as Secretary.

2. The minutes of the previous meeting, held on November 10, 1953 were approved as issued by the Secretary.

3. Plans and Organization—Progress Report.

(a) Mr. Cheney reported that good progress has been made in the basic Market Research phase of the Division activity. Continuing data collection is proceeding under the direction of a trained research assistant, and a library type file is set up, containing current data from some 35

business publications, all government sources, newspapers, and many research organizations and associations.

(b) Mr. Ford Sammis has been engaged on a retainer and per diem basis (for extra time) as Market Research consultant. Other organization progress has been disappointing. In spite of widespread search and over thirty interviews, neither a satisfactory Public Information Director nor Packaging Engineer has yet been located.

[fol. 403] 4. Depth Survey.

The plans for Depth Studies on Glass Containers presented by Ford Sammis in his proposal of March 15, 1954, were discussed and a progress report was given of the work accomplished to date. Numerous suggestions were made as to the proposed areas of opinion to be studied, and Mr. Cheney was instructed to listen to recordings of early interviews and guide the survey in line with Committee recommendations.

The Committee expressed a desire to hear sample recorded interviews at its next meeting. The target date for completion of the survey being May 15th, the Committee requested that Mr. Sammis report on this at the May membership meeting.

5. Task Groups.

Mr. Cheney requested the Committee to recommend two task groups made up of Sales Managers to whom he could turn for guidance as needed. Upon motion duly made, seconded and unanimously passed, it was

> Resolved that the Board of Trustees be requested to appoint two task groups comprised of representatives of the following member companies:

Glass Company Task Group

Anchor Hocking Glass Corporation
Armstrong Cork Company
Ball Brothers Company, Inc.
Brockway Glass Company, Inc.
Carr-Lowrey Glass Company
Glass Containers, Inc.
Hazel-Atlas Glass Company

Lamb Glass Company
Laurens Glass Works, Inc.
Maryland Glass Corporation
Owens-Illinois Glass Company
Thatcher Glass Manufacturing Co., Inc.

Closure Company Task Group

Anchor Hocking Glass Corporation
Armstrong Cork Company
Bernardin Bottle Cap Co., Inc.
Crown Cork & Seal Company
Owens-Illinois Glass Company.
White Cap Company

[fol. 404] 6. Baby Food Situation.

A quick survey of the St. Louis baby food market had been made by GCMI staff members and was presented, and the national market for baby foods in glass was studied and discussed. Further action was deferred for three months.

7. Carbonated Beverage Situation.

Mr. Cheney gave a report of the recent West Coast Sub-Committee meeting wherein the seriousness of the competition from soft drink cans was emphasized. He read a resolution of the Sub-Committee recommending that a consumer and dealer attitude survey be conducted in California and in an appropriate eastern market, to determine the progress and acceptance of the can as a soft drink container.

Recent developments and reports of the progress of cans in markets across the country were reviewed, and a One-Way bottle "test market" merchandising program proposed by a soft drink parent company was discussed. It was the consensus of the Committee that the GCMI newspaper advertising program suggested by the latter company could not be considered at this time.

The Director of Market Research and Promotion was instructed that the Committee policy with regard to the soft drink situation for the present was to keep close watch of new developments, to recommend and promote the use of One-Way bottles in those markets where there was a consumer demand for a No-Deposit package, and to recommend, as the occasion arises, that individual bottlers pro-

tect their industry by vigorously advertising the advantages of beverages in bottles.

Soft Drink Survey. Upon motion duly made, seconded and unanimously carried, the Director was authorized to proceed with a Survey of Consumer & Retailer Attitudes toward soft drinks in cans, in the Philadelphia and California areas, as proposed by the Ford Sammis organization in its letter of March 26, 1954.

8. Beer and Soft Drink Packaging Cost Studies.

After reviewing a report covering the need and use to be made of certain proposed packaging cost studies in the beer and soft drink fields, the Committee asked the Director to obtain definite proposals from two or three cost engineering agencies, outlining specifically what information would be obtained, together with a definite plan as to its use. This is to be discussed further at the next meeting, and a special survey of beer distributors is to be considered.

9. Milk Bottle Public Relations Committee.

Messrs. Hall and Cheney reported progress made by the Milk Bottle Public Relations Committee, particularly as to [fol. 405] the Buffalo and Milwaukee test compaigns. No survey data of results is yet available but dealer reaction indicates considerable success. The Committee has recommended a third test campaign in the St. Louis area, and Mr. Hall reported that milk bottle manufacturers representing over 90% of milk bottle production had signified their desires to contribute to a fund to aggregate $35,000 for this purpose, at the rate of 5 cents per gross of milk bottles shipped, until the total is reached, and that the Committee recommends approval of this project.

Upon motion duly made, seconded and unanimously passed, it was

> Resolved that the recommendation of the Milk Bottle Public Relations Committee be approved and that the Board of Trustees be requested to authorize the proposed program.

10. Publicity Activities.

Examples of continued bad press notices regarding glass containers based on inaccurate, uninformed or biased views, were cited, along with opportunities for constructive publicity. It was the consensus of the meeting that these situations should be promptly handled, and that this pointed up the need for early engagement of a Public Information Director.

11. Next Meeting.

It was decided to hold the next meeting of this Committee at The Greenbrier, White Sulphur Springs, West Virginia, at 1:00 P.M. on Sunday, May 16, 1954.

12. Adjournment.

There being no further business, the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

RLC:H

[fol. 406] GOVERNMENT'S EXHIBIT 86

Minutes of Meeting

Market Research and Promotion Committee

The Greenbrier
White Sulphur Springs, West Virginia

Sunday, May 16, 1954

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Co., Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. J. Costa—Crown Cork and Seal Company, J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation, J. S. Heuisler—Maryland Glass Corporation, G. A. Menglo—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

F. H. May—Foster-Forbes Glass Company.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. F. Davis—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, Fred E. Fuller—GCMI General Counsel, V. L. Hall—GCMI, H. C. Herger—Pierce Glass Company, J. P. Levis—Owens-Illinois Glass Company, C. R. Megowen—Owens-Illinois Glass Company, Ford Sammis—Marketing Economist, F. H. Wright—GCMI.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. F. B. Pollock, who presided. Mr. Cheney acted as Secretary.

2. Plans and Organization—Progress Report.

Mr. Bush Barnum, new GCMI Public Information Director, was introduced to the Committee, and Mr. Cheney's recommendations concerning plans for hiring a Packaging Economics Engineer capable of handling important, high level contacts, were approved by the Committee. With the exception of an Editor, to be hired later, this would complete the proposed organization.

3. Packaging Cost Studies—Beer and Soft Drinks.

Proposals were submitted by the Director of M. R. & P. from three management engineering firms, for diagnostic [fol. 407] and cost studies covering the packing and distribution of beer and soft drinks in cans vs. One-Way bottles. A thorough discussion followed which disclosed the Committee opinion to be that top priority should be given to a thorough diagnostic study of all phases of the merchandising and distribution of beer and soft drinks in One-Way bottles as compared to cans, with special emphasis on distributor activity and bottling house costs. A task group consisting of C. G. Bensinger, E. J. Costa, S. B. DeMerell, and G. A. Mengle was appointed by the Chairman to assist in the selection of an outside agency to handle this study.

4. Brochure of Charts and Statistics.

The Committee reviewed the dummy of a proposed brochure for glass company salesmen and for very limited distribution to business editors, giving the basic statistics on the glass container and other industries contained in "A Survey of the Market Problems of the Glass Container Industry" as presented by Mr. Cheney at Fort Lauderdale.

Photostatic copies were taken by the Committee members for further study—suggestions or additions to be submitted to the Director as soon as possible.

5. Plan for Retail Store Panels.

A plan for Retail Store Panels in Philadelphia and Los Angeles, which would furnish a means for continuing audits covering the relative sales of soft drinks in cans and bottles, and of tinned and glassed baby foods, was discussed.

The Director was authorized to proceed with a plan for such store panels, as proposed by the Ford Sammis organization on March 23, 1954.

6. Depth Survey Techniques.

Mr. Ford Sammis reviewed the results of the Depth Surveys recently completed, and played tape recordings of actual interviews for the Committee. The plans to present a report of these surveys at the membership meeting were approved.

7. Publicity.

The opportunity for constructive publicity and the need for correcting mis-statements concerning the industry were stressed by the Committee, and plans were approved to handle the basic requirements of this situation during the coming months prior to undertaking any broad program of product publicity and advertising, which may later be recommended. This activity will provide a means, under the present budget, for dealing with the immediate needs of the Soft Drink situation.

[fol. 408] 8. Joint Meeting with Soft Drink Manufacturers.

Representatives of all companies manufacturing soft drink bottles were then invited to join the meeting, and Mr. Ford Sammis gave a report of the Consumer and Dealer Surveys covering soft drinks in cans and bottles in the Philadelphia and California areas.

There was a lengthy discussion of the competition being offered by the soft drink can, and the need was expressed for earliest possible distribution of GCMI drawings covering recommended designs for One-Way carbonated beverage bottles, and also for material in pamphlet form setting forth the advantages of glass bottles.

It was suggested that the Trustees be requested to set up a special committee of soft drink bottle manufacturers to keep track of continuing developments in this field and to recommend action when needed. Mr. Cheney said he would convey this suggestion to the Board.

9. Adjournment.

There being no further business, the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 409] GOVERNMENT'S EXHIBIT 87

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, New York

September 22, 1954

Present:

F. B. Pollock, Chairman—Thatcher Glass Mfg. Co., Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. J. Costa—Crown Cork and Seal Company, Inc., J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation, J. S.

Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

E. D. Easterby—Laurens Glass Works, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, Fred E. Fuller—GCMI General Counsel, V. L. Hall—GCMI, H. W. Kuni—GCMI, Ford Sammis—Marketing Economist, W. C. Schade—Ball Brothers Company, Inc.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. E. B. Pollock, who presided. Mr. Cheney acted as Secretary.

The Chairman stated that this meeting was called especially to review the results of the Market Research program to date; that the director and staff of the Market Research and Promotion Division had been asked to make "recommendations . . . . . that might be undertaken which looked promising" as instructed in the resolution establishing the division; that division studies indicated recommendations; that the purpose of the meeting was Committee consideration of the division recommendations; that, in consequence, time would not be taken for detailed division activities since the previous meeting on August 12, 1954.

2. Minutes of Previous Meeting.

The minutes of the meeting held on August 12, 1954 were approved as issued by the Secretary.

[fol. 410] 3. Consumer and Dealer Attitude Surveys.

Ford Sammis presented information on (1) his depth survey, (2) his Philadelphia and California soft drink studies and (3) the nationwide consumer and dealer survey.

The last named is an extremely broad undertaking, involving 10,000 consumers, 2000 retailers and a total of some

3,000,000 individual answers to be collated. In the course of the time available, it was only possible for Mr. Sammis to give highlights of his extensive program. This material was also covered in confidential, numbered reports issued only to Committee members and entitled "National Container Survey, Preliminary Summary, September 22, 1954".

4. Beer Container Diagnostic Study.

Three representatives of McKinsey & Company,—Everett Smith, William Graham and David Fox,—presented an oral report of their recent beer survey. Written reports will be submitted to Committee members at a later date.

5. Milk Bottle Test Markets Results.

R. L. Cheney presented summaries of recent test campaigns in Buffalo and Milwaukee and written reports were given to the Committee.

6. Recommended Industry Program.

Mr. Cheney then presented a 25 page report to the Committee entitled "A Recommended Program for the Glass Container Industry" which included the following sections:

Forward
Competitive Industries
Industry Trends
Defining the Problem
Aims and Objectives
A Total Impact Program including:—
Market Research
Public Information
Consumer Advertising Program
Choosing an Agency
Merchandising and Trade Promotion
Conclusion

After full discussion, the following resolution was duly moved, seconded and unanimously adopted:

Resolved, that the Committee on Market Research and Promotion recommends to the Trustees that the percentage of assessment which the Budget Committee has

[fol. 411] proposed to finance all regular activities of the Standing Committees, amounting to 14/100 of 1% be augmented by 16/100 of 1% to provide funds for an advertising and promotional program as submitted by the Committee herewith, making the membership dues for the year 1955 total 30/100 of 1% of net sales; Resolved Further, that the Committee recommends to the Trustees that at the time the budgets for 1956 and 1957 are under consideration there be included an assessment of 16/100 of 1% to finance advertising and promotional activities.

Respectfully submitted, R. L. Cheney, Secretary.

RLC:CH

[fol. 412] GOVERNMENT'S EXHIBIT 88

Minutes of Meeting

Market Research and Promotion Committee
The Broadmoor
Colorado Springs, Colo.

October 24, 1954

Present:

F. B. Pollock, Chairman—Thatcher Glass Mfg. Co., Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. J. Costa—Crown Cork and Seal Company, Inc., J. C. Feagley—Armstrong Cork Company, J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company, E. D. Easterby—Laurens Glass Works, Inc.

Absent:

W. V. Fisher—Anchor Hocking Glass Corporation.

Present from West Coast Sub-Committee:

K. C. White, Chairman—Owens-Illinois Glass Company, F. L. Bower—Hazel-Atlas Glass Company, R. H. Dallas—Maywood Glass Company, F. W. McDonald—Glass Con-

tainers, Inc., William Simkins—Latchford-Marble Glass Company.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. De-Merell—Anchor Hocking Glass Corporation, Fred E. Fuller—GCMI General Counsel, V. L. Hall—GCMI, Ford Sammis—Marketing Economist, W. C. Schade—Ball Brothers Company, Inc., G. F. Rieman—Ball Brothers Company, Inc., P. R. Goetz—Ball Brothers Company, Inc.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. F. B. Pollock, who presided. Mr. Cheney acted as Secretary.

2. Minutes of Previous Meeting.

The minutes of the meeting held on September 22, 1954 were approved as issued by the Secretary.

[fol. 413] 3. Review of Proposed Presentation to the Membership.

Mr. Cheney then reviewed a 25 page report entitled "A Recommended Program for the Glass Container Industry" dated October 24, 1954, which was the same as the document of the same name dated September 2, 1954 which had been reviewed by the Committee at its previous meeting, except that two or three sections had been considerably condensed since the speakers at the following days' membership meetings would cover the sections orally and with charts.

He outlined the plan of the Market Research and Promotion Department for presenting the Committee's recommendation to the Industry at the meetings on the two following days, including the provision for a report illustrated by charts by Ford Sammis covering the results of the major marketing research survey that had recently been completed.

After discussion, upon motion duly made and seconded the following resolution was unanimously adopted:

Resolved, that Mr. Cheney be authorized to present "A Recommended Program for the Glass Container Industry"

as reviewed with this Committee today, to the Membership at its meetings on October 25 and October 26 with the proviso that he precede it with a statement to the effect that this recommended program represents the best thinking of the Committee at the present time in the light of present market research findings and industry problems as they currently appear, but that it should not be assumed that the execution of the plan would necessarily follow the recommendation as presented here except in general outline, but that if approved by the Membership any plan as put into effect would be with the approval of the Committee and the Board of Trustees.

4. West Coast Marketing Problems.

The members of the West Coast Sub-Committee then reviewed the marketing problems of the glass container industry in the West Coast area. Highlighted were the fact that the position of the 1-way beer bottles had declined in that market; intensive competition has been encountered from canned soft drinks, particularly in the Los Angeles and San Francisco areas; a second packer has switched 100% to glass for baby food in the California market and the two glass-packed baby foods in that area are advertising heavily and are apparently gaining in market position; and joint efforts between the bottle manufacturers and the California Nevada Manufacturers of Carbonated Beverages were reported to have been quite successful in meeting the advent of cans in the Los Angeles market.

[fol. 414] 5. Next meeting.

It was decided to hold the next meeting of the subcommittee at 8:30 A. M. Wednesday morning, October 27, 1954.

6. Adjournment.

There being no further business, the meeting was adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 415] GOVERNMENT'S EXHIBIT 89

Minutes of Meeting

Market Research and Promotion Committee
The Broadmoor
Colorado Springs, Colo.

October 27, 1954

Present:

F. B. Pollock, Chairman—Thatcher Glass Mfg. Co., Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. J. Costa—Crown Cork and Seal Company, Inc., J. C. Feagley—Armstrong Cork Company, J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company, E. D. Easterby—Laurens Glass Works, Inc.

Absent:

W. V. Fisher—Anchor Hocking Glass Corporation.

Present from West Coast Sub-Committee:

K. C. White, Chairman—Owens-Illinois Glass Company, F. L. Bower—Hazel-Atlas Glass Company, R. H. Dallas—Maywood Glass Company, F. W. McDonald—Glass Containers, Inc., William Simkins—Latchford-Marble Glass Company.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, V. L. Hall—GCMI, Ford Sammis—Marketing Economist, W. C. Schade—Ball Brothers Company, Inc., G. F. Rieman—Ball Brothers Company, Inc., P. P. Goetz—Ball Brothers Company, Inc.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. F. B. Pollock. Mr. Cheney acted as Secretary.

2. Selection of an Advertising Agency.

With the approval by the members on a previous day of "A Recommended Program for the Glass Container Industry" and the report of the Budget Committee, the Chairman [fol. 416] stated that he thought it was in order to authorize the selection of an advertising agency by the Director of Market Research and Promotion. He stated that the Director had requested the appointment of a special three-man sub-committee of advertising managers to aid in this selection.

Therefore, after discussion, upon motion duly made and seconded the following resolutions were unanimously adopted:

> Resolved, that the Director of Market Research and Promotion proceed with the selection of an advertising agency in line with the plans for such selection outlined by him to the Committee this day, and
>
> Resolved, that Anchor Hocking Glass Corporation, Armstrong Cork Company and Owens-Illinois Glass Company be requested to supply the services of their advertising managers to act as a special Advisory Committee to the Director of Market Research and Promotion in connection with this selection.

3. Soft Drink Industry Talks.

The Director was instructed to circulate his talk which is to be made at several meetings of soft drink manufacturers to all members of G.C.M.I. He was also instructed to prepare a story for the brewing industry and for the dairy industry, setting forth the facts about those two industries which were incorporated in his soft drink talk.

4. Financial Analysts Program.

The Director was instructed to send copies of the material furnished to the financial analysts at New York and Boston to the financial analysts of the various insurance companies throughout the country.

5. Recommendations for use of the labor press.

Mr. Cheney then read a letter from the Glass Bottle Blowers Association recommending that a substantial amount of the advertising funds of G.C.M.I. be devoted to the labor press. It was the opinion of the Committee that it was too early to consider this matter at this time and the Director was asked to so advise the union.

[fol. 417] 6. N. C. A. Promotional Program.

The Director was instructed to refer to the Glass Container Task Group of the Market Research and Promotion Committee any questions or problems involved in cooperation with the N. C. A. promotional program.

7. Further report of West Coast activities.

Members of the West Coast Sub-Committee then continued a report of the marketing situation facing the glass container industry on the West Coast. The discussion was principally concerned with the opportunities for the sale of 1-way bottles for the carbonated beverage industry on the West Coast and it was reported that there seemed to be one or two success stories in the making for this container in southern California.

It was the concensus of the meeting that the office of the Market Research and Promotion director should keep more closely in touch with the West Coast Sub-Committee, for an interchange of views and adequate communication covering activities of the parent committee and the subcommittee, and of the office of the Director.

8. Adjournment.

There being no further business, the meeting was adjourned.

Respectfully submitted, R. L. Cheney, Secretary

[fol. 418] GOVERNMENT'S EXHIBIT 90

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, N. Y.

March 1, 1955

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., E. J. Costa—Crown Cork and Seal Company, Inc., W. V. Fisher—Anchor Hocking Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, J. S. Heuisler—Maryland Glass Corporation.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. F. Davis—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, J. A. Giddings—Brockway Glass Company, Inc., R. H. Hetzel—Armstrong Cork Company.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. F. B. Pollock. Mr. Cheney acted as Secretary.

2. Minutes of Previous Meetings.

The minutes of the meetings held October 24, 1954 and October 27, 1954 were approved as issued by the Secretary.

3. 1955 Advertising and Promotion Plan.

The following representatives of Kenyon & Eckhardt,

Inc., GCMI's advertising agency, were then invited to join the meeting and were introduced by Mr. Cheney:

D. J. Maggini, Account Supervisor
R. B. Shirey, Account Executive
Miss Leslie Munro, Creative Chief
G. M. Ule, Research Director
Hal Davis, Director of Publicity & Promotion
J. P. Braun, Media Director

[fol. 419] The representatives of the agency then presented a "1955 Advertising Recommendation for the Glass Container Manufacturers Institute," and copies of this plan were distributed to those present and later mailed to absentees. Proposed advertisements were presented partly in preliminary photographs and partly in rough art work form.

After answering questions from the Committee members the representatives of the advertising agency left the meeting.

Mr. Cheney then explained that the plan as presented today was a modification of a plan reviewed the week before by an advisory group of advertising managers from the industry. Their many very helpful criticisms, suggestions and recommendations had been taken into account in bringing the plan to its present form although because of differing views on certain points and because of the need of accommodating the overall desires of the industry as he understood them, the Director alone assumed responsibility for the plan in its present form.

Mr. Cheney then presented the budget covering the plan presented by the agency which was as follows:

Budget

Advertising and Promotion

National Magazines (Space & Production)	$ 513,000
Television (Space & Production)	188,000
Trade Papers	30,000
Labor Papers	20,000
Merchandising and Publicity	75,000
Local Market Campaigns	232,000
Contingencies	2,800
	$1,060,800

The Director then recommended that in addition to the advertising and promotion plan just covered, $50,000 be appropriated for general publicity to be carried out under the direction of Bush Barnum, GCMI Public Information Director, and $22,000 be appropriated to continue the milk bottle promotional program for the balance of 1955. With these additions the total budget for advertising, promotion and publicity is $1,132,800 which was in conformance with the 1955 budget for GCMI as approved by the Board of Trustees and the members.

After many questions and considerable discussion of the plan as presented, upon motion duly made, seconded and unanimously carried, it was

> Resolved, That the Market Research and Promotion Committee approve the plans for the 1955 advertising and promotion and publicity as presented by the Director of Market Research and Promotion and the advertising agency and authorizes the Director to proceed to work out the details and put the plan into action.

[fol. 420] 4. Report of Beer Bottle Subcommittee Activities.

Mr. Cheney then reviewed the recent meeting of the Beer Bottle Sub-committee of this committee. He stated that the Board of Trustees had constituted this Beer Bottle Subcommittee as a subcommittee of the Committee of Market Research and Promotion, transferring it from the Committee on Container Design and Specifications since it appeared that its activities would be henceforth in the field of market research and promotion.

The committee had met and received a report from the representatives of McKinsey and Company covering their study of the possibilities of duplicating the marketing success which the one-way beer bottle was enjoying in Baltimore to the Detroit market. After hearing the report it had been the consensus of the Beer Bottle Subcommittee that in the absence of basic changes in the marketing pattern of beer in the Detroit market that it would not be

possible to duplicate the Baltimore experience there. The Subcommittee felt that in the light of all studies made to date it was not clear what course GCMI should take in the promotion of glass bottles for beer and it invited the parent committee to review the McKinsey and Company report and had recommended that the Director ask the Kenyon & Eckhardt research and marketing people to study this problem and see if recommendations for action could be developed.

The great importance of the beer container market to the glass container industry was stressed and the Director was urged to take every possible step towards developing activity in this connection which would offer promise of success.

5. 1955 Market Research Plans.

Mr. Cheney then presented plans for continuing the market research activities of the Institute in 1955, which plans were approved by the committee as submitted.

In this connection, upon motion duly made, seconded and unanimously carried, it was

> Resolved, That the "Glass Container National Survey 1954—Summary" as presented by Ford Sammis to the membership meeting at Colorado Springs, and as shown to this committee in printed form be held at GCMI on a library loan basis to GCMI members.

6. Committee Directives.

As means of increasing the value of the GCMI advertising and promotion campaign to its members the Market Research and Promotion division was directed by the committee to:

[fol. 421] 1. Send a summary of the Kenyon & Eckhardt report to the membership to inform them of the program.

2. Keep them advised of progress on the various parts of the plan.

3. Furnish the membership with advance proof of all

ads at least thirty days prior to their first appearance in the media.

4. Contact the advertising agencies of customer industries and associations of those industries, explaining our program endeavoring to obtain cooperation in their advertising.
5. Prepare and make available to the members in the necessary quantities material explaining the program, including advance proof of the advertising, and all other useful information about it that could be placed in the hands of the sales people in the industry for their use in merchandising the program in their contacts with the trade.

7. Adjournment.

There being no further business, the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

J. S. Heuisler—Maryland Glass Corporation.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, Fred E. Fuller—GCMI General Counsel, V. L. Hall—GCMI, F. B. Hess—Brockway Glass Company, Inc., M. R. Hellrung—Owens-Illinois Glass Company, P. I. Heuisler, Jr.—Maryland Glass Corporation, F. W. McDonald—Glass Containers, Inc., R. H. Roper—Laurens Glass Works, Inc., F. H. Wheaton—Wheaton Glass Company, F. H. Wright—GCMI.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. F. B. Pollock. Mr. Cheney acted as Secretary.

2. Advertising and Promotion Program.

The Chairman stated that as directed by the committee at its last meeting the Market Research and Promotion department has issued Advertising and Promotion Bulletin No. 1 dated April 18, 1955 giving the industry in complete, but condensed outline form the details of the GCMI 1955 Advertising and Promotion program which had been approved by this committee at its previous meeting. He then asked Mr. Cheney to review the progress that had been made in this program since the last meeting which he did. He told of the working relations that have been developed with Kenyon & Eckhardt, the advertising agency, and pointed out that they had developed in a very satisfactory [fol. 423] way and that he was very pleased with the energy and enthusiasm with which they were attacking our problems and with the quality of the personnel assigned to GCMI.

Slides were shown covering the photographic art work and layouts of the first four in the series of national magazine advertisements (covering milk, two soft drinks and baby foods). A slide was shown covering tentative photographic art work for the fifth advertisement covering staples, and a slide was shown covering artist layouts for the ad covering cosmetics.

Each of these was discussed and many suggestions and recommendations were submitted for the improvement of the advertisements. Now that the program has been launched and enough lead time will be available to do so, Mr. Cheney was asked to submit ads in advance to informed members of the industry for their advice.

Concerning the staples ad it was the consensus that the catsup was to- dark in color, the mustard too orange in color, the catsup bottle looked too unrealistic and should contain more catsup and should give some evidence of having been poured from with residual catsup on the inferior upper side walls. It was suggested that the blue background be changed as it gave the glass a green cast which is undesirable in catsup bottles.

In the cosmetics ad it was pointed out that the artist's conception showed bottles that were too large and not cosmetic type in appearance, and it was recommended that the most distinctive possible bottles be included while still avoiding private molds. A lotion bottle should be included as well as an opal jar and a fancy perfume. It was suggested that GCMI ask cosmetic bottle manufacturers to submit samples of appropriate bottles for the advertisement. The theme of the ad was thought to be very good.

In discussing the labor press to be used for GCMI advertising, it was the consensus of the committee that GCMI funds could not be used for advertisements in the Retail Clerk's publication over the signature of one of the labor unions in the glass container industry. If this magazine will not accept advertising from other than a labor union, it could not be included in any way in GCMI's program.

The Market Research and Promotion division was instructed to furnish the industry with a list of the dates on which the GCMI commercials would appear on the NBC "Home Show" television show.

3. Presentation of Committee Report—May 9 and 10.

Mr. Cheney then outlined his proposed plan for presenting the report of this committee to the GCMI membership on the following two days as outlined in the printed program for those meetings and the plans were approved by the committee.

[fol. 424] 4. Marketing Research Activity.

Mr. Cheney then outlined the proposed plans for marketing research activtities in 1955 including laboratory tests comparing glass with competitive container materials, 1955 consumer surveys, the means of measuring campaign results, and proposals for breaking down the data of the 1954 survey. These plans were approved.

5. Beer Bottle Subcommittee Activity and Plans.

The schedule for this meeting did not allow time for presentation to this committee of the McKinsey and Company report which had been reviewed by the Beer Bottle Subcommittee. However, the problems of the industry in this area have been submitted to Kenyon & Eckhardt for their study and recommendations as to ways and means to attack this problem.

6. Soft Drink Industry Reaction to GCMI Activity.

Mr. Cheney reported that reaction to his talks to eight state associations and the national convention of ABCB seemed to have been favorable. The headquarters of ABCB have been informed of GCMI's advertising and promotion plans for 1955 and have reacted very enthusiastically, inviting him and Mr. Barnum to present these plans to a meeting of virtually all of the state presidents and secretaries of bottling industry associations and officers and directors of ABCB, at their meeting in Washington on the afternoon of May 9. The committee approved this presentation.

7. Statement and Recommendations from a GCMI Member.

The Chairman stated that he had invited Mr. Frank H. Wheaton, Jr. to present a statement and recommendations to this committee. Mr. Wheaton pointed out that the market research findings of the Market Research and Promotion department clearly revealed the need for more technical research on the part of the glass container industry and the improvement of its product in order to maintain its competitive position with other packaging industries. He presented his views as to how best some of this research

could be carried out by members of the industry. The industry members expressed much interest in the subject, and a willingness to explore individually ways and means of carrying out this research, but it was the consensus that it was beyond the jurisdiction of this committee and therefore a subject on which this committee could not take any specific action.

8. Adjournment.

There being no further business, the meeting was adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 425] GOVERNMENT'S EXHIBIT 92

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, N. Y.
September 28, 1955

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation, J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

E. J. Costa—Crown Cork and Seal Company, Inc., E. D. Easterby—Laurens Glass Works, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, Fred E. Fuller—GCMI General Counsel, V. L. Hall—GCMI.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. F. B. Pollock. Mr. Cheney acted as Secretary.

2. In Memoriam, Joseph M. Nester.

The meeting was opened with a period of silence, in memory of the late Joseph M. Nester as an expression of the deep affection and regard in which he was held by all members of the Committee, and in gratitude for the outstanding leadership he had given to the Institute and to the Committee during his year as president of GCMI.

3. Proposed Advertising and Promotion Program for 1956.

The representatives of Kenyon & Eckhardt, Inc. who were to present the agency's recommendations for 1956 advertising and promotion campaign for GCMI then joined the meeting. Those present from the agency were:

W. B. Lewis, President
R. B. Shirey, Account Executive,
G. M. Ule, Research Director
J. P. Braun, Media Director
Hal Davis, Director of Publicity and Promotion
Miss Leslie Munro, Creative Chief

[fol. 426] The representatives of Kenyon & Eckhardt then presnted the "1956 Advertising Recommendation for the Glass Container Manufacturers Institute." Copies of this presentation were distributed to those present and later mailed to absentee committee members. The presentation consisted of the following parts:

I The Problem
II Media Recommendation
III Promotion
IV Summary of Costs
V Copy Planning
VI Special Recommendations

Following the presentation committee members asked many questions of the agency representatives and furnished them with background information on the glass container industry and its relation with the various markets for its products which might have been overlooked in the preparation of the advertisements. In addition to questions and suggestions on details of the art work and copy of the advertisements, particular points questioned were the use of Parents' Magazine with its high cost per thousand of readers, the advisability of using the juice ad at all in its present approach, and the need for much more emphasis on work with the supermarket and other retailers.

On this latter point it was the consensus of the committee that one of the biggest problems of the glass container industry was the negative attitude of the supermarket operators and other retailers towards products packed in glass. Great emphasis was placed upon the need for sufficient activity directed toward the retail trade to at least change the unfriendly attitude towards glass to a neutral one.

Following this the representatives of the agency retired and the committee meeting continued.

4. Proposed Budget for 1956.

Mr. Cheney then presented a proposed budget for 1956, copy of which is attached to these minutes. It covers:

A—Operating Expenses and Market Research Activities	$ 238,300
B—Advertising and Promotion Expenses	1,200,784
C—That portion of Advertising and Promotion Expenses as recommended by Kenyon & Eckhardt	1,102,784

Under B, Advertising and Promotion Expenses, it was pointed out that $50,000 was included for General Publicity Expense, to be carried out under the direction of Mr. Bush Barnum in his capacity as Public Information Director. It is proposed that this fund be used to develop a motion picture for GCMI which could be used for presentation to men's and women's clubs, association meetings, conventions, etc. and so designed that it could be used on

television as a public service or educational feature, in whole and in part. In addition, a budget of $48,000 was included for continuation of the Milk Bottle Promotional Program along present lines.

[fol. 427] 5. Beer Bottle Subcommittee Activity.

The Director of Market Research and Promotion reported that the Subcommittee on Beer Bottles had approved a plan for the research, promotion, and merchandising personnel of Kenyon & Eckhardt to make a thorough study of beer distribution in a typical medium-sized market with a view to developing and later testing in that market a plan for promoting the use of glass bottles for beer. Funds for this purpose ($50,000) were included and not yet expended, in the 1955 budget, and funds for extension of any successful resulting pattern to one or two additional markets were available in accumulated surplus of marketing funds carried forward from 1954.

6. Approval of Plans and Budgets.

Following this there was a further discussion of the plan presented by the agency, the budgets and related material. Among the questions raised but left for further consideration by the Market Research and Promotion department were the advisability of including a beer ad in the magazine schedule, the possibility of finding other media for beer ads, the possibility of using the labor papers for the beer ads, and a question as to value of magazine advertising during the month of August. On the latter point the Director was asked to check readership studies with the agency and see if it would be advantageous to drop this month and use the money elsewhere.

The Chairman stated, and the Committee was in agreement that the last section, VI—"Special Recommendations" —deserved and required much attention from the Market Research and Promotion department. Mr. Cheney stated that he understood that paragraph 2, "Product Improvement," did not come within the jurisdiction of this committee or its budget but that he understood that individual members were expanding the technical research involved and that plans for making research facilities along these

lines available to the industry as a whole were being discussed and considered by the industry.

He said that paragraph 1, "Product Research," paragraph 3, "Merchandising Aids," and paragraph 4, "Merchandising Facts" could be handled within the market research activities of the department and that the budget included $20,000 which could be applied to these activities.

It was the consensus of the committee that these activities justified greater attention, and the Director was asked to develop specific plans to cover these areas, with special emphasis on item 4, and to reappraise the overall budget with a view to the possibility of assigning some of the funds now earmarked for national magazine advertising to this area, if necessary.

Chairman Pollock said he felt the committee should realize that the 1956 plan devotes its full budget for advertising to national media and does not include any local programs or promotions as was previously planned. After further discussion of the plan and budget, upon motion [fol. 428] duly made, seconded, and unanimously carried, it was

> Resolved, That the Market Research and Promotion Committee approve the proposed budget dated September 28, 1955, as submitted, subject to the availability of funds from that portion of members' dues representing 16/100 of 1% of dollar sales to cover that portion of the budget designated "B—Advertising and Promotion"; and
>
> Resolved further, That they approve the basic plan of media advertising, promotion and merchandising; and
>
> Resolved further, That after further study, portions of the media budget may be applied to Section VI of the agency recommendation entitled "Special Merchandising Recommendations"; and
>
> Resolved further, That diversion of funds for this purpose, if any, be recommended to the next scheduled meeting of the Market Research and Promotion Committee which is to be held at Miami Beach in November, prior to the membership meeting.

7. Invitation to Address ABCB Convention.

Mr. Cheney reported that he had been invited to make a brief talk at the ABCB Convention at Miami on November 16 concerning GCMI advertising and promotion plans and the general subject of soft drinks in glass bottles. The committee approved his making this talk and authorized Mr. Cheney to announce at that time that GCMI would have an advertising and promotion program in 1956 which would include soft drinks in glass bottles.

8. Committee Report to GCMI Membership Meeting.

It was proposed that this committee make a report to the membership on the morning of Wednesday, November 30, which would include an introduction by Chairman Pollock, a review of 1955 advertising and promotion activities by R. L. Cheney, a report of the 1955 nationwide consumer attitude survey by Ford Sammis, and a presentation of the advertising and promotion program for 1956 by R. L. Cheney, and R. B. Shirey and Miss Leslie Munro of Kenyon & Eckhardt, Inc.

On motion duly made, seconded and unanimously carried, it was

> Resolved, That this committee should give the proposed report to the membership, subject to the approval of the Program Committee and the Board of Trustees.

9. Competitors' Advertising.

Examples of advertising by members of packaging industries which compete with the glass container industry were [fol. 429] discussed and it was the consensus of the committee that some of this advertising bordered on the unethical. It was hoped that this type of advertising would cease.

10. Next meeting.

It was decided to hold the next meeting of this subcommittee at the Fontainebleau Hotel at Miami Beach, Florida at 3:00 P.M. on Monday, November 28, 1955, preceding the

meeting of the Board of Trustees which is to be held at 5:00 P. M. that afternoon.

11. Adjournment.

There being no further business, the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

Minutes of Meeting

Market Research and Promotion Task Committee
GCMI Conference Room
New York, New York

November 2, 1955

Present:

J. S. Algeo—Hazel-Atlas Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, W. H. Ellis—Lamb Glass Company, The, John H. Funkey—Carr-Lowrey Glass Company, James A. Giddings—Brockway Glass Company, Inc., Kenneth Hay—Ball Brothers Company, Inc., Roger H. Hetzel—Armstrong Cork Company, P. I. Heuisler, Jr.—Maryland Glass Corporation, P. S. Holmquest—Thatcher Glass Manufacturing Co., Inc., R. H. Roper, Jr.—Laurens Glass Works, Inc., Kevin Solon—Owens-Illinois Glass Company.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI.

1. Call to Order.

The meeting was called to order by R. L. Cheney who requested that a chairman be selected. Upon a motion duly made and seconded, Mr. Hetzel was unanimously elected chairman.

2. Purpose of Meeting.

Mr. Cheney outlined the purpose of the meeting: to review the 1956 Advertising and Promotion Program.

3. 1956 Advertising and Promotion Program.

Mr. Cheney then outlined the 1956 program and presented the following schedule:

February	Instant Coffee	Ladies' Home Journal McCall's
March	Fruits	Ladies' Home Journal Good Housekeeping Family Circle Woman's Day
April	Household Chemicals	McCall's Good Housekeeping Family Circle Woman's Day

[fol. 435]

May	Milk	Ladies' Home Journal McCall's Good Housekeeping Family Circle Woman's Day
June	Soft Drinks	Ladies' Home Journal McCall's Good Housekeeping Family Circle Woman's Day
July	Beer	McCall's Family Circle Woman's Day
August	Soft Drinks	Ladies' Home Journal Good Housekeeping Family Circle Woman's Day

September	Baby Food	Ladies' Home Journal McCall's Good Housekeeping Family Circle Woman's Day
October	Juice ?	Ladies' Home Journal McCall's Good Housekeeping Woman's Day
November	Cosmetic	Ladies' Home Journal Good Housekeeping McCall's Family Circle

Roughs of the ten proposed advertisements were next gone over one at a time. Each was considered from the following viewpoints: General approach based on sales potentials and sales problems of the industry; artwork and copy approach; containers used; closures used; other props; other details including labels, quantity of product, etc.

4. Merchandising of the Advertisements.

Merchandising of the advertisements was next discussed. Points covered included lead time to members, lead time to packers, best means of approach in each instance, etc. It was agreed that a twelve-week lead time to members was most advisable, and that this timetable would be established as early in the new year as possible.

[fol. 436] Retailer advertising and promotion, beer bottle plans, promotion and publicity and home economics were next outlined by Mr. Cheney and discussed by the Committee.

5. Next Meeting.

The next meeting was tentatively set for early February.

Respectfully submitted R. L. Cheney, Secretary.

[fol. 437] GOVERNMENT'S EXHIBIT 95

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, New York
September 26, 1956

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois, S. B. DeMerell—Anchor Hocking Glass Corporation, T. S. Gallagher—Crown Cork & Seal Company, Inc., J. S. Heuisler—Maryland Glass Corporation, P. Malloy—Crown Cork & Seal Company, Inc., G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company.

Others Present:

Bush Barnum—GCMI, J. B. Carroll—GCMI, R. L. Cheney—GCMI, V. L. Hall—GCMI, D. L. Keys—Kenyon & Eckhardt, Inc., H. W. Kuni—GCMI, R. B. Shirey—Kenyon & Eckhardt, Inc.

1. The reading of the minutes of the preceding meeting on May 20, 1956 was waived.

2. The recommended advertising and promotion program for 1957 was presented by R. B. Shirey and D. L. Keys in behalf of Kenyon & Eckhardt. Divided into parts,

I. The problem
II. Advertising
  A. Consumer Media
  B. Copy Strategy
  C. Labor Advertising
  D. Trade Advertising

III. Publicity

A. Consumer
B. Trade

IV. Merchandising the Advertising
V. Merchandising Research
VI. Store-Wide "Glass Festival"

[fol. 438] the sixty-one page report was presented in detail by the agency representatives. Included were layouts of ten consumer ads for 1957 and accompanying copy. Presentation of the program and accompanying discussion took about three hours.

3. Mr. Cheney presented the proposed Market Research and Promotion budget for 1957.

4. After discussion, upon motion duly made, seconded and unanimously carried, it was

Resolved, That the Market Research and Promotion Committee recommend to the Board of Trustees the adoption of the 1957 advertising budget totaling $1,236,775 as proposed.

5. At Mr. Cheney's request, the department was authorized to announce early phases of the 1957 program to bottlers and packers, and to proceed with the first three consumer and trade ads in the 1957 program so that timetables could be maintained.

6. Mr. Cheney reported on various phases of the Virginia One-Way Beer Bottle Program, and discussion followed.

7. Beer studies in Syracuse were briefly reported by Mr. Cheney and the Committee was advised that the full report on the Syracuse study would be forthcoming from Kenyon & Eckhardt in the near future.

8. The advertising and promotion effort put behind soft drinks in the Los Angeles area was covered by Mr. Cheney.

9. The nationwide consumer and dealer attitude survey currently underway was also outlined by Mr. Cheney who stated a report of the results would be made by Mr. Sammis at the next Committee meeting.

10. It was agreed that the next meeting of the Market Research and Promotion Committee would be held at the

Phoenix Biltmore on Monday afternoon, November 12, at two o'clock and that the West Coast Subcommittee should be invited to attend.

11. There being no further business the meeting was adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 439] GOVERNMENT'S EXHIBIT 96

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, New York
January 16, 1957

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois, J. C. Feagley—Armstrong Cork Company, J. M. Foster—Foster-Forbes Glass Company, T. S. Gallagher—Crown Cork & Seal Company, Inc., G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

J. S. Algeo—Continental Can Company, Inc., Hazel-Atlas Glass Division, E. D. Easterby—Laurens Glass Works, Inc., W. V. Fisher—Anchor Hocking Glass Corporation, J. S. Heuisler—Maryland Glass Corporation.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, F. H. Wright—GCMI.

1. Call to Order.

The meeting was called to order at 9:30 A. M. by Chairman Pollock.

2. Minutes of Previous Meeting.

The minutes of the preceding meeting on November 12, 1956, were approved as issued by the secretary.

3. Los Angeles 1957 Soft Drink Program.

Mr. Cheney read the resolution passed by the M R & P Committee on November 12 and reported on current activities. Highlights of recent surveys in the Los Angeles area by Ford Sammis were presented.

4. Report of the Task Committee Meeting of January 15, 1957.

A. As recommended by the Task Committee, it was decided that no-deposit bottles would not be promoted in national advertising.

B. Baby Food Problem. Following extensive discussion, upon motion duly made, seconded and unanimously carried, the Task Committee recommendation of the preceding day was approved. This recommendation favored continuing [fol. 440] the past and present baby food jar promotion without extension.

C. RAB Insignia. Mr. Cheney reported that the Task Committee voted definitely against inclusion. No further action was taken.

5. Recommended Milk Bottle Program.

Following considerable discussion, action on a proposed milk bottle program was tabled.

6. Virginia Beer Bottle Program.

Mr. Cheney reported on the recent Virginia effort, adding that a meeting of the Beer Bottle Committee would be called on or about February 13, at which time the final results of the Syracuse Study and their recommendations would be presented by the agency.

7. Review of the Magazine Ads.

The 1957 ads were then reviewed. In various stages of production, each ad was commented on in turn. Reception, in the main, was favorable.

8. Merchandising Research.

Mr. Cheney reviewed the forthcoming merchandising research program in six stores—each of which does a 3½ million dollar volume—in the Giant Food chain in and around Washington, D. C.

9. New Business.

It was suggested that GCMI should participate in the forthcoming Jamestown project.

There was a discussion of trends in the packaging of liquid detergents. Comments were made about disparagement of glass containers in the advertising of packers of ammonia in cans and of manufacturers of plastic containers. Mr. Cheney was requested to present our views to these advertisers.

10. Adjournment.

There being no further business, the meeting was adjourned at 12:30.

Respectfully submitted, R. L. Cheney, Secretary.

Present:

J. M. Foster, Acting Chairman—Foster-Forbes Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

Absent:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Co., Inc., W. V. Fisher—Anchor Hocking Glass Corporation.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, J. W. Fisher—Ball Brothers Company, Inc., Fred E. Fuller—General Counsel, W. J. Green—Thatcher Glass Manufacturing Co., Inc., V. L. Hall—GCMI, F. B. Hess—Brockway Glass Company, Inc., S. V. Tuttas—Crown Cork & Seal Company, Inc., F. H. Wright—GCMI.

1. Call to Order.

The meeting was called to order at 1:30 P. M. by Acting Chairman Foster who presided in Mr. Pollock's absence. Mr. Cheney served as secretary.

2. Minutes of the Previous Meeting.

Upon motion made, seconded and unanimously carried, the minutes of the previous meeting were approved as issued by the secretary.

3. Congratulatory Wire.

The secretary was directed to send a congratulatory telegram in the name of the full committee to Mr. and Mrs. Pollock on the birth of Robert Evans Pollock.

4. Cosmetic Ad.

Mr. Cheney explained that a transichrome version of the tenth and last consumer advertisement in the 1957 series would be on display in the general meeting room the [fol. 447] following morning. Members of the committee were asked to look at this transichrome and give their opinions to Mr. Cheney.

5. Report of Beer Bottle Subcommittee.

(A) Mr. Cheney discussed the Syracuse Study and presented the following recommendation unanimously approved by the Beer Bottle Subcommittee: Kenyon & Eckhardt does not recommend proceeding with the proposed marketing tests in the Syracuse area in the absence of a favorable economic relationship at the retail level, such as now exists in Maryland and Virginia. A motion was then made, seconded and unanimously carried that the Market Research and Promotion Committee accept the recommendation of the Subcommittee but that the matter be kept under advisement for future action at such time as the basic situation appeared favorable.

(B) Mr. Cheney discussed the forthcoming 1957 promotional program for one-way beer bottles in Virginia and the following recommendation approved by the Beer Bottle Subcommittee: That $40,000 be appropriated from existent

funds to continue the Virginia program during the summer of 1957. A motion was then made, seconded and unanimously carried that the Market Research and Promotion Committee accept the recommendation of the Subcommittee.

6. Review of Progress and Costs of Advertising and Promotion Program.

Mr. Cheney next presented detailed studies of increased advertising costs and presented a revised budget for 1957, copy attached. Discussion followed.

7. Next Meeting.

Due to the early date of the 1957 Fall meeting, the next committee meeting was scheduled for Tuesday, August 27, 1957, at GCMI headquarters. At this time a recommended advertising program for 1958 will be presented for committee consideration.

8. Adjournment.

There being no further business, Acting Chairman Foster declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

Absent:

E. D. Easterby—Laurens Glass Works, Inc., W. V. Fisher—Anchor Hocking Glass Corporation, J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., S. V. Tuttas—Crown Cork & Seal Company, Inc., Dr. A. W. Wishart—Knox Glass, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, J. W. Fisher—Ball Brothers Company, Inc., Walter Furlow—Knox Glass, Inc., V. L. Hall—GCMI, Anderson F. Hewitt—Kenyon & Eckhardt, Inc., Douglas L. Keys—Kenyon & Eckhardt, Inc., Robert B. Shirey—Kenyon & Eckhardt, Inc.

1. Call to Order.

The meeting was called to order at 10:00 A. M. by Chairman Pollock. Mr. Cheney served as secretary.

2. Minutes of Previous Meeting.

Upon motion made, seconded and unanimously carried, the minutes of the previous meeting were approved as issued by the secretary.

3. Promotional Recommendation.

Representatives of Kenyon & Eckhardt (Messrs. Lewis, Hewitt, Shirey and Keys) presented a 58-page recommendation for GCMI advertising and promotion in 1958.

Eleven rough layouts of 1958 advertisements, together with the tentative scheduling thereof, were also presented to the Committee for consideration.

[fol. 449]. Each layout was discussed in detail as were other phases of the proposed campaign.

The recommended media list called for eight four-color insertions in the following six consumer publications: McCall's, Ladies' Home Journal, Good Housekeeping, Family Circle, Woman's Day and Reader's Digest. The total recommended budget for advertising and promotion for 1958 amounted to $1,666,353.

Following departure of agency representatives, the recommended program and budget (copy of which is attached to these minutes) were further discussed.

In answer to questions it was stated that elimination of Reader's Digest from the proposed schedule would reduce the budget by $336,040 (space and production), leaving a total budget of $1,330,313. It was further reported that this sum would fall within the amount of income that could be realized in 1958 by continuing the present rate of dues applicable to Advertising and Promotion (i.e., 16/100 of 1% of dollar sales out of total dues of 30/100 of 1%).

Upon motion duly made, seconded and unanimously carried, it was

Resolved, That the Market Research and Promotion Committee approves the proposed Advertising and Promotion Program for 1958 with the exclusion of Reader's Digest from the schedule, and recommends to the Board of Trustees the adoption of the 1958 budget totaling $1,330,313, and it was

Resolved further, That the possibility of adding Reader's Digest to the consumer advertising schedule be further discussed at subsequent meetings of this committee.

4. Title Change.

Upon a motion duly made, seconded and unanimously carried, it was

> Resolved, That the Market Research and Promotion Committee recommend to the Board of Trustees that Bush Barnum's title be changed from Director of Public Information to Director of Advertising and Public Information.

5. Next Meeting.

It was decided to hold the next meeting of the committee at The Cavalier, Virginia Beach, Virginia, on Monday afternoon, September 30, 1957, at 1:30 P. M.

6. Adjournment.

There being no further business, Chairman Pollock declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

Tuttas—Crown Cork & Seal Company, Inc., P. O'C. White—White Cap Company.

Absent:

W. V. Fisher—Anchor Hocking Glass Corporation, Dr. A. W. Wishart—Knox Glass, Inc.

Others Present:

Bush Barnum—GCMI, R. W. Butler—Crown Cork & Seal Company, Inc., E. S. Campbell—Northwestern Glass Company, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, J. W. Fisher—Ball Brothers Com-

pany, Inc., Fred E. Fuller—General Counsel, R. E. Graham—Owens-Illinois Glass Company, W. J. Green—Thatcher Glass Manufacturing Company, Inc., V. L. Hall—GCMI, M. A. Hellrung—Owens-Illinois Glass Company, Ford Sammis—Ford Sammis & Company, J. G. Turk—GCMI, F. H. Wright—GCMI.

1. Call to Order.

The meeting was called to order at 1:45 P. M. by Chairman Pollock. Mr. Cheney served as secretary.

2. Minutes of Previous Meeting.

Upon motion made, seconded and unanimously carried, the minutes of the previous meeting on August 27, 1957, were approved as issued by the secretary.

[fol. 455] 3. Ratification of Previous Actions.

Because a quorum was not present at the August 27 meeting, absent committee members were polled by mail. Mr. Cheney announced that the two actions in question were thereby made unanimous.

4. Report of Task Committee Meeting.

Mr. Cheney reported briefly on the meeting of the Task Committee held at GCMI headquarters on September 11, 1957.

5. Future Committee Meetings.

It was suggested by Mr. Cheney, and approved by the committee, that the committee meetings be scheduled as follows in 1958: first, Advertising Advisory Committee; second, Task Committee; third, Market Research and Promotion Committee. The change makes it possible to present plans to the Task Committee prior to final presentation to the parent committee.

6. 1958 Advertising Program.

(a) The following schedule of consumer advertisements for 1958 was presented and approved:

February—Drugs
March—Coffee
April—Household Chemicals

May—Soft Drink #1 and Beer
June—Soft Drink #2
July—Spices
August—Baby Foods
September—Milk
October—Applesauce
November—Jam and Peanut Butter

(b) Roughs of five ads either revised or new to the committee were presented on slides and approved.

The ecktachrome of the February drug ad was presented and approved with favorable comment.

(c) Upon motion duly made, seconded and unanimously carried, a revised advertising and promotion budget totaling $1,336,178 was established.

7. Virginia Consumer Survey.

Ford Sammis reported on a recent survey of beer bottle sales and distribution in the state of Virginia. Copies of this study will be mailed to committee members shortly.

[fol. 456] 8. West Coast Subcommittee Recommendation.

Frank Wright, reporting on unanimous agreement at a meeting of the West Coast Subcommittee in San Francisco on September 17, 1957, recommended to the parent committee that $50,000 be allocated from the national budget to promote one-way bottles for both soft drinks and beer in the Los Angeles area in 1958.

Following considerable discussion, the committee directed Mr. Cheney to earmark $50,000 in funds for a possible program in Los Angeles in 1958 with the provisos 1) that full details of the proposed program be submitted to the parent committee for further consideration at its next meeting, and 2) that, should the program go forward, the appropriation from the national budget be matched dollar for dollar by GCMI member companies operating on the West Coast.

9. Next Meeting.

No date was set for the next meeting. It is hoped, however, to hold it in conjunction with the Trustees meeting now scheduled for December 5.

10. Adjournment.

There being no further business, Chairman Pollock declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 457] GOVERNMENT'S EXHIBIT 102

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York 16, New York

December 4, 1957

Present:

G. A. Mengle, Chairman—Brockway Glass Company, Inc., E. D. Easterby—Laurens Glass Works, Inc., J. W. Fisher—Ball Brothers Company, Inc., J. M. Foster—Foster-Forbes Glass Company, W. J. Green—Thatcher Glass Manufacturing Company, Inc., S. V. Tuttas—Crown Cork & Seal Company, Inc., P. O'C. White—White Cap Company.

Absent:

C. G. Bensinger—Owens-Illinois Glass Company, J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation, J. S. Heuisler—Maryland Glass Corporation, A. W. Wishart—Knox Glass, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, Fred E. Fuller—General Counsel, V. L. Hall—GCMI.

1. Call to Order.

The meeting was called to order at 10:45 A. M. by Chairman Mengle. Mr. Cheney served as secretary.

2. Minutes of Previous Meeting.

Upon motion made, seconded and unanimously carried, the minutes of the previous meeting on September 30, 1957, were approved as issued by the secretary.

3. Progress Report—1957 Program.

Mr. Cheney reported on the 1957 advertising program, on the use of 2,750 "Your Glass Festival Kits" in retail food stores throughout the country, and gave a preliminary report on the merchandising research conducted in four Giant food stores in the Washington D. C. area. Mr. Barnum reported on general publicity activities for the year.

4. Progress Report—1958 Program.

The committee approved an ecktachrome of the milk advertisement scheduled for next September. Comment was generally favorable. Other advertisements in the 1958 schedule were discussed briefly, as were general publicity [fol. 458] activities for the coming year.

An agency budget, revised to accommodate a rate increase, was presented. The total remained unchanged at $1,208,178.

In discussing Gallup & Robinson and Starch rating services, Mr. Cheney reported that the registration of GCMI advertisements by Gallup & Robinson scored 13.7 compared with 12.1 for the average of all packaging advertisements checked by Gallup & Robinson. The same firm has also reported that GCMI advertisements are second in order of rank of 26 different associations tested during the past two years, the GCMI average being 14.2 compared with an average of 6.1 for the 26 associations whose advertisements were checked.

5. Los Angeles Soft Drink Program—1958.

Mr. Cheney reported on his visit to the West Coast late in October, and copies of a plan prepared by Kenyon & Eckhardt and subsequently modified, were distributed to those present. Mr. Fuller discussed the legal aspects of a supporting merchandising program.

Following considerable discussion, upon motion duly

made, seconded and unanimously passed, the following resolution was adopted:

Resolved, That the Market Research and Promotion Committee accepts the revised recommendation of the West Coast Subcommittee as submitted by Mr. R. L. Cheney, to this meeting, covering an advertising and promotion program in support of glass bottles for soft drinks, in the Los Angeles, California area from May through September, 1958, at a total budget of $50,000, of which $25,000 is to be supplied from the accumulated surplus of previous year's GCMH advertising and promotion funds subject to this sum's being matched by voluntary contributions from the California members, and it is further

Resolved, That this program shall consist of the following activities:

(1) A radio spot advertising program covering the advantages of glass bottles for soft drinks, with particular reference to returnable bottles and to no-deposit bottles.

(2) a. A test promotion involving an advertising allowance to cover space within the newspaper advertisements of cooperating chain stores, devoted to soft drinks in glass bottles, together with allotment of adequate shelf spacings for beverages in both returnable and no-deposit bottles, together with an arrangement for measuring sales results of the different beverage packages.

b. Participation in this test promotion to be solicited from all chain supermarket operators in the Los Angeles market who operate 19 or more supermarkets there, this being considered the minimum number of stores necessary to give adequate coverage for a sound test.

[fol. 459] And it is further

Resolved, That in the event enough chain store operators accept participation in the test promotion program as to cause the expense of this portion of the program to exceed the $15,000 allotted to it in the proposed

budget, GCMI will assume one-half of this overage subject to the California members assuming the other half.

6. Canadian Program—1958.

Canadian members of GCMI will continue to advertise in Chatelaine magazine in 1958, Mr. Cheney reported. The schedule calls for six insertions—in February, April, June, September, October and November.

7. Baby Food in California.

A report on the current baby food situation in California was made by Mr. Cheney, and packer ads from current California newspapers were displayed.

8. New Business.

Mr. Cheney presented a request from GBBA for GCMI support at labor trade fairs. It was agreed to table the request.

9. Next Meeting.

No date was set for the next meeting.

10. Adjournment.

There being no further business, Chairman Mengle declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 460] GOVERNMENT'S EXHIBIT 103

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, New York

April 10, 1958

Present:

G. A. Mengle, Chairman—Brockway Glass Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, J. C. Feagley—Armstrong Cork Company, J. W. Fisher—Ball Brothers Company, Inc., W. J. Green—Thatcher Glass Manufacturing Company, Inc., S. V. Tuttas—Crown Cork & Seal Company, Inc.

Absent:

E. D. Easterby—Laurens Glass Works, Inc., W. V. Fisher—Anchor Hocking Glass Corporation, J. M. Foster—Foster-Forbes Glass Company, J. S. Heuisler—Maryland Glass Corporation, P. O'C. White—White Cap Company, A. W. Wishart—Knox Glass, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, W. M. Furlow—Knox Glass, Inc., M. A. Hellrung—Owens-Illinois Glass Company, J. Gordon King—Hazel-Atlas Glass Division, Continental Can Company, Inc., C. E. Wagner—GCMI.

1. Call to Order.

The meeting was called to order at 10:10 A. M. by Chairman Mengle. Mr. Cheney served as secretary. In the absence of a quorum, the chairman stated that any actions of this meeting would be subject to ratification at the next meeting.

2. Minutes of Previous Meeting.

Upon motion duly made, seconded and unanimously carried, the minutes of the previous meeting on December 4, 1957, were approved as issued by the secretary.

3. Approval of Ektachromes.

Ektachromes of the applesauce advertisement scheduled for the October issues of consumer magazines, and ektachromes of the jam-peanut butter advertisement scheduled for November issues, were submitted to the Committee for consideration. Following discussion, it was suggested that the applesauce ad be re-taken, sharpening the background focus. A jam and peanut butter ektachrome was approved.

[fol. 461] 4. Rate Increases.

The Committee was advised of the following increases in magazine rates:

Family Circle	25%—effective in July
Ladies' Home Journal	8%—effective in August
Supermarket News	9%—effective in July
Progressive Grocer	10%—effective in July

The above rate increases for the remainder of 1958 total $29,600.

Mr. Cheney explained that these rate increases could be covered by unexpended 1957 funds—as were previous rate increases amounting to $26,300.

Accordingly, upon motion made, seconded, and unanimously carried, it was voted to continue the advertising media schedule as approved for 1958 in view of the fact that increases could be handled from existent funds.

5. Report on GCMI-Giant Study.

Following distribution of numbered copies of "The GCMI-Giant Study" (on a one-to-a-company basis), Mr. Cheney outlined promotional plans for this extensive project. Included are: Presentations to retailer and packer groups, trade advertisements, a booklet for widespread distribution.

6. Glass Festival—1958.

Plans for extending the successful in-store promotion conducted in 1957 were presented for Committee consideration. It was agreed that larger stores and more of them would be the aim in 1958. Specific art for inclusion in the

promotional kit was discussed. Upon motion made, seconded, and unanimously carried, it was agreed to proceed as outlined.

7. Los Angeles Soft Drink Program—1958.

Mr. Cheney, just returned from West Coast meetings, reported on the 1958 soft drink campaign. The Committee requested him to verify a point of nomenclature and proceed accordingly.

7A. Baby Food Folder.

Upon motion made, seconded, and unanimously carried, Mr. Cheney was instructed to proceed on the production of a baby food folder or flyer similar to the ones done in the past three years. This is to be offered to all baby food companies for possible incorporation in their direct mail program.

[fol. 462] 8. Report on New No-Deposit Beer Bottle Designs.

Earl Wagner, GCMI development engineer, joined the meeting and subsequently reported on a joint meeting of the Technical Subcommittee on Container Design and Specifications and the Crown Finish Subcommittee of the Committee on Standards for Finishes held at GCMI headquarters on April 8 and 9. Discussion followed.

8A. Anniversary of Beer Return.

Upon motion made, seconded, and unanimously carried, Mr. Cheney was instructed to include the following line in GCMI advertisements scheduled for thirty-nine labor papers:

> "The glass container manufacturers salute the U. S. brewing industry on the 25th anniversary of the return of beer and ale to the American scene."

9. Security Analysts.

The Committee looked with favor upon meetings of security analysts outlined by Mr. Cheney. Present plans call for meetings in Boston and New York on successive days in mid-May. Freshly printed copies of "Glass Containers—

1957" will be presented at these meetings. It is possible that similar sessions in Philadelphia and Chicago will be arranged following industry meeting at White Sulphur Springs.

10. Motivation Research.

As previously suggested by a member of the Market Research and Promotion Committee, the Institute for Motivational Research, Inc.—of which Dr. Ernest Dichter is president—was approached on whether the Institute's techniques might yield a solution to the glass container industry's beer problem and might point to a possible course of action.

Subsequently, Albert Shepard, executive vice-president of the research organization, spent the afternoon at GCMI headquarters, and Mr. Cheney reported Mr. Shepard's remarks to the Committee. Following discussion both on the industry's beer problem and on motivational research, a motion was made, seconded, and unanimously carried to engage the Dichter organization to make a study of the beer industry for GCMI, said study to cost approximately $20,000.

11. New Business.

A. Upon motion made, seconded, and unanimously carried, it was agreed that results of the Sammis surveys should be made available to individual GCMI member companies for promotional use—subject to the specific approval of Mr. Cheney.

[fol. 463] B. Acting upon the suggestion of a Committee member, a motion was made, seconded, and unanimously carried to explore the possibility of presenting details of GCMI's advertising and promotional program to the membership of the National Preservers Association at their annual meeting in Chicago in mid-February of 1959. If an audience of a hundred could be guaranteed, and provided no precedent would be set, Mr. Cheney was instructed to proceed as outlined.

12. Next Meeting.

The date of the next meeting was set for 2 o'clock Tuesday afternoon, May 20, 1958, at The Greenbrier, White Sulphur Springs, West Virginia.

13. Adjournment.

There being no further business, Chairman Mengle declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 464] GOVERNMENT'S EXHIBIT 104

DeMerell—Anchor Hocking Glass Corporation, Fred E. Fuller—General Counsel, W. M. Furlow—Knox Glass, Inc., R. E. Graham—Owens-Illinois Glass Company, V. L. Hall—GCMI, P. I. Heuisler, Jr.—Maryland Glass Corporation, J. G. King—Hazel-Atlas Glass Division, Continental Can Company, Inc., F. H. Wright—GCMI.

1. Call to Order.

The meeting was called to order at 2:00 p. m. by Chairman Mengle. Mr. Cheney served as secretary.

2. Minutes of the Previous Meeting.

Upon motion duly made, seconded, and unanimously carried, the minutes of the previous meeting on April 10, 1958, were approved as issued by the secretary.

[fol. 465] 3. Approval of Proof.

Proof of the final three ads in the 1958 consumer series (September—Milk; October—Applesauce; and November—Jam and Peanut Butter) were submitted and approved by the Committee with the exception of a suggestion re the body copy of the milk advertisement. The point was referred to the trustees for a policy decision.

4. Report on GCMI-Giant Study.

Mr. Cheney reported on "The GCMI-Giant Study," and photostatic copies of a proposed GCMI booklet on the subject were distributed for Committee discussion. Following general discussion, Mr. Cheney's recommendation to refer this matter to the Task Committee was agreed upon.

Mr. Cheney requested that the photostatic copies be given to the appropriate personnel in each organization with the request that it be returned to Mr. Cheney with written comment.

It was also agreed that photostatic copies be sent to the Task Committee for study—with the view to getting their comment on suggested procedure. It was decided that the matter would not be presented to the membership at this meeting until these comments have been received from the Committee members.

5. Motivation Research on Beer Packaging.

Mr. Cheney explained that the Beer Bottle Subcommittee concurred with the suggestion of exploring first the area which we appear to know the least about, namely, the area of beer distribution—as opposed to brewing, retailing, or consumption. Following discussion, it was agreed to proceed with the proposed study.

6. Security Analysts.

Mr. Cheney reported briefly on current security analysts presentations.

7. Plans for 1959 Program.

Mr. Cheney stated that meetings with Kenyon & Eckhardt to develop the 1959 program would start June 30, with presentation to the Committee in September, following Advertising Advisory Committee and Task Committee sessions.

8. National Preservers Association Meeting.

Mr. Cheney stated briefly that, after exploration, he did not feel it would be wise to proceed as heretofore discussed. A motion was made, seconded and unanimously carried, to rescind the action made at the previous meeting on April 10, 1958.

[fol. 466] 9. New Business.

Mr. Cheney introduced the subject of the forthcoming U. S. Steel promotional program in behalf of canned soft drinks. Several member companies, he said, had been asked by bottlers for GCMI plans.

Because the 3:30 p. m. adjournment time had arrived, it was decided to hold a breakfast meeting at 8:00 a. m. on Thursday morning, May 22, to explore this subject further.

10. Adjournment.

There being no further business, Chairman Mengle declared the meeting adjourned at 3:30 p. m.

Respectfully submitted, R. L. Cheney, Secretary.

Others Present:

E. F. Ball—Ball Brothers Company, Inc., Bush Barnum—GCMI, R. A. Blunt—Buck Glass Company, Inc., R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, W. M. Furlow—Knox Glass, Inc., R. E. Graham—Owens-Illinois Glass Company, S. L. Rairdon—Owens-Illinois Glass Company, Lawrence Wilkinson—Hazel-Atlas Glass Division, Continental Can Company, Inc.

1. Call to Order.

This breakfast meeting was called to order by Chairman Mengle at 8:20 a. m. Mr. Cheney served as secretary.

2. Canned Soft Drink Promotion.

The forthcoming advertising and promotion program of U. S. Steel as published in the public press was outlined

by Mr. Cheney who then reported on details of GCMI efforts in behalf of bottled soft drinks.

The subject was extensively discussed, and upon motion duly made, seconded, and unanimously carried, the following action taken:

(a) Mr. Cheney was instructed to inform the members of the many GCMI activities promoting glass-bottled soft drinks, for reference to interested bottlers.

[fol. 468] (b) The radio spot program in the Los Angeles area is to be stepped up during its June to September scheduled period, within the ability of the budget to accommodate this.

(c) The needs of the situation are to be reviewed as the summer progresses so that the Committee can determine the advisability of extending the program for an additional period.

3. Re-scheduling of "Ancient Art—Modern Magic."

Following a suggestion, it was agreed generally that the new ten-minute film should be re-shown at the concluding session on Friday prior to Mr. Hoadley's address.

4. Milk Ad.

A report was made on the board of trustees ruling to delete the word "leak-proof" from the milk ad and a policy of confining advertising copy to affirmative statements about the favorable characteristics of glass containers was reiterated.

5. Sammis Reports.

Reaction of the Committee was asked for on the sample Sammis research summary covering glass-packed tomato juice.

6. Adjournment.

There being no further business, the meeting was adjourned at 9:30 a. m.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 469] GOVERNMENT'S EXHIBIT 106

Minutes of Meeting

Market Research and Promotion Committee
GCMI Conference Room
New York, New York

September 25, 1958

Present:

J. W. Fisher, Chairman—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, J. M. Foster—Foster-Forbes Glass Company, W. J. Green—Thatcher Glass Manufacturing Company, Inc., J. Gordon King—Hazel-Atlas Glass Division, Continental Can Company, Inc., G. A. Mengle—Brockway Glass Company, Inc., E. M. Terner—Metro Glass Company, Inc., S. V. Tuttas—Crown Cork & Seal Company, Inc., A. W. Wishart—Knox Glass, Inc.

Absent:

W. V. Fisher—Anchor Hocking Glass Corporation, P. I. Heuisler, Jr.—Maryland Glass Corporation.

Others Present:

Bush Barnum—GCMI, Leonard Carlton—Kenyon & Eckhardt, Inc., R. L. Cheney—GCMI, S. B. DeMerell—Anchor Hocking Glass Corporation, R. E. Graham—Owens-Illinois Glass Company, W. D. Harvey—Kenyon & Eckhardt, Inc., J. S. Heuisler—Maryland Glass Corporation, Andrew Hewitt—Kenyon & Eckhardt, Inc., W. B. Lewis—Kenyon & Eckhardt, Inc., R. B. Shirey—Kenyon & Eckhardt, Inc.

1. Call to Order.

The meeting was called to order by Chairman Fisher at 9:30 A. M. Mr. Cheney served as secretary.

2. Minutes of Previous Meeting.

Upon motion made, seconded and unanimously carried, the minutes of the previous meeting on May 22, 1958, were approved as issued by the secretary.

[fol. 470] 3. Review of Proposed 1959 Advertising and Promotion Program.

Following opening remarks by Mr. Cheney, representatives of Kenyon & Eckhardt (Messrs. Lewis, Hewitt, Shirey, Harvey and Carlton) joined the meeting and presented a 57-page recommendation for 1959. Layout and copy of twenty-two advertisements were presented for Committee consideration. Each layout was discussed in detail, as were all aspects of the proposed campaign.

4. Proposed Budget.

Following deparature of agency representatives, the program was further discussed, and a proposed budget presented, copy of which is attached. Upon motion duly made, seconded, and unanimously carried, with Dr. Wishart abstaining, it was:

> Resolved, That the Market Research and Promotion Committee approves the program submitted by Kenyon & Eckhardt (based upon twenty-two ads in Life Magazine) and previously approved by GCMI representatives and two subcommittees, with the understanding that individual ads would be discussed further at a later meeting.

Also, upon motion duly made, seconded and unanimously carried, it was:

> Resolved, That the Market Research and Promotion Committee adopts a total advertising and promotion budget of $1,378,650 as submitted, and submits said budget to the Board of Trustees with the recommendation that it be approved.

5. Review of Houston Situation.

Following presentation of the story by Mr. Cheney, the Committee, upon motion duly made, seconded and unanimously carried, voted to leave to the discretion of the General Counsel whether or not an appeal should be made to the office of the Attorney General of Texas, protesting recent discriminatory action against the sale of milk in glass bottles in Houston stores.

6. Task Committee Action on GCMI-Giant Study.

Upon motion made, seconded and unanimously carried the parent Committee approved the recommendation of the Task Committee to print the first half of the GCMI-Giant Study and distribute it to members.

7. Report of Beer Bottle Subcommittee Meeting.

Mr. Cheney reported on this meeting held at GCMI headquarters in New York on August 21st. Following discussion, it was agreed to recommend to the program committee that Dr. Albert Shepard, executive vice president of the Institute for Motivational Research, Inc., be invited to address the membership meeting at The Cloister, Sea Island, Georgia on November 11th.

[fol. 471] 8. New Business.

The outlawing of bottled soft drinks at the 1958 Indiana State Fair held at Indianapolis in August was brought to the attention of the Committee by Mr. Cheney. Possible remedial action was discussed.

Upon motion duly made, seconded and unanimously carried, it was agreed to proceed with the printing and distribution of the 16-page booklet entitled "Mason Jar Centennial: 1858-1958."

9. Next Meeting.

It was agreed that the next meeting of the Committee should be held at The Cloister, Sea Island, Georgia, on Monday, November 10th, at 1:30 P. M.

10. Adjournment.

There being no further business, Chairman Fisher declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

Attachment.

Minutes of Meeting

Market Research and Promotion Committee
and West Coast Subcommittee
Terrace Room
Arizona Biltmore Hotel
Phoenix, Arizona

November 12, 1936

Present:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, J. M. Foster—Foster-Forbes Glass Company, T. S. Gallagher—Crown Cork & Seal Company, Inc., J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc.

Absent:

W. V. Fisher—Anchor Hocking Glass Corporation, P. O'C. White—White Cap Company.

West Coast Present:

K. C. White, Chairman—Owens-Illinois Glass Company, R. H. Dallas—Maywood Glass Company, William Simkins—Latchford-Marble Glass Company.

West Coast Absent:

E. L. Casey—Hazel-Atlas Glass Company, J. W. Donaldson—Ball Brothers Company, Inc., J. B. Miller—Thatcher Glass Manufacturing Company, Inc., E. B. Spread—Crown Cork & Seal Company, Inc.

Others Present:

E. E. Balling—Latchford-Marble Glass Company, Bush Barnum—GCMI, E. S. Campbell—Northwestern Glass Company, R. L. Cheney—GCMI, S. B. DeMerell—Anchor

Hocking Glass Corporation, Fred E. Fuller—GCMI General Counsel, H. V. Fulton—Maywood Glass Company, J. H. Funkey—Carr-Lowrey Glass Company, J. A. Giddings—Brockway Glass Company, Inc., W. J. Green—Thatcher Glass Manufacturing Company, Inc., V. L. Hall—GCMI, John Lauritzen—GCMI West Coast Counsel, Ford Sammis—Ford Sammis & Company, Frank H. Wright—GCMI.

[fol. 476] 1. Call to Order.

The meeting was called to order at 1:30 P. M. by Chairman Pollock.

2. Minutes of Previous Meeting.

The minutes of the preceding meeting on September 26, 1956 were approved as distributed by the secretary.

3. Task Group Recommendations.

A. Mr. Cheney discussed the Task Committee recommendation that GCMI advertising be evaluated by one of the recognized authorities in this field. The Market Research and Promotion department and the agency recommended the Starch readership studies. These would cost approximately $2,000 in 1957. Upon motion duly made, seconded and unanimously carried, this recommendation was approved.

B. Mr. Cheney discussed use of the KAB insignia in the Virginia Beer Program, and the possibility of incorporating the seal in national ads was raised. Discussion followed. The matter was temporarily tabled, and the parent committee directed that any further discussion be with the Task Committee.

4. Los Angeles Soft Drink Bottle Program.

Mr. White, chairman of the West Coast Subcommittee, discussed the 1956 effort in Los Angeles, expressing the opinion that it had constituted an excellent holding campaign and that he felt it important to have a continuing program. There followed a discussion of other trouble points, notably Milwaukee. Chairman Pollock stated that West Coast companies had raised a $20,000 fund in 1956; that Kenyon & Eckhardt had handled the program and

members of the West Coast Subcommittee expressed the opinion that they had done an excellent job.

Mr. Sammis then presented results of his Los Angeles survey.

After discussion, in response to suggestions from the West Coast Subcommittee members, and Mr. Cheney's recommendation, upon motion duly made, seconded and unanimously carried, it was

> Resolved, That $25,000 be allocated for a continuing Los Angeles area promotion in 1957, subject to voluntary subscriptions from the California members sufficient to complete a $40,000 to $45,000 budget for this operation as finally determined by the Director of Market Research and Promotion.

5. Advertising.

Mr. Cheney then presented to the Committee slides—some in photographic form, others in layout form—of the 1957 consumer advertisements as follows:

[fol. 477] February—Beets

March—Pickles
April—Vaccines
May—Milk
June—First Soft Drink
July—First Soft Drink and Beer
August—Second Soft Drink
September—Baby Foods
October—Juices
November—Cosmetics

Discussion of the ads followed each presentation.

In addition, a layout of a detergent advertisement was shown the committee. It was agreed that this would not be included in the 1957 series.

6. Future Discussions.

It was suggested that baby foods and one-way soft drink bottles both needed further discussion. It was decided to request the Task Committee to study these subjects at an early meeting and report back to this committee.

7. Next Meeting.

The next meeting of the Market Research and Promotion Committee is to be held in conjunction with the January meeting of the Board of Trustees, exact date to be determined later.

8. Adjournment.

Because of a scheduled meeting of the Board of Trustees at four o'clock, the Market Research and Promotion meeting was adjourned at that hour.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 478] GOVERNMENT'S EXHIBIT 109

Minutes of Meeting

Market Research and Promotion Task Committee
GCMI Conference Room
New York, New York

January 15, 1957

Present:

R. H. Hetzel, Chairman—Armstrong Cork Company, S. F. Davis—Owens-Illinois, S. B. DeMerell—Anchor Hocking Glass Corporation, J. H. Funkey—Carr-Lowrey Glass Company, J. A. Giddings—Brockway Glass Company, Inc., P. I. Heuisler—Maryland Glass Corporation, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., J. H. Majesky—Continental Can Company, Inc., Hazel-Atlas Glass Division.

Absent:

W. H. Ellis—The Lamb Glass Company, G. F. Rieman—Ball Brothers Company, Inc., R. H. Roper, Jr.—Laurens Glass Works, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, K. M. Hay—Ball Brothers Company, Inc., F. H. Wright—GCMI.

1. Minutes of Previous Meeting.

Mr. Cheney outlined the minutes of the previous Task Committee meeting on October 24, 1956. Upon motion duly made, seconded and passed, they were approved.

2. Los Angeles 1957 Soft Drink Program.

Mr. Cheney read the resolution passed by the M R & P Committee on November 12, 1956, and reported on current activities. Highlights of recent surveys in the Los Angeles area by Ford Sammis were presented.

3. No-Deposit Bottle Promotion in National Advertising.

Mr. Cheney outlined the pros of incorporating one-way advertising in national ads as follows: 1) it would help Los Angeles, 2) the potential market is vast. Cons: 1) agency is opposed because of scant distribution—one-half of 1% nationally, 2) leading customers are not in one-ways, 3) resultant confusion of copy might result in a boost for cans, 4) the glass message would be diluted.

A tally vote was taken and agreement was general that no-deposit bottles should not be promoted in national advertisements. It was subsequently agreed that the subject should be kept alive; that, while we were not at a proper [fol. 479] point to advertise one-ways nationally yet, the situation should continue to be watched.

4. Review of the Baby Food Problem.

Mr. Cheney explained that the parent committee wanted recommendations and suggestions from the Task Committee on how GCMI might extend its efforts in behalf of glass-packed baby foods.

Following discussion a tally vote indicated that the Task Committee favored continuing past and present efforts without extension.

5. Review of the Magazine Ads.

The 1957 ads were then reviewed. In various stages of production, each ad was commented on in turn. Reception, in the main, was favorable.

6. KAB Insignia.

The committee unanimously voted against including the KAB insignia in national GCMI advertising.

7. Merchandising Advertising.

Mr. Cheney said there were two places, namely, member trade paper advertising and member field staffs, where the overall glass story might be more effectively told. Discussion followed.

8. Merchandising Research Program.

Mr. Cheney outlined the forthcoming merchandising research program in six stores—each of which does a 3½ million dollar volume—in the Giant Food chain in and around Washington, D. C.

9. Virginia Beer Bottle Program.

Mr. Cheney reviewed the Virginia beer bottle program.

10. Adjournment.

There being no further business, the meeting was adjourned at 2:00.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 480] GOVERNMENT'S EXHIBIT 110

Minutes of Meeting

Market Research and Promotion Task Committee
GCMI Conference Room
New York, New York

September 11, 1957

Present:

S. B. DeMerell—Anchor Hocking Glass Corporation, J. H. Funkey—Carr-Lowrey Glass Company, K. M. Hay—Ball Brothers Company, Inc., P. I. Heuisler, Jr.—Maryland Glass Corporation, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., R. H. Roper, Jr.—Laurens Glass Works, Inc.

Absent:

S. F. Davis—Owens-Illinois Glass Company, W. H. Ellis—The Lamb Glass Company, J. A. Giddings—Brockway Glass Company, Inc., R. H. Hetzel, Chairman—Armstrong Cork Company, J. H. Majesky—Hazel-Atlas Glass Division, Continental Can Company, Inc.

Others Present:

Bush Barnum—GCMI, A. G. Beltz—Brockway Glass Company, Inc., R. L. Cheney—GCMI, John Duncan—Hazel-Atlas Glass Division, Continental Can Company, Inc., Kevin Solon—Owens-Illinois Glass Company.

1. Call to Order.

The meeting was called to order at 10:00 A. M. by Acting Chairman Holmquest who presided in Mr. Hetzel's absence. Mr. Cheney served as secretary.

2. Minutes of the Previous Meeting.

Upon motion made, seconded and unanimously carried, the minutes of the previous meeting were approved as issued by the secretary.

3. Opening Remarks.

In his opening remarks, Acting Chairman Holmquest defined the purpose of the Task Committee meetings, namely, to screen GCMI advertising and to make recommendations to the Parent Committee.

4. Review of Progress on 1958 Program.

Mr. Cheney reviewed the progress of the 1958 program—from initial meetings with the agency last June through the [fol. 481] Advertising Advisory Committee meeting on August 15, and the Parent Committee meeting on August 27. He then presented to the Committee a digest of the 58-page recommendation presented to GCMI by Kenyon & Eckhardt, Inc.

5. Consumer Ad Schedule.

A discussion of the proposed schedule for consumer ads followed.

6. Discussion of Consumer Ads.

Roughs of the proposed consumer ads—with accompanying copy—were next presented by Mr. Cheney for committee consideration. Detailed discussion of each ad followed.

7. Remainder of 1958 Program.

Mr. Cheney reviewed for the committee the proposed trade advertising for 1958, merchandising the advertising, merchandising research, and the Glass Festival.

8. Next Meeting.

No date was set for the next meeting of the committee.

9. Adjournment.

There being no further business, Acting Chairman Holmquest declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

Glass Company, J. W. Thayer—Hazel-Atlas Glass Division, Continental Can Company, Inc.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, John Duncan—Hazel-Atlas Glass Division, Continental Can Company, Inc., G. R. Hollen—Brockway Glass Company, Inc., Kevin Solon—Owens-Illinois Glass Company.

1. Call to Order.

The meeting was called to order at 10:00 A. M. by Chairman Hay. Mr. Cheney served as secretary.

2. Previous Minutes.

Minutes of the previous meeting were read by the secretary. Upon motion duly made, seconded, and unanimously carried, they were approved as read.

3. Review of Proposed 1959 Advertising and Promotion Program.

The secretary presented for Committee consideration and comment an advertising and promotion plan for 1959, stating that the program bore the recommendation of GCMI's advertising agency—Kenyon & Eckhardt, Inc.—as well as GCMI's Market Research and Promotion department. [fol. 483] The 57-page recommendation covering media, creative, budgets, promotion and advertising copy—together with roughs of 22 advertisements incorporating changes suggested by the Advertising Advisory Committee at a meeting on August 27th—were presented to the Committee by Messrs. Cheney and Barnum, general discussion following.

Changes recommended by the Task Committee were subsequently incorporated prior to final presentation to the Market Research and Promotion Committee on September 25th.

4. Giant Study.

Mr. Cheney next outlined use of the "GCMI-Giant Study," and the Committee voted unanimously to proceed as recommended.

5. Next Meeting.

No date was set for the next meeting of the Task Committee.

6. Adjournment:

There being no further business, Chairman Hay adjourned the meeting about 5:00 P. M.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 484] GOVERNMENT'S EXHIBIT 112

Minutes of Meeting
Advertising Advisory Committee

1. Call to Order.

The meeting was called to order at 10:00 A. M. by R. L. Cheney, GCMI's executive director and marketing manager, who presided.

2. Round Table Discussion.

In opening the meeting, Mr. Cheney stated that, as in previous years, the agency would present for Committee consideration and comment an advertising and promotion program recommended both by Kenyon & Eckhardt and GCMI's Market Research and Promotion department.

Messrs. Shirey, Harvey and Carlton of the Kenyon & Eckhardt staff then joined the meeting and presented a detailed recommendation together with layouts and copy.

Following the departure of agency representatives at about 12:30 P. M., discussion—both general and specific—about the new program began. Various changes suggested by the Committee will be incorporated prior to similar presentations to the Task Committee on Tuesday, September 16th, and to the Market Research and Promotion Committee on Thursday, September 25th.

[fol. 485] 3. Next Meeting.

No date was set for the next meeting of the Advertising Advisory Committee.

4. Adjournment.

There being no further business, the meeting was adjourned about 5:00 P. M.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 486] GOVERNMENT'S EXHIBIT 113

Minutes of Meeting

Beer Bottle Subcommittee
GCMI Conference Room
New York, New York

June 26, 1956

Present:

R. E. Delaplane, Chairman—Owens-Illinois Glass Company, W. S. Bazzett—Thatcher Glass Manufacturing Co., Inc., J. E. Bellinger—Ball Brothers Company, Inc., E. M. Lawrence—Anchor Hocking Glass Corporation, G. A.

Mengle—Brockway Glass Company, Inc., R. M. Ulmer—Armstrong Cork Company.

Absent:

M. J. Jones—Obear-Nester Glass Company.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, J. A. Giddings—Brockway Glass Company, Inc., V. L. Hall—GCMI, M. A. Hellrung—Owens-Illinois Glass Company, P. S. Holmquest—Thatcher Glass Manufacturing Co., Inc., H. W. Kuni—GCMI, R. R. Shirey—Kenyon & Eckhardt, Inc.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. R. E. Delaplane. Mr. Cheney acted as Secretary.

2. Minutes of Previous Meeting.

The minutes of the meeting were reviewed by the Secretary.

3. Virginia Restrictions.

Mr. Kuni reported on the recent removal of the fifteen-year-old restrictions on the use of no-deposit bottles for malt beverages by the Virginia Beverage Control Board. Commission members have indicated they will review the resulting situation after a trial period of six to twelve months.

4. Baltimore Brewers.

Mr. Cheney reported on conferences with brewers in neighboring states who plan an immediate large-scale advertising and promotion program in Virginia to re-introduce beer in no-deposit bottles at prices favorable to glass.

[fol. 487] 5. GCMI Program.

A discussion followed on the pros and cons of a GCMI advertising effort in Virginia at this time. It concluded with unanimous agreement that GCMI should undertake such a test program; that it should run six to eight months; that a target starting date of August 1, 1956, be established;

that total cost should not exceed $60,000; that the effort would consist of a newspaper program in Richmond, Norfolk and the Alexandria area; that copy and illustration are to stress flavor, cleanliness, social acceptability and convenience; that price would not be mentioned; that ads are to carry the KAB insignia at the bottom.

6. Syracuse Study.

Mr. Shirey made a preliminary report on the extensive survey which the agency is currently conducting in Syracuse, New York.

7. Next Meeting.

It was decided to hold the next meeting of the Committee at GCMI headquarters in New York on Thursday, July 26, 1956.

8. Adjournment.

There being no further business, the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 488] GOVERNMENT'S EXHIBIT 114

Minutes of Meeting

Beer Bottle Subcommittee
GCMI Conference Room
New York, New York

July 26, 1956

Present:

R. E. Delaplane, Chairman—Owens-Illinois Glass Company, W. S. Bazzett—Thatcher Glass Manufacturing Co., Inc., J. A. Giddings—Brockway Glass Company, Inc., M. J. Jones—Obear-Nester Glass Company, E. M. Lawrence—Anchor Hocking Glass Corporation.

Absent:

J. E. Bellinger—Ball Brothers Company, Inc., R. M. Ulmer—Armstrong Cork Company.

Others Present:

Bush Barnum—GCMI, R. L. Cheney—GCMI, V. L. Hall—GCMI, Eric Marder—Kenyon & Eckhardt, Inc., R. B. Shirey—Kenyon & Eckhardt, Inc., C. H. Strickland—Brockway Glass Company, Inc.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. R. E. Delaplane. Mr. Cheney acted as Secretary.

2. Minutes of Previous Meeting.

The minutes of the meeting of June 26, 1956, were approved as issued by the Secretary.

3. Virginia Beer Bottle Program.

The Subcommittee reviewed the advertising layouts and copy presented by Mr. Shirey of Kenyon & Eckhardt, subject to changes and suggestions offered by the Subcommittee. An opening date of August 9 was approved for the campaign, and the proposed schedule covering newspaper ads running through December, was approved,—budget for space and production to fall within the $60,000 previously authorized.

The litter problem in Virginia was discussed and the prominent display of the KAB insignia in the ads as shown in the Kenyon & Eckhardt layouts was approved.

Plans for soliciting brewer and retailer cooperation with the campaign were approved. Brewers and distributors are to be covered by direct mail with schedules and ad proofs which will be offered in quantity. Retailers will be contacted by the newspapers.

[fol. 489] Ford Sammis & Company had completed field work on a consumer survey in Virginia to determine knowledge of the One-Way bottle and attitudes toward it. The Subcommittee approved plans to follow this with a survey at the conclusion of the program to determine progress. It was also planned to obtain distribution and sales data from all possible sources.

4. Syracuse Study.

The representatives of Kenyon & Eckhardt then presented parts I, II and III of their Syracuse Beer Container Study, to wit:

I. Story Audits of Selected Brands of Beer
II. The Dealers Survey
III. The Brewer and Distributor Survey

Copies were furnished to Subcommittee members, and a discussion followed. As soon as the consumer survey is analyzed, a thorough marketing study will be made by Kenyon & Eckhardt and full recommendations will be submitted to the Subcommittee.

5. Adjournment.

There being no further business the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

1. Call to Order.

The meeting was called to order by the Chairman, Mr. R. E. Delaplane. Mr. Cheney served as secretary.

2. Minutes of the Previous Meeting.

Upon motion made, seconded, and unanimously carried, the minutes of the July 26, 1956, meeting were approved.

3. Syracuse Beer Studies.

The meeting was turned over to R. B. Shirey of Kenyon & Eckhardt, Inc., GCMI account supervisor. He in turn introduced Eric Marder of the agency's research staff. Mr. Marder presented a summary of the beer studies conducted among 581 Syracuse consumers in the late summer of 1956. This constituted part four of the agency's comprehensive Syracuse Beer Container Study. It dealt with consumer acceptances of beer containers, consumer size preferences, consumer appeals, and consumer prejudices about beer containers.

Following Mr. Marder's presentation, Mr. Shirey and Douglas Keys, GCMI account executive, presented the agency's analysis and recommendation. In summary, Kenyon & Eckhardt does not recommend proceeding with proposed marketing tests in the Syracuse area, in the absence of a favorable economic relationship at the retail level, such as now exists in Maryland and Virginia. Following discussion, members of the Beer Bottle Subcommittee unanimously approved this viewpoint.

[fol. 491] 4. Virginia Beer Bottle Program.

Mr. Cheney reported to the Subcommittee in detail on the results of the program in behalf of one-ways conducted in three Virginia markets from August through December, 1956. Following discussion, a motion was made, seconded and unanimously carried that the agency submit recommendations for an advertising program in Virginia to cost approximately $40,000, major emphasis to be placed on the

important beer-consuming holidays—Decoration Day, Independence Day and Labor Day.

5. Vermont Legislative Situation.

Mr. Cheney reported on the current situation regarding the proposed legislative ban of one-way beer bottles in the state of Vermont.

6. New Business.

No new business was brought before the Subcommittee.

7. Next Meeting.

No date for the next meeting was established.

8. Adjournment.

There being no further business, Chairman Delaplane declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 492] GOVERNMENT'S EXHIBIT 116

Minutes of Meeting

Beer Bottle Subcommittee
GCMI Conference Room
New York, New York

August 21, 1958

Present:

E. M. Lawrence, Chairman—Anchor Hocking Glass Corporation, A. G. Beltz—Brockway Glass Company, Inc., H. C. Crago—Hazel-Atlas Glass Division, Continental Can Company, Inc., K. Kevin Hepp—Owens-Illinois Glass Company, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., R. M. Ulmer—Armstrong Cork Company.

Absent:

M. J. Jones—Obear-Nester Glass Company, G. W. Meyer—Glenshaw Glass Company, Inc.

Others Present:

J. B. Carroll—GCMI, R. L. Cheney—GCMI, K. M. Hay—Ball Brothers Company, Inc., J. P. Moore—Metro Glass Company, Inc.

1. Call to Order.

The meeting was called to order by Chairman E. M. Lawrence.

2. Minutes of the Previous Meeting.

Upon motion made by Mr. Holmquest, seconded by Mr. Beltz and unanimously carried, the minutes of the March 26, 1957 meeting were approved.

3. Beer Pilot Study. Institute for Motivational Research, Inc.

Mr. Cheney presented a report on the findings of the Institute for Motivational Research, Inc., in its pilot study concerning beer distributors' views on beer packaging—one-way bottles and returnables as compared with cans. This packaging study was carried on through personal depth interviews with 60 beer distributors selected on a regional basis. It was the initial phase of a proposed five phase study which will include, in addition to distributors: brewers, drivers, retailers and consumers.

Copies of this report have been furnished to all members of this Subcommittee.

[fol. 493] B

Total Advertising & Promotion

	1958 Budget	1959 Budget	Amount (over) or under 1958
Advertising and Promotion (Kenyon & Eckhardt, Inc.)	$1,208,178	$1,250,000	($41,822)
Publicity, General	80,000	80,650	(650)
Milk Bottle Promotional Program	48,000	48,000	.....
Total	$1,336,178	$1,378,650	($42,472)

[fol. 494] 4. Further Studies Approved.

The Institute for Motivational Research recommended they continue with the remaining four phases of the study after which a final analysis will be prepared.

They also recommended that a special side study be made in the Pittsburgh and Toledo markets to enable them to evaluate certain new beer bottle innovations introduced there. In this particular study all levels of the trade will be studied simultaneously.

Following a general discussion concerning the advisability of entering into this special study, upon motion duly made, seconded and unanimously carried, it was

> Resolved, That the Institute for Motivational Research, Inc. be authorized to conduct special beer packaging studies in the Pittsburgh and Toledo beer markets at the cost of approximately $5,000, in addition to completing the original nationwide study.

(After the close of the meeting Mr. Cheney determined that the entire five phase study and the special study on Pittsburgh and Toledo beer markets can be completed and reported to the Beer Bottle Subcommittee at its next scheduled meeting, Wednesday, October 29.)

5. Review of Package Beer Statistics.

The Subcommittee received several reports on package beer data, including statistics for the first half of 1958, and a special study of trends in one-way bottles vs. cans.

6. New Business. Promotion Participation—Pittsburgh.

At the suggestion of one member, the Subcommittee considered the advisability of lending advertising support to the new beer bottle in the Pittsburgh area. While it was the consensus that there was not yet sufficient evidence that the Pittsburgh situation presented the proper opportunity for launching a beer bottle promotion, the Subcommittee unanimously adopted the following resolution:

> Resolved, That this Subcommittee feels that in the near future serious consideration should be given to a carefully planned and executed aggressive promo-

tional campaign in behalf of the no-deposit glass beer bottle.

[fol. 495] 7. Next Meeting.

The Subcommittee elected to meet Wednesday, October 29, at the GCMI headquarters in New York to receive the complete report on the motivational studies.

8. Adjournment.

There being no further business, Chairman Lawrence declared the meeting adjourned.

Respectfully submitted, R. L. Cheney, Secretary.

[fol. 496] GOVERNMENT'S EXHIBIT 117

Technical Committee on Glass Packed Products
Special Subcommittee on Nuclear Tests Semi-Annual Report of Activities For the Period May to September 1957.

To the Board of Trustees
of Glass Container Manufacturers Institute

Mid-1957 the Federal Civil Defense Administration released the official, and presumably the final, report on the "Effects of Nuclear Explosions on Canned Foods". The term "canned foods" as used throughout the report refers to foods packed in glass and tin containers. Earlier in the year interim reports were issued on fruits, vegetables and juices, and a separate report on commercially packaged beverages. These reports and their conclusions are of great significance to glass container and closure manufacturers, their packer and bottler customers, and the American public. Certainly the serviceability of glass as a protective package was clearly demonstrated.

The tests were conducted in cooperation with the Atomic Energy Commission at the Nevada Test Site during the forepart of 1955. Some 60 different types of foods representing those most commonly found in homes were selected for test purposes. Altogether about 25,000 individual sample packages were involved. Among the glass packed items

were a range of fruits, vegetables, meats, fish, and baby foods. Other glass packed items comprised drugs and beverages, the latter including soft drinks and beer. Briefly, the principal objectives of the test were to determine the effect of extreme heat, pressure changes and the various types of radioactivity that are generated by nuclear explosion on containers and the products in them.

The official report, which was sent by the Subcommittee to all members under date of August 16, 1957, contains a great deal of important information heretofore unavailable. The findings set forth in the Summary are most gratifying to our industry. Of particular interest are the two following conclusions quoted from the Summary Section:

> "Canned foods in unbroken tin or glass containers subjected to an atomic blast are suitable for immediate use when located in shelters or other structures effective in protecting personnel against lethal radiation or blast effects. Their induced radioactivity is not at a dangerous level, and any container failure is readily discernible. Canned foods that might be recoverable from critically exposed areas within the zone of complete destruction could be pressed into emergency service after three or four days."
>
> "Even in the case of an above ground shelter so badly shattered that no personnel could have survived crushing or the lethal doses of radiation, 67 per cent of the canned foods were recovered in usable condition."
>
> Note: Canned foods includes glass packed products.

Since this likely may be the final report of the Subcommittee appointed by the Trustees on May 14, 1954 to handle participation of GCMI in the Nuclear Test Program, it seems appropriate to include a short bibliography:

[fol. 497]

1. Semi-Annual Activities Reports to the GCMI Board of Trustees; Special Subcommittee on Nuclear Tests; May 1955, November 1955 and May 1956.
2. Federal Civil Defense Administration-Atomic Energy Commission Reports "Operation Teapot" February-May 1955:

(a) Program 32—"Exposure of Foods and Foodstuffs to Nuclear Explosions"—Report WT-1222.

(b) Project 32.2a—"The Effect of Nuclear Explosions on Commercially Packaged Beverages"—Report WT-1213.

(c) Project 32.2—"Effects of Nuclear Explosions on Canned Foods"—Report WT-1212. (Final Report)

Members of this Subcommittee are:

Alex Hart, Chairman—Anchor Hocking Glass Corporation
H. A. Barnby—Owens-Illinois Glass Company
J. M. Sharf—Armstrong Cork Company
P. O'C. White—White Cap Company
H. W. Kuni—GCMI

Messrs. Sharf and Kuni handled all arrangements in connection with the program and participated in the tests at Yucca Flats and Mercury, Nevada.

Respectfully submitted, Alex Hart, Chairman.

[fol. 498] GOVERNMENT'S EXHIBIT 118

Committee on Market Research and Promotion
Semi-Annual Report of Activities
For the Period November 1955 to May 1956

To the Board of Trustees of
Glass Container Manufacturers Institute

The personnel of the Committee is as follows:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., J. S. Algeo—Hazel-Atlas Glass Company, E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation,

T. S. Gallagher—Crown Cork & Seal Company, Inc., J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

R. L. Cheney is Secretary.

The Task Committee consists of:

R. H. Hetzel, Chairman—Armstrong Cork Company, J. S. Algeo—Hazel-Atlas Glass Company, S. F. Davis—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, W. H. Ellis—The Lamb Glass Company, J. H. Funkey—Carr-Lowrey Glass Company, J. A. Giddings—Brockway Glass Company, Inc., Kenneth M. Hay—Ball Brothers Company, Inc., P. I. Heuisler, Jr.—Maryland Glass Corporation, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., R. H. Roper, Jr.—Laurens Glass Works, Inc.

R. L. Cheney is Secretary.

The roster of the West Coast Subcommittee is:

K. C. White, Chairman—Owens-Illinois Glass Company, E. L. Casey—Hazel-Atlas Glass Company, R. H. Dallas—Maywood Glass Company, J. W. Donaldson—Ball Brothers Company, Inc., J. B. Miller—Thatcher Glass Manufacturing Company, Inc., William Simkins—Latchford-Marble Glass Company, E. B. Spread—Crown Cork & Seal Company, Inc.

Frank H. Wright is Secretary.

Committee Meetings.

Since the last report, one meeting of the Committee has been held:

November 28, 1955, at The Fontainebleau, Miami Beach, Florida.

[fol. 499] Since the last report, one meeting of the Task Committee has been held:

March 21, 1956, at GCMI headquarters.

GCMI's Market Research and Promotion Program divides into four major parts:

I

Advertising and Promotion

II

Public Information

III

Member Information

IV

Market Research

Following are highlights of Market Research and Promotion Division activities in each of these four major areas for the six-month period ending in May, 1956:

I

Advertising and Promotion

Designed to increase consumer preference for glass containers, the industry's long-range advertising and promotion effort was extended during the past six months to include:

Magazines: From February through May, fifteen full-page, four-color advertisements featuring glass containers appeared in Family Circle, Good Housekeeping, Ladies' Home Journal, McCall's or Woman's Day. Subjects of the first four ads in the 1956 series were: February—Instant Coffee; March—Fruits for Salad; April—Worksavers; May—Milk. Six additional ads covering the period June through November have also been prepared and cleared. Total 1956 insertions: forty. Combined circulations of the five consumer magazines on the 1956 schedule total 20,676,000. Estimated average monthly readership: 31,870,000.

The basic media choice—women's magazines—still constitutes, in the opinion of your Committee, the most economical means of presenting the advantages of glass containers to maximum consumer audiences at the national level. Mo-

mentum gained in 1955 has been speeded during the current period, and it is believed that it will continue through the current year with appreciable results in increased consumer demand for glass-packed products throughout the nation.

Canadian Program: At the request of the Canadian members of GCMI, who have supplied the funds for it, the Canadian women's magazine Chatelaine has been added to the GCMI schedule. Six of the 1956 advertisements will appear from April through November in Chatelaine, circulation of which is 407,000.

Trade Publications: Recognizing the great importance of retail trade attitudes in the free flow of glass containers from manufacturer to consumer, your Committee has, from [fol. 500] the inception of the current program, made every effort to work out a series of strong advertisements for incorporation in trade papers read by members of the retail food industry. Problems are manifest, and need no elaboration here. Suffice it to say that the 1956 trade program got underway in April issues of seven food journals—combined circulation of which is 316,000—as follows: Chain Store Age, Cooperative Groups Magazine, Food Topics, Nargus Bulletin, Progressive Grocer, Supermarket Merchandising, Supermarket News, and Voluntary and Cooperative Groups Magazine. Most are in four-color. Additional ads are scheduled—on a staggered basis—from May through September, making a total of six trade ads in each publication, or a total of 42 ads, in the 1956 trade series.

Glass Packer: The leading trade paper in the glass packaging field, Glass Packer, has a circulation of some 6,000 among packaging consultants, users of glass containers, manufacturers associations, and allied industries. Your Committee felt it advisable to use this publication on a continuing basis as part of the GCMI trade program. Double-page advertisements appeared from January through May, and are scheduled monthly through the year-end.

Labor Papers: To reach a large and influential segment of the American consuming public it was decided to include nine labor publications in the 1956 schedule as follows: American Teacher, American Teacher Magazine, Boilermakers Journal, Locomotive Fireman, Maintenance Way Journal, Public Employee, Railway Carmens Journal, Union Postal Clerk, and Motorman Conductor. Combined

circulation: 1,135,000. Black and white ads appeared on a staggered basis in February, April and May issues, and are scheduled on a monthly basis thereafter through November. Starting in May, this will be supplemented by 32 regional labor papers with a combined circulation of 1,089,000.

Local Program: A special advertising effort promoting glass bottles for soft drinks in the Los Angeles area is detailed in the report of the West Coat Subcommittee.

Merchandising the Advertising: Every ad in the 1956 series is extensively merchandised. While space does not permit a detailed report, major projects include: 1) mailing of special merchandising material by each of the consumer magazines on the schedule, plus their regular monthly merchandising services; 2) mailing of personally-addressed, hand-typed letters—accompanied by a proof—to industry leaders in each field, i.e. coffee, fruit, household cleaners, milk; 3) Glass Container Sales letters sent each month to 3,500 executives supervising buying for 28,000 supermarkets —as well as to packers, distributors and associations in each end-use area; 4) mailing of a milk promotion packet to 8,500 milk dealers in conjunction with the May ad; 5) mailing of regular releases and glossy prints of ads to interested trade papers in each field.

Home Economics Activities: The story of glass containers is told to consumers by qualified members of the Agency publicity staff on a continuing basis in many ways. Included are: 1) a matted feature which goes to 1,500 weekly and small daily newspapers once a month; 2) releases and photographs to 400 food and women's page editors of major daily newspapers once a month. (Combined circulation of these papers totals some 150,000,000. Material is based upon the end-use product featured in the corresponding national magazine advertisement); 3) a monthly release to 500 women radio commentators; 4) scripts to 200 television commentators once a month; 5) national magazines, newspaper syndicates and the labor press are contacted regularly in an effort to obtain editorial space for glass containers. First quarter results of this activity are gratifying, and a report will shortly be submitted to the membership.

[fol. 501] Preparation of a slide film designed for domestic science classes in those 19,000 schools which have projectors for this type of visual education is in progress.

II

Public Information

Motion Picture: Major effort in the GCMI public information program throughout the past six months has been the preparation of a 25-minute, 16-mm, color film on glass containers. Title: "The Story Behind A Bottle." An extensive undertaking, this project has been in work since August of 1955. At this writing, it is anticipated that the initial showing to members will be made at the mid-May membership meeting at White Sulphur Springs. Distribution plans will be outlined at that time.

GCMI Glass Container Collection: With the aid of Helen McKearin Powers, a collection of authentic, old glass containers was assembled from the notable collection of Mrs. Powers' father, George S. McKearin. It is now on display in the reception room at GCMI headquarters. The collection has aroused considerable interest, and has many promotional applications. A printed folder describing the collection was mailed to members on March 29th, 1956.

"The History of Glass Containers": A second printing of "History" was made in February. A total of 16 GCMI member companies ordered 11,000 copies of the second edition. Corporate titles were imprinted on the cover and title page in each instance. Combining first and second prints, some 66,000 copies of this green-covered booklet have now been placed in member hands. GCMI has placed 17,000 copies with opinion makers.

"The Story of Glass Containers": This 16-page educational unit was originally offered in the September, 1955, issue of Grade Teacher Magazine. It was re-offered via a full-page advertisement in the February, 1956, issue of Grade Teacher. Copies distributed to date total nearly 400,000. In the past six months, distribution has been at the rate of 8,000 a week or 1,500 a day—Monday through Friday. The National Science Teachers Association—a division of National Education Association—mailed 10,000 copies to its membership for classroom use. Considerable editorial mention—reported to members on February 17, 1956—has accrued.

"The Glass Container Industry": This recap of the glass container industry, incorporating background statistics and

accompanied by charts, was originally prepared through 1953. It was updated for 1954. It is currently being reworked to include 1955. Copies will be sent to members upon completion. It will also be used, as in the past, over a twelve-month period as a ready means of supplying writers, editors and others interested with favorable, factual information about the glass container industry.

Releases: During the six-month period, various releases were distributed by GCMI to wire services, daily newspapers and trade papers. Among them: New Peaks for Glass Container Shipments Predicted at GCMI Meeting In Miami—November 29, 1955; A. J. Martin Joins GCMI As Labor Relations Director—December 16, 1955; Glass Container Shipments Reach All-Time Peak in 1955—January 25, 1956; Glass Container Industry Signs New Wage Agreements For 1956-57—February 27, 1956.

[fol. 502] Requests for Information: Members, editors, educators, students and members of the general public approached GCMI by telephone, letter and in person in increasing numbers during the past six months with requests for a wide variety of information. The national advertising coupled with the increasing distribution of literature and releases, has given more people a name and an address to call or write, and they are doing so. These inquiries have, in each instance, been handled by the Market Research and Promotion Division to the best of its ability.

Talks to Bottlers and Others: Leading off with a speech at the annual meeting of the American Bottlers of Carbonated Beverages in Miami on November 16, 1955, R. L. Cheney subsequently addressed three state bottling associations as follows: Missouri Bottlers Association at St. Louis on December 6, 1955; California-Nevada Manufacturers of Carbonated Beverages at San Francisco on February 14, 1956; the Arkansas Bottlers Association at Little Rock, Arkansas, on February 20, 1956.

On February 23, 1956, Mr. Cheney spoke to the New York Canners & Freezers Association at Buffalo. On April 18, 1956, Mr. Cheney participated in the Fifth Annual Package Design Seminar conducted by New York University.

III

Member Information

In addition to advance mailings of most of the foregoing, the following material has been supplied to GCMI members on a continuing basis:

Advertising and Promotion Bulletins: During the course of the six-month period, 40 mailings were sent to some 250 executives of member companies reporting details of the Advertising and Promotion Program. While it is not possible to recap full details in the course of this brief report, members were advised regularly on all developments in the M R & P program as they occurred.

Container Capsules: A digest of current news developments culled from some 131 trade papers and daily newspapers went forth to GCMI members twice a month throughout the six-month period.

Reprints: Complete reprints of significant editorial comment were mailed to members at the rate of about three a week during the past six months.

IV

Marketing Research

Market Survey: The results of the 1955 nationwide consumer attitude survey, which were reported to the semi-annual membership meeting on December 1, 1955, have been further analyzed to develop information for our advertising agency on magazine readership and notation of the GCMI advertising messages. The summary report has been put in printed form, available to members on a libarary loan basis.

Further breakdowns revealing special opportunities and problems of the glass container industry, together with regional trends, have been made and will be reported to the membership at the annual meeting in May. These will later be issued in printed form to members.

[fol. 503] A special report on consumer attitudes in the West, together with data covering sales of baby foods and soft drinks in the Los Angeles area derived from continuing store audits there, were given at the annual meetings of the West Coast Subcommittees in March.

Plans are being prepared by the Market Research and Promotion Division, the research department of Kenyon & Eckhardt, and Ford Sammis for the 1956 consumer attitude survey to be conducted in August and reported at the November semi-annual meeting.

Special Studies: A field check has been made of the progress of market tests on new metal containers for soluble coffee, and an investigation made of potential markets for glass containers for liquid detergents, including heavy duty detergents.

Bibliographies and reprints of technical articles bringing out the relative merits of glass containers and other packaging are being assembled.

Retail Tests: A pilot study will have been completed on April 18th, in a large supermarket in the New York City area covering turnover, handling costs, sales and profits per square foot, breakage and damage losses, and related information on products packed in glass compared with those in other containers. The purpose was to establish a series of benchmarks for practical merchandising and sales ideas designed to increase the sale of products packaged in glass. Possibilities uncovered by this study will be tested in retail outlets in various parts of the country.

Negotiations are underway with a consulting organization in the supermarket operation field to develop the means for conducting these broader tests.

Beer Bottle Studies: The beer bottle studies being made by Kenyon & Eckhardt, Inc. will shortly be completed. (See report of Beer Bottle Subcommittee)

Product Research: Discussions are being held with two leading product research and design organizations to determine if their techniques can help in developing ways and means for expanding the sales of such items as One-Way beer bottles.

West Coast Subcommittee Activities.

Since submission of the November, 1955, report, Subcommittee meetings have been held December 15, 1955; February 2, 1956; February 3, 1956; February 14, 1956; and March 13, 1956.

The Subcommittee formulated a questionnaire designed to accurately evaluate the impact of the three-month local

promotion carried on in the Los Angeles market during the months of July, August and September, 1955, directed towards soft drinks in glass bottles. This questionnaire was sent to all bottlers in the Los Angeles area, and the replies correlated and tabulated in the West Coast GCMI office and distributed to the Subcommittee for study and action.

The decision was reached that a continuing local radio and TV spot program in that market during 1956 was required to realize full value from the 1955 effort and to keep the favorable trend of soft drink packaging in glass bottles against any aggressive activity on behalf of various can manufacturers and soft drink manufacturers towards packaging soft drinks in metal containers.

[fol. 504] As funds to carry out this program were not available from the national Market Research and Promotion budget, and the problem was felt to be of extreme importance, not only to the glass container industry on the West Coast, but nationally, the Subcommittee was unanimous in resolving that the companies operating plants within the State of California would assess themselves to finance a 1956 program.

At the time of Mr. R. L. Cheney's address to the California-Nevada Manufacturers of Carbonated Beverages, February 14, 1956, the Subcommittee had the pleasure of discussing the 1956 advertising program and various problems particular to the West Coast, presenting numerous facts and figures to Mr. Cheney.

A request directed to the Subcommittee by the CNMCB to contribute one half of the cost of a continuing advertising program for returnable bottles in the West Coast trade journals, was not given favorable consideration, as the Subcommittee was of the opinion that the basic problem was one of glass versus tin, and that effort directed at consumer level would accomplish the most favorable results.

Continued increases in glass-packed baby foods on the Coast were noted in 1955, and the Subcommittee is continuing its careful watch and study of this important and growing market.

With the advent of spring, the Subcommittee and Task Force for Public Education have stepped up activity directed to improve roadside litter conditions on the West Coast. At all times close liaison and cooperation is main-

tained with the California State Chamber of Commerce, and the West Coast Manager of GCMI, under the direction of the Subcommittee and Task Force, keeps fully advised of all matters concerning this problem, reporting them immediately to the Subcommittee.

Respectfully submitted, Franklin B. Pollock, Chairman.

Committee Meetings.

Since the last report, two meetings of the Committee have been held:

[fol. 506] May 20, 1956, at The Greenbrier, White Sulphur Springs, West Virginia.

September 26, 1956, at GCMI headquarters.

Since the last report, one meeting of the Task Committee has been held:

October 4, 1956, at GCMI headquarters.

One meeting of the Advertising Advisory Group has been held:

September 18, 1956, at GCMI headquarters.

GCMI's Market Research and Promotion Program divides into four major parts:

I

Advertising and Promotion

II

Public Information

III

Member Information

IV

Market Research

Following are highlights of Market Research and Promotion Division activities in each of these four major areas for the six-month period ending in November, 1956:

I

Advertising and Promotion

Designed to increase consumer preference for glass containers, the industry's long-range advertising and promotion effort was extended during the past six months to include:

Magazines: From May through November, twenty-five full-page, four-color advertisements featuring glass containers appeared in Family Circle, Good Housekeeping, Ladies' Home Journal, McCall's or Woman's Day. Subjects of the final six ads in the 1956 series were: June—Soft Drinks; July—Beer; August—Soft Drinks; September—Baby Food; October—Juices; and November—Cosmetics. Total 1956 insertions: forty. Combined circulation of the five consumer magazines on the 1956 schedule totals 20,676,000. Estimated average monthly readership: 31,870,000. The basic media choice—women's magazines—still constitutes, in the opinion of your Committee, the most economical means of presenting the advantages of glass containers to maximum consumer audiences at the national level. While any effort to change consumer attitudes on a national scale is necessarily long-range, it is the belief of your Committee that tangible progress has been made since the inception of the GCMI Program in May of 1955, and that further gains in the sale of glass-packed products will be scored in the months and years ahead.

[fol. 507] Canadian Program: At the request of the Canadian members of GCMI, who supplied the necessary funds, the Canadian women's magazine Chatelaine was added to the GCMI schedule. Six of the 1956 advertisements appeared from April through November in Chatelaine, circulation of which is 407,000.

Trade Publications: Recognizing the great importance of retail trade attitudes in the free flow of glass containers from manufacturer to consumer, your Committee has, from the inception of the current program, made every effort to

work out a series of strong advertisements for incorporation in trade papers read by members of the retail food industry. The 1956 trade program got underway in April issues of seven food journals—combined circulation of which is 316,000—as follows: Chain Store Age, Cooperative Groups Magazine, Food Topics, Nargus Bulletin, Progressive Grocer, Supermarket Merchandising, Supermarket News, and Voluntary and Cooperative Groups Magazine. Most ads are in four-color. Six ads appeared in each publication, from April through September, 1956. Total insertions: 42.

Glass Packer: The leading trade paper in the glass packaging field, Glass Packer, has a circulation of some 6,000 among packaging consultants, users of glass containers, manufacturers associations, and allied industries. Your Committee felt it advisable to use this publication on a continuing basis as part of the GCMI trade program. Double-page advertisements are scheduled monthly throughout 1956.

Labor Papers: Nine national labor publications are included in the 1956 schedule as follows: American Teacher, American Teacher Magazine, Boilermakers Journal, Locomotive Fireman, Maintenance Way Journal, Public Employee, Railway Carmens Journal, Union Postal Clerk, and Motorman Conductor. Combined circulation: 1,135,000. Black and white ads appeared on a staggered basis from February through November, 1956. Total insertions: 47. Starting in May, this schedule was supplemented by 32 regional labor papers with a combined circulation of 1,089,000. Total regional insertions: 105.

Local Programs: Special advertising effort promoting glass bottles for soft drinks in the Los Angeles area and glass bottles for beer in the State of Virginia are detailed in the report of the West Coast Subcommittee and the Beer Bottle Subcommittee, respectively.

Merchandising the Advertising: Every ad in the 1956 series is extensively merchandised. While space does not permit a detailed report, major projects include: 1) mailing of special merchandising material by consumer magazines on the schedule; 2) mailing of personally-addressed, hand-typed letters—accompanied by a proof—to leading packers; 3) Glass Container Sale$letters sent each month to 3,500

executives supervising buying for 28,000 supermarkets—as well as to packers, distributors and associations in each end-use area; 4) mailing of regular releases and glossy prints of ads to interested trade papers in each field.

Home Economics Activities: The story of glass containers is told to consumers by qualified members of the Agency publicity staff on a continuing basis in many ways. Included are: 1) a matted feature which goes to 1,500 weekly and small daily newspapers once a month; 2) releases and photographs to 400 food and women's page editors of major daily newspapers; 3) releases to women radio commentators; 4) scripts to television commentators once a month; 5) national magazines, newspaper syndicates and the labor press are contacted regularly in an effort to obtain editorial space for glass containers.

[fol. 508] Preparation of a slide film designed for domestic science classes in those 19,000 schools which have projectors for this type of visual education is nearing completion.

II

Public Information

"The Story Behind A Bottle": A working print of this 24-minute motion picture was shown members at The Greenbrier on May 22, 1956. Twenty-eight member companies subsequently ordered a total of thirty-one 16-mm prints—which were delivered on or before September 20. Previews for press, etc., were held on September 13 and 14, and on October 11. Promotional material was prepared and distributed. Reaction has been consistently favorable. The film was telecast over an American Broadcasting Company coast-to-coast network on September 27, shown over the network's New York flagship station—WABC—on October 14. WRCA, key station of the National Broadcasting Company, showed the film on November 4. Numerous other screenings have been scheduled, including one at the ABCB convention in Cleveland on November 15. Plans for extensive national distribution in the months ahead are currently in work.

"The Story of Glass Containers": Demand from teachers for this 16-page educational unit continues to exceed optimistic estimates. In the four-week period September 4

through 28, 1956, a total of 218,000 copies were requested. Over 700,000 copies of the booklet have been distributed since the booklet was first introduced in September of 1955. Unsolicited comment from teachers has been highly gratifying.

"The History of Glass Containers": Member companies continue to order copies of this 24-page booklet with their corporate name imprinted on cover and title page. A third printing was done in September. Over 75,000 copies have been placed in member hands to date. Some 20,000 additional copies have been distributed from GCMI headquarters.

"The Glass Container Industry": This recap of the glass container industry, incorporating background statistics and accompanied by charts, has been updated annually since 1953. The version covering data for 1955 was distributed to members in early June and it is used at GCMI headquarters on a continuing basis to provide those interested with factual information about the industry.

"The Evolution of the Glass Container Industry": Daniel J. James, professor of marketing, University of Arkansas, College of Business Administration, brought to our attention an independently-prepared treatise on the subject of glass containers. Professor James agreed to the incorporation of his material by GCMI in a 24-page booklet—subsequently made available to members and others.

Releases: During the six-month period, various releases were distributed by GCMI, to wire services, daily newspapers and trade papers. Among them: GCMI Semi-Annual Meeting Scheduled at White Sulphur Springs May 21-23—April 16, 1956; Instant Products Contribute to New Record Glass Shipments—June 6, 1956; New Peaks for Glass Container Shipments in 1960 Predicted at GCMI Meeting, May 22, 1956; William J. Green Named GCMI Trustee—September 19, 1956; Glass-Packed Food & Candy Dominate National Show—September 19, 1956; August Glass Container Shipments at All-Time Peak—September 24, 1956.

[fol. 509] Requests for Information: Members, editors, educators, students and members of the general public approach GCMI by telephone, letter and in person in increasing numbers during the past six months with requests

for a wide variety of information. These inquiries have, in each instance, been handled by the Market Research and Promotion Division to the best of its ability.

III

Member Information

In addition to advance mailings of most of the foregoing, the following material has been supplied to GCMI members on a continuing basis:

Advertising and Promotion Bulletins: During the course of the six-month period, 32 mailings were sent to some 200 executives of member companies reporting details of the Advertising and Promotion Program. While it is not possible to recap full details in the course of this brief report, members were advised regularly on all developments in the M R & P Program as they occurred.

Container Capsules: A digest of current news developments culled from some 131 trade papers and daily newspapers went forth to GCMI members twice a month throughout the six-month period.

Reprints: Complete reprints of significant editorial comment were mailed to members at the rate of about one a week during the past six months.

IV

Marketing Research

Market Survey: Field work for the third annual nationwide consumer attitude survey by Ford Sammis and Company was completed late in August. This year 4,000 women, 2,000 men and 1,000 retailers were interviewed in scientifically selected samples designed to give a true picture of overall attitudes toward glass containers and glass-packed products.

The results will be covered in a report by Mr. Sammis at the Semi-Annual meeting in Phoenix, and will later be available to members in printed form on a loan basis. Comparisons with 1954 and 1955 reports will reveal trends and that a number of new areas have been explored which should prove helpful to members and the Institute in planning future marketing activities.

Special Studies: To measure results of local programs, to obtain knowledge for the overall effort, and to gain needed information regarding special marketing problems, the following studies have been or are being made (by Ford Sammis and Company unless otherwise noted):

(a) Beer bottle studies by Kenyon & Eckhardt (See Beer Bottle Subcommittee Report.)
(b) Before-and-after consumer attitude surveys on beer packaging in Virginia.
(c) Before-and-after consumer survey on soft drinks in the Los Angeles area.
(d) Continuing store audits in the Los Angeles area covering soft drinks and baby foods.
[fol. 510] (e) Consumer and dealer survey on milk packaging in the South Bend, Indiana, market, together with an analysis of published cost studies covering a dairy conversion to 100% paper operation there.
(f) A study of potential markets for aseptically packed products in glass containers.
(g) A special study of the market problems of the glass milk bottle.

Retail Studies: The report of the pilot study made in a large supermarket in the New York City area has been completed, and arrangements are pending with a group of stores in another area to test some of the findings on a broader scale before the end of the year. It is hoped to develop facts which can be used to further break down retailer resistance to glass-packed products.

West Coast Subcommittee Activities.

Since previously reporting, the West Coast Subcommittee have held meetings at the Sheraton-Palace Hotel, San Francisco, on March 13; the Sheraton-Town House, Los Angeles, on April 27; the Fairmont Hotel, San Francisco, on July 27; and the Sheraton-Town House, Los Angeles, on September 26, 1956.

The majority of the Subcommittee's work has been directed toward the 13-week radio spot program promoting

soft drinks in glass bottles in the Los Angeles market. This radio spot program, commencing June 25 and running through September 23, had in excess of 1,250 spots and achieved a high degree of saturation. Financing of the program was accomplished by the West Coast manufacturers assessing themselves $20,000.00 in order to continue the program originally started in conjunction with the California-Nevada Manufacturers of Carbonated Beverages in 1954 and continued in 1955 by the Market Research and Promotion Department as one of the local promotions in the industry advertising and promotion program. Copy prepared by the Kenyon & Eckhardt, Inc. advertising agency contained mention of the one-way beverage bottle which was scheduled to be used in 25% of the broadcasts. During the last month of the program this percentage of one-way messages was substantially increased. The program was merchandised by mailings from the West Coast GCMI office to all members of the Southern California Bottlers Association and approximately 1,900 Class A markets in Los Angeles County. Point-of-sale material was provided to retail outlets who took advantage of its offer.

At the suggestion of the Subcommittee, the California manufacturers again purchased space for the GBBA's use in the Union Products and Services Show which enjoyed an attendance of over 150,000 visitors. Ten thousand copies of "The Story of Glass Containers" were distributed by the GBBA at this event.

Subcommittee interest in milk bottle sales and merchandising to creameries prompted suggestions which were forwarded to the Parent Committee for the modernization and redesign of the glass milk bottle [redacted]nd.

Action by the Subcommittee and Task Force for Public Information was taken relative to a communication sent to all beach concessionaires by the Director of Health and Sanitation of the City of Hermosa Beach, California, requesting that the concessionaires sell only canned soft drinks. The Subcommittee is pleased to report success in the handling of this matter.

[fol. 511] The Subcommittee is continuing to watch carefully baby food sales in glass which, on the Coast, are

continuing to capture an increasing percentage of that market.

Respectfully submitted, Franklin B. Pollock, Chairman.

[fol. 512] GOVERNMENT'S EXHIBIT 120

Committee on Market Research and Promotion

Semi-Annual Report of Activities
For the Period November 1956 to May 1957

To the Board of Trustees of
Glass Container Manufacturers Institute

The personnel of the Committee is as follows:

F. B. Pollock, Chairman—Thatcher Glass Manufacturing Company, Inc., E. F. Ball—Ball Brothers Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, W. V. Fisher—Anchor Hocking Glass Corporation, J. M. Foster—Foster-Forbes Glass Company, T. S. Gallagher—Crown Cork & Seal Company, Inc., J. S. Heuisler—Maryland Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., P. O'C. White—White Cap Company.

R. L. Cheney is Secretary.

The Task Committee consists of:

R. H. Hetzel, Chairman—Armstrong Cork Company, S. F. Davis—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, W. H. Ellis—The Lamb Glass Company, J. H. Funkey—Carr-Lowrey Glass Company, J. A. Giddings—Brockway Glass Company, Inc., P. I. Heuisler, Jr.—Maryland Glass Corporation, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., J. H. Majesky—Hazel-Atlas Glass Division, Continental Can Company, Inc., G. F. Rieman—Ball Brothers Company, Inc., R. H. Roper, Jr.—Laurens Glass Works, Inc.

R. L. Cheney is Secretary.

The roster of the West Coast Subcommittee is:

K. C. White, Chairman—Owens-Illinois Glass Company, E. L. Casey—Hazel-Atlas Glass Division, Continental Can Company, Inc., R. H. Dallas—Maywood Glass Company, J. W. Donaldson—Ball Brothers Company, Inc., J. B. Miller—Thatcher Glass Manufacturing Company, Inc., William Simkins—Latchford Glass Company, E. B. Spread—Crown Cork & Seal Company, Inc.

Frank H. Wright is Secretary.

[fol. 513] Committee Meetings.

Since the last report, two meetings of the Committee have been held:

November 12, 1956, at the Arizona Biltmore Hotel, Phoenix, Arizona.

January 16, 1957, at GCMI headquarters.

Since the last report, one meeting of the Task Committee has been held:

January 15, 1957, at GCMI headquarters.

GCMI's Market Research and Promotion Program divides into four major parts:

I

Advertising and Promotion

II

Public Information

III

Member Information

IV

Market Research

Following are highlights of Market Research and Promotion Division activities in each of these four major areas for the six-month period ending in May, 1957:

I

Advertising and Promotion

Magazines: From November through May, twenty-two full-page, four-color advertisements featuring glass containers appeared in Family Circle, Good Housekeeping, Ladies' Home Journal, McCall's and Woman's Day. Subjects of the first four ads in the 1957 series were: February-Beets; March-Pickles; April-Drugs; May-Milk. Combined circulation of the five consumer magazines on the 1957 schedule totals 20,199,000. Estimated average monthly readership: 32,004,000. The basic media choice—women's magazines—still constitutes, in the opinion of your Committee, the most economical means of presenting the advantages of glass containers to national audiences. While any effort to change consumer attitudes on a national scale is necessarily long-range, it is the belief of your Committee that tangible progress has been made since the inception of the GCMI program in May of 1955, and that Americans are becoming more glass container conscious with the passing of each month.

Canadian Program: The consumer campaign was continued into 1957 in Chatelaine. Canadian members again supplied the funds for this program. Four insertions appeared in Chatelaine—circulation of which is 407,000—between November and May.

Trade Publications: Recognizing the importance of retail trade attitudes in the free flow of glass containers from manufacturer to consumer, your Committee has, from the [fol. 514] inception of the current program, made every effort to work out a series of strong advertisements for incorporation in trade papers read by members of the retail food industry. The 1956-57 schedule includes the following seven food journals: Chain Store Age, Food Topics, Nargus Bulletin, Progressive Grocer, Supermarket Merchandising, Supermarket News, and Voluntary and Cooperative Groups Magazine. Combined circulation: 316,000. Most ads are in

four-color. Insertions from November through May totaled 21.

Glass Packer: The leading trade paper in the glass packaging field, Glass Packer, has a circulation of some 6,000 among packaging consultants, users of glass containers, manufacturers' associations, and allied industries. Your Committee felt it advisable to use this publication on a continuing basis as part of the GCMI trade program. Double-page advertisements are accordingly scheduled on a twelve-times-a-year basis.

Labor Papers: Ten national labor publications are included in the 1956-57 schedule as follows: American Teacher, American Teacher Magazine, Boilermakers Journal, Locomotive Fireman, Maintenance Way Journal, Public Employee, Railway Carmens Journal, Union Postal Clerk, Locomotive Engineers' Journal, and Railroad Telegrapher. Combined circulation: 1,083,000. Black and white ads appeared on a staggered basis from November of 1956 through May of 1957. Total insertions: 17. This schedule was supplemented by 42 regional labor papers—with a combined circulation of 1,276,000—on a staggered basis.

Local Programs: Special advertising efforts promoting glass bottles for soft drinks in the Los Angeles area and glass bottles for beer in the State of Virginia are detailed in the report of the West Coast Subcommittee and the Beer Bottle Subcommittee, respectively.

Merchandising the Advertising: Every ad is extensively merchandised. While space does not permit a detailed report, major projects include: 1) mailings of special merchandising material by consumer magazines on the schedule; 2) mailings by GCMI of personally-addressed, hand-typed letters—accompanied by a proof—to leading packers; 3) Glass Container Sales letters sent each month to 3,500 executives supervising buying for 28,000 supermarkets—as well as to packers, distributors and associations in each end-use area; 4) mailing of regular releases and glossy prints of ads to interested trade papers in each field.

Slide Film: Early in January, a 12-minute, 35mm color filmstrip entitled "Glass Containers In Today's Living" was sent to home economics teachers in 3,000 leading high

schools throughout the country. These filmstrips—with accompanying commentary describing the use of glass containers in the home—became part of the film library of the schools to which they were sent and will be used as a teaching aid year after year.

In-Store Promotion: Plans are under way for a special in-store promotion adaptable for voluntary or cooperative supermarket groups. If successful on a test basis, this in-store promotion will be extended in 1958 and thereafter as budgets permit.

II

Public Information

"The Story Behind A Bottle": From November through the end of March, 1957, this 24-minute, color film was televised 177 times on stations in 42 states to a total audience [fol. 515] conservatively estimated at 8,564,000. Had this free television time been purchased, it would have cost over $30,000. Second, the film was shown during the same period to 698 groups in 48 states. Included were: Business organizations, colleges and universities, church groups, women's clubs, PTA's, Rotary and Kiwanis Clubs, schools, public libraries, etc. Third, thirty GCMI member companies own one or more prints of the film. These members report that their prints are also being shown regularly both on TV stations and to local groups. Fourth, ten prints are kept in steady circulation from GCMI headquarters. The number of people who see the film each month thus totals 1,725,000. This breaks down to almost half a million people per week, and to an audience of 86,250 people every business day of every week.

"Glass Containers—1956": According to present schedules, a booklet incorporating information pieces heretofore issued separately will be ready early in May. Included in the new 48-page booklet will be an up-dated version of the article previously called "The Glass Container Industry," up-dated charts, "Glass Container Shipments, 1928-1956," "Sources of Information on Glass—Glassmaking and Glass Containers," a list of GCMI staff members, and so on. This basic industry round-up will be distributed to GCMI member companies, to members of the working press, to opinion

makers, to correspondents and to others interested during the next twelve months.

Photos: During the past six months GCMI has been building a photographic library. Now in a workable file are 80 glass container production photographs and 35 pictures of finished glass containers. Some have already been placed with news and trade paper editors. Others have been used in booklets. Plans are to extend this basic collection in the months ahead.

"The Story of Glass Containers": Requests from teachers for copies of this 16-page educational booklet continue to arrive at GCMI headquarters in every mail. Over 800,000 copies of the booklet have been distributed during the 1955-56 and the 1956-57 school terms.

"The History of Glass Containers": Member companies continue to order copies of this 24-page booklet with their corporate titles imprinted on cover and title page. Over 85,000 copies have been requested by members to date. Some 25,000 copies have been distributed to opinion makers, correspondents and others by GCMI.

Releases: During the six-month period, various releases were distributed by GCMI, to wire services, daily newspapers and trade papers. Among them: GCMI Semi-Annual Meeting Scheduled in Phoenix November 12 through 15—October 12, 1956; Spices and Herbs In Glass Contribute to Growth Market—October 16, 1956; GCMI Exhibiting Old Jars and Bottles—October 24, 1956; New Peaks for Glass Container Shipments Predicted at GCMI Meeting in Phoenix—November 9, 1956; Million-Dollar-Plus Ad and Promotion Campaign Mapped for Glass Containers—November 14, 1956; 250 Year Old Beer Bottles—December 3, 1956; Instant Tea In Glass Jars Contributes to New Market—January 7, 1957; GCMI Packaging Research Lab Moved to Lansing, Michigan—January 18, 1957; Glass Container Shipments Reach All-Time Peak in 1956—January 24, 1957; Outdoor Cooking Trend Helps Expand Glass Container Market—February 1, 1957; Non-Fat Dry Milk Solids in Glass Contribute to New Growth Market—March 1, 1957; and GCMI Semi-Annual Meeting Scheduled at White Sulphur Springs May 21-23—March 29, 1957.

Requests for Information: Members, editors, educators,

students and members of the general public approached GCMI by telephone, letter and in person in increasing [fol. 516] numbers during the past six months with requests for a wide variety of information. These inquiries have, in each instance, been handled by the Market Research and Promotion Division.

III

Member Information

In addition to advance mailings of most of the foregoing, the following material has been supplied to GCMI members on a continuing basis:

Advertising and Promotion Bulletins: During the course of the six-month period, 43 mailings were sent to some 230 executives of member companies reporting details of the Advertising and Promotion Program. While it is not possible to recap full details in the course of this brief report, members were advised regularly on all developments in the M R & P Program as they occurred.

Container Capsules: A digest of current news developments culled from some 131 trade papers and daily newspapers went forth to GCMI members twice a month throughout the six-month period.

Reprints: Complete reprints of significant editorial comment were mailed to members at the rate of about seven a month during the past six months.

IV

Marketing Research

Syracuse Beer Container Survey: Designed to develop information on which to base possible promotion of beer in bottles, this four-part study was conducted in the Syracuse market in 1956 and 1957. Parts I, II and III comprised, respectively, 1) analyses of sales in a sample of stores, 2) dealer opinions and 3) brewer and distributor opinions. Part IV dealt with consumer opinions, consisting of 581 consumer interviews (290 men and 291 women). Results of Parts I, II and III were presented to the Beer Bottle Subcommittee on July 26, 1956, results of the consumer studies on March 26, 1957.

Merchandising Research: Four large supermarkets of

the Giant Food Shopping Chain are cooperating in a merchandising research project designed to ascertain how the proper use of glass-packaged foods can best build the grocer's over-all volume. The participating stores each do an annual business of about four million dollars. They are located within the District of Columbia and in neighboring Maryland and Virginia suburbs.

After extensive preparation and planning, the entire packaged fruits and vegetables departments in the four stores were completely reorganized on April 1, 1957, in accordance with the research requirements. This special shelf organization, with periodic changes, will continue in the stores until the end of June.

Two basic merchandising areas are being examined: first, the type of shelf display which best makes use of glass-packaged products as a stimulus to store sales; and secondly, the ratio of glass to can packaged merchandise which may be expected to give the retailer maximum movement of both.

[fol. 517] National Consumer and Dealer Survey: Ford Sammis and Company have further analyzed data from this basic study completed last August. A preliminary report on this study was made by Mr. Sammis at Phoenix in November. A complete report will be made at the forthcoming meeting at White Sulphur Springs.

Beer in Virginia: Following completion of GCMI's bottled beer advertising campaign in Virginia markets, Ford Sammis and Company completed studies in this area with further consumer surveys and distribution studies.

Los Angeles Studies: Audits of the sale of soft drinks and baby foods in stores in the Los Angeles area were continued during the past six months by Ford Sammis and Company.

Consumer Survey: Plans are being developed for the fourth annual consumer survey. Field work will commence in August, indicating that at least a preliminary report can be made at the Fall meeting at Virginia Beach. Due to the early date of this meeting, however, it will not be possible to make a complete report at that time.

Packaging Industry Studies: A detailed statistical study of the over-all packaging industry is nearing completion. This study will up-date the industry analysis presented to

the membership in December of 1953. A report of this study will be made at the forthcoming White Sulphur Springs meeting.

Milk Bottle Study: A special study of the market problems of the glass milk bottle has been completed and presented to the Subcommittee on Milk Bottles and, in summary form, to the Market Research and Promotion Committee. Further studies are indicated in this area and will be carried forward.

GCMI Market Research Files: These files are continuously up-dated by a day-to-day reading of newspapers, trade and business papers, surveys and reports. The result is a packaging library of increasing value to members, editors, customers and the general public.

West Coast Subcommittee Activities.

Since the last Semi-Annual Report, the West Coast Subcommittee has held meetings in San Francisco on January 9; Los Angeles, January 17; Los Angeles, February 1; Pebble Beach, March 8, 1957.

On November 12, 1956, members of the West Coast Subcommittee discussed the excellent holding effect of the 1956 Los Angeles market program beamed at bottled soft drinks with the Market Research and Promotion Committee, recommending that the program be continued in 1957. Acting upon the recommendations of the West Coast Subcommittee and Mr. Cheney, $25,000 of GCMI funds was appropriated to supplement funds to be raised by the West Coast manufacturers.

It is planned to increase radio spot coverage, devoting approximately $35,000 of the budget towards a saturation radio spot program of over 4,200 thirty-second spots on 10 radio stations during a 13-week program commencing June 24, 1957.

Concentration of these spots will be at peak traffic hours, both morning and evening, and over week-ends.

Point-of-sale material designed for use in conjunction with the material developed by individual bottlers is in preparation. This is to be merchandised to the bottlers by [fol. 518] the merchandising and sales staffs of the manufacturers and the West Coast office of GCMI, and to grocers

through merchandising teams of the radio stations, Kenyon & Eckhardt, and manufacturers' sales staffs.

Under the direction of the Subcommittee, the West Coast Manager delivered a brief talk and showed the GCMI film "The Story Behind A Bottle" to the Pickle Packers Association at their West Coast meeting held in Santa Barbara, March 22, and participated in the University of California Extension Division course in "Modern Packaging" March 25, 1957, delivering a short lecture and presenting the film.

The Subcommittee has closely watched the California Grocers Association time study of the handling of the returnable containers and the West Coast Manager has been in close liaison with the Executive Vice President of the California Grocers Association concerning this Survey.

Subcommittee members have been keeping Mr. Cheney advised concerning marketing activity of a number of glass-packed products on the West Coast.

Respectfully submitted, Franklin B. Pollock, Chairman.

Miller—Thatcher Glass Manufacturing Company, Inc., William Simkins—Latchford Glass Company, Russell Gowans—Crown Cork & Seal Company, Inc.

Frank H. Wright is Secretary.

[fol. 520] Committee Meetings.

The Market Research and Promotion Committee met:

At The Greenbrier, White Sulphur Springs, West Virginia, on May 20, 1957.

At GCMI headquarters on August 27, 1957.

The Task Committee met:

At GCMI headquarters on September 11, 1957.

The Market Research and Promotion Program divides into four major parts:

I

Advertising and Promotion

II

Public Information

III

Member Information

IV

Market Research

Following are developments in each of these four major areas since the meeting at White Sulphur Springs in May of 1957:

I

Advertising and Promotion

Magazines: Work was completed on the full-page, four-color advertisements scheduled to appear during 1957 in the five consumer magazines in which GCMI advertises as follows: Family Circle, Good Housekeeping, Ladies' Home Journal, McCall's and Woman's Day. With the appearance of the cosmetic ad in November issues, a total of 36 insertions will have appeared in 1957 issues of the foregoing magazines. Subjects of the ten advertisements in the 1957 series were as follows: February—Beets; March—Pickles; April—Drugs; May—Milk; June—Soft Drinks; July—Beer; August—Soft Drinks; September—Baby Foods; October—Fruit Juices; and November—Cosmetics. Combined circulation of the five consumer magazines on the 1957 schedule total 20,199,000. Average monthly readership of these magazines is estimated at over 32,000,000. In the three years of the current GCMI advertising program, an impressive total of over 672,000,000 advertising messages have been delivered by magazines alone.

Canadian Program: Canadian members continued to supply the funds with which ads appearing in U. S. magazines were re-used on a delayed basis in the Canadian magazine Chatelaine, circulation of which is over 400,000. With a re-

run of the Pickle ad in the November issue, a total of seven full-page, four-color insertions will have appeared in Chatelaine in 1957.

[fol. 521] Trade Publications: Believing strongly in the value of telling the story of glass containers to members of the retail food industry, the Committee continued the GCMI advertising program in the following seven food journals: Chain Store Age, Food Topics, Nargus Bulletin, Progressive Grocer, Supermarket Merchandising, Supermarket News, and Voluntary and Cooperative Groups Magazine. Combined circulation of these seven magazines totals 316,000. Total insertions in 1957: 42.

Glass Packer: Because Glass Packer has a circulation of some 6,000 among packaging consultants, users of glass containers, manufacturers' associations and allied industries, the Committee deems it advisable to advertise in this publication on a continuing basis. Double-page advertisements are accordingly scheduled on a twelve-times-a-year basis.

Labor Papers: Ten national labor publications were also included on the 1957 schedule as follows: American Teacher, American Teacher Magazine, Boilermakers Journal, Locomotive Fireman, Maintenance Way Journal, Public Employee, Railway Carmens Journal, Union Postal Clerk, Locomotive Engineers' Journal and Railroad Telegrapher. Combined circulation totals 1,083,000. Black and white versions of the consumer ads appeared on a staggered basis thoughout 1957. Total insertions for the year were 47. This schedule was supplemented by 114 insertions in 42 regional labor papers with a combined circulation of 1,276,000.

Local Programs: Details of the special effort promoting glass bottles for soft drinks in the Los Angeles area and the special effort promoting one-way bottles for beer in the State of Virginia are included in the reports of the West Coast Subcommittee and the Beer Bottle Subcommittee, respectively, which follow.

Merchandising the Advertising: Every ad is extensively merchandised. While space does not permit a detailed report, major projects include: 1) mailings of special merchandising material by consumer magazines on the schedule; 2) mailings by GCMI of personally-addressed,

hand-typed letters—accompanied by a proof—to leading packers; 3) Glass Container Sale$letters sent each month to 3,500 executives supervising buying for 28,000 supermarkets—as well as to packers, distributors and associations in each end-use area; 4) mailing of regular releases and glossy prints of ads to interested trade papers in each field.

Store-Wide Glass Festival: Promotional kits, in which blow-ups of consumer ads were incorporated, were offered on a test basis in the Spring of 1957 to limited groups of retailers for in-store use. Some 3,500 kits were requested and are, in most cases, being used during September and October. Plans for 1958 will be based upon the full reports of this test effort.

II

Public Information

During the past three years, several promotional tools have been developed and they are being used on a continuing basis to project the attributes of glass containers to large segments of the public. Following is a brief report of how this material is being applied on a day-by-day basis to increase consumer awareness of glass containers:

"The Story Behind A Bottle": The last semi-annual report included distribution figures through the end of March, 1957. From April 1st, 1957, through the end of July, GCMI's 24-minute motion picture was televised 122 times over stations in 43 states to a total viewing audience conservatively estimated at over 7,250,000. Through the end of July, the film has been televised 299 times to an estimated [fol. 522] audience of nearly 16,000,000. Had this free time been purchased, it would have cost more than $50,000.

During the four-month period ending in July, the film was also shown to 875 groups in 48 states. Non-TV showings through the end of July total 1,573. Groups to which the film was shown include associations of soft drink bottlers, associations of food retailers, men's and women's clubs, church groups, educational groups, business organizations and associations. In addition, GCMI member companies own and show prints, and a dozen prints are kept in constant circulation from GCMI headquarters.

"Glass Containers—1956": This new 48-page informa-

tional booklet was completed just prior to the White Sulphur meeting. Copies were subsequently distributed to some 3,000 opinion makers. Included were: members of the working press; security analysts; leading packers; and public, government, bank and other libraries. In addition, GCMI member companies requested over 3,000 copies for their own use.

"The Story of Glass Containers": Over 800,000 copies of this 16-page teaching unit have been requested to date. Requests arrive in every mail from teachers who have used it before, from teachers trying it for the first time, from companies, individuals, and others.

"The History of Glass Containers": This 24-page booklet continues popular among GCMI members who order copies with the corporate title of their respective company imprinted on cover and title page. Additional copies are also frequently requested by students, writers and others interested.

"Feature": This editorial feature service in magazine form is distributed to publications throughout the country. The issue dated June, 1957, offered editors a GCMI article entitled "Bottles by the Billion" and a series of seven accompanying photographs. Over seventy-five requests for the text and photographs have been received so far from editors of newspapers, Sunday supplements, magazines and house organs.

Releases: During the five-month period, from April through August, the following releases were sent out by GCMI to wire services, daily newspapers and trade papers: Glass Blowers Contract Increases Wages and Benefits 28¢ Per Hour—April 25, 1957; E. F. Ball Named President of Glass Container Institute—May 22, 1957; GCMI Elects New Trustees—May 29, 1957; and GMCI Semi-Annual Meeting Scheduled at Virginia Beach September 30-October 3—August 9, 1957.

Requests for Information: GCMI Market Research and Promotion Division continues to handle an increasing number of requests for information received from members, editors, educators, students, businessmen and members of the general public.

Plans for 1958: Considerable time was expended during the summer months in analyzing ways and means of extend-

ing the public information program in the months ahead. Projects under consideration or in formative stages include a 12½-minute, 35-mm version of "The Story Behind A Bottle" for distribution in motion picture theatres throughout the country, an extension of the recently established photographic library, a Mason Jar Centennial, a woman's club program, and so on.

III

Member Information

Advertising and Promotion Bulletins: Some 240 executives of member companies were kept informed of all phases of the M R & P Program through 33 mailings during [fol. 523] the five-month period ending in September.

Container Capsules: Current news items taken from more than 130 trade publications and dailies were distributed to members in digest form twice a month during the five-month period.

Reprints: Editorial comments of importance to the industry were mailed to members at the rate of about seven per month.

IV

Marketing Research

Merchandising Research: The merchandising research project in the four large supermarkets of the Giant Food Shopping Chain in the Washington, D. C., area has been completed. Preliminary reports will be presented at the forthcoming meeting at Virginia Beach.

Plans will also be presented there for utilizing results of this research to food retailers through booklets, trade paper advertising and other means.

National Consumer and Wholesaler Survey: Ford Sammis & Company completed field work for the fourth annual GCMI consumer survey in August and a report will be made to the membership at the Virginia Beach meeting. This year's survey covered 4,000 women, 2,000 men, 1,000 children and 100 wholesaler and chain store headquarters.

Beer In Virginia: Following GCMI's advertising campaign promoting one-way bottles for beer in the State of Virginia, Ford Sammis & Company have conducted con-

sumer surveys and distribution studies to determine progress made in that market.

Los Angeles Studies: The store audits covering the sale of soft drinks and baby foods in the Los Angeles area have been continued during the summer by Ford Sammis & Company and a final consumer survey will be conducted to determine the results of the 1957 soft drink bottle campaign in that area.

Milk Bottle Study: The first of a proposed series of interviews with leading operators in the dairy field has been held by the Marketing Manager and this study, designed to clarify the problems in this area, will be continued through the Fall.

GCMI Market Research Files: The continuous combing of all types of publications for information covering all phases of the packaging industry has kept the GCMI market research library up to date and it is being effectively utilized in the advertising and promotion as well as information services of the Institute.

West Coast Subcommittee Activities.

Meetings of the West Coast Subcommittee covered by this report were held in Los Angeles on April 24; Balboa, June 6-7, 1957; San Francisco, July 31-1957; and September 17, 1957.

The major portion of the Subcommittee's activity since last reporting has been concentrated on the 1957 program promoting soft drinks in glass bottles in the Los Angeles market.

Colorful point-of-purchase material was developed by the agency consisting of soft sheets and bottle hangers with separate copy for one-ways and returnable bottles. Mr. E. [fol. 524] P. Schindler, well known to the Los Angeles food and beverage trade, and previously on GCMI payroll during the one-way beer bottle promotion from 1947 to 1950, was retained to merchandise the point-of-purchase material in the retail outlets of greater Los Angeles. The material developed this year was supplemented with reprints of both national soft drink ads, a limited quantity of shelf talkers and snipes left over from the 1955 promotion, and a supply of the pamphlet developed by Mr. Cheney's

department covering the bottled soft drink profit picture for the retailer.

The merchandising efforts of Mr. Schindler have been coordinated with merchandising activity by the 10 radio stations carrying GCMI spot advertisements. Many pluses have been gained through special "packages" the stations provide their clients, including in-store spots into 35 markets eight times a day for two weeks by one station, and a "Southland Salute" honoring the glass container manufacturers who make the bottles for the soft drink industry by another. The other stations have all featured special soft drink displays in chain markets who are their clients, over staggered dates throughout the duration of the radio spot campaign.

The radio spots commencing June 24 and continuing through September 22 were brought to the attention of the grocers in the Los Angeles market through full page ads which were placed in the Southern California Grocers Journal and the Commercial Bulletin in the June 28 issues. Mr. Schindler commenced his merchandising of the program on June 15, thereby getting groundwork laid prior to the kick-off of the spot campaign.

Reports gathered from the retail trade, route salesmen, and principals of the soft drink industry indicate the program has been successful and has created the effect desired. Further, analysis of the Sammis store audits and the continuing home audits conducted by the Los Angeles Times' lead the Subcommittee to believe that we have been effective up to a point. Further exploration by all of the Subcommittee members is being made, and recommendations concerning a 1958 program will be finalized for submittal to the parent committee and Director of Marketing when the Subcommittee meets on September 17, 1957.

The Subcommittee is keeping Mr. Cheney supplied with information as to the acceptance by consumer and retailer of the 11 oz. returnable stubby beer bottle recently introduced by a California brewer.

Subcommittee members are forwarding retail store ads featuring baby foods to Mr. Cheney and are carefully watching baby food trends in metal containers and glass on the West Coast.

Respectfully submitted, Franklin B. Pollock, Chairman.

[fol. 525] GOVERNMENT'S EXHIBIT 122

Committee on Market Research and Promotion

Semi-Annual Report of Activities
For the Period October 1957 to May 1958

To the Board of Trustees of
Glass Container Manufacturers Institute

The Market Research and Promotion Committee consists of:

G. A. Mengle, Chairman—Brockway Glass Company, Inc., C. G. Bensinger—Owens-Illinois Glass Company, E. D. Easterby—Laurens Glass Works, Inc., J. C. Feagley—Armstrong Cork Company, J. W. Fisher—Ball Brothers Company, Inc., W. V. Fisher—Anchor Hocking Glass Corporation, J. M. Foster—Foster-Forbes Glass Company, W. J. Green—Thatcher Glass Manufacturing Company, Inc., J. S. Heuisler—Maryland Glass Corporation, S. V. Tuttas—Crown Cork & Seal Company, Inc., P. O'C. White—White Cap Company, A. W. Wishart—Knox Glass, Inc.

R. L. Cheney is Secretary.

The Task Committee:

R. H. Hetzel, Chairman—Armstrong Cork Company, A. G. Beltz—Brockway Glass Company, Inc., S. F. Davis—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, W. H. Ellis—The Lamb Glass Company, J. H. Funkey—Carr-Lowrey Glass Company, K. M. Hay—Ball Brothers Company, Inc., P. I. Heuisler, Jr.—Maryland Glass Corporation, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., J. H. Majesky—Hazel-Atlas Glass Division, Continental Can Company, Inc., R. H. Roper, Jr.—Laurens Glass Works, Inc.

R. L. Cheney is Secretary.

The West Coast Subcommittee:

K. C. White, Chairman—Owens-Illinois Glass Company, E. S. Campbell—Northwestern Glass Company, E. L. Casey—Hazel-Atlas Glass Division, Continental Can Company, Inc., R. H. Dallas—Maywood Glass Company, J. W. Donald-

son—Ball Brothers Company, Inc., Russell Gowans—Crown Cork & Seal Company, Inc., F. W. McDonald—Glass Containers Corporation, J. B. Miller—Thatcher Glass Manufacturing Company, Inc., William Simkins—Latchford Glass Company.

Frank H. Wright is Secretary.

[fol. 526] Committee Meetings.

The Market Research and Promotion Committee met:

At The Cavalier, Virginia Beach, Virginia, on September 30, 1957
At GCMI headquarters on December 4, 1957
At GCMI headquarters on April 10, 1958

Since the last report, there have been no meetings of the Task Committee.

. . . . . .

The Market Research and Promotion Program divides into four major parts:

I

Advertising and Promotion

II

Public Information

III

Member Information

IV

Market Research

Following are developments in each of these four major areas since the Virginia Beach meeting in September of 1957:

I

Advertising and Promotion

Magazines: Work was completed on eleven full-page, four-color advertisements scheduled to appear during 1958 in the five consumer magazines on the GCMI schedule as

follows: Family Circle, Good Housekeeping, Ladies' Home Journal, McCall's and Woman's Day. Subjects of the eleven advertisements in the 1958 series are: February-Drugs; March-Coffee; April-Household Chemicals; May-Beer and Soft Drinks; June-Soft Drinks; July-Baby Food and Spices; August-Baby Food; September-Milk; October-Applesauce; and November-Jam and Peanut Butter (one ad). Combined circulation of the five consumer magazines on the 1958 schedule totals 23,300,000. Average monthly readership of these magazines is estimated at over 57,000,000. By the end of 1958 it is estimated that over 942,000,000 GCMI advertising messages will have been delivered by magazines alone since the inception of the current promotional program in 1955.

Gratifying was the fact that the American Institute of Graphic Arts announced last February that a GCMI advertisement (Fruits for Salad) had been selected as one of the "Fifty Advertisements of the Year" by the A.I.G.A.

[fol. 527] Canadian Program: Canadian members continued to supply funds with which ads appearing in U. S. magazines are re-used on a delayed basis in the Canadian magazine Chatelaine—circulation of which is over 400,000. Six full-page, four-color advertisements are scheduled during 1958.

Trade Publications: Believing in the value of telling the story of glass containers to members of the retail food industry, the Committee continued the GCMI advertising program in the following seven food journals in 1958: Chain Store Age, Food Topics, Nargus Bulletin, Progressive Grocer, Super Market Merchandising, Supermarket News, and Voluntary and Cooperative Groups Magazine. Combined circulation of these seven magazines totals nearly 350,000. Total insertions in 1958: 42.

GCMI's 1957 trade advertising program—consisting of eight advertisements—was awarded first place in the category of Public Relations Advertising in a competition conducted by the Associated Business Publications, it was announced in mid-April.

Glass Packer: Because Glass Packer has a circulation of some 6,000 among packaging consultants, users of glass containers, manufacturers' associations and allied industries, the Committee deems it advisable to advertise in this

publication on a continuing basis. Double-page advertisements are accordingly scheduled on a twelve-times a year basis.

Labor Papers: Ten national labor publications are also included on 1958 schedules. They are: American Teacher, American Teacher Magazine, Boilermakers Journal, Locomotive Fireman, Maintenance Way Journal, Public Employee, Railway Carmen's Journal, Union Postal Clerk, Locomotive Engineers' Journal and Railroad Telegrapher. Combined circulation totals approximately 1,150,000. Black and white versions of the consumer ads are scheduled on a staggered basis throughout 1958. Total insertions for the year: 37. This schedule is supplemented by 156 insertions in 55 regional labor papers with a combined circulation of 1,519,000.

Merchandising the Advertising: Every ad is extensively merchandised. While space does not permit a detailed report, major projects include: 1) mailings of special merchandising material by consumer magazines on the schedule; 2) mailings by GCMI of personally addressed, hand-typed letters—accompanied by a proof—to leading packers; 3) Glass Container Sales letters sent each month to 5,200 executives supervising buying for 28,000 supermarkets—as well as to packers, distributors and associations in each end-use area; 4) mailings of regular releases and glossy prints of ads to interested trade papers in each field.

Local Programs: Details of the special effort promoting glass bottles for soft drinks in the Los Angeles area are included in the report of the West Coast Subcommittee which appears later in this report.

Store-Wide Glass Festival: Promotional kits, in which blow-ups of consumer ads were incorporated, were offered on a test basis in the spring of 1957 to limited groups of retailers for in-store use. Some 3,500 kits were requested and used during the latter part of 1957. Plans for 1958 call for an extension of this successful in-store promotion.

[fol. 528] II

Public Information

Following is a brief report on how various GCMI promotional tools are being used on a day-to-day basis to increase consumer awareness of glass containers:

"The Story Behind A Bottle": The last semi-annual report included distribution of this color film through the end of July, 1957. Through March 31, 1958, GCMI's 24-minute motion picture was televised 420 times over stations in 43 states to a total viewing audience conservatively estimated at over 20,000,000. Had this free time been purchased, it would have cost more than $80,000.

Non-TV showings through the end of March totaled 3,716. Groups to which the film was shown include associations of soft drink bottlers, associations of food retailers, men's and women's clubs, church groups, educational groups, business organizations and associations. In addition, GCMI member companies own and show prints, and a dozen prints are kept in constant circulation from GCMI headquarters.

"Ancient Art—Modern Magic": Beginning early in May, 1958, screenings of 35-mm prints of this ten-minute version of "The Story Behind A Bottle" will begin in first-run motion picture theatres in key cities throughout the nation. By the end of 1958, it is anticipated that some 1,500 such bookings will have been completed, and the new film will have been viewed by movie audiences totaling 2,500,000.

"Glass Containers—1957": This new, enlarged 60-page informational manual—incorporating 1957 statistics—was completed early in May. Copies were subsequently distributed to some 5,000 opinion makers. Included were: members of the working press; security analysts; leading packers; deans of business schools; package designers; and public, government, bank and other libraries.

"The Story of Glass Containers": Over 900,000 copies of this 16-page teaching unit have been requested to date. Each mail brings requests from teachers, libraries, companies and individuals.

"The History of Glass Containers": This 24-page booklet continues popular among GCMI member companies. Copies are also requested by students, writers and others.

Releases: During the eight-month period, from September through April, the following releases were sent out by GCMI to wire services, daily newspapers and trade papers: GCMI President Reports Gains in Glass Container Shipments at Virginia Industry Meeting—September 27, 1957; Glass Milk Bottles Insure Full Measure—October 14, 1957; Glenn A. Mengle Named Committee Chairman—October 21, 1957; Bush Barnum Named Advertising and Public Information Director of Glass Institute—November 8, 1957; Glass Container Shipments Reach New Peak in 1957—January 24, 1958; GCMI Semi-Annual Meeting Scheduled at White Sulphur Springs May 20-23—April 21, 1958.

Photos: In recent months photographic files were increased by some 25 new end-use photographs. Some were used in "Glass Containers—1957." Others are being released. Still others are being held for specific future use.

[fol. 529] Requests for Information: The Market Research and Promotion Division continues to handle an increasing number of requests for information received from members, editors, educators, students, businessmen and members of the general public.

III

Member Information

Advertising and Promotion Bulletins: Some 240 executives of member companies were kept informed of all phases of the M R & P program by 40 mailings during the eight-month period ending April 25, 1958.

Container Capsules: Current news items taken from more than 145 trade publications and dailies were distributed to members in digest form twice a month during the eight-month period.

Reprints: Editorial comments of importance to the industry were mailed to members at the rate of about six per month.

IV

Marketing Research

Starting with the original study in 1953 of the Market Problems of the Glass Container Industry, each step in the development of GCMI's advertising, promotion and public information program has been based upon thorough, sound marketing research. The past seven months have seen continued progress in this area.

Member's Use of GCMI Research: At its April 10, 1958 meeting, the Committee established the policy that the facts contained in the various GCMI surveys (such as the Sammis surveys) shall be made available to individual members for promotional use—subject to the specific approval of Mr. Cheney.

Consumer Preferences and Motivations on Containers, 1954-1957: This report, which was presented at the membership meeting at Virginia Beach on October 1, is available to members in printed form on the usual library-loan basis. It covers the nationwide consumer attitude studies conducted over the past four years, including the 1957 survey which involved more than 7,000 interviews.

GCMI Giant Study: This merchandising research project, conducted in supermarkets of the Giant Food Store chain in the Washington, D. C. area, has been completed. Plans to exploit the findings on the broadest possible basis are complete, and it is hoped that its impact upon the food retailing industry will result in increased sale of glass-packed products.

Advertising Rating Studies: Both the leading organizations in the field of analyzing the effectiveness of advertising have been retained to measure GCMI consumer ads. They are: 1) Gallup & Robinson, Inc. and 2) Daniel Starch & Company. Over a two-year period, registration of GCMI ads by Gallup & Robinson scored 13.7 compared with 12.1 for the average of all packaging advertisements, and 10.0 for all advertising. The same firm rated GCMI ads second in order of rank among 26 different association advertising programs. These reports and those of Daniel Starch organization are being studied monthly with a view to continually improving the impact and effectiveness of GCMI advertising.

[fol. 530] GCMI Market Research Files: A full-time librarian continues to comb all types of publications for information covering the many phases of the packaging industry, so that up-to-date files are always available for the use of the marketing division and representatives of member companies.

West Coast Subcommittee Activities

Five meetings of the Subcommittee have been held since the October, 1957 report:

October 31-November 1, 1957
November 26, 1957
January 15, 1958
February 19, 1958
March 27, 1958

As reported in the October, 1957 semi-annual report, after studying bottler and retailer reactions to the 1957 Soft Drink Program carried on in the Los Angeles market, and after analyzing the Sammis store audits and other material, the Subcommittee instructed the West Coast manager to recommend a program involving approximately $50,000 for a 1958 soft drink promotion in the Los Angeles market during the summer months. Recognizing the importance of a continuing program, the parent Committee approved the West Coast Subcommittee's recommendation.

The most effective promotion was considered to be a two phase program consisting of a test merchandising promotion in Los Angeles and Orange Counties with the cooperation of qualifying grocery chains, and a radio advertising program consisting of 13 weeks of 10-second spots on selected radio stations.

The six grocery chains participating in this test program represent 215 retail outlets and enjoy an estimated 25.6% of the grocery volume in those counties. The program involves cooperative advertising and display techniques designed to increase sales of glass-bottled soft drinks. A means of measuring results is included.

Through the joint efforts of the Marketing Department, West Coast Subcommittee, advertising agency, and the advertising and merchandising managers of the participating chains, colorful, durable, point-of-purchase material has

been developed consisting of 9½ x 10" plastic stack markers for both returnable and one-way bottled soft drinks and shelf-edge markers identifying no-deposit, no-return bottles, "The Bottle You Don't Take Back." This material will be supplied to the grocers at no cost.

An experienced merchandiser has been retained to assist GCMI to help the local store managers build their displays and organize their soft drink sections. He will go on the GCMI payroll June 15, 1958, and terminate September 15, 1958.

The second phase of the program—radio advertising—consists of 10-second spots for both returnable bottles and for no-deposit bottles over selected radio stations broadcasting in Los Angeles at a saturation level (approximately 100 per week) for a 13-week period beginning June 15. These spots will be delivered live by various radio personalities which should result in greater listenership and possible added extemporaneous remarks plugging glass bottles, resulting in additional time.

[fol. 531] Under the direction of the Subcommittee, the West Coast manager is responsible for the coordination of this program with the merchandising and advertising managers of the participating firms, the advertising agency, and the GCMI merchandiser.

The Subcommittee has kept abreast of developments in the baby food industry on the West Coast.

Respectfully submitted, Glenn A. Mengle, Chairman.

* * * * * * *

The Market Research and Promotion Program divides into four major parts:

I

Advertising and Promotion

II

Public Information

III

Member Information

IV

Market Research

Following are developments in each of these four major areas since the meeting at White Sulphur Springs in May of 1958:

I

Advertising and Promotion

Magazines: Work was completed on eleven full-page, four-color advertisements scheduled to appear during 1958 in the five consumer magazines in which GCMI advertises as follows: Family Circle, Good Housekeeping, Ladies' Home Journal, McCall's and Woman's Day. With the appearance of the jam and peanut butter ad in November issues, a total of 40 insertions will have appeared in 1958 issues of the foregoing magazines. Subjects of the eleven advertisements in the 1958 series are as follows: February-Drugs; March-Instant Coffee; April-Chemicals; May-Soft Drinks #1 and Beer; June-Soft Drink #2; July-Baby Foods and Spices; August-Baby Foods; September-Milk; October-Applesauce; and November-Jam and Peanut Butter (one ad). Combined circulation of the five consumer magazines on the 1958 schedule totals 23,860,000. Average monthly readership of these magazines is estimated at over 33,800,000. In the three years of the current GMCI advertising program, an impressive total of over 942 million advertising messages have been delivered by magazines alone.

[fol. 534] Canadian Program: Canadian members continued to supply the funds with which ads appearing in U. S. magazines were re-used on a delayed basis in the Canadian magazine Chatelaine, circulation of which is over 406,000. A total of six full-page, four-color insertions will have appeared in Chatelaine in 1958.

Trade Publications: Believing strongly in the value of telling the story of glass containers to members of the retail food industry, the Committee continued the GCMI advertising program in the following seven food journals: Chain Store Age, Food Topics, Nargus Bulletin, Progressive Grocer, Supermarket Merchandising, Supermarket News, and Voluntary and Cooperative Groups Magazine. Combined circulation of these seven magazines totals 344,200. Total insertions in 1958: 44.

Glass Packer: Because Glass Packer magazine has a

circulation of some 6,200 among packaging consultants, users of glass containers, manufacturers' associations and allied industries, the Committee deems it advisable to advertise in this publication on a continuing basis. Double-page advertisements are accordingly scheduled on a twelve-times-a-year basis.

Labor Papers: Ten national labor publications were also included on the 1958 schedule as follows: American Teacher, American Teacher Magazine, Boilermakers Journal, Locomotive Fireman, Maintenance Way Journal, Public Employee, Railway Carmens Journal, Union Postal Clerk, Locomotive Engineers' Journal and Railroad Telegrapher. Combined circulation totals 1,143,000. Black and white versions of the consumer ads appeared on a staggered basis throughout 1958. Total insertions for the year were 37. This schedule was supplemented by 156 insertions in 57 regional labor papers with a combined circulation of more than 1,150,000.

Local Program: Details of the special effort promoting glass bottles for soft drinks in the Los Angeles area are included in the report of the West Coast Subcommittee.

Merchandising the Advertising: Every ad is extensively merchandised. While space does not permit a detailed report, major projects include: 1) mailings of special merchandising material by consumer magazines on the schedule; 2) mailings by GCMI of personally addressed, hand-typed letters—accompanied by a proof—to leading packers; 3) Glass Container Sales letters sent each month to 3,500 executives supervising buying for 28,000 supermarkets—as well as to packers, distributors and associations in each end-use area; 4) mailing of regular releases and glossy prints of ads to interested trade papers in each field.

Store-Wide Glass Festival: GCMI's developing contact with food retailers made it possible, in 1957, to conduct a successful test of a store-wide promotion. Some 3,000 stores cooperated with good results. The scope of this promotion plan has been expanded in 1958,—the promotion kits, in which blow-ups of consumer ads are incorporated, being enlarged to meet the requirements of stores doing an annual volume of $2,000,000. The goal is to place 5,000 kits this

year, and requests,—including those from important units of leading national chains—have been gratifying.

II

Public Information

In an effort to keep glass containers continually before the public, GCMI distributes the following:

[fol. 535] "Ancient Art—Modern Magic": The 35mm ten-minute version of "The Story Behind A Bottle" had its premiere in May, 1958. Through September 15, the film played at 552 motion picture theatres throughout the country. Of these theatres, the 416 already reporting show that it has played to audiences totaling 1,585,000. By the end of 1958, it is anticipated that the film will have played at more than 1,500 theatres before several million people.

"The Story Behind A Bottle": The continuing interest in the 16mm 24-minute film is illustrated by the fact that it has been televised 515 times to an estimated audience of 22,564,000 from its introduction in the Fall of 1956 through September 30, 1958. The estimated value of this time is nearly $100,000.

In addition, 4,790 groups including bottlers and food retailers associations, business organizations, service organizations, women's clubs, schools and colleges have shown the film to approximately 500,000 viewers.

"Glass Containers In Today's Living": The single-frame film strip has been distributed to 8,000 schools for use in their Home Economics classes.

"Glass Containers—1957": This 60-page informational manual—the second in an annual series—was distributed to more than 5,000 opinion makers including: Press, security analysts, leading packers, deans of business schools, package designers, and public, government, bank and special libraries. In addition, hundreds of requests for copies have been received since the booklet was issued last May.

Talks to Security Analysts: A number of factors made it seem very timely to tell the GCMI story once more to security analysts in May and June of this year. Consequently, carefully planned presentations were made to

groups of security analysts in the following cities at the time indicated:

New York—May 13
Chicago—May 15
Philadelphia—June 10
Boston—June 12
San Francisco—June 24
Los Angeles—June 26

A kit of background material was furnished to each analyst (whether or not he was able to attend a meeting) and considerable evidence has already accumulated in the form of published statements on their part, that these important opinion leaders now entertain a more accurate view of the glass container business and no longer think of it as a declining industry.

"The Story of Glass Containers": Almost a million copies of the teaching unit have been distributed to date to teachers, libraries, business organizations and individuals. Recent items mentioning the booklet in "A Wonderful World for Children" and "Good Housekeeping" magazine brought thousands of requests.

"The History of Glass Containers": This 24-page booklet continues to be a useful item. Plans are under way to issue a new edition early in the coming year.

"Mason Jar Centennial": In observance of the one hundredth anniversary of the Mason Jar on November 30, 1958, a booklet telling the history of the jar is being sent, with releases and photographs, to trade papers, leading dailies and food editors. In addition, copies of the booklet are going to editorial writers, women's programs on radio and television, and public libraries.

[fol. 536] Releases: In the five-month period from May through September, the following releases were sent out by GCMI to wire services, leading dailies and trade publications: Glenn Mengle Named President of Glass Container Institute; Advertising As Teaching Material; GCMI Packaging Conference Held on Michigan State University Campus; GCMI Semi-Annual Meeting Scheduled at Sea Island, Georgia, November 11-14; Modern Industry Celebrates

Mason Jar Centennial; John W. Fisher Named Committee Chairman.

Requests for Information: An increased and continuing service in the volume and scope of requests for information received from members, editorial staffs, educators, students, businessmen, researchers and the general public is handled by the Market Research and Promotion Division.

III

Member Information

Advertising and Promotion Bulletins: Some 238 executives of member companies were kept informed of all phases of the Market Research and Promotion program through 23 mailings during the five-month period ending in September.

Container Capsules: Current news items taken from more than 145 trade publications and dailies were distributed to members in digest form twice a month during the five-month period.

Reprints: Editorial comments of importance to the industry were mailed to members at the rate of about seven per month.

IV

Marketing Research

The past six months have seen continuing activity in the field of marketing research for the purpose of guiding our promotional activities and keeping the membership informed of changes in the industry marketing problems.

Members' Use of GCMI Research: The Committee wishes to remind members that copies of all marketing research studies made by GCMI are available on a library-loan basis to members and that members are free to use research data from any of these surveys for promotional use —subject to the specific approval of Mr. Cheney.

Consumer and Retailer Attitude Surveys: For the fifth consecutive year Ford Sammis & Company have completed a nationwide consumer and retailer attitude survey covering a scientifically selected sample of 4,000 women, 2,000 men and 1,000 retail grocers. Mr. Sammis will present these

findings at the semi-annual meeting at Sea Island, Georgia, on November 11th and printed copies will thereafter be available to members on a library-loan basis.

GCMI-Giant Study: A report of the study of the stimulation given to food merchandising by glass packaging, conducted in supermarkets of the Giant Food Store chain in Washington, D. C. will shortly be available in printed form for sales promotion use by the members.

Motivational Research Studies of Beer Bottle Marketing: A study will have been completed by October 30th by the Institute of Motivational Research covering the industry's beer bottle marketing problems. A report of this will be given at the meeting at Sea Island.

[fol. 537] Special Studies: Audits covering the movement of bottled and canned soft drinks in the Los Angeles market, together with a consumer attitude survey in that market, have been conducted this year since this market offers our only opportunity of assessing competitive strength of soft drink packaging.

A special detailed study of consumer attitudes towards baby food packaging has also been completed.

Value of the Packaging Industry: In order to keep the measure of glass container industry progress within the packaging industry, the second annual analysis of the Value of the Packaging Industry has just been completed for GCMI by Ford Sammis & Company.

Continuing Information Research: GCMI's full-time market research librarian and her assistants continue to search all pertient publications and literature in all areas of interest to the glass container industry, particularly in that of end uses of glass containers and competitive packaging. These files are open to members at all times in the GCMI library.

West Coast Subcommittee Activities

During the period covered by this report, the Subcommittee has held three meetings: May 7, 1958, June 24-25, 1958 and September 26, 1958. An additional meeting is scheduled for October 30, 1958.

The great majority of the time and efforts of the Subcommittee members was directed towards the test program for soft drinks in glass bottles conducted in Los Angeles

and Orange counties. This program, commencing June 15, 1958 and continuing for thirteen weeks, was a three phase program consisting of (1) 10-second radio spots at saturate level (approximately 100 per week), given Class A time preference on five major radio stations in Los Angeles, (2) in-store cooperation by the participating chains during the months of July and August, consisting of shelf displays with a minimum of ten facings each of soft drinks in returnable bottles and non-returnable bottles, special floor, end island, or dump displays of at least twenty-five cases of soft drinks packed in both types of bottles, and the use of plastic stack markers and shelf strips supplied by GCMI (this material was described in the May 1958 Semi-Annual Report).

The outlets of the chains participating in the test were periodically checked by a GCMI merchandising detail man who averaged coverage of approximately 15 outlets per day throughout the duration of the program. Each chain also carried four 75-line ads in its full-page Thursday advertisements using a mat supplied by GCMI (silhouette of a boy drinking from a bottle and "Finest Soft Drinks in Sparkling Glass Bottles") featuring at least one brand of soft drinks in returnable and one-way bottles, and (3) the third phase, consisting of auditing, through headquarters, the movement of soft drinks in one-way bottles, returnable bottles, and cans for a period of six months which would provide two months' control periods before and after the in-store merchandising and promotion period. These audits are being conducted by Ford Sammis & Company and are not complete at this time due to a lag in the receipt of invoices by chain headquarters.

This test program was well received by the grocers and bottlers, and was considered a necessity by the glass container manufacturers on the West Coast due to active and aggressive campaigns conducted to promote soft drinks in metal containers by two major can companies and the United States Steel Company. It is estimated with information provided by a reliable source, that 5.9% of total [fol. 538] sales of soft drinks in the metropolitan Los Angeles area are in cans, and 2.3% in the Bay Area. Both of these percentages are considerably higher than national sales percentages.

Attention has been directed by the Subcommittee to promoting the 1958 "Your Glass Festival" kit, and at this time, the Red and White Stores (a cooperative of independents) have ordered 85 kits for 75 stores throughout California. A chain of 7 large supermarkets in Los Angeles has ordered 21 kits, and the San Diego division of one of the largest grocery chains in the country, has ordered 40 kits. Special promotional effort is being given the Northwest.

Container trends on the West Coast are being carefully and constantly watched by the Subcommittee members with particular attention being given baby foods and beer, in addition to soft drinks.

Respectfully submitted, John W. Fisher, Chairman.

[fol. 539] GOVERNMENT'S EXHIBIT 124

Committee on Market Research and Promotion
Subcommittee on Beer Bottles

Semi-Annual Report of Activities
For the Period May 1955 to November 1955

To the Board of Trustees of
Glass Container Manufacturers Institute

No meeting of this Subcommittee has been held since the last report and in the opinion of the Committee there has been no change in the marketing pattern of beer in the Detroit market that would justify the contemplated GCMI effort in behalf of the One-Way bottle there.

Kenyon & Eckhardt, Inc. have been studying our marketing problems in the beer field, however, and have recommended the selection of a test market, which will be as nearly typical as possible, as to: (a) per capita consumption of beer, (b) distribution of returnable bottles, One-Ways and cans, (c) retail beer price relationships, and (d) local versus national brands.

The Subcommittee has approved this plan by mail and telephone contact, and has selected a test market.

The research, marketing and merchandising departments of Kenyon & Eckhardt have started a thorough study of

this market at the brewery, distributor, retailer and consumer level, and before the year-end will come back to this Subcommittee with a recommended test advertising, promotion and merchandising campaign for that city.

If approved by the Subcommittee, the campaign will be undertaken with the hope of establishing a successful pattern for the promotion of beer in glass bottles that can be extended to other markets.

The Beer Bottle Subcommittee is composed of the following members:

R. E. Delaplane, Chairman—Owens-Illinois Glass Company, W. S. Bazzett—Thatcher Glass Manufacturing Company, Inc., J. E. Bellinger—Ball Brothers Company, Inc., M. J. Jones—Obear-Nester Glass Company, E. M. Lawrence—Anchor Hocking Glass Corporation, G. A. Mengle—Brockway Glass Company, Inc., R. M. Ulmer—Armstrong Cork Company.

R. L. Cheney is Secretary.

Respectfully submitted, R. E. Delaplane, Chairman.

[fol. 540] GOVERNMENT'S EXHIBIT 125

Committee on Market Research and Promotion
Subcommittee on Beer Bottles

Semi-Annual Report of Activities For the Period
October 1957 to May 1958

To the Board of Trustees of Glass Container
Manufacturers Institute

This Subcommittee has not met since the last semi-annual report was issued.

Virginia Program

During this period, however, a report from Ford Sammis and Company has been received by the Subcommittee members covering the "Distribution and Sales of One-Way Beer Bottles in Virginia—June, 1956 to October, 1957." This report showed, among other data, that by the end of our

1957 advertising program covering One-Way beer bottles in the state of Virginia, distribution and sale of beer in One-Ways was growing in all types of outlets in the market areas covered by the promotion, while it had dropped elsewhere in the state.

One-Way beer in the promotion markets is now carried by 77% of the supermarkets, 50% of small groceries and 29% of "On-Off" taverns. Sales of beer in One-Way bottles has reached a level of 11.3% of total packaged beer sales in these markets;—considerably above the national average. In addition, more brands are entering the state in One-Way bottles. No litter problems have been reported and it is felt that the introduction of this package in this state has been successfully accomplished.

Motivation Research Studies.

Preliminary discussions have been held by the marketing department of GCMI with a leading firm of motivation research consultants in regard to the glass container industry's over-all problems in the beer packaging field. The Subcommittee will soon review the possibility of utilizing the services of such a firm in this area.

The Beer Bottle Subcommittee is composed of the following members:

R. E. Delaplane, Chairman—Owens-Illinois Glass Company, J. E. Bellinger—Ball Brothers Company, Inc., A. G. Beltz—Brockway Glass Company, Inc., H. C. Crago—Hazel-Atlas Glass Division, Continental Can Company, Inc., L. F. Harder—Thatcher Glass Manufacturing Company, Inc., M. J. Jones—Obear-Nester Glass Corporation, E. M. Lawrence—Anchor Hocking Glass Corporation, R. M. Ulmer—Armstrong Cork Company.

R. L. Cheney is Secretary.

Respectfully submitted, R. E. Delaplane, Chairman.

[fol. 541] Committee on Market Research
and Promotion
Subcommittee for Public Education

Semi-Annual Report of Activities
For the Period October 1957 to May 1958

To the Board of Trustees of
Glass Container Manufacturers Institute

Louisiana

Early this year GCMI learned of a law enacted in Louisiana that prohibits the sale or purchase of gasoline or mineral spirits in glass containers. The law is identified as Louisiana Act No. 550 of 1956. Investigation disclosed that the intent of the law was to stop the sale of highly volatile petroleum products by service stations, general stores and the like from bulk containers into customer furnished glass containers as a fire prevention measure. The wording of the law is such that it is subject to an investigation which would go far beyond these limits and indeed might be held to apply to such common household items as liquid waxes, polishes, insecticides, paint thinners and solvents that use petroleum distillates as a base. As a matter of fact enforcement agents in Louisiana in several instances had held up glass packs of such products as paint thinners and solvents.

The Subcommittee for Public Education concluded that in the interest of glass container and closure members and their packer customers an effort should be made to have the purpose of Act No. 550 clarified. Accordingly, local counsel was employed by our General Counsel and Mr. H. W. Kuni made several trips to Louisiana to acquaint the appropriate state officials with the unnecessary and unintentional hardships placed upon the glass container industry. Following a series of conferences the District Attorney for the Parish of Baton Rouge and the Attorney General for the State of Louisiana in an exchange of correspondence have expressed in crystal clear terms the opinion that Louisiana Act No. 550 of 1956 "does not and could not apply to the many packaged household products that have for years been in common use and sold in this state and

throughout the United States in small glass containers generally of quart size and smaller, such as polishes and waxes, paints and paint thinners, scratch removers and furniture touch-ups, insecticides and like commercial products".

The Louisiana legislature will convene in a regular session presently and consideration is now being given to the advisability of requesting that the law be amended to specifically reflect its true intent. Regardless of whether or not amendment is requested the above mentioned opinions should eliminate any further question as to the propriety of commercial glass packs that use mineral spirits as a base.

Maryland

Although 1958 is an "off-year" the Maryland legislature was convened by Governor McKeldin for the purpose of enacting additional revenue raising legislation. Among the revenue bills was a proposal to tax every bottle of distilled spirits and alcoholic beverages, except beer, sold in Maryland. The tax would have been on a sliding scale basis depending upon capacity with a maximum of ten cents per bottle. At one point during consideration of the measure the tax would have applied to beer as well. Proponents [fol. 542] estimated that the yield would be about $15,000,000 annually, a substantial step toward the approximately $30,000,000 state deficit. For the purpose of identification the bill was designated as Maryland House of Delegates No. 109.

After careful consideration the Maryland legislature decided to raise the necessary additional revenue by increasing the state-wide sales tax and income taxes.

New York

A bill was introduced in New York State that would prohibit the sale of beer, soft drinks, or any other beverage in non-returnable bottles when consumed off-premise. Its sponsor felt that such legislation would materially reduce highway litter.

As would be expected virtually every bottle group in the state expressed opposition to the measure. In addition, the public education programs recommended by Keep America

Beautiful, Inc. and found to be effective in enlisting public cooperation in litter reduction campaigns were made known to the sponsor. The bill was defeated in the Committee of Judiciary to which it had been referred.

Keep America Beautiful, Inc.

This will bring you up to date on developments since our last report in September.

The annual meeting held in November re-elected Donald J. Hardenbrook, vice president of Union Bag-Camp Paper Corporation, president for another term. I was re-elected chairman of the board. Vice presidents elected were: Cecil F. Dawson of the Dixie Cup Company; Edgar J. Forio, vice president of the Coca-Cola Company and Peter J. Wojtul, vice president of Continental Can Company, Inc. Harry Kuni was re-elected treasurer.

Mr. William J. Hufstader, vice president of General Motors, was elected a director, as was William C. Stolk, president of American Can Company. Mr. Stolk relinquished his post as chairman of trustees.

Since the annual meeting we have had the good fortune of having former President Herbert Hoover express a willingness to serve as a trustee. He was duly elected in April by the Executive Committee.

During the year 1957 Keep America Beautiful, Inc. experienced further encouraging growth in both the number of members contributing to it and in the aggregate amount of contributions.

An annual conference of state and community leaders, together with representatives of KAB's National Advisory Council, was also held in November at the time of the annual meeting. It was expanded to a two-day meeting in order to accommodate the wide interests and needs of the growing number of volunteers carrying on the work in their respective communities and states. Attendance was up over 1956 and many of those who were present stated that the conference was both stimulating and inspirational. [fol. 543] Information continues to come in on the constantly expanding activity to be found in every state. More and more communities are requesting help in organizing local action groups, and in order to capitalize on this tremendous potential KAB will shortly publish a "How-to-do-

it" manual. It will feature the so-called national program formula and dramatize how maximum use, at little or no cost, can be made of the materials presently available from KAB.

The Boy Scouts of America have been so impressed by the special kit that was developed for Cub Scouts that they designated April as Keep America Beautiful month. About 1,800,000 youngsters and their families are involved.

A handbook for elementary school teachers is being written and we are hopeful that it can be ready for distribution before the year is out. The National Education Association has already endorsed the project.

Special news releases are being prepared for nation-wide distribution just prior to each of the major summer holiday periods. Study is also being given to an animated cartoon film and we are happy to be able to report that the Disney studios are interested in working with us on it. New and revised radio and TV material has been prepared and was widely distributed in January and February. The usual favorable comments on the professional quality of these aids have been received in large numbers by the staff.

I have not given you the complete story of what is going on but this brief statement provides you with enough benchmarks to indicate the substantial character and effectiveness of the Keep America Beautiful program.

I wish to thank the subcommittee and all members of GCMI who have assisted in the work of Keep America Beautiful, Inc. and who have participated in state and local anti-litter educational campaigns. The progress that has been made in many parts of the country is heartening and should encourage all of us to continue our efforts in this public interest activity.

Members of the Subcommittee for Public Education appointed by the Trustees to serve until May 1958 are as follows:

S. L. Rairdon, Chairman—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, K. C. Frazier—Olin Mathieson Chemical Corporation, F. B. Hess—Brockway Glass Company, Inc., R. H. Hetzel—Armstrong Cork Company, M. J. Jones—Obear-Nester Glass Company,

D. R. Parfitt—Thatcher Glass Manufacturing Company, Inc., H. W. Kuni—GCMI Secretary.

Respectfully submitted, Smith L. Rairdon, Chairman.

[fol. 544] GOVERNMENT'S EXHIBIT 126

Committee on Market Research and Promotion
Subcommittee on Beer Bottles

Semi-Annual Report of Activities For the Period
May 1958 to November 1958

To the Board of Trustees of Glass Container
Manufacturers Institute

The Subcommittee on Beer Bottles has held one meeting since the October 1957 to May 1958 report was issued. This meeting was held in the GCMI Conference Room August 21, 1958 for consideration of the initial report from the Institute for Motivational Research, Inc. concerning the packaging and merchandising in bottles—both returnables and non-returnables—as compared with cans. This was only the first phase of a proposed five phase study so no attempt was made to draw any conclusions at this time.

The Institute for Motivational Research expects to complete its studies during October so this Subcommittee has scheduled another meeting October 28, 1958 to receive the complete report.

At its August 21st meeting the Subcommittee also authorized the Institute for Motivational Research to conduct a special side study in the Pittsburgh and Toledo areas to evaluate the acceptability and results of a new style beer bottle introduced representing a departure from the conventional types. The report on this supplementary study also will be considered at the meeting scheduled in late October.

The Beer Bottle Subcommittee is composed of the following members:

E. M. Lawrence, Chairman—Anchor Hocking Glass Corporation, J. E. Bellinger—Ball Brothers Company, Inc.,

A. G. Beltz—Brockway Glass Company, Inc., H. C. Crago—Hazel-Atlas Glass Division, Continental Can Company, Inc., J. T. Helsel—Knox Glass, Inc., K. Kevin Hepp—Owens-Illinois Glass Company, P. S. Holmquest—Thatcher Glass Manufacturing Company, Inc., M. J. Jones—Obear-Nester Glass Company, G. W. Meyer—Glenshaw Glass Company, Inc., J. P. Moore—Metro Glass Company, Inc., R. M. Ulmer—Armstrong Cork Company.

R. L. Cheney is Secretary.

Respectfully submitted, E. M. Lawrence, Chairman.

[fol. 545] GOVERNMENT'S EXHIBIT 127

Committee on Market Research and Promotion
Subcommittee on Milk Bottle Promotion

Semi-Annual Report of Activities For the Period
May 1957 to September 1957

The personnel of the committee is as follows:

W. W. Springfield, Chairman—Thatcher Glass Manufacturing Company, Inc., E. S. Campbell—Northwestern Glass Company, G. F. Collins, Jr.—Liberty Glass Company, F. B. Foster, Jr.—Diamond Glass Company, H. L. Kaness—Knox Glass, Inc., R. M. Lamb, Jr.—Lamb Glass Company, G. W. Meyer—Glenshaw Glass Company, H. M. Oates—Universal Glass Products Company, W. A. Seger—Buck Glass Company, R. B. Wilhelm—Owens-Illinois Glass Company.

J. B. Carroll is secretary to the committee.

The Parent Committee and the Task Committee have not met since the last report in May. However, the Parent Committee will meet in New York on September 18, at which time they will take up the subject of the 1957-1958 advertising program.

GCMI National Milk Bottle Advertisement—May 1957

The full-page, four-color consumer advertisement, which appeared in the May issue of leading ladies' magazines with

a readership of thirty-one million, was received with considerable interest. A special merchandising kit was forwarded to more than 8,500 dairies throughout the country. Many letters of praise were received from leading authorities in the dairy field, government officials, and interested consumers. The Ladies' Home Journal, one of the magazines in which the advertisement appeared, prepared and distributed to 9,000 dairies and jobbers, and dairy association executives, a special mailer featuring the May advertisement.

The Glass Milk Bottle

Since the last semi-annual report in May, two issues of The Glass Milk Bottle were prepared and distributed to the industry. The June 1957 issue featured a center double-spread with sales ideas and promotional items for route deliverymen to further increase their sales of milk in glass bottles. This was again prepared in the popular bulletin board style for use by dairies. Other articles included information on New York State approval of gallon bottles and the May National Milk Bottle Advertisement.

The August-September issue featured the tremendous growth of large-size milk bottles with special on-the-spot survey reports covering Chicago, Cleveland, and Detroit. In addition, it contained articles describing the current Washington, D. C., and Massachusetts milk markets.

New Consumer Leaflets

The three new leaflets developed by Mr. Speaks promoted milk in quarts, half-gallons, and gallons. This series, made available to dairies at a nominal, non-profit charge, went on sale in July. To date 150,000 copies of the three pamphlets have been purchased by dairies. They are primarily used as envelope stuffers and milk box messages.

[fol. 546] Special School Milk Program Brochure

A special brochure promoting glass bottled milk for consumption by school children was distributed to 11,000 school officials. This brochure opened with a letter to school officials from Mr. R. L. Cheney, and featured a resume of available vending machines for glass milk bottles.

In addition, it pinpointed the important phases of serving milk to school children in glass, and special highlights of the Federal School Milk Program.

An individual insert instructing milk dealers in methods of increasing milk sales to schools was prepared and mailed with the school milk brochure to approximately 9,000 dairymen.

Other Matters of Committee Interest

In late May, the Navy Department put into effect its new regulations governing milk purchasing procedure to be followed by naval base officers. This regulation is practically identical with the Army regulation which went into effect last year. Negotiations are continuing with the Air Force for acceptance by that service of a similar purchasing procedure.

The Institute continues to fill dairy requests for leaflets, ad proofs, radio and TV copy, historical information, and other material on the subject of the glass milk bottle.

Respectfully submitted, W. W. Springfield, Chairman.

[fol. 547] Committee on Market Research and Promotion
Subcommittee on Beer Bottles

Semi-Annual Report of Activities For the Period
May 1957 to September 1957

To the Board of Trustees of
Glass Container Manufacturers Institute

There have been no meetings of this Subcommittee since the last report, but the Committee has directed, reviewed, and approved by mail the newspaper advertising program promoting One-Way beer bottles in the state of Virginia.

Virginia Program

As announced in our last report, an intensive newspaper advertising program promoting One-Way bottles in the Richmond, Norfolk and Alexandria areas of Virginia has been conducted during the height of the beer season. The first ads appeared before the Memorial Day week-end and the advertising ran through the Labor Day week-end. Reports from the field indicate increasing interest in that area

and Ford Sammis & Company will again survey consumer purchases and attitudes towards the One-Way bottle together with distribution of this package in retail outlets.

While the Subcommittee has directed the secretary to watch and report any new developments in the beer packaging field, such as the introduction of the returnable stubby bottle by a large California brewer, there have been no new developments since our last report.

The Beer Bottle Subcommittee is composed of the following members:

R. E. Delaplane, Chairman—Owens-Illinois Glass Company, J. E. Bellinger—Ball Brothers Company, Inc., H. C. Crago—Hazel-Atlas Glass Division, Continental Can Company, Inc., J. A. Giddings—Brockway Glass Company, Inc., L. F. Harder—Thatcher Glass Manufacturing Company, Inc., M. J. Jones—Obear-Nester Glass Corporation, E. M. Lawrence—Anchor Hocking Glass Corporation, R. M. Ulmer—Armstrong Cork Company.

R. L. Cheney is Secretary.

Respectfully submitted, R. E. Delaplane, Chairman.

A. F. Schumacher	Owens-Illinois Glass Company

F. H. Wright is Secretary to the Subcommittee.

Standing Committee Meetings and Conferences

Your Committee has had five (5) meetings:

November 19, 1954
December 2, 1954
December 9, 1954
February 18, 1955
March 29, 1955

several joint meetings; conferences with and hearings before rail and truck common carriers during the period covered by this Report.

[fol. 549] Standing Committee Activities

Canadian Rail Freight Classification Ratings, Less Than Carload, Commodities In Glass Containers Vs. Same Commodities in Metal Cans

Since June 26, 1953 we have endeavored to have established within Canada, the same ratings on commodities shipped in glass containers as generally apply on the same commodities shipped in metal cans. As a rule the ratings on articles in glass have been one (1) class higher (costlier) than the contemporaneous ratings on the same articles in metal cans.

This was remedied, in part, effective March 1, 1955 when the ratings on some commodities in glass were reduced to the metal can basis. We are, however, continuing our efforts for like treatment for all other ratings.

Carriers' Proposed Transfer of Present Docket No. 15879 Carload Exception Ratings (Other Than Those Applicable on Water-Borne Traffic) To Their Rating Equivalent Under The Docket No. 28300 Scale—Official Territory

A detailed description of this situation was given in our last Report.

Excluding the rates on Cullet and Glass Containers, previously and satisfactorily adjusted under C.C.M.L. formulas and those on a few other commodities (including Soda Ash) either already handled or still under consideration, the carriers have worked out a conversion method which, generally, will maintain the present charges.

The covering tariff should be released early this April

and carry an effective date of or about June 1, 1955. Such publication should greatly simplify the determination of the transportation charges.

Railroads' Proposed Transfer of Present Carload Exception or Commodity Column Ratings on Cullet, Glass Containers and Feldspar To Their Average Rating Equivalent Under The Docket No. 28300 (Uniform Basis) Scale (Within Southern Territory and Between That Territory On the One Hand and All Other United States Territory North Thereof—Lying Generally East of the Mississippi River—On the Other)

Actually, this is another phase of the preceding subject. The chief difference here is in the present basis of rates and the territorial application thereof.

Except on Cullet the carriers' proposed basis would not be satisfactory, not only because of resultant increased charges but also due to the disruption of the present competitive relationships between points of production and the common markets.

Your Committee was in attendance at and presented its views before a Public Hearing held in Chicago March 30, 1955 by a Joint Committee of Northern and Southern Railroads.

Present indications are that definite action, by the carriers, will not be taken until 60 to 90 days hence. Meanwhile we shall continue our efforts toward the retention, as closely as possible, of the present charges, taking into consideration certain unavoidable variances in the basic factors of the scales of rates involved.

[fol. 550] Rail Class Rates—Mountain Pacific Territory (I.C.C. Docket No. 30416) and Transcontinental Territory (I.C.C. Docket No. 30660).

These proceedings, referred to in our last two Reports, continue under the I.C.C.'s consideration.

Carload Rates, Beverages, Flavored or Phosphated, In Glass and Metal Cans—Southern States and Between That Territory On The One Hand and All Other United States Territory (East of The Rocky Mountains) On The Other

As indicated in our previous Report, the Southern Railroads, over our objections, established October 2, 1954 within the Southern States, a lower level (Canned Goods Basis) of rates on these commodities in metal cans.

Subsequently, those carriers sought to extend that basis of rates (on these canned beverages) for application between Southern Territory on the one hand and all other United States Territory (East of the Rocky Mountains) on the other.

We vigorously renewed our objections through the usual channels and orally, December 14, 1954, at a Public Hearing before the proponent Carriers Association in Atlanta, Georgia. As a result of our action the proposed "between" application was withdrawn by the carriers and effective May 2, 1955 the Canned Goods basis will be likewise applicable, within Southern Territory, on these beverages in bottles. The total affect is the restoration of the rate parity, shipments in bottles versus those in cans, heretofore long in effect, within and between the territories involved.

Truckload Rates—Beverages, Flavored or Phosphated (Nonalcoholic), Bottled and Canned—Southern Territory

About a year and a half ago the Southern Motor Carriers' Rate Conference established a reduced basis of rates on these commodities in cans from Miami, Florida, to all destinations in Southern Territory. (Prior thereto the same basis of rates applied whether packed in cans or glass.) Effective July 2, 1954 these carriers extended this reduced basis, on shipments in cans, for application from Lake Alfred, Florida. We saw no necessity for these reductions but as there were no bottling plants at these origins we could find no valid grounds for objections.

However, effective August 6, 1954, these same carriers spread this reduced basis (on canned shipments) for application from all Florida origins. With 162 bottling plants then in Florida this action was highly discriminatory.

While we were progressing action for the removal of this discrimination this reduced level for canned beverages was extended, effective September 24, 1954, for application from Chattanooga, Tennessee, and Columbus, Georgia.

On October 5, 1954 we appeared before the Carriers' Conference in Atlanta, Georgia, in support of a proposal for the inclusion of bottled beverages under this preferred basis of rates. The proposal was approved with the addition of Atlanta, Georgia, and points grouped therewith as origins for both bottled and canned beverages and the reduced level from the origins involved:

> Atlanta, Georgia, and points rated therewith Columbus, Georgia Chattanooga, Tennessee Florida (all [fol. 551] origins) became effective December 10, 1954.

Motor Common Carrier Rates—Fruit Juice Crystals Or Powders, Citrus, In Metal Cans and Glass Containers, Less Than Truckload and Truckload—Plant City, Florida, To All United States Destinations East Of The Rocky Mountains

December 17, 1954 the Southern Motor Carrier Rate Conference announced consideration of reductions of:

Percent	Quantity
23½	Less Than Truckloads
12½	Truckloads

in the present rates on shipments made in metal cans.

We immediately protested pointing out that the present rates were the same for shipments in glass containers and metal cans. Furthermore, that the container supply of the Plant City processor was being actively solicited by the glass container and can manufacturers; that it naturally followed that any departure from the existing equality of rates for shipments made in one container without like treatment for shipments made in the other (container) creates a discriminatory situation. Moreover, any commodity exclusive of certain kinds of explosives, inflammatory articles, etc., which is or may be packaged in metal cans, is better or at least equally adaptable for packaging in glass containers.

The carriers handled this revision in four (4) sections.

That covering rates to Southern States Territory was disapproved January 19, 1955. The two (2) sections involving rates to territory West of the Mississippi River were disapproved in early March, 1955. The last section, covering rates to Northern Territory, East of the Mississippi River, was disapproved at the carriers' meeting of March 31, 1955.

This equitably disposes of the entire subject.

Middle Atlantic Conference Motor Common Carriers' Rates and Charges

Early last Fall these carriers were faced with a strike unless the demands of their drivers and helpers for an increase of 25¢ per hour, plus fringe benefits, were met. Initially this only involved service within the New York Metropolitan Area (comprising New York and New Jersey Territory within a radius of about 90 miles of New York City) and between it and the balance of the Middle Atlantic States Territory. Gradually these, or comparable demands, spread to other parts of the general territory.

Mediation efforts proved to be futile. Finally, after accedence to these demands by some of the larger carriers, all other carriers capitulated.

The position was advanced that resultant increased operating costs could not be absorbed by the carriers. To meet them the carriers originally estimated that they would require increased charges ranging from 5% to 27.35% (dependent on the area of haulage).

On November 10, 1954 the public was notified of these proposed increases. Your Traffic Committee promptly arranged a conference with all glass container truckers (over 80 in number) for G.C.M.I. members in an endeavor to [fol. 552] negotiate the varying bases of increase.

Following attendance at the Public Hearings on the proposed increases, and our negotiatory meetings with the carriers, the carriers revised downward the measure of increase required. This was considerably lower than originally proposed although higher than the bases we sponsored in our negotiations with the carriers.

Because of the variance in increases, effective dates thereof and the territories affected thereby, there follows an outline thereof:

Middle Atlantic Conference Tariffs	Territory Covered	Percentage Increase Proposed by Carriers Originally	Finally	Effective Date	G.C.M.I. Suggested
No. 8-M	N.Y. Short Haul (200 Miles Maximum) Points in New York and New Jersey	25	*10	1/10/55	10 Maximum 3¢
No. 9-K	Philadelphia Short Haul Area—Points in Delaware, New Jersey & Penn.	15.5	$15 Maximum 4¢ Truckloads	2/ 7/55	10 " "
No. 35	Between Areas covered by Tariff No. 8-M on the one hand and Tariff No. 9-K on the other	27.35	$15 Maximum 4¢ Truckloads	2/ 7/55	10 " "
Class Rates (Except Special Class Rates on Glass Containers, Truckloads—Applicable to & including 560 miles) in all other Tariffs	All other Middle Atlantic Territory	5 to 27.35	3 to 15 @	4/18/55	None on Special Class Rates on Glass Containers, Truckloads

* To expire 1/9/56 unless sooner cancelled, changed or extended.
$ " " 2/7/56 " " " " " "
@ Will not apply on Special Class Rates, Glass Containers, Truckloads. This nonapplication saved members between $23,000 and $25,000 per annum.

Other increases not included in those just described are:

1. 5% surcharge—effective March 7, 1955 and scheduled to expire September 6, 1955 unless sooner cancelled, changed or extended. This applies on all rates and charges applicable between a limited part of the eastern section of [fol. 553] Delaware, New Jersey, New York and Pennsylvania on the one hand and the eastern half of New York State (generally on and east of a line running from Binghamton to Utica) on the other.

2. An increase of 5% maximum 2¢ in the commodity rates on Glass Containers, truckloads, South Jersey origins to destinations in Middle Atlantic States and southern Connecticut; an increase in the Special Commodity Rates, on Glass Containers, truckloads, from the same origins to Connecticut (other than those afore-referenced), Massachusetts and Rhode Island to the same level as the Special Class Rates, on the same commodities, within Middle Atlantic States and the establishment of certain accessorial charges.

This was a negotiated adjustment resulting in a total estimated annual increase of $134,000 or 39% ($86,000) less than that sought by the carriers.

Central States Motor Common Carrier Rates and Charges

To meet a wage increase aggregating 28 cents an hour, staggered over a three year period beginning February 1, 1955 and also to recover, in part, expected reductions in revenue as a result of the Interstate Commerce Commission's decision in the "Small Shipments" Cases (I.&S. Docket No. M-4462, etc.) the carriers involved proposed, early this year, general increases ranging from 30% on shipments weighing less than 5,000 pounds to 10% on shipments weighing 5,000 pounds and more.

Your Committee was virtually in daily contact with the situation in an effort to arrange a negotiatory conference. On March 7, 1955 such a conference was arranged and the following day the Committee's views were again presented at a Public Hearing before the carriers.

Immediately following that Hearing the carriers recon-

sidered their proposed increases, amended and approved them on the following basis:

Increase—Per 100 lbs.
10 Cents—on Less Than Truckloads—less than 2,000 pounds
5 Cents—on Less Than Truckloads—2,000 to 5,000 pounds
2 Cents—on Less Than Truckloads—over 5,000 pounds
1 Cent—on Truckloads

The I.C.C.'s authority is being sought for publication as an Emergency Increase. This will afford the carriers sufficient time accurately to determine a permanent basis of increase.

On Glass Containers, truckloads, the carriers' original basis would have increased our members' annual transportation costs by over $300,000. The approved basis will limit the increase to about $40,000 which is within $1,200 of the amount which would have resulted from the basis upon which your Committee's negotiations were founded.

The situation is being watched closely so as to enable resumption of negotiations so soon as the carriers have [fol. 554] determined the exact measure of a permanent general increase.

West Coast Subcommittee Activities

Two meetings of the West Coast Subcommittee have been held on November 30, 1954 and March 24, 1955 and a meeting is scheduled in the G.C.M.I. West Coast Office, April 4th.

Problems covered since the last report were Public Utilities Commission Case No. 5432, Petition No. 22, which seeks to include the communities of El Monte, Downey and Whittier in the Los Angeles Basin Territory; PUC Case No. 5478, Certification of California Radial Highway Common Carriers and Highway Contract Carriers; and PUC Case No. 5441, proposing the establishment of the San Francisco Bay Drayage Area to include the entire area bounded by San Francisco, Richmond and San Jose.

Under the direction of the Subcommittee, the West Coast Office has issued bulletins keeping the West Coast Industry informed on matters of interest concerning Traffic.

Respectfully submitted, J. L. Sprowls, Chairman.

[fol. 555] GOVERNMENT'S EXHIBIT 129

Committee on Government-Industry Relations

Semi-Annual Report of Activities For the Period May to November 1956

To the Board of Trustees of Glass Container Manufacturers Institute

The activities of the Committee on Government-Industry Relations during the past six months are summarized as follows:

Trade Agreements and Tariffs

Mid-year the various nations, including the United States, participating in the Geneva Conference concluded the Geneva Trade Agreement. Its effect on existing duties applicable to glass containers imported into our country may be considered relatively moderately, however, reductions were put into effect, commencing June 30, 1956, with respect to two classifications of ware provided for in the Tariff Act of 1930 as follows:

Par. 217: Unfilled bottles, jars, ..., n.e.s., holding less than 1/4 pint; present rate of 25¢ per gross is to be successively reduced during the succeeding three years to 21¢ per gross, as of June 30, 1956.

Par. 218(e): Unfilled bottles and jars ..... used as containers of perfume, talcum powder, toilet water, or other toilet preparations, produced otherwise than automatic machine; present rate of 45% ad valorem to be successively reduced during the succeeding three years to 38% ad valorem, as of June 30, 1956.

For background of the committee's activities in this area please see semi-annual reports during the past several years.

Food Additives Legislation

Recent publicity given to the report issued by International Symposium Against Cancer, held in Rome during August 1956, undoubtedly will stimulate attempts on the part of certain agencies in the U. S. government to have adopted during the forthcoming session of Congress so-called food additives legislation. Various bills introduced during the past several years, if passed, could have had far-reaching effects upon all segments of the container industry. Your committee will undertake to keep abreast of developments and inform you.

Census Reports on Glass Containers and Closures

Contacts have been continued with the Bureau of the Census toward improving the accuracy and coverage of the monthly reports issued under the Facts for Industry series dealing with glass containers (M77C) and closures for glass containers (M75C).

[fol. 556] Foreign Bottle Design Applications

The committee has continued to keep all glass container members informed of bottle design applications filed in foreign countries that conflict with designs that have been in general use in the United States. During the past six months such foreign applications have been for glass container designs traditionally used in this country for packaging perfumes, toiletries and beverages.

Washington Office

GCMI continues to maintain a Washington office on a nominal cost basis at 1625 K Street, N.W. Mr. Harry Kuni, secretary to the committee, spends such time in Washington as is necessary in behalf of the industry.

The Econometric Institute, Inc.

This committee arranges for certain services from The Econometric Institute, Inc., among which are oral reports at the two industry meetings on the business outlook and

two comprehensive written reports at quarterly intervals between times. Also, the services include attendance by GCMI staff members at the Econometric Institute's Annual Seminar at which are discussed basic economic factors including trends in the various segments of business, labor and government.

Other Activities

Other services provided the industry under the auspices of the Committee on Government-Industry Relations include:

(a) Contacts with government agencies, such as the Departments of Commerce and Agriculture and their agencies, such as the Business and Defense Services Administration, and Food and Drug Administration, on matters of interest to the industry and its customers.

(b) The dissemination of various data of interest compiled by the U. S. government, as for example exports of glass containers to various foreign countries and imports into our country.

(c) The circulation of information prepared by the National Canners Association on the volume of fruits and vegetables packed, especially those items such as baby foods, catsup and chili sauce, where glass is extremely used.

(d) The circulation of special reports prepared by the Department of Commerce for various industries such as Fruit Spread, and Salad Dressing, Mayonnaise and Related products.

[fol. 557] Members of the Committee on Government-Industry Relations appointed *to* by the Trustees to serve until May 1957 are as follows:

Parent Committee

G. F. Rieman, Chairman—Ball Brothers Company, Inc., J. S. Algeo—Hazel-Atlas Glass Company. C. G. Bensinger—Owens-Illinois Glass Company, S. B. DeMerell—Anchor Hocking Glass Corporation, F. B. Hess—Brockway Glass Company, Inc., H. F. Merritt—Solvay Process Division, Allied Chemical & Dye Corporation, H. W. Kuni—GCMI Secretary.

West Coast Subcommittee

Since previously reporting, the West Coast Subcommittee has met on April 27, July 27 and September 26, 1956.

Continued interest in the unemployment insurance developments in California has been displayed by the subcommittee. Subsequent to their study of the work accomplished by the Inter-Association Unemployment Insurance Committee and, in view of anticipated developments during the forthcoming year, it was the recommendation of the subcommittee that the West Coast manufacturers should again give financial support to this committee for the fiscal year 1956-57.

The subcommittee has maintained a close watch on air pollution developments and have reported that in the face of an industrial problem which is assuming greater and greater proportions, the glass industry in California, with one or two exceptions, has not been subject to the critical attention of the Air Pollution Control Board. The Technical Subcommittee on Air Pollution, which reports to this subcommittee, has not met since last reporting.

Attention has been given to Proposition #3, the so-called "Food in Bars" California Constitution Amendment which could, if passed, seriously affect the glass container industry within the state.

Liaison and contact with the California Conference of Industrial Association, California Manufacturers Association, California Public Utilities Commission, Inter-Association Unemployment Insurance Committee, and Central Coast Industrial Committee has been continued by the West Coast Manager under the direction of the subcommittee.

Members of the West Coast Subcommittee appointed to serve until May 1957 are as follows:

R. W. McKee, Chairman—Maywood Glass Company; E. E. Balling—Latchford-Marble Glass Company; E. S. Campbell—Northwestern Glass Company; E. L. Casey—Hazel-Atlas Glass Company; J. W. Donaldson—Ball Brothers Company, Inc.; R. J. Miedel—United Can & Glass Company; J. B. Miller—Thatcher Glass Manufacturing

Company, Inc.; H. S. Wade—Owens-Illinois Glass Company; F. H. Wright—GCMI Secretary.

Respectfully submitted, G. F. Rieman, Chairman.

[fol. 558] GOVERNMENT'S EXHIBIT 130

Committee on Market Research and Promotion
Subcommittee on Beer Bottles

Semi-Annual Report of Activities For the Period
May 1956 to November 1956

To the Board of Trustees of Glass Container
Manufacturers Institute

The Subcommittee has held two meetings since the last report, one on June 26, 1956, and the other on July 26, 1956.

Virginia Program.

The sale of malt beverages in no-deposit bottles was permitted in the State of Virginia starting July 1, 1956, for the first time in fifteen years.

After a quick but thorough study of the situation, the Subcommittee accordingly voted to advertise One-Way bottles within the State for a period of six months. Several brewers were planning to energetically merchandise One-Way bottles in Virginia on an economically-sound basis, and the elements necessary for a successful promotion appeared present. The first ads appeared on August 8. The campaign covers the Richmond, Norfolk and Alexandria markets, making use of large newspaper space with dramatic but believable photographic illustrations, clearly identifying the bottle, and accompanied by short, direct copy stressing flavor, cleanliness, social acceptability and convenience.

To measure progress and learn as much as possible from this effort for use elsewhere, Ford Sammis and Company made a survey of the State of Virginia before the campaign was launched, and will repeat it at the end of the year. These studies cover retailer and consumer

attitudes, as well as statistics on the distribution and sale of beer in the no-deposit bottles.

Great care is being exercised to handle the public relations aspects of the introduction of this package to avoid reactions which might encourage reinstatement of the ban on its sale in Virginia.

Syracuse Study.

Kenyon & Eckhardt, Inc. submitted parts I, II, and III of their Beer Container Survey covering the Syracuse market on July 26, 1956. The final report, including Part IV (consumer attitudes) and their complete analysis and recommended plans for meeting our beer bottle marketing problems will shortly be reviewed by the Subcommittee.

It is expected that these recommended plans will include a test campaign in the Syracuse area which could be undertaken early in 1957 to determine whether efforts on a broader basis would be worthwhile. Progress reports on the Virginia campaign and the Syracuse studies will be made to the industry from time to time.

[fol. 559] The Beer Bottle Subcommittee is composed of the following members:

R. E. Delaplane, Chairman—Owens-Illinois Glass Company, W. S. Bazzett—Thatcher Glass Manufacturing Company, Inc., J. E. Bellinger—Ball Brothers Company, Inc., J. A. Giddings—Brockway Glass Company, Inc., M. J. Jones—Obear-Nester Glass Company, E. M. Lawrence—Anchor Hocking Glass Corporation, R. M. Ulmer—Armstrong Cork Company.

R. L. Cheney is Secretary.

Respectfully submitted, R. E. Delaplane, Chairman.

[fol. 560] GOVERNMENT'S EXHIBIT 131

Committee on Container Design and Specifications

Semi-Annual Report of Activities For the Period November 1955 to May 1956

To the Board of Trustees of Glass Container Manufacturers Institute

During the period covered by the report the committee held one meeting, February 16. The following is a brief summary of matters concluded since the previous report and additional subjects of interest to the industry now being considered by the committee.

Manufacturing Tolerances for Glass Containers

Undoubtedly one of the most important accomplishments of the D & S Committee during the period covered by this report was the approval of GCMI Drawing No. C-102, showing recommended tolerances for capacity, weight and body specifications.

In pursuing this study to a satisfactory conclusion the Technical Subcommittee held numerous meetings and the individual members made contributions in the form of independent studies to provide the basic information from which the drawing was prepared.

In the committee's early discussions of the previous Drawing C-100 it became apparent that the tolerances for weight and body dimensions, formerly related to capacity ranges, would be most realistically stated if they were shown as functions of their own specifications. Also it was recognized that it would be advisable to introduce additional intermediate tolerance values in order to provide less abrupt steps in the tolerance schedules. Both of these principles were incorporated in the revised drawing.

In continuing its study of tolerances the committee is giving special consideration to beer bottles, carbonated beverage bottles and pressed ware to determine whether it would be practical to include these lines among those for which the tolerances on C-102 are recommended.

Export Shape One-Way Beer Bottle

In our previous report we referred to the committee's discussion of drawings which would show specifications for 10 oz. and 4/5 quart capacity beer bottles in this line. In view of the Alcohol and Tobacco Tax Division's conclusion that the establishment of standards of fill for malt beverages was not warranted at this time, the committee was following closely the extent of the demand for the new bottle sizes to determine whether GCMI drawings for them would be justified.

During a recent meeting it was found that the two capacity sizes in question were still more or less used only by the one brewerey for which the designs were developed and there was very little general demand. Accordingly the subject was dropped from the committee's agenda.

In our previous report we announced that several brewers were using a quart capacity Export Shape Beer Bottle having 3/8 fl. oz. less headspace than the one identified as Item 165-75 on GCMI Drawing No. C-16506. The committee completed its study and found that the larger bottle was rapidly being replaced by the smaller one and the [fol. 561] GCMI drawing should be changed. Accordingly prints of revised GCMI Drawing No. C-16508 were issued to the industry incorporating the new specifications.

Glass Containers for Pharmaceuticals

In a previous report we referred to joint meetings which representatives of our industry held with representatives of the American Drug Manufacturers Association to study specifications of glass containers used by the drug industry. In view of the progress reported recently by the Technical Subcommittee in its study of manufacturing tolerances the drug representatives were requested to postpone any finalization of conclusions from their work until the conclusion of the GCMI tolerance study in order that the drug people would have available to them the latest findings in the industry.

Following a delay of several months the drug representatives advised that they had decided to proceed with the completion of their study and discontinue the activity of their Glass Committee. The drug representatives found

that in conversations with individual glass manufacturers the specifications originally considered by the drug group were acceptable to the manufacturers.

There appears to be nothing further for our committee to do unless some further request for assistance is received from the drug manufacturers.

Stacking of Filled and Capped Glass Containers

The latest progress report under this subject concerns the development of recommended specifications for stacking glass containers on metal caps having flowed-in compound liners. A technical advisory group from the closure industry is assisting the Technical Subcommittee by providing technical data with special emphasis on recommended dimension limits consistent with good manufacturing procedures. Additional data needed to continue the study is in process of being obtained.

Stubby Beer Bottle

Recently the West Coast Subcommittee reported that in some instances the identification ring on the 11 ounce capacity Stubby Beer Bottle was being mistaken as an indication of the fill point. Since the approximate fill point of this bottle is 1/32" below the bottom of the ring there are many complaints that the bottles are underfilled. In order to assist the brewers in meeting this complaint and eliminating the confusion one of the West Coast manufacturers produced samples of a bottle having the identifying ring 1/16" lower. Samples of this bottle have been approved by the brewers in the Northwest and at its recent meeting the West Coast Subcommittee recommended that the GCMI drawing be revised to incorporate the change. This matter has been referred to the membership of the Parent Committee and the Technical Subcommittee.

West Coast Subcommittee

Since last reporting, the West Coast Subcommittee had held meetings December 15, 1955, February 3, 1956 and March 9, 1956.

Study has continued concerning containers incorporating shaker fitments of plastic (polyethylene and other),

metal and foil sample containers were forwarded to the [fol. 562] Parent Committee for their study. Due to the multiplicity of problems arising from the various combinations of materials used in manufacturing fitments and closures for any specific glass container, the subcommittee placed the problem before the Parent Committee for their amplification and recommendation. (This matter has been referred to the Committee on Standards for Finishes.)

Dissatisfaction expressed by brewers operating plants in the Northwest concerning the location of the shoulder bead on the 69 Series, Stubby Beer Bottle, was taken under study by the subcommittee. The brewers claimed that the approximation of the bead to fill point resulted in erroneous rejections by brewers' customers for underfill in various instances.

As a result, a redesign lowering the bead 1/16" was submitted to the brewers, which was favorably accepted. The design was forwarded to the Parent Committee for their study and consideration with the recommendation that the suggested specifications be incorporated in GCMI Item 69-35, and that a revision be issued and approved.

Committee Personnel

The personnel of the Committee on Container Design and Specifications has not changed since our report to you last November and is as follows:

P. S. Holmquest, Chairman—Thatcher Glass Manufacturing Co., Inc., J. S. Algeo—Hazel-Atlas Glass Company, W. S. Coffman—Foster-Forbes Glass Company, J. A. Giddings—Brockway Glass Company, Inc., M. A. Hellrung, —Owens-Illinois Glass Company, E. A. Hinkins—Tygart Valley Glass Company, E. M. Lawrence—Anchor Hocking Glass Corporation, G. F. Rieman—Ball Brothers Company, Inc., R. M. Ulmer—Armstrong Cork Company.

V. L. Hall is Secretary of the Committee.

In our report last November we stated that word had been received that Mr. Arthur Glenn was no longer associated with Brockway Glass Company and had accepted an appointment as an instructor in Mechanical Engineering at Pennsylvania State University. Accordingly, Mr. Glenn asked to be relieved of his responsibility as a mem-

ber. of the Technical Subcommittee. At its meeting on November 28, 1955 the Board of Trustees appointed Mr. James H. Wilson of Brockway Glass Company to succeed Mr. Glenn.

The Technical Subcommittee is now constituted as follows:

G. M. Stuntz, Chairman—Anchor Hocking Glass Corporation, W. F. Alderson—Owens-Illinois Glass Company, F. H. Delwo—Ball Brothers Company, Inc., C. W. Evans—Tygart Valley Glass Company, Foster Mitchell—Armstrong Cork Company, Bud Powers—Thatcher Glass Manufacturing Co., Inc., Walter Siegel—Hazel-Atlas Glass Company, J. H. Wilson—Brockway Glass Company, Inc., Harold Youkers—Knox Glass, Inc.

C. E. Wagner is Secretary of the Technical Subcommittee.

[fol. 563] The personnel of the West Coast Subcommittee has remained unchanged during the period covered by this report and is as follows:

R. H. Dallas, Chairman—Maywood Glass Company; E. S. Campbell—Northwestern Glass Company, E. L. Casey—Hazel-Atlas Glass Company, J. W. Donaldson—Ball Brothers Company, Inc., E. L. Fraser—Owens-Illinois Glass Company, W. J. Latchford—Latchford-Marble Glass Company.

Frank H. Wright is Secretary of the West Coast Subcommittee.

Conclusion

It has been extremely gratifying to me, as Chairman of this committee, to note the cooperative and progressive attitude evidenced by the individuals of this group in their contributions to the committee's work. This collaborative effort made possible the establishment of suggested new manufacturing tolerances for glass containers, representing the major accomplishment of this committee during this period. Extensive research and study was involved in this project and the committee is particularly indebted to the Technical Subcommittee for their contributions to this important project.

The glass industry is a major segment of the dynamic packaging industry. Developments and improvements in competitive packaging media make it mandatory that we, as an industry, search diligently for design and specifications for glass containers that will assure our continued growth. It will be the constant aim of this committee to develop container specifications compatible with high level production efficiency that will enable us to compete in an intensively competitive market.

Speaking for the committee, I want to express appreciation for the constructive assistance given by Messrs. Hall and Wagner. Their assistance in coordinating the various elements involved in the committee's work made possible the expeditious handling of our meetings.

Respectfully submitted, P. S. Holmquest, Chairman

[fol. 564] GOVERNMENT'S EXHIBIT 138

Fifth Annual Consumer Survey on Containers
Prepared For The Confidential Use Of
Can Manufacturers Institute

By Benton & Bowles, Inc.
December, 1947

[fol. 565] Fifth Annual Consumer Survey on Containers

Purpose

This survey was undertaken to obtain current information on consumer attitudes toward various types of containers and to compare current attitudes with those of previous years. This is the fifth annual study conducted on this subject, and the information developed herein has been designed to be mainly comparable to information derived in previous studies.

The principal subjects covered by the current survey include:

1. General preference between cans and glass and reasons for preference.
2. Preferences for different types of containers for specific products, and willingness to pay more for preferred container.
3. Type of container believed to insure highest quality at time of purchase.
4. Type of container believed to keep food most sanitary after opening.
5. Proportion of respondents who leave unused portion of food in cans after opening.
6. Opinions regarding safety of leaving unused portion of food in cans.
7. Preferences for "fresh" vegetables and fruits vs. those packed in cans, glass, frozen packs, etc.
8. Opinions regarding the vitamin content of "fresh" food vs. food packed in various containers.
9. Type of container believed to give the greatest amount of usable food for the money during summer vs. winter.
10. Consumer buying habits of food packed in cans or glass vs. frozen food.

[fol. 566] Procedure

Questionnaires were mailed to 3,500 members of the Benton & Bowles' Home Research Staff selected to represent a reasonably accurate cross-section of all U. S. families with respect to territories, community size and income groups.

In the current study, an effort was made to determine

what effect a "reminder" question concerning the storing of opened cans of evaporated or condensed milk (products believed to be frequently left in cans) would have on opinions regarding the safety of leaving unused portions of food (such as fruits, vegetables, juices and meats) in cans. Accordingly, one-half of the respondents were asked preliminary questions on their usage of canned evaporated or condensed milk and on whether or not they leave unused portions of milk in the can.

So that a true trend picture could be maintained, the remaining questionnaires were worded on this point as in last year's study.

Each version of the questionnaire was sent to half of the families, each half representing similar cross-sections of the country. A copy of the two questionnaires is included at the end of this report.

The questionnaires were mailed on October 10, 1947 and the survey closed on November 10, 1947 when replies had been received from 2,277 families, or 65% of the mailing.

Composition Of The Sample will be found in Table 1.

Summary of Results

The results of this survey indicate that in many respects, the current attitude toward cans has not changed materially from the attitude evidenced last year, but continues to be somewhat more favorable than the attitudes evidenced in the three preceding studies (1943, 1944 and 1945).

The following paragraphs summarize the principal "highlights" revealed by the current study:

1. Consumer preference is evenly divided between cans and glass, with 37% of the respondents preferring each. The current attitude toward cans is about on the level evidenced last year (1946), but is more favorable than the attitudes revealed in the 1943, 1944, and 1945 studies.
2. Compared with last year, there has been little change in the preferential margin for cans for the majority of specific products on which the respondents were queried. However, preferences for cans are currently at a significantly higher level for shortening, coffee and beer than in any of the

previous years surveyed. For baby foods, the current preference for cans is lower, continuing the decline indicated last year.

[fol. 567] 3. As in previous studies, the majority of the respondents believe that glass is the type of container in which they are most sure of getting the quality they want when they purchase foods. The relative position of cans on this point is now about on the level of 1943, and better than in 1944, 1945 or 1946.

4. Glass is thought by the large majority of the respondents (84%) to be the type of container which keeps food most sanitary. While this proportion has not changed materially over the past several years, the proportion who don't know which type of container keeps food most sanitary has increased to 13% from 7% in 1943.

5. Currently, about one-eighth of the respondents (12%) claim that they leave the unused portions of foods in cans. This proportion shows little change from the 1946 (13%) or 1945 (10%) levels.

6. While only one-eighth of the respondents (12%) state that they actually leave the unused portions of foods in cans, nearly one-quarter (23%) believe it is safe to do so. The proportion who believe it is safe is currently about on the level indicated in 1945, and slightly below the proportion indicated last year (28%).

7. One-quarter of the respondents (25%) currently claim that they prefer to use so-called "fresh" vegetables, while 10% state that they generally prefer to use vegetables packed in cans, glass, frozen, etc. The proportions who prefer to use either "fresh" vegetables or packaged vegetables are smaller than in 1946, while the proportion who prefer to use both is correspondingly higher.

Usage preferences for fruits are very similar to preferences for vegetables.

8. More than half (57%) of the respondents believe that "fresh" food contains the most vitamins. Votes for frozen food (6%), food in cans (3%) and food in glass were all of comparatively minor

importance, while one-third of the respondents did not know.

9. Four-fifths of the respondents (80%) believe that "fresh" food gives the most food for the money in the summer months. In the winter months, food in cans is believed to give the most for the money by the greatest proportion of respondents (48%), followed by frozen foods (14%), foods in glass (13%) and "fresh" foods (6%).

[fol. 568] 10. Currently, about four-fifths of the respondents (79%) buy more food in cans or glass than frozen foods; 17% buy equal amounts; and only 4% buy more frozen foods than packed in cans or glass. These proportions are about the same as were evidenced in the 1946 survey.

Detailed Results

1. General Preference For Containers

The results of the present survey indicate that currently consumer preference is evenly divided between cans and glass, with 37% preferring each of these types of containers and the remaining 26% having no preference. Upper income and urban women are more favorably inclined toward cans, while lower income and farm women are more favorably inclined toward glass.

The current attitude of consumers toward cans shows little change from the attitude evidenced last year, but indicates a definite gain over the attitudes revealed in the three preceding studies (1943, 1944 and 1945).

	1943	1944	1945	1946	1947
Prefer cans	29%	23%	31%	37%	37%
Prefer glass	34	41	44	38	37
Have no preference	37	36	25	25	26
Ratio of glass over cans	1.09	1.44	1.29	1.02	1.00

The principal single reason for preferring cans was their indestructibility. About half the women who indicated a preference for cans (52%) gave "don't break" as their reason for preference. However, the convenience reasons (including ease of storing, of disposal, of handling, of opening, etc.) were given, in total, by a higher proportion of the

respondents (56%). Health factors, including such statements as sealed better, keeps food better, keeps food fresher, not exposed to light, etc., were listed, in total, by more than one-fifth of the housewives (22%).

The principal reasons for preferring glass are visibility of the contents (54%), various health factors such as contents need not be removed, sanitary, etc. (41%) and the fact that glass containers may be re-used (17%).

When asked what they like about cans and glass, the respondents gave reasons closely parallelling their reasons for preference.

[fol. 569] Qualities disliked about cans include chiefly a feeling that cans are unsafe (necessary to remove the contents after opening, 16%; other safety reasons, 10%); the fact that the contents are not visible (14%); and the inconvenience of using cans (13%).

The principal qualities disliked about glass containers are the fact that they can be broken (51%) and their inconvenience (difficult to dispose of, to store, to open, to handle, to remove contents, etc.) (18%).

2. Preference For Specific Products In Cans Vs. Glass

Of the 21 products listed on the questionnaire, consumers currently show a significant preference for cans over glass containers for the following 15 products:

	Prefer Cans	Prefer Glass
Motor oil	94%	6%
Paints	91	9
Baking powder	84	16
Talcum powder	83	17
Liquid soups	75	25
Fish	73	27
Meat	70	30
Shortening	68	32
Waxes and polishes	64	36
Bicarbonate of soda	63	37
Insecticides	63	37
Tomato juice	63	37
Fruit juices	62	38
Coffee	57	43
Vegetables	56	44

Compared with last year there has been little change in the preferential margin for cans for any of the above products with the exception of shortening and coffee. For these

two products, cans are at significantly higher level than in any of the previous years surveyed.

For the following three products, preferences are very nearly evenly divided between cans and glass:

Fruits, Beer, Disinfectants

While preference for fruits and disinfectants in cans is at about the same level as last year, preference for beer in cans is at a substantially higher level than in any of the previous four years.

[fol. 570] For the remaining three products shown below, the preferences are significantly in favor of glass over cans.

	Prefer Cans	Prefer Glass
Aspirin	31%	69%
Salad oil	34	66
Baby foods	36	64

The showing for cans is about the same as in 1946 for aspirin and salad oil. For baby foods, however, cans have lost ground, continuing the decline indicated last year.

3. Container Believed To Insure Best Quality At Time of Purchase

As in previous studies, the majority of the respondents believe that glass is the type of container in which they are most sure of getting the quality they want when they purchase foods. Currently, there is little difference in this attitude by community size or by income groups.

A comparison of the replies to this question received in all five of these surveys reveals that the relative position of cans on this point is now about on the level of 1943, and better than in 1944, 1945 or 1946.

	1943	1944	1945	1946	1947
Prefer cans	10%	6%	10%	15%	15%
Prefer glass	37	49	47	45	42
Have no preference	53	45	43	40	43
Ratio of glass over cans	1.75	2.48	2.15	1.88	1.74

The principal reasons for favoring cans in this respect are that dependable brands are put up in cans (28%), that they are sealed better (16%), that a greater variety of foods is put up in cans (11%) and that contents stay fresh

(10%). The visibility of the contents was by far the chief reason for favoring glass containers, with 85% of those who prefer glass naming this as their reason for preference.

4. Container Believed To Keep Food Most Sanitary

The large majority of the respondents (84%) currently believe that glass is the type of container which keeps food most sanitary after the container has been opened. While this proportion has not changed materially over the past several years, there has been a small but fairly steady increase in the proportion who don't know which type of container keeps food most sanitary.

[fol. 571]

Keeps food most sanitary	1943	1944	1945	1946	1947
Glass	91%	91%	87%	86%	84%
Cans	2	2	2	3	3
Paper carton	1	*	*	*	*
Don't know	6	7	11	11	13

* less than 1%

Glass is believed to keep food most sanitary principally because the container can be tightly resealed (29%), unused portions of food can be stored in the container (19%), glass is more sanitary (11%), there is no danger of poisoning (11%), and there is no chemical reaction or rust (11%).

5. Proportion Who Leave Unused Portion Of Food In Cans

In total, about one-eighth of the respondents (12%) currently claim that they leave the unused portions of foods in cans. This proportion shows little change, in total, from the proportions evidenced in the 1946 (13%) or 1945 (10%) surveys.

	1945	1946	1947
Leave unused portion in cans	10%	13%	12%
Do not leave unused portion in cans	90	87	88

The proportion of women who leave food in cans currently ranges from 16% in the highest income group to 8% among women in the lowest income group, but shows relatively little variation by community size or by age of housewife.

The women who do not leave food in cans do not do so principally because they fear food poisoning (30%) feel that leaving food in cans is not safe (15%), prefer to store food in dishes or glass (12%), or fear spoilage (12%).

[fol. 572] 6. Safety of Leaving Unused Portion Of Food in Cans

In total, nearly one-quarter of the respondents (23%) currently believe it is safe to leave the unused portions of food in cans. This proportion is about on the level of 1945, and slightly below the proportion evidenced last year.

	1945	1946	1947
Believe it is safe to keep food in cans	23%	28%	23%
Believe it is not safe to keep food in cans	56	50	54
Don't know	21	22	23

The proportions who believe it is safe to leave the unused portions of food in cans are higher among upper income and urban housewives than among lower income women and farm women. Age apparently has little influence on their opinions in this respect.

Women who believe it is safe to leave food in cans state principally that cans are chemically treated (23%), they have heard or read that it is safe (15%), and that authorities say it's safe (9%). On the other hand, women who believe it is unsafe are chiefly afraid of poisoning (33%), of spoilage (11%) and of contamination or chemical reaction (10%).

In the current study, an effort was made to determine what effect a "reminder" question concerning the storing of opened cans of evaporated or condensed milk (products believed to be frequently left in cans) would have on opinions regarding the safety of leaving unused portions of food (such as fruits, vegetables, juices and meats) in cans. Accordingly, one-half of the respondents were asked preliminary questions on their usage of canned evaporated or condensed milk and on whether or not they leave unused portions of milk in the can.

Of these respondents, 44% use canned milk and leave unused portions in the can, 19% use canned milk but do not leave unused portions in the can, and 37% do not use canned milk.

Among the group, in total, who were asked the "re-

minder" question, only a very slightly higher proportion (26%) considered it safe to keep unused portion of food in cans than among the group who were not asked about canned milk (23%). While a relatively high proportion (34%) of the women who leave unused portions of milk in cans believe it safe to keep unused portions of food in cans, a relatively small proportion (13%) of women who do not leave unused milk in can believe it safe to leave unused portions of food in cans.

[fol. 573] 7. Preference For "Fresh" Vs. Packaged Vegetables And Fruits

One-quarter of the respondents (25%) currently claim that they prefer to use so-called "fresh" vegetables, while 10% state that they generally prefer to use vegetables packed in cans, glass, frozen, etc. Nearly two-thirds of the total respondents (65%) prefer to use both types. There is relatively little variation in preference by community size or by income level.

The proportions who prefer to use either so-called "fresh" vegetables or packaged vegetables are smaller than in 1946, while the proportion who prefer to use both is correspondingly higher.

Prefer to use:	1945	1946	1947
So-called "fresh" vegetables	31%	28%	25%
Vegetables packed in cans, glass, etc.	9	15	10
Both "fresh" and packed in cans, glass, etc.	60	57	65

Women's usage preference with regard to fruits are very similar to those for vegetables, and also show a drop-off since 1946* in the proportion who prefer to use either so-called "fresh" fruits or packaged fruits, with a corresponding increase in the proportion who prefer to use both.

Prefer to use:	1946	1947
So-called "fresh" fruits	25%	23%
Fruits packed in cans, glass, etc.	14	11
Both "fresh" and packed in cans, glass, etc.	61	66

"Convenience" (saves work and time, easy to obtain, etc.) "better flavor" and "no waste" are the principal reasons

* Fruits were not included in the 1945 survey.

for preferring packaged vegetables and fruits, while the chief reasons for preferring to use the "fresh" products are because they have better flavor and are more nourishing. Among those who prefer to use both the "fresh" and the packaged products, the principal reasons given were a preference for "fresh" vegetables and fruits when available, the convenience of using both, and the fact that using both "fresh" and packaged fruits and vegetables provides variety in the diet.

[fol. 574] From a list of 16 vegetables and 14 fruits, a significant preference is indicated for the following products in can or glass pack as opposed to the frozen or "fresh" form:

Vegetables	Fruits
Tomato juice	Fruit cocktail
Baked beans	Grapefruit juice
Sauerkraut	Pineapple
Pumpkin	Apricots
Mixed vegetables	Cranberry sauce
Mushrooms	Cherries
	Grapefruit segments
	Pears
	Plums

Products preferred in the "fresh" form to the can, glass, or frozen pack are:

Vegetables	Fruits
Carrots	Raspberries
Sweet potatoes	
Tomatoes	
Green beans	
Spinach	
Asparagus	

For these remaining products, there is no strong preference between the can or glass pack and the "fresh" form:

Vegetables	Fruits
Beets	Applesauce
Corn	Peaches
Peas	Prunes
Lima beans	Figs

None of the listed products are preferred in the frozen pack by as many as 25% of the respondents. Those preferred in the frozen pack by 10% or more women are:

Vegetables	Fruits
Peas	
Lima beans	Raspberries
Mixed vegetables	
Spinach	
Asparagus	
Green beans	

[fol. 575] 8. Opinions On Vitamin Content Of "Fresh" Food Vs. Food Packed In Various Containers

When asked to state their opinion on the type of food which contains the most vitamins, 57% of the respondents voted for "fresh" food, while one-third (33%) did not know. Votes for frozen food (6%), food in cans (3%) and food in glass (1%) were all of comparatively minor importance. "Fresh" food was thought to contain the most vitamins by a somewhat higher proportion of rural women and of lower-income women than of housewives in other market divisions.

9. Opinions On Type Of Food Which Gives Most Usable Food For The Money—Summer Vs. Winter

There was a considerable division of opinion on the type of food which gives the most food for the money in the summer months as compared with the winter months. Four-fifths of the respondents (80%) believe that "fresh" food gives the most food for the money in the summer months. In the winter months, food in cans is believed to give the most for the money by the greatest proportion of respondents (48%), followed by frozen foods (14%), foods in glass (13%) and "fresh" foods (6%).

Opinions On Type of Food Which Gives Most For The Money	In The Summer Months	In The Winter Months
Foods in cans	4%	48%
Foods in glass	1	13
Frozen foods	3	14
"Fresh" foods	80	6
Don't know	12	19

10. Buying Habits Of Food Packed In Cans Or Glass vs. Frozen Food

Currently, about four-fifths of the respondents (79%) buy more food in cans or glass than frozen foods; 17% buy equal amounts; and only 4% buy more frozen foods than food packed in cans or glass. These proportions are about the same as were evidenced in the 1946 survey.

The use of frozen foods is somewhat less among farm women and women in the lowest income group.

[fol. 688] GOVERNMENT'S EXHIBIT 145

Minutes of a Special Meeting of the Administrative Committee for the Research Division of Can Manufacturers Institute, Inc., held in the office of the Institute, 60 East 42nd Street, in the City of New York, at 10:30 A.M. on Monday, November 17th, 1941.

Present: D. M. Heekin, Chairman, L. F. Gieg, H. K. Taylor, C. H. Black, E. B. Webster, H. F. White, L. H. Clark (ex-officio).

Mr. D. W. Figgis of the American Can Company; Mr. C. C. Conway and Mr. F. J. O'Brien of the Continental Can Company; Dr. Miller McClintock, Director of Research and Mr. Karl Brown of the Research Division; Mr. C. E. Sifton, Secretary of the Institute; and Mr. Edward McGarvey, Counsel, were also present.

Mr. D. M. Heekin, Chairman of the Committee, called the meeting to order and acted as Chairman. Mr. C. E. Sifton, Secretary of the Institute, acted as Secretary.

In view of the unavoidable absence of several members from the Board of Governors meeting on Monday, November 10th, Dr. Miller McClintock repeated in shorter form his comprehensive preliminary report on the work of the Research Division covering the past nine months, outlined his conclusions and made specific recommendations for the future program of the Research Division.

After discussion, it was the consensus of the members present that the Institute would make a very definite contribution by supervising the execution of the broad promotional plan submitted by Dr. McClintock, and that the steel companies only be asked to make monetary contributions for the execution of the program.

After further discussion and upon motion duly made and seconded it was unanimously

> Resolved that the Administrative Committee for the Research Division approves Dr. McClintock's recommendations in principle for a five year promotional program, the first year of which includes the following activities:
>
> 1. Lay the foundation for action by a continuation of the industry's organization—the Research Division.

2. Develop immediately a broad program of public relations.
3. Provide for maturing and testing the major parts of the Master Plan.
4. Provide for a powerful series of industry advertisements in national magazines.

[fol. 689] GOVERNMENT'S EXHIBIT 147

Digest of Recommendations Presents to the Administrative Committee of the Research Division of the Can Manufacturers Institute on November 17, 1941 by Dr. Miller McClintock, Director of the Division

After the review of the materials collected and analysed in the nine months' survey of the potentialities of the can market, the Director presented the following conclusions and proposals:

1. The can industry can profitably engage in a nationwide, continuing promotional plan as evidenced by the possibilities of the industry itself and by parallel successful types of operations carried on by other industrial groups.
2. It was further concluded that there is a very substantial hazard to the industry in not having such a promotional activity due to the development and aggressive promotion of competitive types of containers.
3. It was recommended that the plan should be of such a form as to cover all current fields of can manufacturing and the development of such new fields as are logically and economically within the range of service of metal containers, and that the plan should be a direct selling and merchandising program of nationwide extent instrumented primarily through:
   a) National consumer magazines and the trade press
   b) Related radio selling activities

c) Cooperative utilization of newspapers
d) Outdoor advertising.

In addition, publications, pamphlets and similar literature should be developed and distributed. A broad program of public relations and publicity in scientific, professional and consumer magazines and the newspaper press should be undertaken, together with a broad program for the utilization of motion pictures.

4. The plan should be instrumented by the Can Manufacturers Institute, through appropriate organization.

[fol. 690] GOVERNMENT'S EXHIBIT 148

5. This recommendation is predicated upon the fact that among other things the Can Manufacturers Institute has a much more direct and intimate understanding of the problems of merchandising metal containers than does any other organization.
6. Dr. McClintock recommended that the full plan should be conceived in terms of a budget of approximately $3,000,000 per year; this being in line, considering the breadth and complexity of the problem, with promotional expenditures of comparable, successful types of trade promotions.
7. It was recommended that the funds necessary to instrument the program should be derived from monies raised in proportion to base boxes of tin, terne or black plate; this measurement being the most practical and equitable means of determining contributions.
8. Dr. McClintock recommended that the plan should be put into operation immediately but not in its entirety, due to the defense economy and related questions of shortages as well as governmental policy to decrease consumer demands in many fields so adequately served by the can industry. However, he did recommend that essential parts of the program, suited to current conditions and designed to

lay the foundation for subsequent expanded action, be undertaken immediately in the following steps:

a) Lay the foundation for action by a continuation of the industry's organization—the Research Division.
b) Develop immediately a broad program of public relations.
c) Provide for maturing and testing the major parts of the Master Plan.
d) Provide for a powerful series of industry advertisements in national magazines.

The above is a true and accurate digest of the conclusions and recommendations which in principle were approved by the Administrative Committee of the Research Division at a meeting held on November 17, 1941.

Signed: Miller McClintock.

November 25, 1941

[fol. 691] GOVERNMENT'S EXHIBIT 156

Minutes of a Special Meeting of the Administrative Committee for the Research Division of Can Manufacturers Institute, Inc., held in the office of the Institute, 60 East 42nd Street, in the City of New York at 9:30 A.M. on Monday, May 11, 1942.

Present: D. M. Heekin, Chairman, C. H. Black, Vice Chairman, J. F. Hartlieb, L. F. Gieg, G. A. Milton, H. K. Taylor, H. F. White, L. H. Clark (ex-officio)

Mr. C. E. Sifton, Secretary and Treasurer of the Institute, was also present.

Mr. D. M. Heekin, Chairman of the Committee, called the meeting to order and acted as Chairman. Mr. C. E. Sifton, Secretary of the Institute, acted ex-officio as Secretary.

Mr. White spoke of the technical research project for the study of canned food values (especially vitamins) which the Can Manufacturers Institute Inc. and makers of packers cans in collaboration with the National Canners Association had considered last year and then dropped. The project is now being reconsidered. The estimated cost of

the research would be $36,000 a year; $18,000 to be contributed by the National Canners Association and the remaining $18,000 to be contributed jointly by the Research Division and the members of the Institute making packers cans. Inasmuch as the project would deal primarily with foods packed in Packers Cans, it was suggested that in fairness to makers of general line cans the contribution by the Research Division be determined as follows:

Take the total tonnage (1,685,804) of steel plate used in making Packers Cans during 1941 and divide it by the total tonnage (2,860,088) of steel plate consumed in both General Line and Packers Cans; this figures 58.9%. Then the contribution by the Research Division would be 58.9% of $18,000 or $10,602. The difference between $18,000 and $10,602, viz. $7,398, would then be prorated between the members of the Institute making Packers Cans on the same basis proposed last year in figuring similar contributions, viz. amount of dues paid to the Institute.

After discussion, and on motion duly made and seconded, it was unanimously

> Resolved that the Administrative Committee for the Research Division approves the proposed joint research plan of the N. C. A., the Can Manufacturers Institute, Inc. and the members of the Institute making packers—with reference to canned food values; and further

. . . . . .

[fol. 692] GOVERNMENT'S EXHIBIT 158

Minutes of a Special Meeting of the Administrative Committee for the Research Division of Can Manufacturers Institute, Inc., held in the office of the Institute, 60 East 42nd Street, in the City of New York, at 10:00 A.M. on Monday, June 1, 1942.

Present:

D. M. Heekin, Chairman, C. H. Black, Vice Chairman, J. F. Hartlieb, L. F. Gieg, G. A. Milton, H. K. Taylor, H. F. White, E. B. Webster.

Mr. C. E. Sifton, Secretary and Treasurer of the Institute; Mrs. Jean Hollander, Assistant to the Executive Vice President of the Institute; and Dr. Miller McClintock, Director of Research, were also present.

Mr. D. M. Heekin, Chairman of the Committee, called the meeting to order and acted as Chairman. Mr. C. E. Sifton, Secretary of the Institute, acted ex-officio as Secretary.

Dr. Miller McClintock, Director of the Research Division, submitted two financial reports, viz.

1. A Statement of expenditures for May, 1942 against the current budget, and
2. An itemized list of carry-over expenditures deductible from the 1941-1942 budgets.

Copies of the reports are attached to these minutes.

Dr. McClintock next discussed the Research Division's forthcoming "Annual Report". This report will summarize the results of the survey made during the period February 1, 1941 to April 30, 1942. He recommended that the report be turned over to Mr. White for his approval, and that Mr. White authorize its publication and determine the extent to which it should be distributed.

After a general discussion Dr. McClintock's recommendations were approved.

The Committee then went to Room 2304 in the Lincoln Building where Dr. McClintock had made arrangements for a preview of the visual presentation of the annual report. At this stage of the meeting the Committee was joined by the following members of the Research Division staff:

Miss Mary Pentland
Dr. E. L. Yordan
Mr. Adrian Williams
Miss Regina Hands.

Dr. McClintock next gave his report which was illustrated by charts projected on a screen.

* In accordance with my memorandum of May 14, 1942, to Mr. Clifford E. Sifton.

[fol. 694] GOVERNMENT'S EXHIBIT 166

Minutes of a Special Meeting of the Administrative Committee for the Research Division of Can Manufacturers Institute, Inc., held in the office of the Institute, 60 East 42nd Street, in the City of New York, on Monday, December 14, 1942 at 1:50 P.M.

Present: D. M. Heekin, Chairman, C. H. Black, Vice Chairman, J. F. Hartlieb, L. F. Gieg, G. A. Milton, H. F. White, L. H. Clark (ex-officio).

Mr. C. E. Sifton, Secretary & Treasurer of the Institute, was also present.

Mr. D. M. Heekin, Chairman of the Committee, called the meeting to order and acted as Chairman. Mr. C. E. Sifton, Secretary of the Institute, acted ex-officio as Secretary.

Mr. Heekin read the attached report of the Research Division's Technical Committee composed of Mr. J. J. Vertrees and Mr. H. A. Goodwin.

In the discussion which followed, Mr. White asked the question, "Is there unanimity among the members of this committee that there is a consumer advertising job to be done?" The Chairman then polled each member present and it was unanimously agreed that there is a definite need for a comprehensive consumer advertising program for tin (steel) cans covering a period of about five years and that steps to put such a program into effect should be taken at once.

It was also generally agreed that the expense of the program (estimated roughly from 1 to 2 million dollars a year) should be carried by the steel people because the program would be in the interests of plate manufacturers rather than can makers. Attention was called to the fact that can companies are in a position to make containers of materials other than tin or black plate, while the profitable (for the steel people) field of manufacturing tin and black plate is in jeopardy as a result of substitutions which may be developed during war time.

After further discussion it was agreed that Mr. White should arrange for Mr. Tower and the heads of the various steel companies to meet as a group with representatives from the can industry to discuss

(1) The immediate need for a comprehensive consumer advertising program to

(a) Protect the use of steel containers while we are at war, and to

(b) Promote their use after restrictions on steel have been lifted.

(2) The ways and means of putting such a program in to effect.

[fol. 695] Mr. White reported that after the Administrative Committee meeting on November 9th at which Dr. McClintock's resignation was accepted, Dr. McClintock had on his own volition offered to remain as Director of Research until the end of 1942. After consulting with a majority of the Administrative Committee members, Mr. White told Dr. McClintock that the Committee would be very glad to have him continue as Director until the first of

the coming year. After discussion and on motion duly made and seconded, it was unanimously

> Resolved, that Mr. White's action in extending Dr. McClintock's tenure of office as Director of Research to the end of the year 1942 be and hereby is in all respects ratified, approved and confirmed.

Meeting adjourned at 3:00 P.M.

Secretary.

This summer . . . all summer long . . .
U. S. STEEL HELPS YOU SELL

Soft Drinks in Cans!

Beginning June 4, United States Steel launches a continuous nationwide program to help you increase your distribution and your sales of canned soft drinks.

This program will educate the *consumer* to a greater acceptance and preference for soft drinks in cans. It will demonstrate to the *supermarket industry* the advantages and new opportunities in merchandising soft drinks in cans. Impact at the national level, at the local level, and in the trade will give you the advertising and promotional help you need to make *canned* soft drinks really take hold.

IN NEWSPAPERS
ALL SUMMER LONG . . . ads will convince consumers to try "the new way to buy soft drinks—in cans." Large-space ads, like the one shown here, will drive home the advantages of cans, in 34 markets, during your peak selling season from June 26 through mid-August.

ON MORNING TV
EVERY WEEK . . . beginning June 4, throughout the year, commercials will demonstrate the advantages of canned soft drinks twice a week to an audience of 2,200,000. The show is CBS MORNING NEWS, carried over 65 key stations, coast to coast.

ON EVENING TV
REACHING 25,000,000 VIEWERS
Sheila Jackson and Jack Brand, on the U.S. STEEL HOUR, will "sell" canned soft drinks over 135 stations during July. So, even if the newspaper ads do not reach your market, your customers will know

THIS AD SELLS in 48 newspapers in 34 big markets, coast to coast. It runs June 26 . . . July 3, 17, 31 . . . and August 14 in:

[fol. 700] GOVERNMENT'S EXHIBIT 174

INCREASED CONSUMER IMPACT has been added to United States Steel's Soft Drinks in Cans program for the summer months. On alternate Wednesdays, beginning July 9 at 11 AM-EDT, U. S. Steel will sponsor 15 minutes of the televised Arthur Godfrey Show over a minimum of 60 stations of the CBS Television Network. The schedule will also include one commercial every other Friday on the Godfrey Show beginning July 4. Some of these commercials will use that personal Godfrey salesmanship and others will be films. Godfrey replaces the CBS morning News in the soft drink program, and CBS advises that the morning news will resume in October.

Arthur Godfrey for years has been known as the nation's number one salesman. Millions of Americans, people from all strata of life, immediately identify themselves with him and with the products he advertises. The warmth, the vitality and the humor that have made Godfrey the greatest entertainer salesman in television will provide a perfect medium to tell Americans everywhere of the advantages of soft drinks in cans.

In addition to the Godfrey Show, U. S. Steel's Soft Drinks in Cans program includes commercials on the U. S. Steel Hour on July 2 and July 30, and an intensive newspaper advertising schedule in 50 papers covering 34 markets where canned soft drinks have maximum super market distribution. The advertisement which will appear is reproduced here.

This newspaper ad will remind consumers, as will Arthur Godfrey, of the many advantages of Soft Drinks in Cans

- Lightweight, easy to handle
- Space saving
- No deposits to pay, no empties to return
- Chill quickly
- No breakage

Why the Emphasis is Growing on SOFT DRINKS IN CANS

1. MORE CONVENIENT FOR CONSUMERS because there are no deposits and no returns; they are easier to carry and chill quickly. See Food Page story on back.

2. EASIER FOR STORES TO HANDLE because they stack easily, may be displayed more advantageously and in less space, and eliminate costly handling of returns. See Business Page story on back page.

What U.S. Steel is Doing About It

1. PLACING ADVERTISING IN NEWSPAPERS IN 33 MARKETS this year. Paving the way for other markets with umbrella coverage on U. S. Steel's network TV programs.

2. FURNISHING NEWSPAPERS EVERYWHERE with this service to "tool them up" for helping Food Retailers and Bottlers advertise Soft Drinks in Cans.

Ready to Pep Up Food Store Soft Drink Sales

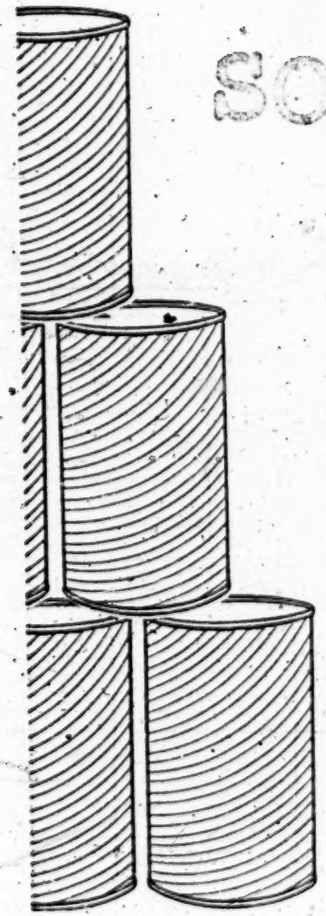
U.S. Steel will promote soft drinks— in cans for HOME USE



In all its advertising to consumers, U. S. Steel will be building new in-home use of soft drinks in cans. It will demonstrate dramatically these five advantages of soft drinks in cans:

- Lightweight, easy to handle
- Space saving
- No deposits to pay, no empties to return
- Chill quickly
- No breakage

Refreshments for picnics, ball games, beach parties, barbecues and other outdoor events are also big reasons for people to buy soft drinks in cans. So U. S. Steel will emphasize these uses, too, during its summer-time advertising program.

FOR THE FIRST TIME, the advantages of soft drinks in cans will be brought home dramatically to American consumers. This ad will appear throughout the summer in 50 newspapers in 35 markets. It will be backed up with extensive network television commercials. It will stimulate consumers to look for soft drinks in cans. Complete advertising schedule is shown inside this brochure.

Now, to build new sales
for you

U.S. STEEL promotes

in cans!

Starting June 4, nationally and locally, in newspapers and on television, U. S. Steel is selling the consumer. Selling morning, afternoon and night. Selling week after week after week. Selling the advantages of soft drinks *in* cans. Showing the convenience of disposable, lightweight cans. This continuous advertising will create a stronger acceptance and preference for soft drinks in cans. It will help you to increase your total sales of soft drinks.

[Vol. 706]

IN THE MORNING

television

sells for you

Every Wednesday, for 40 consecutive weeks, U. S. Steel commercials will demonstrate the advantages of canned soft drinks to a television audience of 1,200,000 consumers in 50 key markets. The show is CBS Morning News, a popular early morning* newscast featuring Richard Hottelet and Grant Holcomb.

Coming in the morning when the housewife plans her shopping needs, these memorable commercials will encourage shoppers to look for canned soft drinks in the stores. Make it easy for them. Advertise, promote, display your canned soft drinks.

*See list below for exact time in each city

IN THE AFTERNOON

newspapers

sell for you

A thirteen-week, 50-line newspaper campaign starts June 19 and continues throughout the summer, from June 19 through mid-August. Consumers in 30 markets will be urged to "try the new way to buy soft drinks—in cans." These ads will present the consumer on soft drinks in cans. Caution: Schedule your combined advertising to begin

NEWSPAPER SERVICE Daily newspapers will receive a complete set of ad-building ideas and mats that will enable you, easily, to make up your own canned soft drink ads. Be sure to get in touch with your newspaper to see how this service can help you.

IN THE AFTERNOON — June 26–July 1, 11, 18–August 13

IN THE EVENING

television

sells for you

On July 2 and again on July 30, Sheila Jackson and Jack Brand, U. S. Steel's commercial-getting team, will take the canned soft drink story into 25,500,000 living rooms, coast to coast, on the *United States Steel Hour*. They will demonstrate the advantages of canned soft drinks and urge viewers to try this new way to buy soft drinks—in cans. Canned soft drinks will also be featured on other *U. S. Steel Hour* commercials during July and August.

U.S. STEEL HOUR — July 2, July 30 on 135 Network Stations

 Government's Exhibit #177

[fol. 707] GOVERNMENT'S EXHIBIT 177

USS United States Steel

If you have been handling canned soft drinks, you know that they provide an easy and convenient way to increase total soft drink volume. Because, for the most part, canned soft drink sales are extra sales.

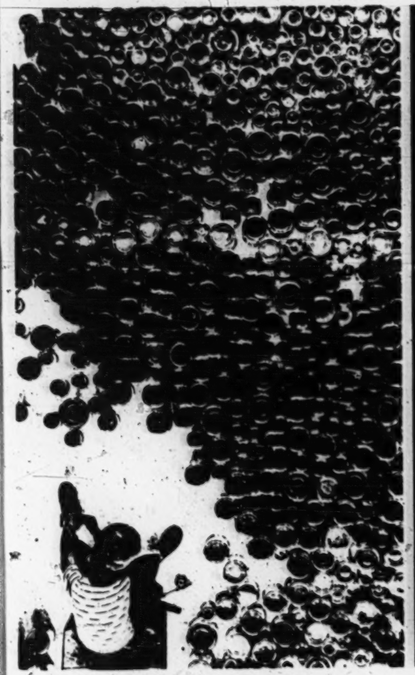
And now, United States Steel Corporation is helping you to gain this extra volume. Beginning June 4, a continuous consumer advertising program in newspapers and on television demonstrates the important advantages of soft drinks in cans and will create a stronger acceptance and preference for soft drinks in cans. In trade advertising, bottlers are being urged to coordinate their sales promotion and advertising with United States Steel's national effort.

You can capitalize on the consumer's new awareness of soft drinks in cans: Feature canned soft drinks in your store. Feature them in your advertising. Time your promotional activity to take full advantage of U.S. Steel's program. You will find a complete timetable and description of this program in the enclosed folder.

Remember, soft drinks in cans not only help you to sell more but also save you trouble and labor. They eliminate the nuisance of handling returns; they are lightweight and easy to handle; they are easy to stack and display; and they won't break because cans are 99% steel.

Today's USS steels

lighten your work . . . ✦ brighten your leisure . . . ✦ widen your world . . .



What does a growing boy need? *Food*—good, hearty, plenty of it. Like the amazing variety of flavorful foods packed in convenient steel cans. Sea foods, meats cooked to perfection, fruits and vegetables picked at their peak, countless delicacies . . . the start of a banquet with the flip of a lid.

Steel makes music. Whether at the concert, the dance or at home, your enjoyment of piano music depends on strings of the finest steel . . . wires so strong and resilient, so accurate in diameter and smooth in finish that they can bring the continued pleasure of perfect tones.

Steel for a floating palace. When your sleek, modern luxury liner glides out of her berth, you're off to make a host of new friends . . . see the wonders of other lands! In almost every critical part—from hull plates to turbine blades—the new high-speed liners depend on the unique *combination* of strength and lightness found only in today's steels.

k . . . ✦ brighten your leisure . . . ✦ widen your world . . .

Steel makes music. Whether at the concert, the dance or at home, your enjoyment of piano music depends on strings of the finest steel . . . wires so strong and resilient, so accurate in diameter and smooth in finish that they can bring the continued pleasure of perfect tones.

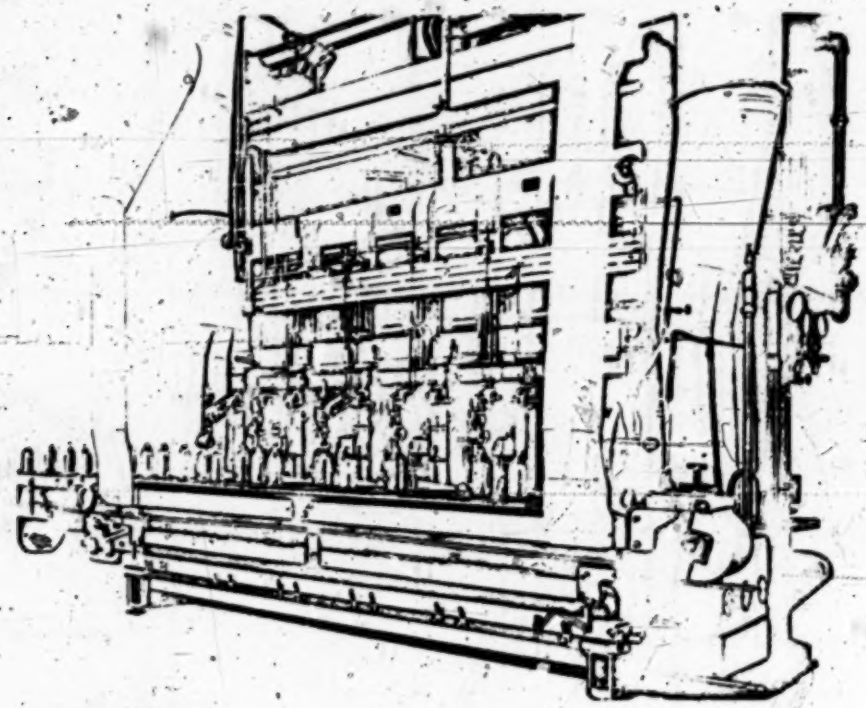
[fol. 711]

6-SECTION I.S. MACHINE



SIX-SECTION I.S. MACHINE
and 117 CONVEYOR

BASIC EQUIPMENT consists of the I.S. Machine and conveyor without any accessories or auxiliary attachments.

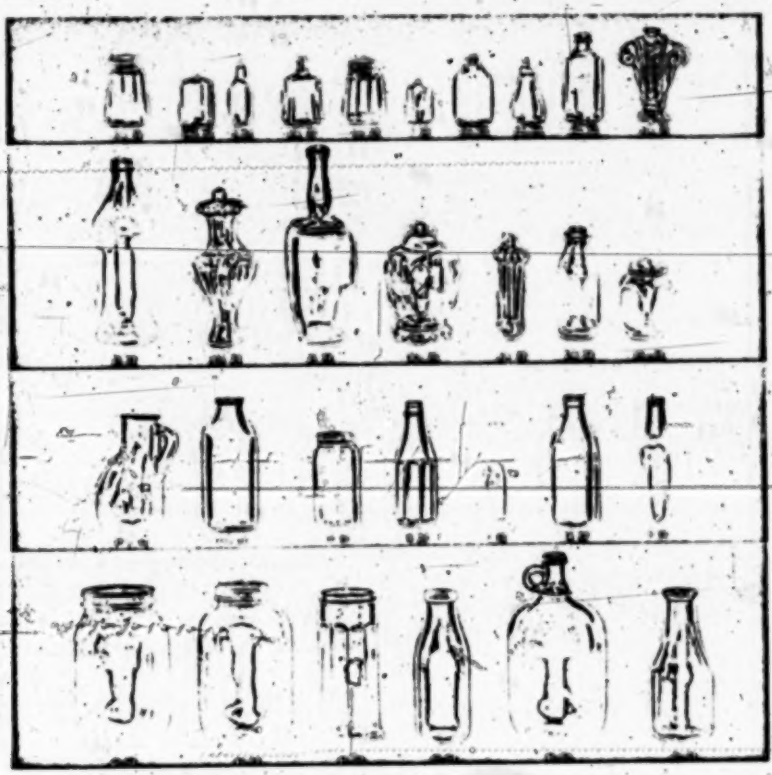
AUXILIARY EQUIPMENT and ACCESSORIES comprise those parts required for meeting specifications of the ware to be made. These include delivery equipment, mold-holding equipment, conveyor extensions, compressed-air regulators, sprockets and chain, and similar items.

ATTACHMENTS are those devices which can be applied to any I.S. Machine to change the type of operation, such as the "62" Process for making wide-mouth ware, fire-polishing equipment, and double-gob equipment.

[fol. 712]

2270

TYPICAL WARE MADE ON THE I.S. MACHINE



With the I.S. Process the same machine is used for either large or small ware, for narrow-neck or wide-mouth ware, and even for small pressed ware. Adjustments for different ware sizes and types can be made quickly, with a minimum of down time. Only a change in mold and delivery equipment is required. Because it is adaptable to such a wide range of ware, the I.S. Machine permits scheduling for more efficient operation of melting furnaces and other interrelated equipment. Full use of this versatility enables a plant to broaden the scope of its sales and enter vigorously into competition for many different types of ware.

WIDE RANGE OF WARE

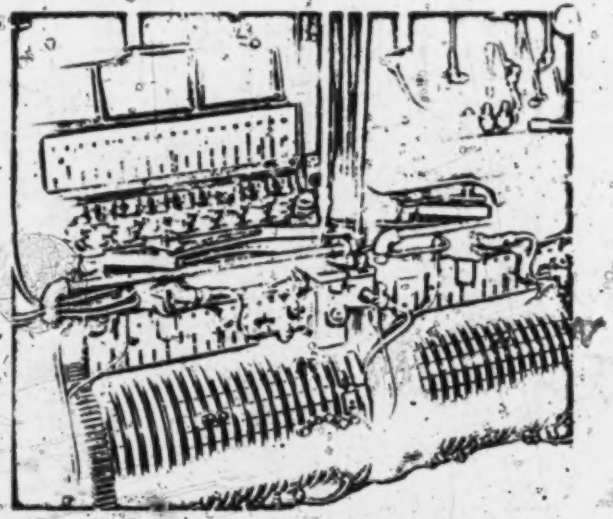
[fol. 713] 2271

HARTFORD - EMPIRE I.S. MACHINES

The I.S. Process is based on the use of identical Individual Sections. Each section consists of one blank mold and one blow mold. The sections are assembled to form machines of increasing production capacities.

Five-section and six-section machines are most common. For high rates of production, eight-, ten- and twelve-section machines are used. Single-section machines are available for hand feeding. Two-section machines also may be obtained and later increased in size.

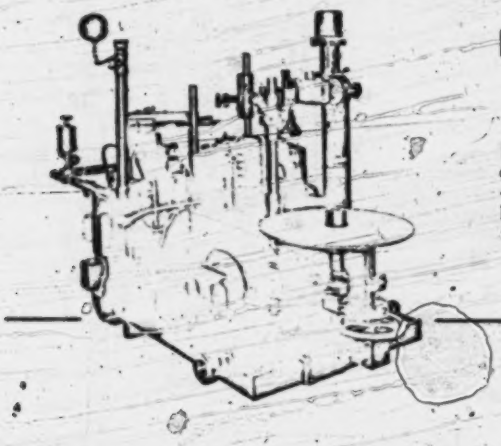
This variety of combinations and ready flexibility makes the I.S. Process highly efficient for any type of ware and any size of order. Any section may be adjusted while other sections continue to operate. The I.S. Machine is pneumatically operated. The timing drums and conveyor are driven from the feeder mechanism.



CLOSE-UP SHOWING I.S. TIMING DRUMS

INTERNAL COOLING

By means of the Internal-Cooling Blowhead, which is standard equipment, it is possible to obtain up to 10 per cent increase in the rate of production. Internal cooling is accomplished by circulating air through the formed article while it is still in the blow mold. It is applicable to bottle finishes greater than 7/16 inch (11 mm.) inside diameter.



HAND-FED SINGLE-SECTION I.S. MACHINE

For production of small orders in a wide variety of shapes and sizes—or for use with special glasses—the single-section machine is economical. One hand-gatherer can feed the machine. Shearing, transfer, and take-out are automatic.

WEIGHTS AND CUBAGE OF AVERAGE I.S. MACHINE AND CONVEYOR WHEN CRATED FOR EXPORT

	6-SECTION I.S.	
NET	34,700 lbs.	15,746 Kg.
GROSS	44,300 lbs.	20,094 Kg.
CUBAGE	1,475 cu.ft.	41.77 Cu.M.

[fol. 714]

2272

ADVANTAGES OF THE I.S. MACHINE

1. FLEXIBILITY

The I.S. Machine is highly efficient for any size of order, large or small, and for the manufacture of large or small ware, narrow-neck, wide-mouth, and even some small pressed ware. Mixed orders of different shapes may be produced on any number of sections of one I.S. Machine, provided all sections require the same weight and shape of gob and the same forming speed.

2. HIGHEST QUALITY

Independent control of every glass-forming action in each individual mold—a distinctive feature of the I.S. Machine—aids materially in assuring highest quality of either common or difficult ware. Distribution is controllable to an exceptional degree, a dominating factor where "light weighting" is desirable.

3. INCREASED PRODUCTION

Because the I.S. Machine produces more ware per mold per minute than any other forming machine, fewer molds are required for filling any given order in a given time. Through continuing research and improvement, the rate of productivity is constantly being increased.

Standardization of mold design and of dimensions of parts assures getting jobs into production quickly.

Note: For best quality and maximum efficiency, it is essential to use a Hartford-Empire Feeder.

4. ACCESSIBILITY OF SECTIONS

Most adjustments are made without stopping the machine. Independent control of each section permits individual mold changing, adjustment, and repair.

5. SAFETY

The straight-line, stationary I.S. Machine, assures the safest conditions possible for operating personnel.

6. STAMINA

Precision standards of manufacture and rugged construction of the Hartford-Empire I.S. Machine guarantee long life. One example is the heavy linkage used and the ruggedness of the mold-handling parts. As a result, some machines are still in use after 30 years of service.

7. CONTINUAL IMPROVEMENT

It is the policy of the Hartford-Empire Company to improve continually the design of its machinery. The principle of the I.S. Machine permits modernization in accordance with new advances in design.

8. NON-JAMMING ACTION

It is virtually impossible to jam the Hartford-Empire I.S. Machine, because of its pneumatic operation. Any obstruction in the machine merely stalls action without causing serious damage.

5-SECTION I.S.			4-SECTION I.S.			3-SECTION I.S.			SINGLE-SECTION I.S.

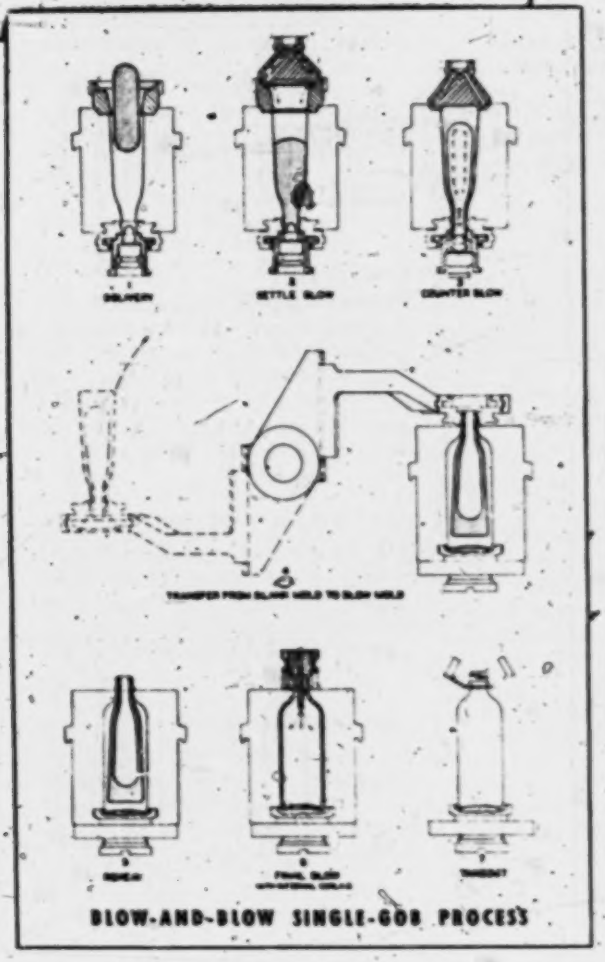
[fol. 715]

FUNCTIONAL OPERATION of the HARTFORD-EMPIRE I.S. MACHINE



THE MOLD CHARGE is fed to the blank (parison) mold of each section by the delivery system. The parison is formed upside down and is then transferred to the blow mold by means of the neck-ring mechanism, which immediately returns to the blank mold. Finished ware is blown in the blow mold while the next parison is formed. To aid in high-speed production, a unique take-out and conveying system is provided. To satisfy all plant layout requirements, the conveyor may project either to the right or to the left, and may deliver either directly to a stacker, which is recommended, or to a secondary conveyor. A feeder motor drives the I.S. control drum, from which all functions are pneumatically operated. Correct timing between the feeder and I.S. Machine is accomplished by means of an infinitely adjustable differential drive.

HARTFORD-EMPIRE "62" PROCESS

Readily applied to the I.S. Machine, the Hartford-Empire "62" Process, which is a press-and-blow operation, improves conventional forming processes of light-weight, wide-mouth ware by forming the complete parison immediately upon glass delivery in the blank mold. This process produces improved-quality ware, ideally controlled glass distribution, and very substantial speed increases over I.S. blow-and-blow methods. The mechanism includes a long-stroke pressing-plunger unit.

Blank molds and plungers are designed to formulas based on experience with the process. Certain pressed articles can also be made with the "62" mechanism.

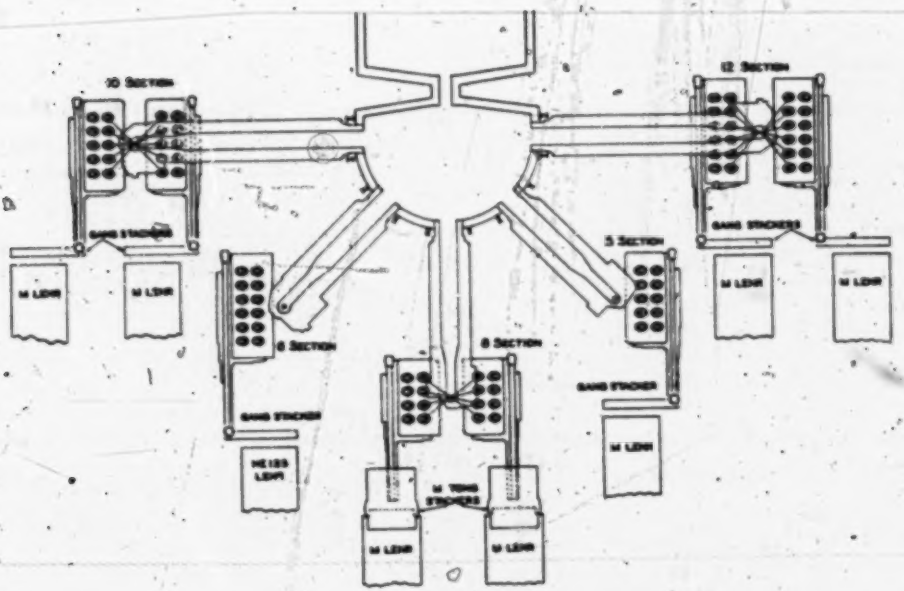
VARIOUS I.S. MACHINE COMBINATIONS

COMPOSITE DIAGRAM



The Individual-Section Glass-Forming Process particularly lends itself to future advancement of practices and efficiency in the glass factory. Hartford-Empire's engineers are always available to help work out individual applications for all Hartford-Empire glassmaking equipment. In the above diagram, the various combinations possible with the I.S. Process are shown. Here, at a glance, is revealed the unequaled ability of the I.S. Process to meet varying production requirements with minimum investment.

2276

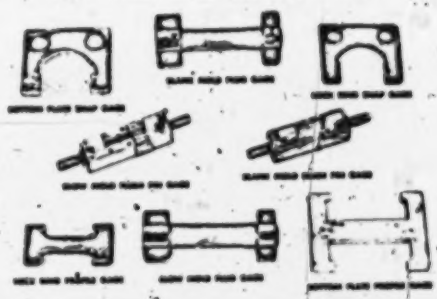
[fol. 718]

MOLDS FOR THE I.S. MACHINE

Mold-design specifications, incorporated in data books, are available to all users of the I.S. Machine and all makers of I.S. molds. These specifications, based on the best experience in the container industry, have been accumulated to meet the steadily advancing techniques in this process.

Mold-equipment gages and mold test fixtures are available at additional cost. The gages assure correct interlocking fits and interchangeability of the mold parts themselves. The test fixtures serve as a final check of mold interlocking and machine registration so as to prevent possible operating difficulties.

I.S. MACHINE MOLD EQUIPMENT GAGES



MOLD ENGINEERING

The H-E Mold Engineering Service Group designs and prepares complete manufacturing drawings of mold equipment at a moderate cost for all Hartford-Empire forming machines. Improvements in forming practices, glass composition, and machine or auxiliary equipment are a few of the many factors taken into consideration in preparing mold drawings. Standard or special designs can be completed within a few days after receipt of specifications. If a customer desires, the mold equipment itself can be furnished through Hartford-Empire, in which case it will be inspected prior to shipment.

PRECISION SPARE PARTS

Standard replacement parts are available for periodic repairs. These precision-built parts are manufactured from production drawings and are interchangeable on any machine in the field. A list of recommended replacement parts is supplied by Hartford-Empire. A moderate inventory of these components is recommended. Their immediate availability is assurance against any prolonged break in the continuity of operation when overhaul is required.

[fol. 719] 2277

AUXILIARY EQUIPMENT

To meet the specialized production requirements of glassware manufacturers, the Hartford-Empire Company has developed a number of auxiliary devices to be applied to the I.S. Machine. Available at moderate cost, these devices extend the scope of the I.S. Machine far beyond its original design. Future improvements in design may result in even greater potential. Hartford-Empire engineers are available at all times for consultation on the practical application of such auxiliary equipment.

DOUBLE-GOB EQUIPMENT

With double-gob equipment, two bottles are formed simultaneously in a double-cavity mold or in individual dual molds. Double-gob production is recommended for large orders which are to run a full week or more. The equipment consists of double-gob mechanisms, delivery equipment, and mold and take-out equipment. Parts such as shears, for adapting the feeder to double-gob operation, must also be applied.

DOUBLE-GOB "62" EQUIPMENT

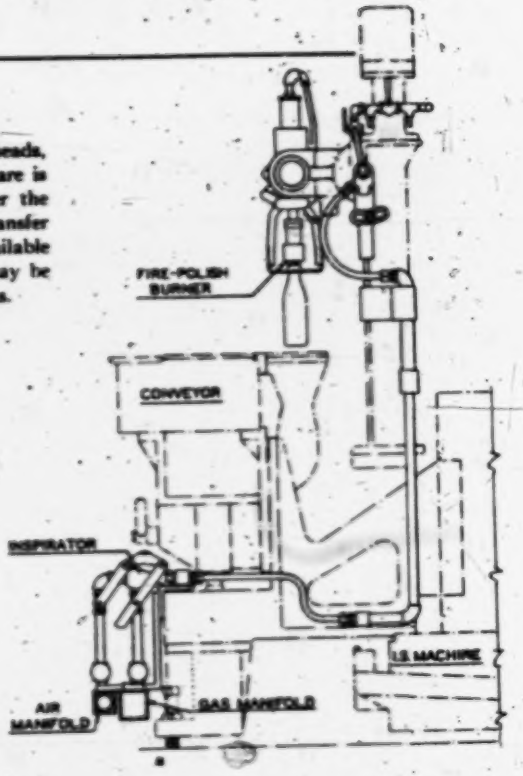
For quantity production of light-weight wide-mouth ware, the Hartford "62" Process is combined with standard double-gob equipment. The mechanism includes a double pressing plunger unit with individually controlled plunger pressure. It is recommended when one job will run for two weeks or longer, or when several jobs will exceed one month in combined time.

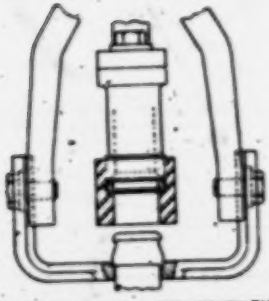
ADVANTAGES OF DOUBLE-GOB PROCESS

1. About 60 to 70 per cent greater productivity is possible from a given amount of floor space and forming-machine equipment.
2. Feeder and labor fuel cost per bottle is lower.
3. Double-gob operating efficiency is practically the same as single-gob for a single bottle, when the double-gob equipment is operating within its range.
4. Mold-equipment cost per bottle is lower.
5. The initial investment for a four-, five-, or six-section I.S. Machine, equipped for double-gob, is lower than an eight-, ten-, or twelve-section I.S. Machine operating single gob.

FIRE-POLISHING EQUIPMENT

This auxiliary device features take-out burner heads, which fire-polish the tops of ware while the ware is being removed from the blow mold and after the ware has been placed on the dead plate for transfer to the conveyor. Fire-polishing equipment, available for both single- and double-gob operations, may be used with natural, manufactured, or bottled gas.





ENLARGED VIEW OF FIRE-POLISH BURNER

DEAD-PLATE CONVEYORS

Single Dead-Plate Conveyor

The single dead-plate conveyor incorporates one cooling plate on which the ware is placed after removal from the mold, before it is transferred to the conveyor belt.

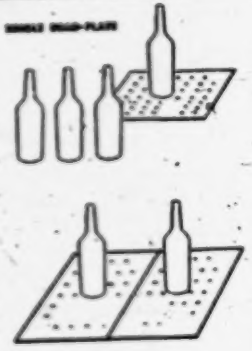
Double Dead-Plate Conveyor

The double dead-plate conveyor provides two dead plates for each machine section and a separate wind control for each dead plate. Approximately 20% additional cooling air is available.

Each container is placed upon the first dead plate by the take-out mechanism, and is then transferred to the second plate by a cam-actuated pusher having a straight-line motion. The container is then transferred to the conveyor belt by a similar pusher, which is operated by a second cam.

The double dead-plate conveyor can be arranged for single-gob or double-gob operation, or may be operated as a single dead-plate conveyor for single-gob or double-gob operation.

All units can be arranged for either right- or left-hand delivery as specified.



[fol. 721]

2279

COMPRESSED-AIR REQUIREMENTS FOR I.S. MACHINES

6-SECTION I.S.	BLOW AND BLOW		"NI" PROCESS	
	Single Gob	Double Gob	Single Gob	Double Gob
OPERATING AIR	415 C.F.M. (11.74 Cu.M./Min.)	415 C.F.M. (11.74 Cu.M./Min.)	510 C.F.M. (14.43 Cu.M./Min.)	450 C.F.M. (12.74 Cu.M./Min.)
INTERNAL COOLING	120 C.F.M. (3.40 Cu.M./Min.)	Not Available	120 C.F.M. (3.40 Cu.M./Min.)	Not Available
SETTLE BLOW	60 C.F.M. (1.70 Cu.M./Min.)	60 C.F.M. (1.70 Cu.M./Min.)	Not Req'd	Not Req'd
PLUNGER COOLING	Not Req'd	Not Req'd	210 C.F.M. (5.94 Cu.M./Min.)	300 C.F.M. (8.49 Cu.M./Min.)
TOTALS	595 C.F.M. (16.84 Cu.M./Min.)	475 C.F.M. (13.50 Cu.M./Min.)	840 C.F.M. (23.80 Cu.M./Min.)	750 C.F.M. (21.30 Cu.M./Min.)

Note: If internal cooling is used, the operating-air requirements may be decreased by approximately 25 C.F.M. (0.71 cubic meters per minute).

(a) For other I.S. Machines, the air requirements are proportional to the number of sections.

(b) All air requirements are maximum free air at 70°F (21°C) and 14.7 lbs. per sq. in. (1.0335 Kg. per sq. cm.)

(c) Operating air regulated to 30 lbs. per sq. in. ± ½ lbs. (2.109 Kg. per sq. cm. ± .0176 Kg.)

(d) All other air is at factory pressure, usually about 40-50 lbs. per sq. in. (2.81-3.52 Kg. per sq. cm.)

(e) The compressed air used with the I.S. Machine should be clean and dry as obtained through the use of a well-designed aftercooler.

COOLING AIR

Mold-cooling air may be introduced to the I.S. Machine from overhead, as shown on Page 2, or from basement supply ducts. Approximately 2240 cubic feet of cooling air are required per section at 15 inches (0.0380 Kg. per sq. cm.) water pressure. This is sufficient for all weights and types of ware within the capacity of the machine, for glass of average container quality, and with average operating technique.

Where double dead-plate conveyors are used, the cooling air requirements are increased by approximately 20 per cent. In the following tabulation are given the air requirements for the various types of I.S. Machines.

NUMBER OF I.S. SECTIONS	Cubic Feet per min. @ 15" water (28 mm., mercury) pressure and Cubic Meters per min. @ 0.0380 Kg. per sq. cm.			
	TYPE 117 SINGLE DEAD-PLATE CONVEYOR		TYPE 117 DOUBLE DEAD-PLATE CONVEYOR	
	Cubic Feet	Cubic Meters	Cubic Feet	Cubic Meters
1	2,240	63.43	2,688	76.12
2	4,480	126.86	5,376	152.23
4	8,960	253.72	10,752	304.46

6	13,500	382.28	16,000	453.07
8	17,920	507.44	21,504	608.93
10	22,400	634.30	26,880	761.16
12	27,000	764.56	32,000	906.14

[fol. 722]

I.S. MACHINE PRODUCTION RATES

In this table are shown normal production rates of I.S. Machines served by Hartford-Empire Feeders. Unless otherwise indicated, these figures are based on the best average performance obtained at a given weight.

Attainable speeds are affected by:

1. Weight-Capacity Ratio
2. Shape of Container
3. Glass Composition
4. Operating Practice

Packed ware per 24 hours is the true measure of machine performance.

The practical limit for hand gathering for the Single-Section I.S. Machine is 10 to 12 per minute.

	GRAMS WEIGHT	OUNCES WEIGHT	MOLD CHANGES PER MINUTE	GROSS PACKED PER 24 HRS.	PIECES PACKED PER 24 HRS.
5-SECTION MACHINE NN Blow and Blow	Less than 28	Less than 1	76.3	712	102,528

Narrow Mouth Prices

Bob Graham has some charts which show prices of cans vs. glass on specific items past ten years. Charts indicate that the differential has widened (instead of narrowing) and I would like to see the figures (also plotted) on baby food, 303 jars, 300 jars, soluble coffee, or any W/M figures you have. This could also be interesting on a N/N major item such as syrups, etc.—if you have 'em.

These figures will be important in making our decision on prices. The 1.9% price increase announced on cans covered cost increases for 1953. The Can Companies have recently taken on a $.15 per hour labor increase, and they will undoubtedly be confronted with making a decision soon on increases they expect to make to be effective April 1, 1954. Even if they should decide to add another 3 or 4%, this might be the time that we want to stay a bit under them to restore the differential—or at least level it out.

How soon can we get these figures and charts on a couple of items, preferably baby food and soluble coffee—and a N/N item?

Present:

G. S. Babcock, H. A. Barnby, M. G. Beishline, C. G. Bensinger, E. F. Bertrand, F. T. Cantrill—Richmond, J. W. Colbert—New York, F. N. Davis—Dallas, S. F. Davis, R. E. Delaplane, R. L. Fetters—Nashville, M. A. Hellrung, C. G. Houghton—St. Louis, E. M. Jones—Cincinnati, E. C. Jones—Chicago, Frank Jones, Jr.—Atlanta, H. C. Knepper—Cincinnati, R. M. Koehrman, N. J. Laird, C. R. Megowen, S. L. Rairdon, W. M. Robertson, C. I. Rodgers—New York, J. A. Rudy, J. A. Runnels—Atlanta, E. F. Schafer, O. D. Snavely, F. J. Solon, K. J. Solon, K. S. Upham, R. C. White—San Francisco.

Opening Remarks

Mr. S. F. Davis welcomed the group and commented on some of the problems present in today's business. He also stated that many of the problems of the newer salesmen should be handled at the branch or regional level, rather than be referred to Toledo.

Container Division Program

Mr. C. G. Bensinger commented briefly on profits by line and profits by branch pointing out that the latter figure is definitely beneficial to branch operation. He also stated that this year production is geared to manufacture 40,000,000 gross, and that by a level operation throughout the year, thus keeping trained personnel, this figure could be increased to 42,000,000 gross. Idling and curtailing operations means laying off valuable people and incurring high rehiring costs. He stated that we should reduce costs to meet future wage increases, thus not having to increase prices. Mr. Bensinger commented that if each salesman would make one more call per day, the increased sales would result in cost reductions. He felt that the bottle salesmen should know more about closures, and thus be in a position to sell the complete package.

Earnings, Objectives, & Competitive Situation

Through the first six months of this year, Mr. M. A. Hellrung stated that we are substantially below earlier indications of a good profit performance. From the latest estimate, it appears that 1954 will not equal '53 performance before tax although elimination of the excess profit tax will improve the after-tax picture. He also pointed out that while we picked up seven-tenths percentage points in industry position for the first half, it was on a less favorable mix of ware. We sold 1.6% less tons than a year ago and 2.8% [fol. 728] less tons than the first six-months forecast, due on a large part to December price-buying of Beverage and Dairy ware. Manufacturing volume for the first six months of '54 was up 1.5%. This enabled us to maintain a more stable employment pattern. However, the resulting inventory increases meant heavy expenditures in outside warehouses. The expense of outside warehousing will be reduced upon completion of new plant warehouses in 1955. He stated the only way to achieve any kind of a satisfactory profit picture this year must come about through an emergency cost reduction program. At this point Mr. Hellrung presented charts and discussed in detail the subjects of profit objectives and performance against these objectives, gross sold vs. forecast sales and earnings, industry position by lines, sales vs. quotas, and budget efficiency. Mr. Hellrung also commented the current competitive situation.

Production & Manufacturing Program

After discussing our 1954 production, Mr. M. G. Beishline stated that next year capacity will be 44,000,000 gross; in 1956, it will be 46,500,000; and in 1957, 47,500,000. This increase of 5,500,000 million over our present 42,000,000 production capacity would be accomplished by machine conversions, continued increased double gobbing, the new Bridgeton "H" furnace, conversion of Bridgeton's "A" furnace to Flow, and continued production increases. Mr. Beishline stated that this year we began with a 3,500,000 gross inventory and that next year we will begin with about a 4,000,000 gross inventory. In order to accommodate this year's inventory, we are spending $3,000,000 for warehousing in 44 buildings off our plant premises. After taxes, this

is a penalty against earnings of $1,500,000. Management has approved three new warehouses during the past seven months totaling 750,000 square feet, at an average cost of about $1,000,000 each. These warehouses will not increase our storage capacity but will reduce the costliness of outside storage. Mr. Beishline also stated that the G-50 Machine is back in operation at Huntington after being idle for nine weeks. The ARF Machine on Alton's "M" furnace is now scheduled for operation in September. He also commented on such things as unit load shipments, colorant forehearths, and glued manufacturers' joints.

Closure & Plastics Program

In discussing this topic, Mr. G. S. Babcock reviewed the new organizational setup in the Closure and Plastics Division. He stated that Glassboro will laminate and wax line materials for San Jose and St. Charles plants. He also stressed the importance of selling plastic jars to replace opal glass. Mr. Babcock also emphasized the importance of bottle salesmen selling closures, thus providing one source of responsibility for a complete packaging service.

[fol. 729] Surface Treatment, Inventories, & Carton Development

Mr. K. J. Solon discussed the expanding interest in surface treatment. He further pointed out that we have started to run tests on various items employing four different coatings—the GE silicone, Dow Corning silicone, polyethylene wax, and 15-101. When these tests have been completed, evaluation of the effectiveness of the different kinds of coatings will be presented. In discussing our inventories and warehousing programs, Mr. Solon pointed out that with the permanent increase in the size of inventories, the risk of aging also increases. Therefore, we must be sure that the expensive warehousing facilities are used economically. Recent carton developments featuring the tear-strip principle for opening cartons has been adopted by about 45 accounts. More recently, work has been done on inner-flap printing which controls the adhesion to the unprinted surfaces.

Personnel Requirements

Mr. E. F. Schafer discussed the interviewing methods used by the Company, and further pointed out the changes that have occurred in the type of men available. He mentioned specifically what he terms "job hopping"—they quit jobs fast, often without notice for better opportunities or more money. He also discussed the difficulties that arise when both the husband and wife are employed, as well as the Military Service aspect. Mr. Schafer also discussed the method of hiring used by the Maytag Company. That company sends a questionnaire to twelve references, asking them to rate the man on eight or ten factors.

S. L. Rairdon

Mr. Rairdon spoke on the topic "Selling to Sellers," pointing out many of the facets of the business job of selling advertising. The use of newspapers, radio, and television as a selling tool were discussed. Mr. Rairdon stated that it is interesting to note that there is currently little emphasis on the importance of economy as a purchasing factor of the consumer; instead, the trend is toward convenience, attractive appearance, contributions to health, and connotations of prosperity. There have been dramatic changes, not only in packaging and distribution, but in customer buying habits as well. Convenience was from the beginning the driving force which moved merchandise from bulk to packages, and today the drive towards convenient packaging is greater than ever. Mr. Rairdon reminded those present that we have the resources for technical research, product design and manufacture, plus the all important know-how in advertising, merchandising, and selling techniques—all geared to an ever-changing pattern.

Western Region

In commenting on this region, Mr. E. F. Bertrand stated that the outlook in Peoria, Detroit, and St. Paul was good. Milwaukee is showing some improvement, while the Toledo area remains critical. Chicago business is strong but not too optimistic for the second half. The competitive situation is still strong in the region. Mr. Bertrand stated that the PIA program has brought substantial business into the area dur-

ing 1954, quality and service have improved, and the dollar billings should be up for the last half of this year.

[fol. 730] Southwestern Region

Mr. F. N. Davis stated that the market outlook was generally good in the face of strong competitive activity. He pointed out that the M&M situation is not satisfactory. Due to the increase in freight rates, many food and vegetable packers are moving into the region. Mr. Davis discussed the need for alterations on the split-sales credit plan.

Eastern Region

Mr. C. L. Rodgers stated that in the last half of this year we should do as well or better than we did in the same period of last year. In the case of New York Branch despite very poor shipments to the liquor industry, they are 7.7% ahead of six months of last year. For the first six months of this year, Philadelphia is 2.1% ahead of the same period of 1953; and with the heavy food shipments that they normally expect in the fall, it is the hope that they can exceed the last six months of 1953. Baltimore and Boston should finish the year in relatively good shape. Although due to high percentage of beverage and milk bottle business, they may have more difficulty than some of the other branches. Mr. Rodgers commented that he continues to get complaints from the branches on the matter of service out of the plants and the length of time always required to get answers from our people. He also stated that most of the Eastern branches are going to be helped materially by the increased operations at Bridgeton.

Midwestern Region

Mr. C. G. Houghton stated that the sales for this region are expected to exceed last year. Through the first six months of '54, they are substantially ahead of the same period of the prior year. He did state that the Indiana tomato pack is one of the smallest they have had in years in that area. Mr. Houghton also brought up the question of changes in the salesmen contest prizes, suggesting better prizes for both the Salesmen of the year Contest as well as the President's Club.

Southern Region

Mr. J. A. Runnels remarked that with the exception of the Memphis trade area where cotton plays such an important part, the market outlook is very good. In the Kentucky area, there has been a reduction of better than 25,000 people at the atomic energy plant in Paducah. It is felt, however, that the outlook in other sections of the Southern Region will more than offset these reductions, and he is confident that the Southern Region will finish the year with sales greater than the prior year. In speaking on quality, he stated that while our quality continues to be good, competitors' quality has shown a marked improvement, reducing to a very large extent the difference in quality which has been a major sales tool.

Central Region

Mr. E. M. Jones stated that they are doing their best to offset the transfer of the Schenley business to New York and in that connection reported some interesting new business developments involving decorated tumblers for Scull at Dayton, changing the Mentholatum Company, Buffalo, from traditional Opal to Emerald Green, as well as some Kroger business. Mr. Jones also commented on the [redacted]ex Window Cleaner bottle recently designed by Dwight [redacted]st for the Drackett Company, which enabled them to hold down their costs. That move was not only appreciated by the customer, but also was very instrumental in our holding the business. In closing, he commented that service and quality is good.

[fol. 731] Pacific Coast Outlook

Mr. K. C. White stated that the Coast problems and situations were parallel to those of the East, mentioning specifically the canned beverage situation. He stated that their catsup, baby food, and food and vegetable business looks good. Wine is currently off, but improving.

Chicago Branch

Mr. E. C. Jones presented a divided sales credit policy. His proposal was that while each account must be judged on its own merits, the percentage that goes to each depends on how much control that branch has over the purchasing

done by the account involved. In order to qualify for split credit, annual billings into any shipping destination must reach $25,000. After fulfilling these requirements, the individual account would fall into a particular category which carried definite percentage splits within limits of 25% to 75%.

Richmond Branch

Mr. F. T. Cantrill commented briefly on some of the local branch situations. He also stated that he was of the opinion that great value was derived from holding regional sales meetings in our factories. These trips through the plants disclose new developments and are very helpful to the salesmen.

Nashville Branch

A Merchandising Canned Beverage Campaign was recently conducted in the Memphis area, and Mr. R. L. Fetters stated that many complaints were tabulated. Some retail outlets were still holding some of this stock. Complaints were rusted shoulders, off-flavor, etc.

Atlanta Branch

Frank Jones stated that through six months of this year, Atlanta is running approximately 6% ahead of the same period last year. He further added that they are in a growing market area and should be greatly benefited by the Atlanta plant.

Cincinnati Branch

Mr. H. C. Knepper pointed out that quite often customer personnel changes as well as ours, and often times this is an opportunity for our salesmen to build a position with a customer that he was unable to do so with before. He also felt that major account contacts by top Toledo personnel were extremely beneficial.

Packaging Research

Discussing the Packaging Research program, Mr. H. A. Barnby covered some of the problems of the beverage can. He also pointed out that competition is learning customers' needs and working them into selling needs, such as customer, plant layouts, experimental packs, etc. He also dis-

cussed the fact that new plastic containers allow for forming and filling at one point of operation.

Mr. C. R. Megowen

Mr. Megowen reviewed the operations of all of our divisions, specifically discussing sales and earnings, as well as the perspectives of the business. He also commented on the potential that lies ahead of American industry. Since ours is a service organization, Mr. Megowen enumerated many new facilities which will aid us in giving our customers [fol. 732] better service. In view of the increase in freight rates, he pointed out the importance of weight reduction in containers.

December Branch Managers' Meeting

Mr. E. F. Schafer stated that tentative dates were December 6th and 7th. Considerable discussion followed regarding the merits of holding one large meeting as contrasted to the regional groups meeting with the various industries.

Beverage Industry Plans

Mr. R. E. Delaplane stated that for the first six months of this year, Beverage Division sales were off 14.5%; Coca-Cola, off 32.4%; and Liquor, 1.2%; Brewery was ahead 17.2% for a net decrease in the Beverage Industry of 4.5%. Increased billings on Brewery ware were due to two factors: (1) PIA stocks; (2) heavier purchases of returnable bottles by several large breweries. The fact that the Beverage Industry position at the end of six months is only 2/10 of 1% below last year's figure for the same period indicates that we are not alone in our difficulties. Mr. Delaplane stated that press releases indicate that the liquor business has been off quite generally during the first six months of this year. Mr. Delaplane reported that our sales to Beverage and Coca-Cola accounts are down because of heavy purchases in the fourth quarter of last year, poor weather, the trend toward paper cup dispensers, and heavy inventory by competitors. In discussing the sales outlook for carbonated beverages including Cokes, the outlook is mixed. Bottlers this year are faced with can competition; and since it is felt that can sales are being made at the expense of bottled goods, the orthodox users may not attain

last year's sales levels. This can competition plus our huge shipments in the fourth quarter of '53 combined to force the feeling that our 1954 business cannot possibly match or exceed last year. Mr. Delaplane also stated that the annual Beverage and Brewery Sales Meeting will be held in Toledo on September 23rd and 24th.

Drug Industry Plans

Mr. W. M. Robertson reviewed sales figures for each of the divisions. Mr. Robertson pointed out that they have stressed additional volume with their top accounts; and in the case of the top fifteen T&C accounts, they have enjoyed an increase totaling approximately $500,000 with twelve of the first fifteen. He stated that in the Prescription Division, the Flint Rx. Square has created new interest and it has set a new pattern in the prescription ware field. He also mentioned that they are studying and analyzing a change in packaging the Rx. ware line. Mr. Robertson stated that one of the most interesting developments within the P&P Division was the introduction of the Shelf-Pack line. There are nineteen sizes available. He also remarked about the change from Opal to Emerald Green glass with Musterole and [fol. 733] Mentholatum. In the H&C Division, Mr. Robertson explained in detail the redesigning of the Windex bottle for the Drackett Company. Lighter weight work is also being done for Boyle-Midway. In closing, Mr. Robertson explained the new organizational setup of the Drug and Chemical Division.

Food Industry Plans

Mr. K. S. Upham stated that for the first six months of this year, the Food Industry sales were approximately $6,000,000 ahead of the same period last year. This points toward an 80 to 85 million dollar year for the Food Industry. Mr. Upham displayed containers they are working on presently which have a re-use, as home freezer jars. In addition they also make a very satisfactory refrigerator storage jar and are completely satisfactory for home canning. This type jar is particularly suitable for such products as salad dressing and mayonnaise, mustard, peanut butter, cake frostings, etc. Mr. Upham pointed out that work must be done with

Dairy jobber salesmen so as to improve our position in the fluid milk business.

Closure & Plastics Plans

Mr. J. A. Rudy pointed out that sales for the first six months are up approximately 11% compared to a year ago. This is due largely to increased sales of Vapak caps. Mr. Rudy displayed samples of metalized molded closures and commented in the increased billing value that can thus be obtained. He stated that the plastics business is a fast growing industry and solicited the salesmen to contact Toledo with their problems. Mr. Rudy also commented on the possibility of plastic containers as substitute for Opal ware. In this regard, he pointed out that plastic containers lend themselves to the cosmetic trade since they can be made very decorative. In closing, Mr. Rudy stated that there are developments on both closures and plastics which are going to present sales opportunities.

Closing Remarks

In summary, Mr. Davis commented on the growth of the Glass Container Division in the last year and half and stressed the amount of money spent for research and the important part that it plays as a sales tool. He emphasized the importance of the lighter weighting program and stated that salesmen should be trained to consult regional or branch managers with their problem before referring them to Toledo. Mr. Davis also stressed that branch action must be taken to relieve our present inventory and cancellation situations.

R. M. Koehrman

RMK:bb

[fol. 734] GOVERNMENT'S EXHIBIT 235d

Sales Policy Committee Meeting

Tuesday—Wednesday, February 23 and 24, 1954

Duraglas Center Theater

Members Present: H. A. Barnby, E. F. Bertrand—Chicago, S. F. Davis—Chairman, R. E. Delaplane, M. A. Hellrung, C. G. Houghton—St. Louis, E. M. Jones—Cincinnati, W. M. Robertson, C. L. Rodgers—New York, J. A. Rudy, J. A. Runnels—Atlanta, K. J. Solon.

Members Absent: C. G. Bensinger, F. N. Davis—Dallas, E. F. Schafer, F. J. Solon, K. S. Upham, K. C. White—San Francisco.

Also Present: W. P. Adams—Philadelphia, G. S. Babcock, M. G. Beishline, H. J. Carr, J. W. Colbert—New York, R. A. Cosh, J. Duncan, Jr., R. E. Graham, H. C. Gstalder—Detroit, K. A. Hamel, George Harsh—New Orleans, Bert Herron, E. C. Jones—Chicago, R. M. Koehrman, J. P. Levis, J. M. McGarry, W. D. Plummer, S. L. Rairdon, J. W. Thayer—New York.

Opening Remarks

After welcoming the group, Mr. S. F. Davis announced that the purpose of the meeting was to discuss the present price and cost situation and its relationship to corporate earnings. Mr. Davis also pointed out that the younger salesmen refer too many of their problems to Toledo when actually they can be answered by the Branch or Regional Manager.

Earnings and Prices

Mr. M. A. Hellrung presented and reviewed charts on sales and profits, profit by line, branch expense, and cost increases. He pointed out that in 1953, the per cent profit after tax dropped and that in view of cost increases in raw materials, labor, fuel, and power, increased revenue was necessary. Mr. Hellrung also presented a new price increase card which will be furnished to the Sales Department. This card, based on percent of increase over the 1935-1939 average, compares the O-I selling price with such indices as consumer prices, freight rates, soda ash, wholesale commodity prices, and O-I wage rates.

Manufacturing Program

The manufacturing program was reviewed by Mr. R. A. Cosh. He discussed such things as our use of colorant feeders, electric boosters, increased mold costs, a more sensitive gauging head, and warehouse facilities. He particularly pointed out increases in power costs and the necessity for auxiliary fuel installations to offset gas curtailments present in the winter months.

Production Program

In discussing the production program, Mr. M. G. Beishline pointed out that due to the P.I.A. program, additional rented warehouse space has increased our costs in that respect. This has prompted plans for additional warehouse space on our own properties. At this point, Mr. Davis called attention to the fact that due to the relatively limited shipping facilities, it is impossible to move great amounts of ware from outside warehouses during a short period of time, [fol. 735] such as we might encounter prior to a price increase. Mr. Beishline stated that in 1953, approximately 36 per cent of our production was from Flow operations. Of this, almost half was double gob. He estimated that in 1954, Flow production would be approximately 40 per cent of the total and by 1960, about 50 per cent of our production would be Flow.

Closure & Plastics Division Expansion Plan

Mr. G. S. Babcock called attention to the Closure and Plastics Meeting in Philadelphia, March 1 and 2, as a means of building product knowledge on the line. He mentioned improved liners and new equipment at Glassboro for making our own liners, new assembly units, and new injection machines. Clorox's decision to use an aluminum cap rather than a molded closure has opened up considerable Lauterbach time.

Trade Relations

Mr. J. Duncan, Jr. discussed Trade Relations.

Institutional Advertising Plans

Mr. S. L. Rairdon pointed out the definite need for an institutional advertising plan to further the new corporate identity program. In this regard, Bert Herron presented

six display formats covering Color-Break ampules, dry milk powder, Libbey tumblers, instant coffee, glass block, and plastic items used in conjunction with glass containers.

Packaging Research

Mr. H. A. Barnby commented on improvements in the speed of filling line operations and the synchronization of the capper and filler into one unit. He mentioned the future possibility of Freon 114—pressure less than twenty-five pounds—as a possibility for glass spray packages. Present supplies of this gas, however, are limited; and therefore, its adoption is not practical at this time. Mr. Barnby also pointed out that the customer should not consider the cost of the glass based simply upon delivery to his dock, but what it may represent in greater efficiency in the packing operation.

Beverage Industry Plans

Mr. R. E. Delaplane commented on the Beverage Industry plans for 1954. He presented a table indicating a 1954 sales forecast of $82,800,000, or 7.1 per cent over 1953 actual. This represented a grossage increase of 1,139,000 gross. Regarding Liquor and Wine, Mr. Delaplane stated that they will aim specifically at an increased position with Schenley, Seagrams, and Hiram Walker justified by giving them the utmost in the way of service, quality, and the closest possible attention at all times. The Liquor Division will also continue to develop new and eye-catching decanters for the holiday trade, since they are good profit items. They will maintain contacts with major wineries, pushing for their adoption of Champagne Green, which of course takes them out of the competitive market.

In commenting on the Brewery Division, Mr. Delaplane pointed out that the 1953 volume was off about one million dollars from the prior year due to our inability to serve them during the summer months. This was brought about in part, due to the transition from GB-8 to GB-7, which prevented making considerable inventory. The Brewery Division is entering the year of 1954 with a better position inventory-wise and are hopeful that they can regain some of the position lost in 1953. Mr. Delaplane stated that during this year, they plan on having more contacts with the

major beverage parent companies such as Coca-Cola, Pepsi Cola, Canada Dry, etc. They have been participating actively in more important state bottlers' meetings and will continue to do so. The most active sort of solicitation seems indicated if they are to keep abreast of the activities on cans [fol. 736] versus bottles for beverage. At this point, Mr. Delaplane presented considerable detail on advantages and disadvantages of beverage in cans as well as discussing bottlers operating can lines.

Drug Industry Plans

Mr. W. M. Robertson commented on the Drug and Chemical Industry plans for 1954. In the case of Prescription Division, he mentioned a study is going to be made of the packaging on each Rx. Line. White molded caps with the new plastic coated liner have been added to the Emerald Green Rx. Squares, Emerald Green and Dropper Service. The new Rx. Flint Square Line with white molded closures has already been announced. Mr. Robertson commented on the Prescription Ware selling tools, such as, the 3-D movie, the slide film on inventory control, the giant oval, miniature show groups, and other presentations.

Mr. Robertson stated that in 1953, Toiletry and Cosmetic Division sales were approximately $100,000 greater than in 1952. They definitely expected another substantial increase in 1954 by concentration on major companies. The Toiletry and Cosmetic Division does not have any plans to bring out a new stock line. After analyzing the type of business that they would like to have in the Toiletry and Cosmetic field, it was found that from 80 to 85 per cent of that volume would be on private molds; therefore, they feel that they have ample stock of toiletry and cosmetic items.

In commenting on the Pharmaceutical and Proprietary Division, Mr. Robertson described and demonstrated the new Self Pack Line consisting of twenty sizes and the new pourout finish. He explained that there is a definite trend from Amber to Flint in the Pharmaceutical Industry, this being brought about by colored tablets and capsules. He also commented that with the acceptance of a polio serum, a great potential is found in that field.

The Household and Chemical Division expects their '54 sales to run at least 10 per cent ahead of 1953. They cur-

rently are market-testing detergents packed in tin versus glass. Mr. Robertson stated that the greatest II & C potential for new glass business lies in the chemical field. Heavy bulk chemical houses are developing new products, and the majority of these items are of such a nature that they need glass as their package. All in all, the Drug and Chemical Industry is looking forward to a good 1954.

Food Industry Plans

Mr. R. E. Graham commented for the Food Industry. He stated that Owens-Illinois shipments of Duraglas containers to food customers increased 14½ per cent in 1953 over the prior year. While the shipment to the total Food Industry increased 3,300,000 gross, Owens-Illinois shipments to the Food Industry increased 1,650,000 gross, or exactly half of the total industry increase. Mr. Graham predicted a 10 per cent increase for the Food Industry during the year of '54. This increase will result in sales of over $80,000,000.

Paper continues to make serious inroads in the Dairy Division. It is hoped that additional volume in dry milk solids as well as gallon and half-gallon business will allow the Dairy Division to maintain the same total volume in 1954. The Tumbler and Coffee Divisions predict a 20 per cent increase—'54 over '53. This is expected even in light of tremendous increases in 1953 in the sales of containers for preserves, jellies, processed cheese, and soluble coffee. The Prepared Foods Division expects to maintain the 1953 [fol. 737] grossage in the current year. Certain losses of volume will be offset by increases in pickle, mustard and sauce glass. In the Processed Foods Division, Mr. Graham expects an increase of about $3,000,000. This is expected to come from catsup, baby foods; table syrups, and eatable oils.

Closure & Plastics Plans

In discussing the Closure and Plastics plans for 1954, Mr. J. A. Rudy stated that we have the advantages of Owens-Illinois plusses in the manufacture and service of closure and plastic items. Mr. Rudy stated that they expect a substantial further increase in caps for baby food due to Vapak. He commented on torque control units to eliminate breakage and assure good sealing as well as experiments on thread contour, giving improved torque control. Mr. Rudy stressed

the importance of using plastics in conjunction with glass for such items as pourouts, sifters, applicators, etc.

Western Region

Mr. E. F. Bertrand commented that the market outlook in 1954 for the Western Region was favorable. With the exception of some isolated problems, quality in the Western Region is generally good. Mr. Bertrand felt that our present M&M stocks are not adequate, and in many cases, we fail to meet customers' needs for that particular reason. There are even instances where we lose volume on items we can deliver simply because we are not able to supply certain other M&M items customer needs. At this point, other sales representatives agreed with Mr. Bertrand. Mr. Beishline stated that they would study the M&M situation. A survey will also be conducted whereby branches will report to Toledo on a biweekly basis any M&M outages they encounter, as well as the volume lost because of the shortages.

Eastern Region

Mr. C. L. Rodgers stated that some of the Eastern Branches are not measuring up to 1953 sales, but feels that by the end of the first quarter, they will equal '53. New York and Albany are running ahead of the prior year, and Philadelphia, the second largest Eastern Branch, is only slightly behind the same period last year. The Eastern Branch group is relatively optimistic about the current year. Mr. J. W. Colbert also commented that M&M outages are a definite problem.

Midwestern Region

Mr. C. G. Houghton commented on the Midwestern Region. He indicated that the general outlook in the Omaha territory appears to be good with every indication that sales through 1954 should show an increase over 1953. Sales in Kansas City Branch will show approximately a seven per cent gain through the first 60 days of this year. The Indianapolis market outlook is generally good, although it may vary in activity by lines. The Louisville Branch predicts that their business volume in '54 should closely approximate last year. There is some indication that spirit blended whiskey will continue to lose position to the straights. If

this becomes a fact, we can look for a slight shrinkage in Seagram volume, but this could be picked up through Brown-Forman, Stitzel-Weller, Glenmore, etc. Mr. Houghton stated that the St. Louis Branch predicts shipments for the first six months of 1954 to be approximately 20 per cent ahead of last year, this increase largely brought about by Falstaff and Pet Milk. Mr. Houghton also commented on a broker situation in the Midwestern Brewery business.

Southern Region

In commenting on the Southern Region outlook, Mr. J. A. Runnels stated that the Food Industry Division outlook appears to be very bright; Drug and Chemical should hold its own, possibly even show an increase. In the Beverage Industry, demand for One-Way Beers seems to be holding at a good level, however, Beverage orders are soft at the present. None of the Southern Branches have reported any [fol. 738] major complaints as to quality. Service is improving and they have not turned down any business. With the exception of Beverage ware, the inventory along the trade seems to be on the low side, particularly so with food packers. Mr. Runnels stated that our building of P.I.A. inventories will be of great relief; nevertheless, he wanted to comment on the importance of building larger M&M stocks.

Central Region

Mr. E. M. Jones advised that the Central Region's sales for January are 22.7 in the black. With increases from such accounts as Heinz, Schenley, and M & R Dietetic, the Central Region should continue to run considerably ahead of 1953. Mr. Jones mentioned that competition is very active and has encountered increasing instances of competition granting special trucking and handling allowances, free palletization, etc.

Sales Operating Problems

Mr. K. J. Solon commented on abuses of our 1 per cent cash discount. These abuses are: taking unearned discounts, discounts on the gross amount (including freight), competitive practices, and special term's requests. In an effort to rectify this situation, effective March 1, all invoices will show the exact amount of the discount allowable. The Credit

Department will advise Branch and Sales Managers of improper discount practices. Branches will then take up the matter with the customer. Mr. Solon also discussed the control of cancellations and setbacks.

New York Branch

Mr. J. W. Thayer commented that New York's sales in the month of January were over a half million dollars in excess of 1953. He felt that a price increase may result in some loss of volume to the Glass Container Industry in certain glass-tin competitive lines.

Chicago Branch

Mr. E. C. Jones brought up the question of reshipper cases. He stated that our price lists specify 175-pound Mullen test will be supplied where the weight of the package and filled bottles does not exceed 40 pounds. Where weight exceeds 40 pounds but does not exceed 60 pounds, 200-pound test will be used. Mr. Jones pointed out that in many cases we are furnishing 200-pound test when it is not necessary under Rule 41, and furthermore, not in accordance with our policy. He felt that use of the 175-pound test where ever possible would result in an increase in revenue. This has even gone to the point where one of Chicago's larger accounts has asked us to quote lower prices based on supplying 175-pound test outers.

Detroit Branch

Mr. H. C. Gstalder stated that unemployment in the state of Michigan has caused a softening in Beverage, Beer, and Dairy activities. He advised that acceptance sampling has greatly improved our quality on shipments to Gerbers. Mr. Gstalder felt that Paragraph 10 of our contract form should be reviewed since two of his large-volume accounts refused to sign due to provisions of that paragraph. Mr. Davis said the entire contract is being studied along these lines by Babbs and Solon.

New Orleans Branch

Mr. George Harsh advised that competition is stepped up in the New Orleans Branch and mentioned some price and terms concessions granted by competition.

Mr. J. P. Levis

Mr. J. P. Levis reviewed the earnings and financial statistics of the Corporation for the last three years. He pointed out that in view of decreased earnings and increased expenditures, additional revenue was needed.

[fol. 739] GOVERNMENT'S EXHIBIT 304

Articles of Incorporation and Code of Regulations
Glass Container Manufacturers Institute, Inc.
June 5, 1945

Section 10, amended as of December 5, 1945
Section 60, amended as of March 25, 1949
Section 10, amended as of March 23, 1950

[fol. 740] Articles of Incorporation of
Glass Container Manufacturers Institute, Inc.

Witnesseth that we, the undersigned, all of whom are citizens of the United States, desiring to become a corporation not for profit under the General Corporation Act of Ohio, do hereby certify:

Article First

The name of this corporation is Glass Container Manufacturers Institute, Inc.

Article Second

The place in this state where the principal office of this corporation is to be located is the City of Toledo, Lucas County, Ohio.

Article Third

The purpose for which this corporation is formed is to be and conduct a business league not organized for profit, and as a part thereof, in the interests of the glass and allied industries, packers, bottlers, governmental agencies and the general public: to promote the progress of the glass and related arts and sciences; to improve and expand the manufacture and use of glass containers and closures; to foster and facilitate packing and bottling in glass; to improve and increase the efficiency of machinery, equipment and appliances for the manufacture, handling and use of glass containers and closures and techniques in connection therewith; to improve materials and supplies and the use thereof in the manufacture and distribution of glass containers and closures; to expand domestic and foreign [fol. 741] markets; to originate, gather and disseminate technical, statistical and general data and information on tariff, traffic, credit, labor and other matters of interest to those engaged in the glass container industry and related industries; to develop standards for glass containers, closures, quality controls, testing and accounting procedures; to promote the interests of the glass, closure, and allied industries in every lawful manner through research, experimental work, education of the public and glass users, market research and promotion, the reduction of costs, and services to glass container and closure manufacturers,

packers, bottlers and other users; and generally to do all things reasonably incidental to said purpose, necessary, convenient or expedient for the best interests of the glass, closure and allied industries and the general public, to the same extent as an individual might or could do, either within or without the State of Ohio, and in any capacity; but this corporation shall never engage in any activity prohibited by valid law or regulation of either Federal or State authority.

Article Fourth

The names and post office addresses of the Trustees of this corporation, not less than three, who are to serve until the first annual meeting or other meeting called to elect Trustees, are:

Name	Address
Lewis F. Gayner	Salem, New Jersey
George F. Lang	102 St. Albans Way, Baltimore, Maryland.
Francis H. May	524 Spencer Avenue, Marion, Indiana.
John H. Rau	North Central Avenue, Indianapolis, Indiana.
Robert L. Warren	Brockway, Pennsylvania
Roy R. Underwood	Knox, Pennsylvania.
Fred E. Fuller	807 Ohio Building, Toledo, Ohio.

[fol. 742] Article Fifth

The names and post office addresses of the members of this corporation upon organization are:

Anchor Hocking Glass Corporation	Lancaster, Ohio.
Brockway Glass Company	Brockway, Pennsylvania.
Buck Glass Company	Fort Avenue & Lawrence Street, Baltimore 30, Maryland.
Carr-Lowrey Glass Company	Baltimore 3, Maryland.
Chattanooga Glass Company	Chattanooga 10, Tennessee.

Name	Address
Diamond Glass Company	First Avenue, Royersford, Pennsylvania.
Dominion Glass Company, Ltd.	1111 Beaver Hall Hill, Montreal, P. Q. Canada.
Fairmount Glass Works, Inc.	1501 So. Keystone Avenue, Indianapolis 7, Indiana.

Tygart Valley Glass Company	Washington, Pennsylvania.
Universal Glass Products Co.	Parkersburg, West Virginia.
T. C. Wheaton Company	Millville, New Jersey.

Article Sixth

The qualifications for membership in this corporation are as follows:

1: Any corporation, partnership, association or individual engaged in the manufacture or sale of glass containers or closures therefor other than jobbers, or machinery, appliances, equipment, supplies or materials used in connection therewith, which may lawfully do so, may become a member of this corporation upon making written application to do so, except that:

(a) The persons named in Article Fourth, and all persons who may hereafter be elected Trustees of this corporation shall be Trustee members of this Corporation during their terms of office as Trustees, without further action on their part; and

[fol. 744] (b) The corporations named in Article Fifth shall be regular members of this corporation without further action on their part until thirty days after the adoption of a code of regulations by the members, at which time any such corporation which has failed to make said written application shall cease to be a member.

2. The written application for regular membership in this corporation shall, when accepted by this corporation, constitute an agreement on the part of the applicant to be bound by the corporation's code of regulations during the term of membership and such application shall otherwise be in such form as the code of regulations may prescribe.

3. Except as provided in paragraph 1(b), all regular memberships in this corporation shall terminate on December 31, 1947, and thereafter at the end of each third calendar year after 1947, but any such membership may be renewed by similar written application in such form as shall at the time be prescribed by the code of regulations, made not less than ninety days prior to the expiration of such membership; and all Trustee memberships shall expire with the expiration of the terms of office of the respective Trustees.

4. Each regular membership shall continue for the period from the date of acceptance of the application there-

for until December 31, 1947, or from the date of acceptance of the application until the expiration of the current three year period in or with respect to which application for membership is made, but the corporation may in its code of regulations provide for suspension and expulsion from membership.

5. No regular member shall have or be entitled, directly or indirectly, to more than one vote on any matter considered by the members, and accordingly no Trustee member shall, as such Trustee member, be entitled to vote or be [fol. 745] counted in determining the number of members necessary to constitute a quorum, or a quorum at any meeting of members.

Article Seventh

No part of the net earnings of this corporation shall ever inure to the benefit of any private shareholder, member, or individual. No part of the assets of this corporation shall ever be distributed to any member by reason of such membership, either during the period of its operation, or upon its liquidation.

Article Eighth

No compensation for services shall ever be paid to any Trustee, as such, or as a member of this corporation's Executive Committee, nor shall any allowance for expenses be made to any Trustee, as such, or as a member of this corporation's Executive Committee.

Article Ninth

All rights of a member in this corporation and its property, shall cease upon the termination of membership.

Article Tenth

These Articles of Incorporation may be amended from time to time as now or hereafter provided by law.

In Witness Whereof, the undersigned have hereunto set their hands on March 1st, 1945, March 5th, 1945 and March 13, 1945.

Lewis F. Gayner, George F. Lang, Francis H. May, John H. Rau, R. R. Underwood, Robert L. Warren, Fred E. Fuller.

[fol. 746] State of New York,
County of New York, ss.:

Personally appeared before me, the undersigned, a Notary Public in and for said county, Lewis F. Gayner, George F. Lang, Francis H. May, Robert L. Warren and Fred E. Fuller, who each subscribed and acknowledged the signing of the foregoing Articles of Incorporation to be his free and voluntary act and deed for the uses and purposes therein mentioned.

Witness my hand and official seal on the day and year aforesaid.

Ida B. Gilson, Notary Public.

Ida B. Gilson, Notary Public, New York County, Court's No. 516, Register's No. 702-G-6, Commission Expires March 30, 1946.

(Seal.)

[fol. 747] No. 20282

State of New York,
County of New York, ss.:

I, Archibald R. Watson, County Clerk and Clerk of the Supreme Court, New York County, the same being a Court of Record having by law a seal, do hereby certify, That Ida B. Gilson whose name is subscribed to the annexed deposition, certificate of acknowledgment or proof, was at the time of taking the same a Notary Public in and for said County, duly commissioned and sworn and qualified to act as such and authorized by the laws of the State of New York to protest notes, to take and certify depositions, to administer oaths and affirmations and certify the acknowledgment or proof of deeds and other written instruments for lands, tenements and hereditaments, to be read in evidence or recorded in this State, And further, that I am well acquainted with the handwriting of such Notary Public, or have compared the signature of such officer with his autograph signature filed in my office, and believe that the signature to the said annexed instrument is genuine.

In Witness Whereof, I have hereunto set my hand and affixed my official seal this 1 day of March, 1945.

Fee paid 25¢

ARCHIBALD R. WATSON, County Clerk and Clerk of the Supreme Court, New York County.

(Seal.)

[fol. 748] STATE OF PENNSYLVANIA,
County of Venango, ss.:

Personally appeared before me, the undersigned, a Notary Public in and for said County, Roy R. Underwood, who subscribed and acknowledged the signing of the foregoing Articles of Incorporation to be his free and voluntary act and deed for the uses and purposes therein mentioned.

Witness my hand and official seal on the 5th day of March, 1945.

Fred W. Richardson, Notary Public. My Commission Expires April 30, 1947.

(Seal.)

STATE OF PENNSYLVANIA,
County of Venango, ss.:

I, Richard I. Fry, Clerk of the Orphan's Court in and for said county, the same being a Court of Record, having a seal, do certify that Fred W. Richardson whose name is subscribed to the annexed affidavit, certificate or proof of acknowledgement, was at the time of taking said affidavit or proof of acknowledgment a Notary Public in and for said county, dwelling therein, and duly authorized and empowered by law to take the same, and to take the acknowledgment of deeds to be recorded in said State; that I am acquainted with the handwriting of the said , and verily believe that the signature to the said affidavit, a certificate or proof of acknowledgment is genuine. I further certify that said affidavit, certificate or proof of acknowledgment is executed according to the laws of this commonwealth.

In Witness Whereof, I have hereunto set my hand and affixed the seal of said Court, at Franklin, this Fifth day of March 5, A. D. 1945.

Richard I. Fry, Clerk of Orphans' Court.

(Seal.)

[fol. 749] STATE OF INDIANA,
County of Marion, ss.:

Personally appeared before me, the undersigned, a Notary Public in and for said county, John H. Rau, who subscribed and acknowledged the signing of the foregoing Articles of Incorporation to be his free and voluntary act and deed for the uses and purposes therein mentioned.

Witness my hand and official seal on the 13th day of March, 1945.

Robert A. Williams, Notary Public. Com. Expires Jan. 23, 1949.

(Seal.)

STATE OF INDIANA, MARION COUNTY, SCT:

I, the undersigned, Clerk of the County of Marion, in the State of Indiana, and also Clerk of the Circuit Court within and for said County and State, the same being a Court of Record, and having a seal, do hereby certify that Robert A. Williams, whose name is subscribed in the annexed instrument, was at the time of executing such acknowledgment—oath to wit: March 13, 1945, an acting Notary Public within and for the County aforesaid, duly commissioned and qualified, and authorized by the laws of the State of Indiana, to take and certify the same, as well as to take and certify all affidavits, and the acknowledgment and proof of deeds or conveyances, and all other instruments of writing.

And further, that I am well acquainted with the handwriting of said Robert A. Williams and verily believe that the signature to said Certificate or Proof of Acknowledgment or Jurat is genuine, and that said instrument is executed and acknowledged according to the laws of the State of Indiana.

In Testimony Whereof, I have hereunto set my hand and affixed the seal of said Court and County at Indianapolis, Indiana, this 13 day of March, A. D. 1945.

A. Jack Tilson, Clerk.

(Seal.)

[fol. 750] Code of Regulations of
Glass Container Manufacturers Institute, Inc.

Name

1. The name of this corporation is Glass Container Manufacturers Institute, Inc.

Offices and Books of Record

2. The principal office of the corporation in Ohio shall be in the City of Toledo, and the agent of this corporation in Ohio upon whom process, tax notices or demands against the corporation may be served is Fred E. Fuller, Toledo, Ohio.

3. The corporation may have another or other office or offices, within or without the State of Ohio, at such place or places as the Trustees may designate from time to time.

4. The books of record of the corporation, except as otherwise required by law, may be kept at such office of the corporation as the Trustees may designate from time to time.

5. The books, accounts and records of the corporation shall be open to inspection by the members at such times and subject to such regulations as the Trustees may, from time to time, determine, but in no event shall the confidential records or reports of any member of any non-member be open to the inspection of or be disclosed to any other member, or any other corporation, association, partnership or individual.

Application for Regular Membership

6. Applications for regular membership shall be in the following form, to-wit:

[fol. 751] Glass Container Manufacturers Institute, Inc.

Application for Membership

The undersigned hereby makes application for membership in the Glass Container Manufacturers Institute, Inc.

In consideration of the acceptance of this application for membership, the applications of others for membership, the benefits and advantages to be obtained from the Institute, and the agreements and undertakings entered into by and on behalf of the Institute, the undersigned agrees—

That pursuant to Article VI of the Articles of Incorporation of the Institute the term of the membership of the undersigned herein shall be from ..... to .....;

To abide by the Code of Regulations as the same now is, and with all lawful amendments thereto hereafter made;

To pay, during the continuance of the above period all assessments duly and properly levied against the undersigned by the Trustee of the Institute, pursuant to Sections 10, 11 and 12 of the Code of Regulations, provided, however, that the undersigned reserves the right to resign from the Institute in the event the assessments so levied shall exceed the rate of one-tenth of one per cent of aggregate net sales per annum and provided notice of such resignation is given the Institute within thirty (30) days from the date such assessments are levied.

Dated at —— this — day of ——, 19—

By —— ——.

Accepted, Glass Container Manufacturers Institute, Inc.
By —— ——.

[fol. 752] Membership Book and Certificate

7. The corporation shall keep a membership book containing the name and address of each regular and Trustee member, and the date of admission to membership. Upon the termination, or renewal, of any membership, such fact shall be recorded in the membership book, together with

the date on which the membership ceased or was renewed.

8. Regular membership may be evidenced by non-transferable membership certificates in such form as the Trustees may determine from time to time.

Suspension and Expulsion of Members

9. Any member may be suspended or expelled from the corporation by the Trustees for failure to pay any assessment or for any wilful breach of the code of regulations. Before any member is suspended or expelled such member shall be notified, in writing, by mail, at such member's last known address, of the charges and of the time and place of the meeting of the Trustees at which such charges shall be considered, at least ten (10) days before such meeting. Such member shall have the right to appear in person and by counsel at said meeting. Such charges may be sustained and such member suspended or expelled by the affirmative vote of not less than two-thirds of the full number of the Trustees. A member shall not be a member in good standing from the date of mailing such notice until the dismissal of such charges, or such member's expulsion, or the termination of such member's suspension, as the case may be.

Assessments

10. In order to provide for the support and maintenance of the corporation each regular member shall, subject to the provisions of Section 12 hereof, on or before the last days of January, April, July and October in each year, pay [fol. 753] to the corporation amounts which shall not exceed the following amounts, to-wit:

(a) Each January payment, one-eighth† of one per cent of its aggregate net sales of glass containers and closures for the second preceding calendar year, if a manufacturer of glass containers or closures; and one-eighth† of one per cent of its aggregate net sales to manufacturers of glass containers or closures and users of glass containers for the second preceding calendar year, if not a manufacturer of glass containers or closures; and

(b) Each April, July and October payment, one-eighth† of one per cent of its aggregate net sales of

† As amended March 23, 1950.

glass containers and closures for the next preceding calendar year, if a manufacturer of glass containers or closures; and one-eighth† of one per cent of its aggregate net sales to manufacturers of glass containers or closures and users of glass containers for the next preceding calendar year, if not a manufacturer of glass containers or closures;

but no regular member shall pay less than $200.00 per year, and within said maximum and minimum limits the Trustees shall determine the percentage assessment based upon aggregate net sales as aforesaid to be paid in each year on or before December first of the preceding year, and the Treasurer shall notify each member in writing thereof on or before December thirty-first of said preceding year. *There shall be no discrimination among regular members or classes of regular members in the rate or percentage of the yearly payments, except that special arrangements may be made with companies not incorporated in the United States.

11. Aggregate net sales as used in this code or regulations shall be determined as follows:

[fol. 754] Glass Container Net Sales

The aggregate dollar amount of empty, new, machine-made bottles, jars and tumblers (including packages and any fitments sold in connection therewith) for the commercial packing or domestic packing of any product, less amounts paid by the glass container manufacturer for freight, returns and allowances. No deduction shall be made for cash or jobber discounts, brokerage, sales or commission expenses.

Where one glass container manufacturer produces for and/or sells to another glass container manufacturer, he shall exclude such sales from his aggregate net sales; and the manufacturer making the transaction with the ultimate customer, bottler or packer shall include the amount of such sales in his aggregate net sales.

† As amended March 23, 1950.

* As amended December 5, 1945.

Closure Net Sales

The aggregate dollar amount of metal and molded closures, whether continuous thread, lug or lug style, single or double shell, one-piece or two-piece types, friction or machine applied (including band caps) for the commercial packing or domestic packing of any product, less amounts paid by the manufacturer for freight, returns and allowances. No deduction shall be made for cash or jobber discounts, brokerage, sales or commission expenses.

Where one closure manufacturer produces for and/or sells to another closure manufacturer, he shall exclude such sales from his aggregate net sales; and the manufacturer making the transaction with the ultimate customer, bottler or packer shall include the amount of such sales in his aggregate net sales.

Machinery, Equipment, Appliances, Raw Material Supplies and Affiliated Industries Net Sales

The aggregate dollar amount of sales made to glass container and closure manufacturers, less amounts paid [fol. 755] for freight, returns and allowances. No deduction shall be made for cash or jobber discounts, brokerage, sales or commission expenses.

12. Special assessments may be made from time to time, on the same basis, and in such percentages as may be determined by the Trustees, and approved by a majority of the regular members then in good standing.

13. The Trustees may accept voluntary contributions from corporations and others not members of the Institute, and/or make arrangements for fees to be paid the Institute for information and services by regular members and by corporations and others not members of the Institute to the extent that it is lawful to do so; and the Trustees shall take any such contributions and/or arrangements into account in fixing or adjusting the current percentage assessments provided for in Section 10 of this code of regulations in order that the corporation's receipts as an entirety shall substantially equal its disbursements in carrying on its activities.

Members Meetings

14. Each meeting of members shall be held at such place within or without the State of Ohio as the Trustees may determine.

15. The annual meeting of members shall be held on the second Thursday in May of each year at 10:00 A. M., or if such day be a holiday, then on the next Thursday at the same hour.

16. Special meetings of members may be called by the President or by resolution adopted by the Trustees, and shall be called upon written demand of five Trustees or ten regular members in good standing, and shall be held at the time and place fixed by the President or the Trustees therefor.

17. Notice of each meeting of members shall be given each member in writing, setting forth the time, place and [fol. 756] purpose or purposes thereof, by post-paid mail or by pre-paid telegram, addressed to such member at the address of such member shown on the records of the corporation, mailed or telegraphed at least ten days before the date for fixed for such meeting.

18. Any member may waive any notice of any meeting of members, in writing, either before or after the meeting.

19. A majority of the regular members in good standing of the corporation, present in person or by proxy, shall be necessary to constitute a quorum, but a lesser number may adjourn from time to time, without further notice, until a quorum is secured.

20. A complete list of members entitled to vote at any meeting of members shall be prepared in alphabetical order by the Secretary, and shall be open to the examination of each member during the whole time of election at any meeting of members at which an election is held.

21. Any regular member in good standing may vote at any meeting of members either in person, or by proxy duly authorized in writing and signed by such member, or by telegram or wireless message appearing to have been transmitted by such member.

22. Each regular member in good standing shall be entitled to one vote on each matter considered at any meeting of members, but there shall be no cumulative voting at any election.

23. A corporation, partnership or association member shall be present in person at any meeting of members when any officer of such corporation or association, or partner of such partnership is present. The President, Vice-President, Secretary and Treasurer in the order named, of any corporation or association which is a member of the institute, present at any meeting of members, shall constitute the presence of such corporation or association at such meeting, and his vote at such meeting shall constitute the [fol. 757] vote of such corporation or association which is a member of the Institute, unless such member has authorized some other person to represent it by proxy filed with the secretary of the meeting prior to the vote taken at said meeting.

24. Unless changed by a majority vote of the quorum present, the order of proceedings at each meeting of members shall be:

(1) Reading of minutes of preceding meeting.
(2) Reading of reports and statements.
(3) Unfinished matters.
(4) Election of Trustees.
(5) New matters.

Trustees

25. The corporate powers, property and affairs of the corporation, subject to the limitations contained in the Ohio General Code, the Articles of Incorporation and the Code of Regulations, shall be exercised, conducted and controlled by a board of eleven trustees, each of whom shall upon election as Trustee and during the term of his office as Trustee, become and be a Trustee member of the corporation; one of whom shall be a citizen of the State of Ohio; and not less than eight of whom shall be officers or employees of manufacturers of glass containers who are regular members of this corporation.

26. The terms of office of the Trustees named in the articles of incorporation shall expire at the first meeting of the corporation called to elect Trustees.

27. At the first meeting of the corporation called to elect Trustees, three Trustees shall be elected for a term expiring at the 1946 annual meeting of the corporation, four Trustees shall be elected for a term expiring at the

1947 annual meeting of the corporation, and four Trustees shall be elected for a term expiring at the 1948 annual meeting of the corporation, and until their respective successors shall be elected and qualified as Trustees.

[fol. 758] Thereafter at each annual meeting, Trustees shall be elected for a term of three years, and until their successors shall be elected and qualified, to fill the vacancies caused by the expiration of the terms of the Trustees whose terms then expire. In case of vacancy caused by any reason other than expiration of his term of office, such vacancy shall be filled by the Trustees by election for the unexpired term, and until a successor is elected and qualified.

Trustees Meetings

28. Each meeting of the Trustees shall be held at such place within or without the State of Ohio as the Trustees may determine.

29. The Trustees shall meet after each annual election of Trustees at such time and place as shall be fixed at the annual meeting of members, for the purpose of organization, election of officers and the transaction of any other matters, and if a majority of the Trustees are present at such meeting no notice need be given the Trustees.

30. The Trustees may by resolution fix and change the time and place of regular meetings of the Trustees, and any action may be taken at any such regular meeting without prior notice thereof to the Trustees.

31. Special meetings of the Trustees may be called by the President and on the written request of five Trustees shall be called by the President.

32. Notice of each regular and special meeting of the Trustees, other than the annual meeting, shall be given each Trustee in writing, setting forth the time and place and if a special meeting, the purpose or purposes thereof, by postpaid mail or prepaid telegram, addressed to each Trustee at the address of such Trustee shown on the records of the corporation, mailed or telegraphed at least three days before the date fixed for such meeting.

33. Any Trustee may waive any notice of any meeting of Trustees, in writing, either before or after the meeting.

[fol. 759] 34. A majority of the Trustees shall be necessary to constitute a quorum, but a lesser number may ad-

journ from time to time, without further notice, until a quorum is secured.

35. Unless changed by a majority vote of the quorum present, the order of proceedings at each meeting of Trustees shall be:

(1) Reading of minutes of preceding meeting.
(2) Reports of officers.
(3) Reports of committees.
(4) Unfinished matters.
(5) Miscellaneous matters.
(6) New matters.
(7) Elections.

Standing Committees

36. The Trustees shall each year, at their annual meeting, appoint nine standing committees of the Institute, each to consist of such number of persons skilled in the activities of such committee as may be selected by the Trustees, and each to have as its chairman such person as may be selected by the Trustees. *A majority of the members of each standing committee and sub-committee thereof shall be officers or employees of regular members of the Institute. The Chairman of each committee shall be a full time employee of the Institute or of a regular member of the Institute.

37. The standing committees of the Institute and their respective duties shall be as follows:

Committee on Market Research and Promotion

The Committee on Market Research and Promotion shall devote its efforts to the advancement of the competitive interests of the glass container and closure industries, and in connection therewith shall among other things:

[fol. 760] (a) Study the actual and potential uses of glass containers and closures, the comparative costs of packaging and distribution in glass and other materials, new product needs and possibilities, and the relative merits of the use of competitive packaging materials;

(b) Advance the competitive interests of the glass container industry in relation to other industries producing

* As amended at Annual Membership Meeting, May 18, 1954.

containers from other materials by maintaining a central organization for cooperation with Federal, state and local agencies, by investigating and opposing discriminatory laws and regulations and by encouraging uniform laws and regulations;

(c) Promote glass container markets through an integrated public relations program, the maintenance of a general center of information about the industry and its products, cooperation with trade organizations in the food and beverage and other industries, assisting in new product development and research with respect thereto, and cultivation of export markets;

(d) Obtain publicity for the industry through advertising and the furnishing of information with reference to the industry and its products, the providing of industrial exhibits, the publication of industry organs, and in all other proper manners;

(e) Provide educational work and facilities for keeping glass, closure and allied manufacturers and packers and bottlers abreast of current improvements and the needs for further improvements in the industry, and for retailers as to the most effective means of displaying, merchandising and handling glass packed products; and to promote educational work of interest to the industry in the schools and colleges;

(f) Assist packers and bottlers in the reduction of handling costs and other problems in the use of glass containers; and

[fol. 761] (g) Maintain an historical record of the industry and its accomplishments.

Traffic Committee

The Traffic Committee shall obtain to the fullest extent possible for the entire industry safe, convenient, expeditious, efficient and otherwise adequate transportation service at rates and under rules and regulations that are reasonably free from prejudice, preference and discrimination, and in connection therewith shall among other things:

(a) Deal with industry-wide problems concerning carriers and transportation; the obtaining of parity shipping rates for products in glass and competing containers; and the obtaining of lowest possible freight rates;

(b) Conduct conferences with carrier regional rate and rule authorities, officers of individual carriers and carriers associations for the presentation of industry-wide views of the industry's needs in reaching the widest possible markets and obtaining raw materials at rates which make such markets possible;

(c) Carry on negotiations with railways, express agencies, motor carriers, the Interstate Commerce Commission and others looking towards the publication of acceptable carton specifications and other satisfactory and economical requirements for the packaging for transportation of glass containers and glass packed products;

(d) Seek relief on behalf of the industry as a whole where necessary in formal proceedings before the Interstate Commerce Commission and state public utilities commissions; and

(e) Provide for cooperation and interchange of information between the industry and the several governmental authorities dealing with traffic and transportation problems.

[fol. 762] Committee on Government-Industry Relations

The Committee on Government-Industry Relations shall coordinate the resources of the industry for service to the government and the public during the period of the war and thereafter and provide liaison between the Institute and Federal, state and local governmental authorities, and in connection therewith shall among other things:

(a) Obtain information with reference to governmental activities relating to the industry;

(b) Operate and maintain an office for the Institute in the City of Washington, D. C.;

(c) As directed by the Trustees, represent the Institute, with the assistance of its officers, in relations with governmental authorities, and furnish governmental authorities with an official means of contact with the industry as a whole, provided that no member of the Institute or person acting on behalf of such member shall be restrained in any way from presenting views, furnishing data, or taking any position before any governmental agency; and

(d) Conduct surveys with reference to matters of interest of the industry and governmental authorities in the field of industry-governmental relations.

Committee on Labor Relations

The Committee on Labor Relations shall assist the industry through research and fact finding and by all other proper means in improving the relationship of employers and employees, and in connection therewith shall among other things:

(a) Provide a clearing house for manufacturers of glass containers and closures having problems involving labor, arrange conferences to discuss the employment and labor relations problems of the industry, and furnish information and advice to members of the industry with reference to labor problems;

(b) Develop procedures in handling labor matters;

[fol. 763] (c) Prepare for and take part in annual collective bargaining conferences with the Glass Bottle Blowers Association, the American Flint Glass Workers Union and other labor organizations;

(d) Collect and collate agreements between the Glass Bottle Blowers Association, the American Flint Glass Workers Union and other labor organizations and the several members of the industry, and inform the members of the industry with reference thereto, and as to job classifications rates of pay, hours of work, and conditions of labor provided therein, and also with reference to matters pertaining to employment and labor relations, directives, decisions and statements of policy of governmental agencies and boards which have the administration of Federal laws concerning collective bargaining, wage and salary stabilization, labor disputes, and the like;

(e) Provide a means for the settlement of disputes as to the interpretation of union contracts with the industry; and

(f) Secure the assistance, when deemed desirable, of labor relations counsel.

Committee on Testing Procedures

The Committee on Testing Procedures shall conduct and provide for experimental activities in connection with the diagnosis and elimination of manufacturing imperfections, the reduction of breakage, the reduction of weight of glass containers, the maintenance of glassware quality and the

definition of glassware characteristics, and other technical problems of the industry, and in connection therewith, shall among other things:

(a) Develop and review testing procedures and equipment and cooperate with others in the development of standards therefor;

(b) Prepare and revise from time to time a manual prescribing standard tests for glass containers;

[fol. 764] (c) Survey, from time to time, the causes of glass breakage;

(d) Furnish technical and scientific assistance to legislative and other governmental bodies;

(e) Conduct courses of instruction for technical men in the glass container and closure industries; and

(f) Provide technical data and other assistance in connection with litigation involving breakage and claimed defects in glass containers and assist packers and bottlers in formulating proper methods and procedures for inspection and testing of new and used glass containers.

Technical Committee on Glass Packed Products

The Technical Committee on Glass Packed Products shall:

(a) Conduct and provide for experimental activities having to do with the relative merits of packing and bottling in glass and other types of containers, the effects of such packing and bottling on food, beverages, and other products packed or bottled in glass, and the improvement and better preservation of such products; and

(b) Provide for the testing of the results of its activities by the proper governmental authorities and others.

Committee on Standards for Finishes

The Committee on Standards for Finishes shall develop standards for glass container finishes, so that there may be as many manufacturers as possible competing for the sale of glass containers, and in connection therewith, shall among other things:

(a) Engage in experimental efforts to improve manufacturing efficiency and better sealing practices;

(b) Develop, and, from time to time modify standard sizes of and specifications for finishes of glass containers [fol. 765] with a review to manufacturing economies, including the revision of specifications so as to permit maximum interchangeability of neck rings;

(c) Develop modifications in finish standards for new types of forming machines;

(d) Develop standard glass finish specifications for any new methods of sealing which may be invented from time to time;

(e) Make blue prints available setting forth technical data pertaining to finishes and their manufacture, and new and revised specifications for finishes; and

(f) Cooperate with the Bureau of Standards in connection with the foregoing.

Committee on Container Design and Specifications.

The Committee on Container Design and Specifications shall endeavor to simplify container supply for the packer and bottler by establishing groups of standard glass container designs and specifications on which a packer or bottler may rely in size and style of container, the laying out of filling lines and procedures in the packing of his products, and which, if accepted throughout the industry, will assure the user of glass containers standard designs irrespective of the source of supply so that there may be as many manufacturers as possible competing for the sale of glass containers, and in connection therewith shall, among other things:

(a) Make available specifications for groups of standard containers which, if the packer or bottler so desires, may be used in place of private mold designs in order to reduce container costs through the reduction of the amount of glass used in containers, the reduction of the number of standard capacities of containers by the elimination of odd capacities, the reduction of mold costs, other economies in manufacture and economies in storage and transportation; [fol. 766] and also to bring about economy of use on filling lines and to increase the packer and bottler's sources of supply;

(b) Develop standard specifications for containers which can be efficiently made on all types of forming machines,

review and modify such specifications, and make available blue prints covering the same;

(c) Cooperate with similar committees of users of glass containers for the purpose of establishing standard specifications for containers for each packing and bottling industry;

(d) Work with the Bureau of Standards and state and municipal agencies in establishing container specifications and sizes consistent with municipal, state and Federal laws;

(e) Consult with packers, bottlers and manufacturers of packing and bottling machinery in connection with the design and functioning of glass handling machinery; and compile brochures from time to time, such as a machinery manual for the use of packers, bottlers and manufacturers of packing and bottling machinery, in order to facilitate the more efficient use of equipment regardless of the source of containers; and

(f) Give constant study to existing standards and consideration to the possibility of additional and future standards in connection with the frequent changes in use and progress in processing as well as technological changes in manufacture.

Committee on Package Design and Specifications

The Committee on Package Design and Specifications shall have as its principal function and purpose the consideration of all matters having to do with the safe, economical and efficient handling of glass containers and glass packed and bottled products as affected by the packaging thereof, and in connection therewith shall, among other things:

[fol. 767] (a) Develop methods of economizing in the use of paper and other packaging materials;

(b) Develop standard designs and specifications for cartons and other packages;

(c) Promote and participate in laboratory investigations of the strength of packaging materials;

(d) Compile brochures on carton specifications and packaging;

(e) Cooperate with the Traffic Committee in problems of interest to both committees; and

(f) Cooperate with the Bureau of Standards in connection with the foregoing.

38. Each standing committee shall, within the limits of the amounts appropriated to it therefor by the Trustees, perform its several duties hereinbefore set forth and engage in no activities not relevant to its functions set forth in this code of regulations without the express authorization of the Trustees, and make regular reports of all actions taken by it to the Trustees at least semi-annually. The Trustees shall make available to members of the Institute at least semi-annually all results of committee activities and the compilations of data prepared by the General Manager in pursuance of Section 60 hereof. The Trustees shall make the same information available to such non-member glass container and closure manufacturers and suppliers as shall make payments or contributions to the Institute upon the same basis as the payments made by members under under Sections 10, 11 and 12 hereof. Upon application of one who reasonably in good faith intends to enter into the glass container or closure manufacturing business, the Trustees shall furnish him such compilation showing the then state of the glass container and closure manufacturing industries as he may request and as the Institute may have available, and if requested, shall furnish to such applicant such additional information as would be available to all members of the Institute, all at reasonable prices, representing the cost of [fol. 768] compiling the information requested and furnished, plus, if desired by the Institute, a reasonable profit. In the event of application to the Trustees for information by one not within the classes hereinbefore in this section mentioned, the Trustees may furnish such information or such part thereof, if any, as they see fit, upon such terms and conditions as they may deem proper.

39. No standing committee, or any officer or employee of the Institute, or the Trustees, in their respective capacities as such, shall ever, directly or indirectly, take any action, or engage in any activity the effect of which shall be unlawfully to prevent or retard competition through the entry of new units into the various fields of manufacture of glass containers or unlawfully to discourage the expansion of the industry, or otherwise to violate the anti-trust laws of

the United States, but the Trustees may from time to time make reasonable charges for information with respect to the results of the activities of the Institute as provided in Sections 13 and 38 hereof.

40. Neither the Institute nor its Trustees, committees, members, officers or employees shall ever attempt, directly or indirectly, to enforce compliance with any advice or recommendation of the Institute or of its Trustees, committees, members, officers or employees, or interfere or attempt to interfere in any way with the conduct of the business of any member or of any other corporation, association, partnership or individual; and no member or any other corporation, association, partnership or individual shall ever be under any obligation whatsoever to take advantage of or make any use whatever of the results of the activities of the Institute or any of its Trustees, committees, officers or employees.

41. The General Manager or Secretary of the Institute or a full time paid employee of the Institute shall attend each meeting of each standing committee and make a full and complete record of the proceedings of each such meeting, and report the same to the Trustees.

[fol. 769] 42. Each meeting of each standing committee shall be held at such place within or without the State of Ohio as the members thereof may determine.

43. Each standing committee shall meet after each annual election thereof at such time and place as shall be fixed at the annual meeting of Trustees, for the purpose of organization and the transaction of any other matters.

44. The members of each standing committee may by resolution fix and change the time and place of regular meetings of such committee, and any action may be taken at any such regular meeting without prior notice thereof to the members.

45. Special meetings of each standing committee may be called by the chairman and on the written request of three members thereof shall be called by the chairman.

46. Notice of each meeting of each standing committee shall be given each member in writing, setting forth the time and place thereof, by post-paid mail or prepaid telegram, addressed to each member at the address of such member shown on the records of the corporation, mailed or

telegraphed at least three days before the date fixed for such meeting.

47. Any member of a standing committee may waive any notice of any meeting of his committee, in writing, either before or after the meeting.

48. A majority of the members of each standing commitee or sub-committee thereof (but only if a majority of any such majority are officers or employees of regular members of the Institute) shall constitute a quorum, but a lesser number may adjourn from time to time, without further notice, until a quorum is secured.

49. The members of each standing committee shall fix their own order of procedure, and such other rules not inconsistent with the other provisions of this Code of Regu- [fol. 770] lations for the conduct of their duties, including the appointment of sub-committees, as they shall deem advisable.

50. Any member of any standing committee may be removed by the Trustees at any time, with or without cause.

51. Any vacancy in any standing committee shall be filled by the Trustees.

52. The Trustees may provide such reimbursement for expenses to members of any committee or sub-committee thereof as they may, from time to time, determine.

Special Committees

53. The Trustees may appoint, or authorize the President to appoint, special committees, all of the members of each of which shall be officers or employees of regular members of the Institute. Such special committees may perform such lawful activities outside the scope of the activities of the standing committees as the Trustees shall direct and define. In the conduct of their activities special committees shall be subject to the provisions of Sections 42 to 47 and 49 to 52 hereof. A majority of any such committee shall constitute a quorum.

Officers and Employees

54. The officers of the corporation shall be a President, First Vice President and Second Vice President, who shall be elected annually from the Trustees to serve as such without compensation, until the next annual meeting of the

Trustees and until their successors are elected and qualified; and a General Manager, Secretary and Treasurer, who may be elected or appointed by the Trustees for such terms and upon such conditions and shall receive such compensation as the Trustees deem advisable.

55. Any two or more offices, except those of President and Vice President, or Vice Presidents, may be held by the same person.

[fol. 771] 56. The Trustees may create such other offices as they deem advisable from time to time and fill the same by election or appointment for such terms and upon such conditions as they deem advisable.

57. Any officer may be removed from office at any time by the Trustees by majority vote with or without cause.

President

58. The President shall be the chief executive officer of the corporation. He shall preside at all meetings of the members and of the Trustees; have general supervision and management, subject to the Trustees, of the affairs of the corporation; and shall perform, generally, all the duties usually performed by Presidents of like corporations, and such further and other duties as may, from time to time, be required of him by the members, or the Trustees.

Vice-Presidents

59. The First Vice-President shall perform all the duties of the President, in case of the absence or disability of the latter. If both the President and First Vice-President are absent, or unable to perform their duties, the Second Vice-President shall serve, and, in his absence or inability to perform his duties, the members or Trustees, as the case may be, may appoint a President pro tem.

General Manager

60. The General Manager shall, subject to the control and direction of the members, the Trustees and the President, have active charge of the general activities of the corporation, including its publicity, promotion, educational research and development work, and shall generally perform such duties as may be required of him by the members,

the Trustees and the President. He shall obtain from the regular members of the Institute and others any and all data, other than data as to prices and methods or speeds [fol. 772] of operation, which they shall be willing to and may lawfully furnish; shall compile and distribute compilations of such data (other than material usage), in such manner and to such persons as shall be directed from time to time by the Trustees; provided that no data with reference to capacity, production, shipments, stocks or sales covering any portion of the preceding* twenty days period shall at any time be distributed or directly or indirectly disclosed to manufacturers of glass containers or closures; and further provided that the General Manager shall keep confidential and separate data furnished by each corporation, association, partnership and individual, with reference to capacity, production, shipments, stock, net sales and material usage, to the end that such separate data shall never be disclosed to any other corporation, association, partnership or individual other than to a full time paid employee of the Institute whose duties require the use of such data, and who has undertaken to keep such data confidential as above provided with reference to the General Manager. No Trustee or member of the Institute other than counsel for the Institute shall ever be entitled to all or any part of such confidential data.

61. The General Manager shall give to the corporation a bond, in such amount and in such form and with such sureties as the Trustees may determine, for the faithful performance of the duties of his office. The amount of such bond may, from time to time, be changed by the Trustees.

Secretary

62. The Secretary shall keep the minutes of all the meetings of the members and the Trustees, and shall make a proper record of the same, which shall be attested by him. He shall give the notices required by the code of regulations, unless the Trustees shall otherwise direct, and shall perform such other duties as may be required of him by the members, the Trustees and the President. He shall be the

* As amended March 25, 1949.

custodian of the seal of the corporation and shall affix the [fol. 773] same to any instrument requiring the same, and shall attest it by his signature.

Treasurer

63. The Treasurer shall receive and have in charge all moneys and securities belonging to the corporation and shall deposit the same in the name and to the credit of the corporation in such banks or other depositories as may be designated by the Trustees. He shall disburse the funds of the corporation pursuant to the orders of the Trustees and the President. He shall keep an accurate account of the moneys, securities and other valuables received and disbursed by him and shall, at the annual meeting, and oftener when required either by the Trustees or the President, present a detailed statement of his receipt and disbursements and of all his transactions, together with a statement of the assets and liabilities of the corporation, and shall generally perform such other and further duties as may be required of him by the members, the Trustees or the President.

64. He shall give to the corporation a bond, in such amount and in such form and with such sureties as the Trustees may determine, for the faithful performance of the duties of his office. The amount of such bond may, from time to time, be changed by the Trustees.

General Counsel

65. The Trustees shall employ a reputable attorney or firm of attorneys as General Counsel. The officers shall keep the General Counsel fully informed as to all activities and proposed activities of the Institute, its Trustees, committees and officers, and the General Counsel shall advise the Institute, its Trustees, committees and officers with respect to the legality of all activities and proposed activities. No activity shall be engaged in by any of them which the General Counsel has advised is illegal. The General Counsel shall have charge of all legal matters in which the [fol. 774] Institute is interested; and shall attend in person or by representatives all meetings of the members and Trustees and, upon request of any officer or committee

chairman, any committee meetings. Upon request of the Trustees, the President, the General Manager or the chairman or members of any committee, the General Counsel shall appear in person or by representatives before any public body on behalf of the Institute, and generally shall perform such other services of a legal nature as they or any of them may request. The General Counsel shall be entitled to receive reasonable compensation for services rendered to the Institute, its Trustees, committees and officers.

Other Officers and Employees

66. Other officers and employees of the corporation shall have such duties as shall be prescribed from time to time by the Trustees, or by the President or General Manager pursuant to authority conferred by the Trustees. In case of the absence or disability of any officer of the corporation, or for any other reason deemed sufficient by the Trustees, the Trustees may delegate his powers or duties to any other officer or to any Trustee for the time being, except that the duties of General Manager shall not be delegated to any person other than a full time paid employee of the Institute who is not an officer or employee of any member of the Institute.

Fiscal Year

67. The fiscal year of the corporation shall begin on the first day of January of each year.

Checks

68. All checks drawn by the corporation shall be signed by the President, General Manager and Treasurer, or any two of them.

[fol. 775] Seal

69. The seal of the corporation shall be circular in form and shall have inscribed thereon, "Glass Container Manufacturers Institute, Ohio, 1945."

Disposition of Assets

70. The corporation shall not sell, lease, mortgage or dispose of any real property owned by it or its entire assets except when authorized by a vote of a majority of the regular members present at a meeting called for such purpose if constituting a quorum.

Amendments

71. This code of regulations may be amended or repealed by the written assent thereto of not less than a majority of the regular members of this corporation, or by a majority vote of the regular members present at any annual meeting, or any special meeting called for that purpose, but for such part of the period of five years from the effective date of the final judgment in United States *v.* Hartford-Empire Company, *et al.*, No. 4426 in the United States District Court for the Northern District of Ohio, Western Division, as any defendant in said cause shall participate in any activity of this corporation pursuant to the order of said court entered May 15, 1945, no amendments shall be made to the provisions of Sections 5, 13, 36, 37, 38, 39, 40, 41, 53, 60, 65 and 71 hereof without the approval, in advance, of the United States District Court for the Northern District of Ohio, Western Division.

RESEARCH LABORATORY

PROCESSES FOR LOW-ACID CANNED FOODS IN GLASS CONTAINERS

BULLETIN 30-L
Second Edition

WASHINGTON, D. C.
September, 1955

IMPORTANT POINTS FOR CANNERS

1. ***Keep your retort operators informed.*** **Give them a copy of this bulletin or written instructions on processes to be used. See page 19.**

2. ***Keep your other key men informed.*** **Insist that all key men read and understand this booklet.**

3. ***Equip your retorts properly.*** **Tested and properly installed retort instruments are essential. Instruments need periodic testing.**

4. ***Don't reduce processes.*** **Processes in this bulletin give the highest quality consistent with safety.**

5. ***Code your jars.*** **The time period during which each code lot is packed should be as short as practicable—in no case longer than one day.**

6. ***Keep your factory clean.*** **High bacterial contamination may lead to spoilage. See Appendix.**

7. ***Follow approved procedures.*** **The procedures given in this bulletin are based on sound theory and wide practical experience.**

[fol. 779]

PROCESSES FOR LOW-ACID CANNED FOODS IN GLASS CONTAINERS

INTRODUCTION

THIS is the 2nd edition of Bulletin 30-L. The first edition was prepared in 1948 to satisfy an increasing demand for authentic information on processes to be used for low-acid foods packed in glass containers.

Process suggestions given in the bulletin are, in general, based on heat penetration data obtained on the products by the National Canners Association and the glass container manufacturers. Where such information was not available factors were used for converting processes for cans to processes for glass jars. These factors were developed from basic data obtained on bentonite in the laboratories of the National Canners Association in a cooperative research project sponsored by the Glass Container Manufacturers Institute. This project involved an extensive investigation on the heating rates of bentonite suspensions in glass jars and tin cans of comparable sizes, and the preparation of experimental inoculated packs of various products in both types of containers.

When further data and information are available, this bulletin will again be revised. Previous editions should then be discarded.

Prefacing the list of processes are recommendations with respect to proper retort equipment and its operation for best results. A thorough understanding of these recommendations is necessary for the best use of the bulletin and is essential for the correct interpretation and proper use of the processes.

Following the list of processes is an appendix which gives information regarding sources of spoilage contamination and its control, the significance of sugar and starch contamination, and precautions for the proper handling of glass containers in the cannery.

[fol. 782]

While the procedures recommended in this bulletin are based on sound theory and wide practical experience, references to methods or types of equipment are not to be construed as a guarantee of their sufficiency. The recommendations contained herein are not to be considered as creating any assurance or warranty with respect to production or cost or any responsibility for damage, spoilage, loss, accident or injury resulting from the use of this information by anyone.

IMPORTANCE OF PROPER EQUIPMENT AND PROCEDURE

Foods in glass containers are processed under water with superimposed air pressure. In order to be certain that all jars secure the amount of heat treatment required to prevent spoilage, careful control and recording of temperatures and adequate circulation of water to ensure uniform temperatures are essential. This is true because processes for canned foods are determined by tests made with the jars at a definitely controlled and specified temperature, and when these processes are applied in commercial practice identical conditions must be met. The suggestions under "Equipment" and "Procedure" are based on the results of careful studies to determine what types of equipment and procedure may be relied upon to give the required heat treatment under commercial conditions. Careful attention to details is essential to ensure successful processing.

EQUIPMENT

Retort

The processes contained in this bulletin are for discontinuous, non-agitating (still) retorts. For other types of retorts, processes should be obtained from a laboratory connected with the canning industry.

The retort must have strength sufficient for processing glass containers under water with superimposed air pressure.

At the start of each packing season, the retort should be submitted to a hydrostatic pressure test at 45 psi. pressure.

Since either vertical or horizontal retorts may be used, the

[fol. 783]

general details of these two types will be considered collectively and the specific details outlined sparately.

Retort Installation

For proper operation each retort should have the following items of equipment:

(1) *Door or Lid-Securing Devices and Gaskets.* Before subjecting the retort to pressure, the door or lid-securing devices should be examined carefully and worn parts replaced. The gasket should be checked to make sure it is tight and in good condition. For vertical retorts it is recommended that not less than 8 wing nuts per retort be used. Consult the American Society of Mechanical Engineers, 29 West 39th St., New York 18, N. Y., Code for non-fired pressure vessels. For details regarding the ASME Code, see "Accident Prevention Manual for Industrial Operations", Section 4 Pressure Vessels, published by the National Safety Council Inc., 425 North Michigan Avenue, Chicago 11, Illinois. Section 4 may be obtained as a separate reprint.

(2) *Safety Valve.* A safety blow-off valve, of at least 2 inch size, should be provided, separate from the overflow and located above the water level. On vertical retorts this should be a side connection with piped outlet. The safety valves should comply in capacity with local safety codes or the A.S.M.E. Code for unfired pressure vessels.

(3) *By-Pass Valves.* All automatic control valves should have manually operated by-pass valves.

(4) *Steam and Air Valves.* There should be a manually operated valve before and after the steam and air control valves.

(5) *Drain Valve.* Because of the importance of maintaining the water level and preventing leakage, a 125 psi., non-clogging, water-tight valve is required.

(6) *Crate Supports.* Lugs, tracks, or a saddle type support should be used. A ring is also satisfactory for vertical retorts. In no case should baffle plates be used.

[fol. 784]

(7) *Thermometer Pocket.* The thermometer pocket or well should:

(a) Preferably be of the hemisphere type having a minimum diameter opening into the retort wall of 9 inches (see sketch).

(b) If of the rectangular type, have a minimum opening into the retort wall of 8 inches by 8 inches.

(c) Be designed with a depth of 4 inches or more.

(d) Have a provision for the pressure gauge in the same pocket as the thermometer (see diagram, page 16).

(8) *Temperature Control and Indicating Equipment.* Adequate automatic controls are essential. Manual control of temperature is not recommended because the possibility of error is too great.

Control and indicating equipment, such as thermometers and pressure gauges, should be so placed with respect to light and position that they are easily readable.

a. *Indicating mercury-in-glass thermometer.* The thermometer should have a temperature range of not more than 100°F., for example, 170°F. to 270°F., and the scale division should be of either one degree or two degrees each—never greater than two degrees. The temperature scale of the indicating thermometer should be at least 7 inches in length. A second thermometer covering the cooling range is also advisable.

The thermometer bulbs should be located in such a position that they are beneath the surface of the water throughout the process. On horizontal retorts, it is desirable

[fol. 785]

that this entry be made in the side at the center. The thermometer bulbs should be inserted directly into the shell.

b. *Recording temperature indicator.* The chart should be easily readable to 1°F. and should be graduated in not to exceed 2°F. divisions within the range of plus and minus 10°F. of the process holding temperature used. All charts should have a working scale of not less than 3 inches. The bulbs for these thermometers should be located adjacent to the bulb of the mercury thermometer, except in the case of a vertical retort equipped with a combination controller-recorder.

(9) *Location of Temperature Control Bulb.* In vertical retorts the temperature control bulb should be located at the bottom of the retort, below the lowest crate rest, in such a position that the steam does not strike it directly: such as in a "dead" quadrant described under (11) on page 10. In horizontal retorts, the temperature control bulb should be located between the water surface and the horizontal plane passing through the center of the retort, so that there is no opportunity for direct steam impingement upon the control bulb.

(10) *Pressure Control and Indicating Equipment.* Adequate automatic controls are essential. Manual control of pressure is not recommended because the possibility of error is too great.

a. *Water level and pressure controller.* The top layer of jars should be covered with about 6 inches of water, and the overflow located accordingly. The opening of the overflow should be larger than the water supply line. An adjustable pressure relief, or control, valve should be installed in the overflow line of a capacity sufficient to prevent increase in retort pressure when the water valve is wide open.

b. *Indicating pressure gauge.* The pressure gauge should be graduated in 1 or 2 psi. divisions and have a range of

[fol. 786]

0 to 30, or 0 to 60 psi. The minimum diameter of the dial should be 4½ inches and the gauge should preferably be of a type in which the operating mechanism is independent of the case. The gauge should be connected to the retort by means of a gauge siphon or gooseneck. In a vertical retort the gauge should be located at the thermometer pocket. In the horizontal retort the gauge may be either in this position or at the top of the retort.

(11) *Steam Introduction.* The general requirement is for a good steam distributor in the bottom of the retort, providing uniform heat distribution throughout the retort and quick come-up time.

For vertical retorts these results can be achieved by any one of several methods. One means is an assembly of six pipes radiating from a center coupling with fish-tail nozzles at the end of each pipe and directing the steam up the walls of the retort outside the crates. Another means is a four-legged cross in which each pipe leg is perforated along one side only. The legs are arranged in opposing pairs to give alternate live and dead quadrants.

In horizontal retorts, the steam distributor should run the full length of the bottom of the retort with perforations distributed uniformly along the upper part of the pipe.

For details of installation of a steam distribution system, consult a laboratory connected with the canning industry. Details on the mode of operation where the retorts for processing glass are to be used for steam processing of metal containers may also be obtained from a laboratory connected with the canning industry.

(12) *Temperature Controls.* The steam valve arrangement should consist of an automatic, air pressure-to-open, valve or valves.

(13) *Water Level Indicator.* A means of determining the water level in the retort should be provided. This can be accomplished by using a gauge water glass or series of petcocks at different levels on the retort but should be supplemented with an automatic warning device such as that described

[fol. 787]

below. Where the gauge water glass is used, attention should be given to proper safety factors.

Drain valves sometimes leak during a process because of the presence of a piece of glass in the valve, or for some other reason, and this may result in some of the upper layers of jars being above the water line during the process. Jars exposed in this manner would be underprocessed because of the lower temperature of the steam-air mixture. In view of this it is strongly advised that an automatic warning device, preferably actuating a horn, be installed in each retort to indicate to the operator that the water has fallen below a safe level (See *Water Level*, page 22).

(14) *Air Supply and Controls.* A reliable supply of compressed air at the proper pressure and a means of introducing it into the retort at an adequate rate are required. The air is required both to maintain water circulation and to maintain the necessary pressure (See page 22). An automatic pressure control unit is recommended for both vertical and horizontal retorts. In both, the air should be introduced with the steam at the bottom of the retort to control "chatter".

The amount of air pressure required will depend upon the steam pressure in the lines to the retort, and upon the location of the point at which the air is introduced into the steam line. It should be in the range of 50 to 70 lbs. psi. If the air pressure at this point does not exceed the steam pressure, no air will pass into the retort during the come-up period; thus, "chatter" will not be controlled. Air circulation should be maintained continuously during the process and cool to ensure uniform temperature distribution and proper temperature and pressure control.

The amount of air required to prevent "chatter" during the come-up depends to a considerable extent on the steam pressure in the line and the back pressure in the steam distributor itself. The amount of air necessary may vary from 8 to 15 cfm. Further details on the amount of air required during this period can be obtained from a laboratory connected with the canning industry.

[fol. 788]

The amount of air required during the process and cool periods will vary with the size of the retort. Three (3) cfm is suggested for three (3) crate vertical retorts and four (4) cfm for four (4) crate vertical retorts. These requirements assume that there is no leakage from the retort either through the gasket or through the overflow valves.

A check valve should be provided in the air supply line to prevent water from the retort getting into the system. An air supply line with hand operated valve connected to the head space of the retort may also be provided for auxiliary pressure control. *A separate compressor is recommended for operating the control instruments. If a separate compressor is not provided, the air line to the instruments should be a separate line from the compressed air tank.*

(15) *Air Cleaners.* The installation of an adequate air cleaner is required in the line which supplies air for activating control valves.

(16) *Cooling Water.* A check valve should be included in the cooling water line to prevent drop of pressure in the retort in case the water pressure should fall below the retort pressure.

a. *Vertical retorts.* Cooling water should be introduced at the top below the water level, either through a minimum of four openings equally spaced around the circumference of the retort or through a ring. This recommendation assumes a feeder pipe of 1 inch minimum size with a minimum of 50 psi. water pressure at the retort. When water pressures of 80 psi. or over are encountered, the 1-inch line should be restricted or reduced to prevent excessive water flow rates or pressure during cooling.

b. *Horizontal retorts.* At the start of the cool, water should be introduced into the suction side of the pump so that the cold water can be mixed with the hot water to prevent breakage of jars from too sudden a change in temperature. Near the end of the cool, water can be admitted rapidly through the spreader in the top of the retort.

[fol. 789]

Retort Details

1. *Vertical retorts.* The general arrangement of a suitable vertical retort is given in the diagram (page 16). Details of the piping diagrams and specifications may be obtained from a laboratory connected with the canning industry.

Several specific details of vertical retorts require special emphasis:

a. *Retort and crate diameters.* There should be a minimum of 1½ inch clearance between the side wall of the crate and the retort wall to allow ample water circulation up the retort wall. The inside diameter of the retort should be a nominal 42 inches and the outside diameter of the crates should be a nominal 38 inches. Not only should diametric clearance be provided, but centering guides should be installed to assure proper clearance between the side wall of the crate and the retort wall.

b. *Retort headspace.* A minimum of 4 inches headspace should be maintained between the top water level and the top of the retort shell.

2. *Horizontal retorts.* The general arrangement of a suitable horizontal retort is given in the diagram (page 17). Details of the piping diagrams and specifications may be obtained from a laboratory connected with the canning industry.

Several specific details of horozontal retorts require special emphasis:

a. *Water circulating system.* A water circulating system is suggested to ensure uniform heat distribution. This system should be installed in such a way that water will be drawn from the bottom of the retort through a suction manifold and discharged through a spreader which extends the full length of the top of the retort.

The size of the suction manifold, circulating system, pump, and water spreader will depend on the size of the retort. The following are suggestions for *minimum* sizes to be used:

[fol. 790]

For retorts under 15 feet in length

1. Size of suction manifold	2 inches
2. Number and size of suction outlets from retort to manifold	Two 1½-inch, equally spaced
3. Size of circulating line and pump	2 inches
4. Size of water spreader	2 inches

For retorts over 15 feet in length

1. Size of suction manifold	2½ inches
2. Number and size of suction outlets from retort to manifold	One 2-inch outlet for each 8 feet of retort length or fraction thereof
3. Size of circulating line and pump	2½ inches
4. Size of water spreader	2½ inches

The holes in the water spreader should be uniformly distributed and should have an aggregate area not greater than the cross-section area of the outlet line from the pump.

The suction outlets should be protected with a screen to keep debris from entering the circulating system, because such debris may foul the pump and clog the water spreader holes.

The pump should be equipped with a pilot light or other signaling device to warn the operator when it is not running, and with a bleeder to remove air when starting operations.

b. *Hot water supply.* It is advisable to have a hot water supply for filling retorts in order to reduce come-up times and avoid thermal shock. A steam heated storage tank equipped with temperature controller and thermometer

[fol. 791]

should be provided into which hot water from cooling retorts can be discharged and saved for the next cook. The hot water outlet of the tank should be connected to the retort circulating system on the suction side, so that the circulating pump can be used to pump the water from the tank into the retort.

c. *Retort headspace.* The amount of headspace necessary varies with the diameter of the retort. In general, it may be said that the water level should not be above the bottom of the water spreader.

Stacking Equipment

Crates, trays, gondolas, etc., for holding jars stacked in a vertical position should preferably be of strap iron or expanded metal. When perforated metal crates are used the perforations in the bottoms should be at least 1-inch holes on 1¾-inch centers, or their equivalent (1½-inch on 2½-inch centers, or 1¾-inch on 3-inch centers).

Maintenance of Equipment

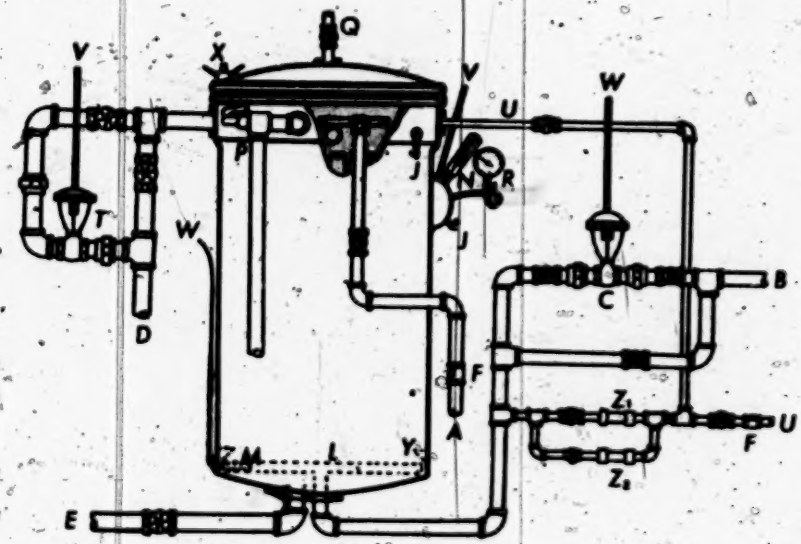
Processing equipment should be maintained in a satisfactory operating condition. The condition of the openings in the steam distribution system should be ascertained periodically to ensure continued efficiency. If a steam cross is used in a vertical retort, the position of the cross should be checked at intervals to see that the steam openings have not changed position relative to the bulb of the temperature controller, which should be in a "dead" location. Safety valves should be tested frequently. Instruments (gauges, thermometers, recorders) should be checked for accuracy at least once a year. Water valves and compressed air valves, especially the latter, should be checked frequently for leaks.

Before each operating season and after any considerable idle period, the entire retort hook-up should be examined carefully, and each retort should be brought to processing temperature (without a load) to test the system for leaks and to test the instruments and control equipment for proper operation and accurate recording.

BASIC REQUIREMENTS FOR RETORTS USED IN PROCESSING GLASS

A Water line
B Steam line
C Temperature control
D Overflow line
E Drain line
F Check valves
G Line from hot water storage
H Suction line and manifold
I Circulating pump
J Petcocks
K Recirculating line
L Steam distributor
M Temperature controller bulb
N Thermometer
O Water spreader
P Safety valve
Q Vent valve
R Pressure gauge
S Inlet air control
T Pressure control
U Air line
V To pressure control instrument
W To temperature control instrument
X Wing nuts—8 required
Y Crate support
Z_1 Constant flow orifice valve used during come-up
Z_2 Constant flow orifice valve used during cook

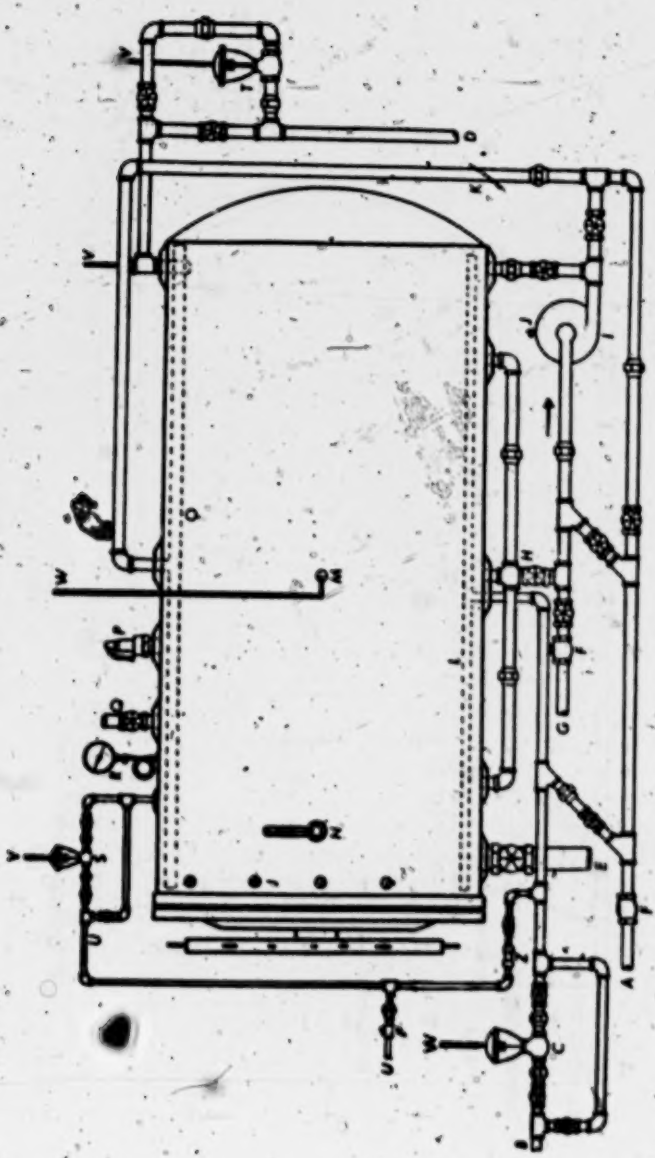
VERTICAL RETORTS



[fol. 792]

2353

[fol. 793]



HORIZONTAL RETORTS

[fol. 794]

PROCEDURE

The glass containers indicated in this bulletin are those sealed with friction type metal closures, which are not intended to hold internal pressure. The processing of the closed jars is effected in water filled retorts, with a top cushion of air under pressure to hold the closures in hermetic seal throughout the retort cycle.

The headspace for most products should be not less than 6% of the container volume (measured at the sealing temperature) for cooks in the range of 240 to 250°F. Unless the product temperature is very high, less headspace will not allow sufficient space for expansion of the contents of the sealed container and as a result the closure may be displaced.

The following measurements will provide adequate headspace under usual conditions:

Container	Headspace from Top of Finish (Volume in no case less than 6% of jar capacity)
Baby jar	3/16 inch
Junior jar	3/16 inch
No. 303 jar	3/8 inch
No. 2½ jar	7/16 inch

For most products, the temperature at the time of sealing must be above 130°F. Lower sealing temperatures require larger headspaces than those listed above to accommodate product expansion.

In general, retort operating pressure should be 28 to 30 psi. for cooks in the temperature range of 240-250°F.

Acidification

Unless some acidification procedure is followed, sterilization of certain low-acid foods by heat produces unmerchantable products. Notable examples are Globe artichokes and onions. Under proper control such products may be acidified to the point where they are no longer low-acid and then may be processed in boiling water. However, this procedure should not be followed without consulting a laboratory connected with the canning industry. Experience has shown that careful supervision of all details, particularly the blanch, fill and

[fol. 795]

brine, is essential when acidification is included in the processing procedure.

Coding

All containers should be coded by marks to identify the time of packing. The time period during which each code lot is packed should be as short as practicable—in no case longer than one day. Strict adherence to this rule has proved to be good economy. Embossing code marks in metal closures is undesirable because of the possibility of corrosion. It is preferable that closure coding be done with ink.

Process

The term "process" as used in this bulletin designates the heat treatment expressed in terms of temperature and time given the product after the container is sealed. The basic, or minimum, requirement for the process for any product is that it be sufficient to destroy *Clostridium botulinum*, the organism of greatest known resistance to heat which, by reason of its survival, may be detrimental to health. There are other types of bacteria still more resistant to heat which may cause spoilage if the product is contaminated with them.

The efficiency of any process is dependent on the heat resistance and the number of contaminating bacteria in the product. In general, the processes listed in this bulletin are regarded as adequate when something greater than an average number of spoilage organisms is present. In some cases contamination by spoilage bacteria may be so high and/or the bacteria of such great resistance to heat that the suggested process may be inadequate to prevent spoilage, and it is therefore essential that all contamination be kept as low as possible. (See Appendix for information regarding precautions which should be taken to keep spoilage contamination low.)

Operation of Cook Room

In order to ensure that unprocessed or underprocessed jars do not reach the warehouse, it is recommended that:

(1) Processes for all products be posted in a conspicuous place near the retorts.

[fol. 796]

(2) All baskets, trucks, cars or crates containing unretorted material be plainly and conspicuously marked. If several products are being packed at the same time, each product should also be plainly indicated.

(3) A distinctive marker be hung from the retort opening when the retort holds unprocessed jars. It should be so placed that the door or lid cannot be closed before the marker is removed.

(4) A retort not be closed until the operator indicates that he is ready to start the process.

(5) Jars of unknown status with regard to process, such as any found on the cook room floor, be opened and their contents discarded.

(6) Adequate precautions be taken to clear exhaust boxes and precookers of all jars at the end of each day's operations.

Rapid Handling and Prompt Retorting of Filled Jars

A long holding period between filling and sealing or between sealing and retorting jars may result in souring, off-flavor, and loss of vacuum. Processing should follow within one-half hour after sealing. If longer times are required to obtain enough jars to fill a retort, processing of partial retort loads should be practiced.

Position of Jars in Retort

Heat penetration in canned foods containing freely flowing liquid is mainly by convection currents. The general trend of these currents is in a vertical direction, consequently in the product being heated they seek channels which permit such motion. Where their progress is impeded or baffled by solid material, the currents flow around the obstruction to the nearest point at which they can pass. For this reason the alignment of certain foods in the jar is of the greatest importance as regards heat penetration.

Where the packing or filling of any product in the jar results in stratification, the jars should be processed in such position that the plane of stratification is vertical. In the case of aspara-

gus, for example, the spears are generally parallel and tightly packed in the jars in a vertical position, so that the channels containing liquid are parallel to the spears. As a result, the speed of heat penetration is greater when the jars are placed upright in the retort.

Products such as peas and cut green beans consist of small solid bodies, fairly uniform in size and evenly distributed throughout a liquid medium; consequently the rate of heat penetration is little influenced by the position of the jars in the retort.

Stacking of Jars

Jars should be so stacked as to permit the free circulation of water throughout the retort load. Solid or insufficiently perforated metal trays, crates, or gondolas should not be used, for such equipment can lead to poor heat distribution.

Initial Temperature

The term "initial temperature" as used herein designates the average temperature of the jar contents at the time steam is turned on for the process. Just prior to the start of the process, the contents of the container used for checking the initial temperature should be shaken or stirred and the temperature determined. This container should be representative of the coldest jars in the retort load and should have an initial temperature equal to or greater than the initial temperature specified in this bulletin. The specified initial temperature is to be regarded as a prerequisite minimum of the process suggested.

Where no initial temperature is specified in the tables, it is understood that this is not important between commercial limits such as 130-170°F.

Retort Cycle

In processing most products, the highest quality will result if the retort is brought to processing temperature quickly, the timing of the process is accurate, and the process is completed by prompt and rapid cooling. This procedure not only protects the quality of the product but also shortens the total time

[fol. 798]

required for each processing cycle and so effects time economy in the use of the retort. It applies to all processing temperatures and is especially important when the temperature is above 240°F.

During the retort cycle there are a number of details that must be observed if reliable processing is to result.

Water Level. In vertical retorts the starting water level should be sufficient to cover the crates of filled jars as they are being loaded into the retort without a tendency to cause excessive overflow, yet bring the water level to the overflow pipe at the time of the loading of the last crate. To minimize thermal shock to the jars and to promote rapid heating efficiency as soon as the retort is closed, the temperature of the water should be adjusted by the introduction of water or steam to approximately that of the product in the filled jars. If the temperature of the water is more than 15°F. above the sealing temperature of the jars, there is a possibility of displacing the friction closures. The level of the water over the top layer of jars should be about 6 inches. No extra jars should be placed on the top of the last load, if they are not covered by at least this depth of water.

For efficient operation of horizontal retorts, the use of a reserve water storage tank is advised. As soon as the retort is closed, water should flow from the tank into the retort until the top layer of jars is covered by about 6 inches of water. The water temperature should be approximately that of the product in the jars at the time of sealing. Use of water at a substantially higher temperature may cause friction closures to be displaced. Water at substantially lower temperatures may cause breakage. *The water level must remain at approximately 6 inches above the top layer of jars during the entire come-up-time, cook, and cool.*

Air Pressure. The air to the bottom of the retort must be turned on immediately after closing the retort and the pressure built up promptly to the operating range. The steam is then turned on. The operating pressure must be maintained throughout the come-up, process and cool.

[fol: 799]

Coming-up Time. Timing of the process should not begin until the specified retort temperature has been reached and agreement is noted between the recording thermometer and the mercury thermometer.

Cool. At the end of the specified process time the steam should be shut off and the operating pressure maintained with air. The cooling procedures should be those specified on pages 11 and 12 of the bulletin under Sections 14 and 16. The duration of the water cooling period either in the retort alone or in combination with cooling canals or sprays shoud be sufficient to bring the temperature of the contents to an average of 100°F. Water cooling should not be continued to the point where external rusting of the container closure may occur.

Storage

When jars whose contents are at temperatures substantially above 100°F. are stacked closely together, and especially if they are sealed in fiber cases, they cool so slowly that spoilage by thermophilic bacteria and injury by heat to the quality of the product (stack-burn) may occur. Such jars should be air cooled before they are put into storage.

CAUTION

To facilitate the presentation of the process times and temperatures in tabular form, it has been necessary to use a number of footnotes. Those who use the bulletin are cautioned to read the footnotes in connection with the tables to which they refer.

JAR DIMENSIONS

The jar sizes are given in the nomenclature usually employed in the industry, which avoids the confusion incident to conflicting local names.

In this system, the jars are identified by a statement of their dimensions (over-all diameter and over-all height). Each dimension is expressed as a number of three digits. The left-hand digit gives the number of whole inches, while the two right-hand digits give the additional fraction of the dimension expressed as sixteenths of an inch.

[fol. 800]

The first number given in the size of each jar is the diameter, and the second number is the height. For example, a No. 2½ jar, designated as 401x414, is 4 1/16 inches in diameter and 4 14/16 inches in height, that is, within manufacturing tolerances.

The characteristics of the common sizes of glass jars covered in the Process Tables are:

Container	Dimensions	Approx. Overflow Cap.—Fl. Oz.
Baby jar	200x309	5.0
Junior jar	208x401	8.1
No. 303 jar	303x411	17.0
No. 2½ jar	401x414	28.4

In those cases where the processes apply to jars other than those listed above, the dimensions are indicated under the respective process tables. If jars having capacities or dimensions not listed in the process table are used, consult a laboratory connected with the canning industry.

[fol. 801]

PROCESS TABLES

I.—VEGETABLES AND VEGETABLE PRODUCTS

Artichokes, Globe

Pressure cooks adequate for sterilization render artichokes and artichoke hearts unmerchantable. The Standard of Identity promulgated under the Food, Drug and Cosmetic Act requires that artichokes be acidified to ensure safe processing in boiling water and thereby ensure preservation without loss of merchantability. Careful supervision of all details, particularly blanch, fill, and brine, is essential when acidification is included in the processing procedure. These products should not be packed without consulting a laboratory connected with the canning industry.

Asparagus Spears, green (a)

Jar size	Dimensions	Initial temperature Deg. F.	Time at 240° F. Min.
14 oz. tapered	411x311x206	140	28
		170	26

Baby food, chopped: *See* Vegetables, chopped

Baby food, strained: *See* Vegetables, strained

Beans, green or wax, whole or cut

Jar size	Dimensions	Time at 240° F. Min.
303	303x411	25
2½	401x414	30

Beans, kidney: *See* Beans, mature, etc.

Beans, Lima, succulent (b)

Jar size	Dimensions	Time at 240° F. Min.
303	303x411	45

(a) These processes are for all green asparagus spears packed into the jar with the tips at the tapered or narrow end and processed tips up (cap down).

(b) For "Lima beans, dry soaked" the processes given under "Beans, mature, etc." should be used.

[fol. 802]

Beans, Soy: *See* Beans, shelled types, succulent (except Limas)

Beans, mature, and soaked dried legumes, shelled types in unthickened sauce (*a*)

Jar size	Dimensions	Time at 240° F.
		Min.
303	303x411	60
2½	401x414	65

Beans, shelled types, succulent (except Limas) (*b*)

Jar size	Dimensions	Time at 240° F.
		Min.
303	303x411	50

Beans with pork, or baked beans (*c*)

Jar size	Dimensions	Initial temperature	Process time at 240° F.	Process time at 250° F.
		Deg. F.	*Min.*	*Min.*
303	303x411	140	100	85
303	303x411	180	85	70
2½	401x414	140	135	115
2½	401x414	180	115	95

Beets, whole, cut, quartered, diced, sliced, or shoestring (*d*)

Jar size	Dimensions	Time at 240° F.
		Min.
303	303x411	35
2½	401x414	40

(a) Classification of this type of product is rather uncertain, and if doubt exists consult a laboratory connected with the canning industry. Unthickened sauce is a packing medium that contains no tomato pulp or similar viscous material and not more than 2½ pounds of starch per 100 gallons of sauce.

(b) These processes are suggested for all succulent shelled beans (except Limas) that are packed in water, with or without, salt, sugar, seasoning, etc.

(c) The process for the sterilization of beans in sauce depends to some extent upon the sauce formulation with respect to tomato pulp and starch content. These processes apply to beans packed in a heavy sauce. If these processes result in a product of unsatisfactory quality, it is recommended that a process for a particular sauce formulation be obtained from a laboratory connected with the canning industry.

(d) If beets are lye-peeled, the cooks apply only provided the lye has been completely removed by washing.

[fol. 803]

Carrots, whole, cut, quartered, sliced, diced or shoestring (a)

Jar size	Dimensions	Time at 240° F. Min.
303	303x411	30
2½	401x414	30

Carrots and Peas: *See* Peas and Carrots

Carrot Juice: *See* Specialties

Corn, cream style, or succotash (b)

Jar size	Dimensions	Initial temperature Deg. F.	Time at 240° F. Min.	Time at 250° F. Min.
303	303x411	160	105	80
303	303x411	180	100	75

Corn, whole kernel, in brine

Jar size	Dimensions	240° F. Min.	Time at 245° F. Min.	250° F. Min.
303	303x411	50	40	30

Corn on the cob

Processes necessary for vacuum packed corn on the cob are dependent to a marked degree upon the factors of maturity, variety, fill, amount of water added, and conditions tending to reduce the vacuum. It should not be packed without directions from a laboratory connected with the canning industry.

Hominy, lye or pearl

Jar size	Dimensions	Time at 240° F.
303	303x411	75
2½	401x414	90

(a) These cooks apply only to a brine pack. Other styles of carrots, including carrot chips, should not be packed without directions from a laboratory connected with the canning industry. If carrots are lye-peeled, the cooks apply only provided the lye has been completely removed by washing.

(b) These cooks apply to succotash prepared from cream style corn and beans. For succotash consisting of whole kernel corn and beans in brine use the processes for whole kernel corn in brine.

[fol. 804]

Onions

Pressure cooks adequate for sterilization render onions unmerchantable. It has been found necessary, therefore, to acidify this product to permit safe processing in boiling water and thereby ensure preservation without loss of merchantability. Careful supervision of all details, particularly blanch, fill, and brine is essential when acidification is included in the processing procedure. This product should not be packed without consulting a laboratory connected with the canning industry.

Peas

Jar size	Dimensions	Time at 240° F. Min.	Time at 245° F. Min.	Time at 250° F. Min.
303	303x411	45	35	25

Peas, dry-soaked: *See* **Beans, mature, etc.**

Peas, Black-eye: *See* **Beans, mature, etc.**

Peas, Crowder: *See* **Beans, mature, etc.**

Peas and Carrots

Jar size	Dimensions	Time at 240° F. Min.
303	303x411	45

Peppers or Pimientos, Green

Pressure processes adequate for sterilization render green peppers or green pimientos unmerchantable. It has been found necessary, therefore, to acidify these products to permit safe processing in boiling water and thereby ensure preservation without loss of merchantability. Acidification must be carefully controlled. For detailed procedures consult a laboratory connected with the canning industry.

Peppers or Pimientos, Red

Acidification of red peppers or red pimientos is desirable to prevent spoilage, even though it may not be necessary from the standpoint of public health. Acidification must be carefully controlled. For detailed procedures consult a laboratory connected with the canning industry.

[fol. 805]

Potatoes, Sweet, whole, in syrup

In view of the lack of standardized canning procedures for sweetpotatoes, any packer of this product should have direct assistance from a laboratory connected with the canning industry.

Potatoes, White, sliced or diced, in brine

Jar size	Dimensions	Time at 240° F. Min.	Time at 250° F. Min.
303	303x411	40	30

III.—SPECIALTIES

This is a group of products which vary widely from each other in composition and which from the standpoint of processing have little in common with the standard vegetables. They not only differ from each other, but each individual specialty as prepared in different plants is likely to vary in composition and in canning procedure from the same product prepared by another packer. Because of this difference in formula and the variation in preparation methods, specialties should not be packed without directions from a laboratory connected with the canning industry.

(a) For processing minced, crushed, chopped, sliced, or other olive products, a laboratory connected with the canning industry should be consulted, as the size of particles, tightness of pack, and moisture content must be considered before the process is suggested.

[fol. 807]

IV.—MEAT OR MEAT PRODUCTS

Due to variations in formula and methods of preparation which may affect process relationships, these products should not be packed without directions from a laboratory connected with the canning industry.

V.—CHICKEN OR CHICKEN PRODUCTS

Due to variations in formula and methods of preparation which may affect process relationships, these products should not be packed without directions from a laboratory connected with the canning industry.

VI.—MARINE PRODUCTS

Due to variations in formula and methods of preparation which may affect process relationships, these products should not be packed without directions from a laboratory connected with the canning industry.

[fol. 808]

APPENDIX

PRECAUTIONS FOR HANDLING GLASS JARS

Glass containers can be damaged by excessive mechanical or thermal shocks. With modern high speed filling lines, particular attention should be directed toward eliminating:

1. Bruising jars by abrupt stops or careless handling.
2. Scuffing on conveyors or transfer points.
3. Excess thermal shock during filling, processing or cooling.

The damage done to filled containers by impacts usually is greater than that to empty containers because of the added weight of the contents.

The hermetic seal of the friction closures applied to the jars can be maintained by careful attention to:

1. Maximum filling temperature of product.
2. Adequate headspace in the glass jar.
3. Correct application of the closure.
4. Proper temperature of water during retort loading.
5. Ample counterpressure in retort during processing and particularly during cooling.
6. Proper heat distribution in the retort.
7. Provision for ample cooling after retorting.

GENERAL SOURCES AND CONTROL OF SPOILAGE CONTAMINATION

The efficiency of any process depends in large measure upon the type and number of microorganisms in the product at the time of canning. In general, the processes presented in this bulletin are regarded as adequate when something greater than an average number of spoilage organisms is present. They are not necessarily adequate in cases of extreme contamination by spoilage bacteria that may or may not be associated with insanitary conditions. Control of contamination by applying the strict principles of sanitation, and by other appropriate means, is a necessary adjunct to any process.

[fol. 809]

Factory surveys during the past twenty years to determine the identity of contamination sources and to develop means for their elimination have shown that the important sources of contamination are within the canning plant. There are exceptions, notably in the case of asparagus, where soil contamination of the raw product may be a cause of spoilage. As soil bacteria brought into the plant may increase in number and lead to spoilage, the raw product, whenever its character permits, should be thoroughly washed in clean water.

Factory studies to date have centered chiefly upon the canning of asparagus, corn, peas, pumpkin, and spinach, but facts developed in these studies are applicable to other products. Accordingly, use of the following information should serve to control contamination to a degree that will ensure the effectiveness of the processes presented in this bulletin.

Wooden equipment

In general, the use of wood in canning equipment is not recommended, for bacteria may become seeded in the pores and once established may contaminate food materials to such an extent that spoilage may occur with a process that has been satisfactory for years. Any wooden equipment with which food materials may come in contact, such as brine and hot water tanks, conveyors, blanchers, canning tables and even such small items as paddles and rollers, may act as carriers of contamination. For example, wooden tanks used for storage of hot water for general plant purposes may contaminate a whole canning system. Wooden brine tanks, at the beginning of a day's run, may supply large numbers of organisms to the product being canned. Owing to dilution their number decreases markedly during steady operation, only to build up again during a shutdown. Wood, being porous, is able to retain bacteria and hold them mechanically immune from scrubbing and other cleaning processes. "Seeding" may be prevented to a considerable degree by constant cleaning, but in spite of all that may be done, there is at present no practical treatment which will rid wood of organisms that are established in it. Consequently, it has been recommended that tanks

[fol. 810]

and other wooden equipment be replaced by those of hard surfaced construction.

Pumps, pipes, extractors, cyclones, etc.

Pumps, pipes, extractors, cyclones, etc., should be selected from the standpoint of ease in cleaning, because such equipment may hold food material that will serve as a medium for bacterial growth and permit the development of sufficient organisms to contaminate seriously the first part of the next day's pack. All such equipment should be thoroughly cleaned after being used, then thoroughly cooled with water and kept cool until next operated. It should likewise be flushed again with water immediately before it is used.

Care should be taken during the cleaning operation to blow steam through the perforations of steam distribution pipes which are submerged in food or brine during operation and to note that all perforations are open. Circulating "feeder" pipes should be thoroughly cleaned at the close of the day's pack. Preferably, they should be so constructed that they may be dismantled and cleaned with brushes. "Dead ends" should be eliminated wherever possible; if not, they should be provided with drains so that they may be thoroughly flushed. Pumps should be dismantled during the clean-up operation and only pumps adapted to daily cleaning should be used. Some persons should be delegated to inspect all cleaning operations to ensure that this work is efficiently done.

Fluming

Flumes, such as those used for conveying peas and whole grain corn, may become sources of bacterial contamination. In particular, the use of water at temperatures in the range of 100°F. to 180°F. should be avoided since this may provide a favorable condition for growth of thermophilic spoilage bacteria. It is advisable to use only fresh, clean, cold water for fluming purposes.

Fillers

Filling machines used with low-acid products have been found to be contaminated with spoilage bacteria. This con-

[fol. 811]

tamination is usually the result of the filler being maintained at temperatures within the thermophilic growth range. This might occur during operation from contact with a heated product or during shut-down periods from leakage of steam supply valves.

Fillers should be dismantled and cleaned as frequently as practicable. After the day's clean-up, the fillers should be flushed with cold water with all machinery in motion to chill the equipment, and the fillers should be left clean, cold, and empty during the overnight shutdown. If the filler operates at temperatures within the thermophilic range during actual packing operations, it should be emptied of its product every 4 hours and thoroughly flushed with water with all machinery kept in motion.

Canning ingredients

In recent years there has been a growing appreciation of the importance, as carriers of spoilage contamination, of certain ingredients commonly used in canning. Among these are sugar, starch, flour, and dried milk. Of these, sugar and starch are most important and are further discussed on page 35.

SPECIFIC SOURCES OF SPOILAGE CONTAMINATION

In addition to the preceding general information on sources of contamination, canners of certain products upon which extensive investigations have been made will find of value the following additional information and suggestions.

Corn

PREHEATING SYSTEMS, MIXING AND BLENDING TANKS. The increasing use of mixing and blending equipment in which corn is handled while hot has demonstrated further need for contamination control. Such equipment while hot (180°F. or higher) does not permit the growth of spoilage bacteria, but in the range of 100°F. to 180°F. there is opportunity for development of thermophilic organisms. Usually this development occurs over night and during shutdowns, and the spores which develop during those times serve subsequently to contaminate

[fol. 812]

the run. As a rule, it is best to hold the tanks empty over night. However, there appears to be no objection to holding them full of cold water provided care is taken to ensure that there are no leaky valves in the line which might tend to warm the equipment. Care should be taken during the cleaning operation to blow out perforated steam supply pipes; otherwise they may hold food material that will serve as a bacterial medium. Flushing and cooling may be accomplished conveniently by tapping a cold water line into the steam supply line adjacent to the mixer and blending tank.

CIRCULATING SYSTEMS. Such systems represent another step in complexity from the preheating systems. The circulating feeder pipes should be thoroughly cleaned at night and preferably they should be so constructed that they may be dismantled and cleaned with brushes.

WHOLE KERNEL CORN. With this product special care should be taken to prevent contact with wooden equipment and, after being cut, the corn should be subjected to an efficient wash. The use of warm water or hot water in flotation washers should be avoided since such practice may lead to the rapid development of spoilage bacteria. Failure to wash the cut corn properly may result in spoilage.

Peas

The recommendations made with respect to control of blancher contamination in the canning of peas apply also to other products, such as lima beans and green and wax beans, that are blanched in a conventional pea blancher.

BLANCHERS. Both rotary drum blanchers and tubular blancher systems may become contaminated with thermophilic spoilage bacteria. The contamination which occurs during shut-down periods can be minimized by prompt cooling of the blanchers after use, by thorough cleaning, elimination of steam leaks, and flushing of the blancher system before its next use. However, thermophilic contamination may also occur during operation of either type of blancher system.

[fol. 813]

In rotary drum blanchers the contaminating bacteria are able to grow on the inner surfaces, above the water line, where temperatures are reduced by cool air drawn into the blanchers under loose-fitting doors and other openings. Any surface in the blancher where the temperature ranges between 100°F. and 180°F. can be the site of bacterial growth from which heat-resistant spores will be washed by condensate into the blanch water, and there contaminate the peas.

Efforts to prevent contamination in rotary drum blanchers should be directed toward elevating inner surface temperatures above 180°F. Blancher doors should be closed and fastened at all times. Doors which are bent or otherwise out of shape should be repaired in order to exclude as much cool air as possible. Vent stacks should be eliminated from the shell of the blancher. The coldest sections within a drum blancher are at the feed end. The use of a spray, inserted at the upper edge of the feed end, which delivers hot water (190°F. or higher) over the inside surfaces has been found useful in preventing contamination. During operation the temperature of the blanch water should be as high as practicable (at least 180°F.), and the reels should be kept in motion continuously while the blanchers are being heated or being held at operating temperature. A continuous overflow from the blancher should be maintained during operation.

The blancher water should be dumped as often as practicable since the number of bacterial spores in the water increases with time and use. The drain and water supply pipes should be of sufficient size to permit rapid draining and re-filling.

In tubular blanching systems a large percentage of the flat sour spore contamination occurs in the de-watering reel into which the peas are discharged from the blanchers. Thermophilic bacteria grow on the mesh of the screen and on the surfaces of the splash boards around the reel and the pan underneath. Spores produced by the bacteria are added to the peas as they pass through the reel or may be washed into the water and re-circulated in the blancher. This contamination can be reduced if sprays are installed to wash the surface

[fol. 814]

of the reel with water which is preferably, but not necessarily, chlorinated. The use of cold water for this purpose is desirable to lower the temperature of the peas before they enter the quality grader. Sprays should also wash down the inner surfaces of the splash boards or canopy surrounding the reel. Tests have indicated that cold water is effective in reducing flat sour contamination when used in these sprays. The foam which accumulates on tanks supplying recovered water to tubular blanchers can be the growth site for thermophilic spoilage bacteria. A large, broad overflow should skim the surface of the tank. Top sprays delivering streams of water at a flat angle will help prevent the formation of foam and aid in skimming the tank.

It is important that peas be washed thoroughly after blanching. Adequate washing will remove large numbers of spoilage bacteria but cannot be depended upon to remove all of the bacteria added by a heavy contamination. Washing with cold water will reduce the temperature of the peas and thus help to minimize slime growth in subsequent equipment and prevent undesirable temperature increases in the quality grader brine.

Pumpkin

Practice in pumpkin canning is not standardized and the following suggestions are based upon a study of systems used by a majority of the pumpkin canners. Consideration of sources of contamination in pumpkin canning begins with the wilting equipment.

WOODEN BOX OR TOWER WILTERS. As already noted, wooden equipment is objectionable, but it may be lined with metal if this is practicable.

CONTINUOUS METAL OR WOODEN BOX WILTERS. Both metal and wooden boxes used as continuous wilters may be sources of contamination. They are difficult to clean and cool.

CONTINUOUS CONVEYOR PRESSES. There are various modifications in this type of equipment but the same principle is involved, that is, the pumpkin from the wilter is dropped into a

[fol. 815]

hopper and carried between two moving belts. The distance between the belts gradually decreases toward the outlet end, and the pressure that is exerted squeezes the juice from the pumpkin. These presses are complicated mechanically and the parts vary in temperature. Where the temperature is favorable to thermophilic growth there may be some bacterial development. Some measure of control may be exerted by spraying the press "apron" with cold water, but this expedient is not fully satisfactory. From the viewpoint of contamination control the screw type press is much to be preferred. In this equipment the pumpkin is "wormed" through a tapering perforated screen. During operation, the temperature of all parts is so high (180°F. to 200°F.) that no growth is possible. The screw press is readily accessible for cleaning.

CONCENTRATION OF PUMPKIN JUICE: It is usual to discard the juice from the press, but in some cases it is the practice to concentrate this juice and add it to the pumpkin at the finisher. This system is satisfactory when the general packing procedure is such as to keep contamination at a low level. However, the concentration of contamination is increased as the volume of juice is reduced by evaporation, and such contamination as may be present is returned to the product when the juice is not discarded.

Spinach

WASHERS: Spinach washers include "immersion," "spray-rotary" and "spray-belt" types. They are used singly, in multiple, and in various combinations. Their primary function is to remove grit and adhering soil and concurrently the soil-borne bacteria which are present. In all types of equipment, the washing efficiency is determined, at least in part, by the amount of water used. Thorough washing is of primary importance and a large volume of water is required. Washers should not be overloaded because this reduces their efficiency. When both immersion and spray types are used in the same line, better results are achieved if the immersion washer is placed before the spray washer. The first washing should always be done with cold water. The use of warm water in

[fol. 816]

the first wash may lead to increase of bacteria that come from the field with the spinach, thus contaminating the equipment. Water should not be re-circulated where a single washer is used.

BLANCHERS: Blanching equipment may be a source of spoilage bacteria, particularly those of the thermophilic group. To minimize the hazards of spoilage from this source, the washing and cooling treatments previously discussed should be applied. Occasionally pea blanchers have been used, but as this type of equipment is difficult to clean there is opportunity for the development of spoilage organisms. Spoilage has been traced to such a blancher and its use is therefore not recommended. The blanch water should be renewed at a reasonably rapid rate.

SIGNIFICANCE OF SUGAR AND STARCH CONTAMINATION

Sugar, both beet and cane in dry or liquid form, may carry spores of all three groups of thermophilic bacteria that are important as spoilage agents in low-acid canned foods. The sugar industry is aware of this condition and has taken steps to control thermophilic contamination in its products. In 1931 the National Canners Association formulated and published bacterial standards for sugar as a basis for its judgment regarding the suitability of sugar to be used in canning low-acid products. These standards have been applied by control laboratories connected with the canning industry, by the sugar industry, by federal and state laboratories, etc. That part of the published statement referring to standards reads as follows:

TOTAL THERMOPHILIC SPORE COUNT: For the five samples examined, there shall be a maximum of not more than 150 spores and an average of not more than 125 spores per 10 grams of sugar.

FLAT SOUR SPORES: For the five samples examined, there shall be a maximum of not more than 75 spores and an average of not more than 50 spores per 10 grams of sugar.

THERMOPHILIC ANAEROBIC SPORES: These shall be present in not more than three of the five samples and in any one

[fol. 817]

sample to the extent of not more than four of six tubes inoculated by the standard procedure.

SULFIDE SPOILAGE SPORES: These shall be present in not more than two of the five samples and in any one sample to the extent of not more than five spores per 10 grams.

Sugar that is certified as suitable for use in the canning of low-acid products is produced by large manufacturers of both beet and cane sugar. It is recommended that canners of low-acid products specify that such sugar be provided, and it is suggested as an added safeguard that samples of delivery be submitted from time to time to a laboratory connected with the canning industry to determine whether deliveries conform to specifications. In collecting dry sugar samples, five individual ½ lb. quantities should be taken from each of five bags or other containers of the shipment or lot in question. These samples should be sent to the laboratory in clean, sealed containers. If samples from more than one shipment or lot are submitted each container should be appropriately marked to distinguish the lot of its origin.

It is appreciated that the adequacy of this sampling will vary in relation to the size of the shipment or lot, but it is felt that where there is any significant variability in the shipment this fact will become evident in the majority of cases through individual tests on five samples.

For sampling liquid sugar, three individual samples of approximately 6 oz. each should be drawn from the tank or pumping line. The first sample should be taken at the beginning of the pumping operation, the second at the mid-point and the third near the end of the pumping. Each sample should be sealed and marked with its number and the designation of the lot of its origin.

The significance of starch contamination has also been demonstrated and starch to be used in the canning of low-acid products should be purchased on specification. The standards for sugar contamination apply also to starch and other cereal ingredients, and periodic laboratory checks are desirable.

[fol. 820]

IMPORTANT POINTS FOR RETORT OPERATORS

1. Read carefully the entire introduction to NCA Bulletin 30-L.
2. Don't trust your memory on processes. Consult Bulletin 30-L.
3. Keep retort instruments and valves in good working order. Instruments need periodic testing.
4. Keep water level up to overflow and maintain water circulation throughout entire cook.
5. Don't start timing process until the thermometer shows the desired temperature.
6. Maintain the proper operating pressure throughout the entire processing cycle.
7. Timing the process is only part of the job. Keep the retort temperature correct.
8. Don't allow crates of jars to stand around before processing. Spoilage may result. See page 20.
9. Keep permanent time and temperature records of every retort load processed. See opposite page.
10. Cool jars properly. Too little cooling may cause either stackburn or spoilage; too much may cause rusting of caps.

[fol. 822]

IMPORTANT POINTS FOR CANNERS

1. *Follow approved procedures.* The procedures given in this bulletin are based on sound theory and wide practical experience. For safe processing it is important that they be carefully followed.

2. *Keep your key men informed.* Irregularities in cook room procedure, such as unprocessed cans getting into the warehouse, inadequate venting of retorts during coming-up period, and using a wrong process, will occur unless the cook room is properly supervised. Insist that all supervisory personnel and retort operators read this booklet and understand the significance of the tasks they perform.

3. *Equip your retorts properly.* Tested and properly installed retort instruments are essential. Instruments need periodic testing.

4. *Don't reduce processes.* Processes in this bulletin give the highest quality consistent with safety.

5. *Code your cans.* The time period during which each code lot is packed should be as short as practicable—in no case longer than one day.

6. *Keep your factory clean.* High bacterial contamination may lead to spoilage. See Appendix.

PROCESSES FOR LOW-ACID CANNED FOODS IN METAL CONTAINERS

INTRODUCTION

ON JANUARY 18, 1930, the Board of Directors of the National Canners Association approved for publication the processes suggested for various low-acid foods packed in metal containers. It was anticipated that further experimental work on processes for these foods, changes in the style of pack, and the advent of new products would necessitate revision of the publication at later dates. The first edition of the processing bulletin was published in January, 1930, and this is the eighth edition. The processes given in the present bulletin are based upon technological data relating to the heat resistance of spoilage bacteria in canned foods and upon data pertaining to heat penetration in canned foods.

In some instances process suggestions are based upon analogy with similar products for which heat resistance and heat penetration data are available, and also on the general experience of the canning industry.

It should be understood that when further data and information are available the bulletin will be revised, and previous editions should be discarded.

Prefacing the list of processes are recommendations with respect to proper retort equipment and its operation for best results. A thorough understanding of these recommendations is necessary for the best use of the bulletin and is essential for the correct interpretation and proper use of the processes.

Following the list of processes is an appendix which gives information regarding sources of spoilage contamination and its control; the significance of sugar and starch contamination; and Federal minimum drained weights for spinach and mushrooms for which maximum drained weights are specified in conjunction with process recommendations.

[fol. 827]

While the procedures recommended in this bulletin are based on sound theory and wide practical experience, references to methods or types of equipment are not to be construed as a guarantee of their sufficiency. The recommendations contained herein are not to be considered as creating any assurance or warranty with respect to production or cost or any responsibility for damage, spoilage, loss, accident or injury resulting from the use of this information by anyone.

IMPORTANCE OF PROPER EQUIPMENT AND PROCEDURE

Close supervision of the cook room and careful attention to details are essential to ensure successful processing; otherwise, irregularities may occur due to poor organization of the cook room, to carelessness, or to ignorance of safe practices.

In order to be certain that all cans secure the amount of heat treatment required to prevent spoilage, careful control and recording of temperatures and adequate venting of air from all parts of the retort are essential, because processes for canned foods are determined by tests made with the cans in "pure" steam (free of air) at a definitely controlled and specified temperature, and when these processes are applied in commercial practice identical conditions must be met. The suggestions under "Equipment" and "Procedure" are based on the results of careful studies to determine what type of equipment and procedure may be relied upon to give the required heat treatment under commercial conditions.

EQUIPMENT

Type of Retort

The processes contained in this bulletin are for discontinuous, non-agitating (still) retorts. For other types of retorts, processes should be obtained from a laboratory connected with the canning industry. For retorts to be used in processing metal or glass containers under water with superimposed air pressure, see NCA Bulletin 30-L.

Retort Equipment

Control and indicating equipment such as thermometers and pressure gauges should be so placed with respect to light and position that they are easily readable.

For proper operation each retort should have the items of equipment named below:

[fol. 828]

(1) *Controller.* An automatic controller to maintain accurately the temperature at the specified point.

(2) *Indicating Mercury-in-Glass Thermometer.* This thermometer should have a temperature range of not more than 100°F., for example, 170°F. to 270°F., and the scale divisions should be of either one degree or two degrees each—never greater than two degrees. The temperature scale of the indicating thermometer should be at least 7 inches in length, and the thermometer should have a pressure scale corresponding to the temperature scale at the altitude above sea level at which the retort is located. The relation between the temperature and pressure scales at various altitudes is given in the table on page 20. The pressure scales of all thermometers should be adjusted in correspondence with these data.

Bulbs of indicating thermometers may be installed within the retort shell or in external wells attached to the retort. External wells should communicate with the principal chamber of the retort through openings having an area not less than that of a circle of ¾-inch diameter. All external wells or pipes must be equipped with at least 1/16-inch bleeders so located as to provide a full flow of steam past the entire length of the thermometer bulb. The bleeder should emit steam continuously and freely during the processing period. A suitable thermometer well is shown in the sketch. If containers are processed under water, the hemispherical well shown in Bulletin 30-L should be used.

(3) *Recording Thermometer.* The chart should be easily readable to 1°F. and should be graduated in not to exceed 2°F. divisions within the range of plus or minus 10°F. of the process holding temperature used. All charts should have a working scale of not less than 3 inches. The bulb may be installed within the retort shell or in a thermometer well attached to the shell. This well should be capable of accommodating both the recorder bulb and a mercury-in-glass thermometer.

[fol. 829]

(4) *Pressure Gauge.* The pressure gauge should be graduated in 1-pound divisions, and have a range to 30 pounds. The minimum diameter of the dial should be 4½ inches and the gauge should preferably be of a type in which the operating mechanism is independent of the case. Compound type gauges having both vacuum and pressure scales, are advantageous The gauge should be connected to the retort by means of a gauge siphon or goose neck.

(5) *Stacking Equipment.* Baskets, trays, gondolas, etc., for holding stacked cans should preferably be of strap-iron. Solid or insufficiently perforated metal trays, dividers, crates, or gondolas should not be used, for such equipment can lead to the formation of low temperature regions. When perforated metal baskets are used the perforations in the bottoms should be at least 1 inch holes on 1¾ inch centers, or their equivalent (½ inch on 1 inch centers, ¾ inch on 1½ inch centers, 1½ inch on 2½ inch centers, or 1¾ inch on 3 inch centers).

(6) *Stacking of Cans.* Cans should be so stacked as to permit the free circulation of steam throughout the retort load. If it is necessary to separate two lots in one crate or tray, fish net or onion sacks of ½ inch, or larger, mesh should be used rather than burlap or other tightly woven material.

(7) *Valve-Controlled Vents.* Vents are *large* valve-controlled openings into retorts used for elimination of air during the come-up period. They should be installed in such a way that all the air can be removed from the retort before timing of the process is started. Vents should be controlled by gate, or plug-cock type valves which should be fully open to permit rapid discharge of air from the retort during the coming-up period. The vents and all external lines, manifolds, etc. should be short and as free as possible from bends and other conditions which might retard rapid discharge of air. The outlet pipes should be located in the extreme opposite wall of the retort from that through which the steam is admitted.

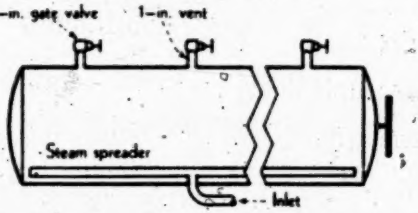
No single venting specification is entirely applicable to all retorts, because the choice of a satisfactory specification is dependent upon size, shape, and present equipment of retorts, as well as upon quantity and pressure of steam available,

[fol. 830]

method of stacking cans in the retort, length of coming-up time desired, resistance to outward flow of air from the retort, etc.

Six suggested installations and operating procedures are given in the following diagrams. *Increased venting may be necessary when systems employing divider plates between each layer of cans are used. Where such systems are used, consult a laboratory connected with the canning industry.*

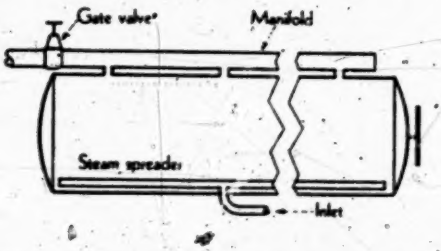
A—Venting through multiple 1-in. vents discharging directly to atmosphere



Specifications: One 1-in. vent for every 5 ft. of retort length, equipped with a gate valve and discharging to atmosphere; end vents not more than 2½ ft. from ends of retort.

Venting method: Valve should be wide open for at least 5 minutes to at least 225°F., or for at least 7 minutes to at least 220°F.

B—Venting through multiple 1-in. vents discharging through a manifold to atmosphere



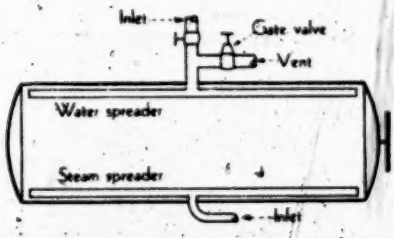
Specifications: One 1-in. vent for every 5 ft. of retort length; end vents not over 2½ ft. from ends of retort;

[fol. 831]

size of manifold—for retorts less than 15 ft. in length, 2½-in.; for retorts over 15 ft. in length, 3-in.

Venting method: Manifold vent valve should be wide open for at least 6 minutes to at least 225°F., or for at least 8 minutes to at least 220°F.

C—Venting through water spreaders



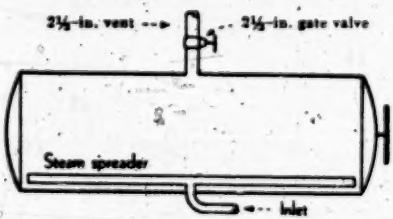
Size of water inlet, vent pipe, and vent valve: For retorts less than 15 ft. in length, 2-in.; for retorts over 15 ft. in length, 2½-in.

Size of water spreader: For retorts less than 15 ft. in length, 1½-in.; for retorts over 15 ft. in length, 2-in.

Number of holes in water spreader: This is an important consideration, and may be governed by local regulations; if not, a laboratory connected with the canning industry should be consulted.

Venting method: Water spreader vent valve should be wide open for at least 5 minutes to at least 225°F., or for at least 7 minutes to at least 220°F.

D—Venting through a single 2½-in. top vent (for retorts not exceeding 15 ft. in length)



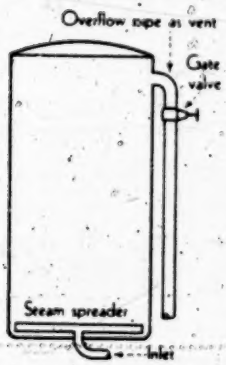
Specifications: A 2½-in. vent equipped with a 2½-

[fol. 832]

in. gate valve and within 2 ft. of the center of the retort.

Venting method: Valve should be wide open for at least 4 minutes to at least 220°F.

E—Venting through a 1½-in. overflow



Specifications: A 1½-in. overflow pipe equipped with a 1½-in. gate valve and with not more than 6 ft. of 1½-in. pipe beyond the valve.

Venting method: Valve should be wide open for at least 4 minutes to at least 218°F., or for at least 5 minutes to at least 215°F.

F—Venting through a single 1-in. top vent

Specifications: A 1-in. vent in lid, equipped with a 1-in. gate valve and discharging directly into the atmosphere.

Venting method: Valve should be wide open for at least 5 minutes to at least 230°F., or for at least 7 minutes to at least 220°F.

(6) *Bleeders.* Besides the thermometer bleeders, additional bleeders are necessary, located in the extreme opposite wall of the retort from that at which steam is admitted. These bleeders should be of ⅛-inch size. A horizontal retort should have one

[fol. 833]

bleeder within 12 inches of each end and additional bleeders not more than 8 feet apart. A vertical retort should have one bleeder at the end opposite to that at which steam is admitted. Bleeders should be open and emit steam continuously and freely during the entire process, including the coming-up time. All bleeders should be arranged in such a way that the operator can observe that steam is escaping during the process.

(7) *Drain Valve.* There should be a drain valve of adequate size to permit the rapid removal of water after cooling. Under some operating conditions the drain valve may be used as a vent.

(8) *Steam Line.* The steam line should lead to a perforated pipe within the retort. The pipe should be so perforated as to ensure proper distribution of steam during the processing period. With horizontal retorts the perforated pipe should extend along the bottom for the entire length of the retort and the perforations should be along the top of this pipe. In vertical retorts the perforated pipe is usually in the form of a cross with the perforations along the top or sides of the pipe.

(9) *By-Pass.* A steam by-pass for the control valve is desirable to make possible hand operation of the retort in the event of a breakdown of the control valve, and also to admit steam rapidly during the coming-up period when steam is usually demanded in larger quantities than the control valve is capable of handling. This steam by-pass should be at least equal in diameter to the pipe bringing the steam to the retort.

(10) *Safety Valve.* Safety valves of adequate capacity are necessary to prevent excess pressure in retorts. These should comply with local safety codes or the A.S.M.E. code for unfired pressure vessels. For details regarding the A.S.M.E. code, see "Accident Prevention Manual for Industrial Operations", Section 4 Pressure Vessels, published by the National Safety Council Inc., 425 North Michigan Avenue, Chicago 11, Illinois. Section 4 may be obtained as a separate reprint.

Pressure Cooling Equipment.

If the cans are to be cooled under pressure, equipment in addition to that described above will be necessary. For information in regard to such equipment or in regard to the oper-

[fol. 834]

ation of retorts, a laboratory connected with the canning industry should be consulted.

Maintenance of Equipment

Processing equipment should be maintained in a satisfactory operating condition. Safety valves should be tested frequently. Instruments (gauges, thermometers, recorders) should be checked for accuracy at least once a year. Water valves and compressed air valves, especially the latter, should be checked frequently for leaks.

Before each operating season and after any considerable idle period, the entire retort hook-up should be examined carefully, and each retort should be brought to processing temperature (without a load) to test the steam line for leaks, to check the vents, and to test the instruments and control equipment for proper operation and accurate recording. Never introduce water into an empty retort after testing until the pressure has been released.

PROCEDURE

All cans should be so closed and processed that the ends will remain concave under all commercial storage conditions regardless of temperature and altitude. To satisfy such conditions, commercial experience has indicated that with products packed in brine without steam flow or mechanical vacuum closure, the average temperature (temperature of the contents of the can after thorough mixing) of the contents of each can at the time of closure should be at least 130°F. Cans of large diameter may require a much higher closing temperature to prevent distortion of the ends during processing. For many products a higher vacuum than that obtained from having an average closing temperature of 130°F. will be necessary in order to maintain the canned product in good condition.

Acidification

Unless some acidification procedure is followed, sterilization of certain low-acid foods by heat produces unmerchantable

products. Notable examples are Globe artichokes, onions and green peppers. A health hazard is involved in the case of insufficient acidification. Under proper control such products may be acidified to the point where they are no longer low-acid and then be processed in boiling water. However, this procedure should not be followed without consulting a laboratory connected with the canning industry. Experience has shown that careful supervision of all details, particularly the blanch, fill and brine, is essential when acidification is included in the processing procedure.

Coding

All containers should be coded by marks to identify the time of packing. The time period during which each code lot is packed should be as short as practicable—in no case longer than one day. Strict adherence to this rule has proved to be good economy.

Process

The term "process" as used in this bulletin designates the heat treatment expressed in terms of temperature and time given the product after the container is permanently sealed. The basic, or minimum, requirement for the process for any product is that it be sufficient to destroy the organism of greatest known resistance to heat which, by reason of its survival, may be detrimental to health.

The efficiency of any process is dependent on the heat resistance and the number of bacteria in the product. In general, the processes presented in this bulletin are regarded as adequate when something greater than a minimum number of spoilage organisms is present. In some cases contamination with spoilage bacteria may be so high and the bacteria of such great resistance to heat that the suggested process may be inadequate to prevent spoilage, and it is therefore essential that such contamination be kept as low as possible. (See Appendix for information regarding precautions which should be taken to keep the number of spoilage organisms at a minimum.)

Operation of Cook Room

In order to minimize the possibility of mistakes and reduce

[fol. 836]

the danger of unprocessed or underprocessed cans reaching the warehouse, it is recommended that:

(1) Processes for all products being packed be posted in a conspicuous place near the retorts.

(2) All baskets, trucks, cars or crates containing unretorted material be plainly and conspicuously marked. If several products are being packed at the same time, each product should also be plainly indicated.

(3) A distinctive marker be hung from the retort opening when the retort holds unprocessed cans. It should be so placed that the door or lid cannot be closed before the marker is removed.

(4) A retort not be closed until the operator indicates that he is ready to start the process.

(5) Cans of unknown status with regard to process and found on the cook room floor be picked up periodically, punctured and thrown out.

(6) Adequate precautions be taken to clear exhaust boxes and precookers of all cans at the end of each day's operations.

Rapid Handling and Prompt Retorting of Filled Cans

A long holding period between filling and closing or between closing and retorting cans may result in souring, off-flavor, and loss of vacuum. Depending upon the nature of the product, processing should follow within one-half to one hour after closure. If longer times are required to obtain enough cans to fill a retort, processing of partial retort loads should be practiced.

Position of Cans in Retort

Heat penetration in canned foods containing freely flowing liquid is mainly by convection currents. The general trend of these currents is in a vertical direction, consequently in the product being heated they seek channels which permit such motion. Where their progress is impeded or baffled by solid material, the currents flow around the obstruction to the nearest point at which they can pass. For this reason the alignment of certain foods in the can is of the greatest importance as regards heat penetration.

[fol. 837]

Where the packing or filling of any product in the can results in stratification, the cans should be processed in such position that the plane of stratification is vertical. In the case of asparagus, for example, the spears are generally parallel and tightly packed in the cans in a vertical position, so that the channels containing liquid are parallel to the spears. As a result, the speed of heat penetration is greater when the cans are placed upright in the retort.

Another example is spinach. In No. 10 cans especially, the spinach is placed in more or less horizontal layers. Convection currents, therefore, travel to the center of the cans faster when the cans are processed on their sides than when in a vertical position.

Products such as peas and cut green beans consist of small solid bodies, fairly uniform in size and evenly distributed throughout a liquid medium; consequently the rate of heat penetration is little influenced by the position of the cans in the retort.

Initial Temperature

The term "initial temperature" as used herein designates the average temperature of the can contents at the time steam is turned on for the process. Just prior to the start of the process, the contents of the container used for checking the initial temperature should be shaken or stirred and the temperature determined. This container should be respresentative of the coldest cans in the retort load and should have an initial temperature equal to or greater than the initial temperature specified in this bulletin. The specified initial temperature is to be regarded as a prerequisite minimum of the process suggested. If a can is closed at a temperature higher than that of the canning room atmosphere and is then held for some time in the room before it is processed, the contents will cool but the temperature at the center of the can may not be appreciably less than the closing temperature. It is for this reason that, from the standpoint of sterilization, the contents of the container should be stirred or shaken and the initial average temperature determined just prior to the start of the process.

[fol. 838]

"Initial temperature" should not be confused with "closing temperature". Except when vacuum packing or steam flow closure is practiced, the closing temperature is the major factor influencing the final vacuum obtained in the cans and is an important consideration in preventing undue can strain or damage during processing and cooling and in avoiding development of flippers. The closing temperature must be sufficiently high to satisfy these needs, and this will, in many instances, result in initial temperatures considerably above the minimum specified as a prerequisite to the processes listed.

Starting a Process—Venting—Coming-up Time

At the time the steam is turned on, all bleeders and all valve-controlled vents should be wide open. All bleeders should be left open during the processing period.

Venting. The valve-controlled vents should be left open for a sufficient time after steam is turned on to ensure that all air is swept out of the retort, so that no "pockets" of air remain among the cans. There is a tendency for steam to by-pass the load of cans and to escape through the vents before all air has been driven from the stacks of cans. On page 8 are the venting specifications designed to provide for satisfactory operations.

An air-steam mixture in the retort will cause a non-uniform heat distribution, resulting in a lowering of the rate of heat transfer to the containers. The timing of the process should not begin, even though the proper temperature is indicated, until temperature and pressure instruments on the retort give corresponding readings (see table on page 20).

Lack of agreement between temperature and pressure instruments is an indication of the presence of air in the retort. However, if proper venting procedure is not followed, there can be a "pocket" containing air in a region of the retort that is remote from the thermometer, and the presence of this "air pocket" may not be indicated by a detectable disagreement between the temperature and pressure indicators.

Coming-up Time. There is a minimum limit for the coming-up time because of the necessity for removing the air from the retort by venting during this period. When venting is inadequate for rapid removal of the air, the use of a very short

[fol. 839]

coming-up time is likely to result in an unsterilized product. A coming-up time shorter than the minimum for which the retort has been demonstrated to give satisfactory results with its existing hook-up and specified operating technique should not be used.

With some vacuum-packed products, it is advisable to heat the cans sufficiently to dissipate the internal vacuum before the pressure in the retort is permitted to become greater than two pounds, otherwise the cans may panel or even collapse.

Process Temperatures

The quality of most products will be least affected by the process if the retorts are brought to processing temperature quickly and the process is followed by prompt and rapid cooling. (Some vacuum-packed products are an exception, for the reason given above.) This procedure not only protects the quality of the product but also shortens the total time required for each processing cycle and so effects time economy in the use of the retorts. It applies to all processing temperatures and is especially important when the temperature is above 240°F.

If any deviation from the processes given in this bulletin is desired, a laboratory connected with the canning industry should be consulted.

Short High Temperature Processes. For a product having rapid heat penetration, very short processes at comparatively high temperatures are sometimes used. It is especially important that such processes have the most careful control. An error in either time or temperature in a short high temperature process will have a much greater effect upon the total sterilizing value of the process than a like error will have in a longer process at a lower temperature.

Boiling Water Processes. The sterilizing of low-acid products in boiling water is impracticable without controlled acidification procedures. Without acidification continuous boiling for over ten hours is necessary to secure a sterilizing efficiency equivalent to that of the processes listed in this bulletin.

Cooling and Storage

The duration of the water-cooling period should be sufficient to bring the average temperature of the contents to 100°F., but

[Ed. 840]

water cooling should not be continued to the point where external rusting of the container may occur. In humid locations water cooling to a temperature of 100°F. may lead to external rusting. In that case, water cooling should be carried to approximately 120°F. and the cans subsequently air cooled before they are put into storage. When cans whose contents are at temperatures substantially above 100°F. are stacked closely together, and especially if they are sealed in fiber cases, they cool so slowly that spoilage by thermophilic bacteria and injury by heat to the quality of the product (stack-burn) may occur.

Air Cooling

If the capacity of the water-cooling equipment is inadequate, or if a shortage of water is experienced, the cans should be so stacked that they will air cool rapidly. Air cooling is sometimes used for products such as hominy in order to effect a proper swelling of the product. It is suggested that the cans be stacked on their sides in single rows, allowing space for air circulation between the rows. The stacks should be arranged parallel to the cross ventilation of the warehouse. Careful attention to the factors affecting air circulation may serve to prevent retarded cooling and to safeguard against spoilage by thermophilic bacteria.

[fol. 841]

Corresponding Gauge Pressures and Process Temperatures

The following table shows the gauge pressure corresponding to specified process temperatures at various altitudes:

GAUGE PRESSURE CORRESPONDING TO SPECIFIED PROCESS TEMPERATURES AT VARIOUS ALTITUDES

Temp. Deg. F.	Sea Level	Feet above sea level							Temp. Deg. C
		500	1000	2000	3000	4000	5000	6000

[fol. 842]

CAUTION

To facilitate the presentation of the process times and temperatures in tabular form, it has been necessary to use a number of footnotes. Those who use the bulletin are cautioned to read the footnotes in connection with the tables to which they refer.

CAN DIMENSIONS

The can sizes are given in the nomenclature usually employed in the industry, which avoids the confusion incident to conflicting local names of cans.

In this system the cans are identified by a statement of their dimensions (over-all diameter and over-all height). Each dimension is expressed as a number of three digits. The left-hand digit gives the number of whole inches, while the two right-hand digits give the additional fraction of the dimension expressed as sixteenths of an inch.

The first number given in the size of each can is the diameter, and the second number is the height. For example, a No. 2 can, designated as 307x409, is $3\frac{7}{16}$ inches in diameter and $4\frac{9}{16}$ inches high, that is, within manufacturing tolerances.

The dimensions are "over-all," the diameter being measured to the outside of the double seam, and the length including the entire seam at each end of the can.

[fol. 843]

PROCESS TABLES

I.—VEGETABLES AND VEGETABLE PRODUCTS

Artichokes, Globe

Pressure cooks adequate for sterilization render artichokes and artichoke hearts unmerchantable. The Standard of Identity promulgated under the Food, Drug and Cosmetic Act recognizes the necessity of acidifying artichokes. Such acidification permits safe processing in boiling water and thereby ensures preservation without loss of merchantability. Careful supervision of all details, particularly blanch, fill, and brine, is essential when acidification is included in the processing procedure. These products should not be packed without consulting a laboratory connected with the canning industry.

Asparagus spears, white and white-green

[fol. 847]

Beans in Sauce

The process necessary for the sterilization of beans in sauce depends to a considerable extent upon the sauce formulation with respect to tomato pulp and starch content. The processes in the three tables which follow are designed to fit three ranges of sauce formulation. If the formulation used does not fall within the specified limits of ingredients, the proper process should be obtained from a laboratory connected with the canning industry.

		Deg. F.	*Min.*
No. 2½ & smaller	401x411 & smaller	70	21
		140	20

(*a*) All cans of broccoli should be processed in a position such that the sprouts are upright in the retort.

(*b*) The weight of cabbage filled into No. 2½ cans should not exceed 17 ounces. These processes should not be applied to other styles of pack because variation in canning procedure may vary the heat penetration. Where it is desired to can cabbage in other styles, a laboratory connected with the canning industry should be consulted.

(*c*) Other styles of carrots, including carrot chips, should not be packed without directions from a laboratory connected with the canning industry. If carrots are lye-peeled, the cooks apply only provided the lye has been completely removed by washing. If carrots are packed "asparagus style," the cans should be processed on end.

(*a*) These processes do not apply to mushroom "chips." For styles of pack other than those listed, consult a laboratory connected with the canning industry.

(*b*) For the minimum drained weights contained in the Standard for Fill of Container promulgated under the Federal Food, Drug and Cosmetic Act, see page 55.

[fol. 853]

Onions

Pressure cooks adequate for sterilization render onions unmerchantable. It has been found necessary, therefore, to acidify this product to permit safe processing in boiling water and thereby ensure preservation without loss of merchantability. Careful supervision of all details, particularly blanch, fill and brine is essential when acidification is included in the processing procedure. This product should not be packed without consulting a laboratory connected with the canning industry.

Parsnips (*a*)

		140	55	40	25

Peppers or Pimientos, Green

Pressure processes adequate for sterilization render green peppers or green pimientos unmerchantable. It has been found necessary, therefore, to acidify these products to permit safe processing in boiling water and thereby ensure preservation without loss of merchantability. Acidification must be carefully controlled. For detailed procedures consult a laboratory connected with the canning industry.

Peppers or Pimientos, Red

Acidification of red peppers or red pimientos is desirable to prevent spoilage, even though it may not be necessary from the standpoint of public health. Acidification must be carefully controlled. For detailed procedures consult a laboratory connected with the canning industry.

[fol. 855]

Potatoes, sweet, solid pack (*a*) (*c*) (*e*)

			160	50	29

(*a*) For processes for asparagus style or vacuum pack sweetpotatoes consult a laboratory connected with the canning industry.

(*b*) These processes apply to freshly dug Little Stem Jersey, Maryland Golden or similar varieties.

(*c*) It is emphasized that the sugar used in the canning of this product should comply with the bacterial standards for sugar formulated by the National Canners' Association. See page 54. Under no circumstances should sugar in dry form be added to the cans.

(*e*) Processes for No. 10 cans considered necessary to safeguard against hazard to health result in a product of unmerchantable quality. It follows, therefore, that solid pack sweet potatoes should not be packed in cans larger than a No. 3 cylinder (404x700).

[fol. 856]

Soups: *See* **Specialties**

Spinach or other greens

These cooks may not be adequate for continuous cookers, and canners planning to use a continuous cooker should consult a laboratory connected with the canning industry.

Drained weight and net weight are of determining importance with spinach and other greens and must be controlled to ensure that the retort process will carry the intended sterilizing efficiency. The maximum drained weight given cannot be safely exceeded, and the net weight of contents should be at least that given for the respective can sizes. For the minimum drained weights announced by the Food and Drug Administration, see page 56.

Since blanched spinach tends to become stratified horizontally in cans larger than the No. 2, it is found that heat penetration is more rapid when these cans are processed on their sides rather

[fol. 858]

Spinach or other greens
(Continued)

than in a vertical position. Therefore the process is shorter for cans processed in a horizontal position.

III.—SPECIALTIES

This is a group of products which vary widely from each other in composition and which from the standpoint of processing have little in common with the standard fruits and vegetables. Specialties may be vegetable products, fish products or meat products, or combinations thereof. Specialties not only differ from each other, but each individual specialty as prepared in different canning plants is likely to vary in composition and in canning procedure from the same product prepared by another maker. Because of this difference in formula and the variation in canning procedure by which they are prepared, specialties should not be canned without directions from a laboratory connected with the canning industry.

IV.—MEAT OR MEAT PRODUCTS

Due to variations in formula and methods of procedure which may affect process relationships, these products should not be packed without directions from a laboratory connected with the canning industry.

V.—CHICKEN OR CHICKEN PRODUCTS

Due to variations in formula and methods of procedure which may affect process relationships, these products should not be packed without directions from a laboratory connected with the canning industry.

(a) For processing minced, crushed, chopped, or sliced olives, a laboratory connected with the canning industry should be consulted, as the size of particles, tightness of pack, and moisture content must be considered before the process is recommended.

[fol. 863]

VI.—MARINE PRODUCTS (a)

Clams or Clam chowder (b)

Crab meat, Blue or Gulf, hand-picked, in brine (c)

Can Name	Dimensions	Initial temperature	230° F.	Time at 240° F.	250° F.
		Deg. F.	Min.	Min.	Min.
½ Tuna (No liner)	307x113 (e)	70	70	35	20
½ Tuna (One piece liner)	307x113 (e)	70	80	50	35

Crab meat, Blue or Gulf, hand-picked, vacuum pack (c) (d)

Can Name	Dimensions	Initial temperature	230° F.	Time at 240° F.	250° F.
		Deg. F.	Min.	Min.	Min.
½ Tuna (No liner)	307x113 (e)	70	80	45	35
½ Tuna (One piece liner)	307x113 (e)	70	85	50	35
——— (No liner)	307x208 (f)	70	85	55	40
——— (One piece liner)	307x208 (f)	70	95	60	45

Crab meat, Dungeness (a)

Fish flakes (a)

Herring and herring roe (a)

(a) For processes for smoked, kippered or specially treated seafoods, consult a laboratory connected with the canning industry.

(b) Due to variation in raw product and lack of standardized packing procedure, this product should not be packed without directions from a laboratory connected with the canning industry.

(c) Processes for mechanically-picked crab meat should be obtained from a laboratory connected with the canning industry.

(d) The processes given for vacuum pack crab meat are dependent on (1) The maintenance of at least 26 inches of can vacuum immediately before processing; (2) the presence of ½ to 1 ounce of free liquid; (3) the use of a fill-in weight which will result in a drained weight not greater than the maximum specified in the applicable footnotes.

(e) Process times suggested for maximum drained weight of 5.25 ounces.

(f) Process times suggested for maximum drained weight of 7.75 ounces.

[fol. 866]

APPENDIX

PRECAUTIONS FOR HANDLING FILLED CANS

The installation of many of the newer labor saving devices for handling filled cans has introduced certain hazards which, if not minimized, may result in some spoilage with the best possible double-seam construction. Before the cans are thoroughly cooled, the seams are slightly expanded and the compound lining is somewhat soft or plastic. In addition to the usual attention to good seam construction, precautions must be taken in handling the cans before they are thoroughly cooled to prevent even small dents on, or near, the double-seams. This involves elimination of fast runways with sharp turns and abrupt stops for handling filled cans both before and after processing. Care should also be taken to avoid conditions which would strain the seams during the processing or cooling; e.g., excessive holding time of unprocessed cans, inadequate exhausting or too rapid release of pressure during cooling. In cooling under pressure, particular attention must be paid to the magnitude of the pressure and the length of time it is maintained since the greater the differential pressure between the inside and the outside of the can, the greater the tendency toward forcing minute quantities of the cooling water into the can during this critical period. Bacterial content of cooling water should be kept as low as possible since the spoilage hazard is reduced in proportion to the number of microorganisms present.

GENERAL SOURCES AND CONTROL OF SPOILAGE CONTAMINATION

The efficiency of any process depends in large measure upon the type and number of microorganisms in the product at the time of canning. In general, the processes presented in this bulletin are regarded as adequate when something greater than an average number of spoilage organisms is present. They are not necessarily adequate in cases of extreme contamination by spoilage bacteria that may or may not be associated with insanitary conditions. Control of contamination by applying the strict principles of sanitation and by other appropriate means, with adequate, organized supervision, inspection and responsibility is a necessary adjunct to any process.

[fol. 867]

Factory surveys to determine the identity of contamination sources and to develop means for their elimination have been conducted since 1926. The surveys have shown that the important sources of significant contamination with heat resistant spoilage organisms are located within the canning plant. Spoilage organisms come originally from the soil and are brought to the canning plant on the raw product. Preliminary washing operations are sufficient, with most products, to reduce this initial soil-borne contamination to a level which will not result in spoilage. However, residual spoilage types may seed the canning equipment and increase in numbers to a degree such that they constitute a spoilage hazard. There are exceptions, notably in the case of asparagus and mushrooms where soil-borne contamination of the raw product may be a direct cause of spoilage.

Factory studies to date have centered chiefly upon the canning of asparagus, corn, mushrooms, peas, pumpkin, and spinach, but facts developed in these studies are applicable to other products. Accordingly, use of the following information should serve to control contamination to a degree that will ensure the effectiveness of the processes presented in this bulletin.

Wooden equipment

In general, the use of wood in canning equipment is not recommended, because bacteria may become seeded in the pores and once established may contaminate food materials to such an extent that spoilage occurs with a process that has been satisfactory for years. Any wooden equipment with which food materials may come in contact, such as brine and hot water tanks, conveyors, blanchers, canning tables and even such small items as paddles and rollers, may act as carriers of contamination. For example, wooden tanks used for storage of hot water for general plant purposes may contaminate a whole canning system. Wooden brine tanks, at the beginning of a day's run, may supply large numbers of organisms to the product being canned. Owing to dilution their number decreases markedly during steady operation, only to build up again during a shutdown. Wood, being porous, is able to retain bacteria and hold them mechanically immune from scrubbing and other cleaning processes. "Seeding" may be prevented to a considerable degree by constant cleaning, but in spite of all that may be done, there is at present no practical treatment which will rid wood of organisms that are established in it.

[fol. 868]

Pumps, pipes, extractors, cyclones, etc.

Pumps, pipes, extractors, cyclones, etc., should be selected from the standpoint of ease in cleaning, because such equipment may hold food material that will serve as a medium for bacterial growth and permit the development of sufficient organisms to contaminate seriously the first part of the next day's pack. All such equipment should be thoroughly cleaned after being used, then thoroughly cooled with water and kept cool until next operated. It should likewise be flushed again with water immediately before it is used.

Care should be taken during the cleaning operation to blow steam through the perforations of steam distribution pipes which are submerged in food or brine during operation and to ensure that all perforations are open. Circulating "feeder" pipes should be thoroughly cleaned at the close of the day's pack. Preferably, they should be so constructed that they may be dismantled and cleaned with brushes. "Dead ends" should be eliminated or provided with drains so that they may be thoroughly flushed at frequent intervals. Pumps should be dismantled during the clean-up operation and only pumps which are adapted to daily cleaning should be used. Some person should be delegated to inspect all cleaning operations to ensure that this work is efficiently done.

Fluming

Flumes, such as those used for conveying peas and whole grain corn, may become sources of bacterial contamination. In particular, the use of water at temperatures in the range of 100°F. to 180°F. should be avoided since this may provide a favorable condition for the growth of thermophilic spoilage bacteria. The reuse of flume water when hot may aggravate the contamination. It is advisable to use only cold water for fluming purposes.

Fillers

Filling machines used with low-acid products have been found to be contaminated with spoilage bacteria. This contamination is usually the result of the filler being maintained at temperatures within the thermophilic growth range. This might occur during operation from contact with a heated product or during shutdown periods from leakage of steam supply valves.

Fillers should be dismantled and cleaned as frequently as practicable. After the day's clean-up, the fillers should be flushed with cold water with all machinery in motion to chill the equipment, and the fillers should be left clean, cold, and empty during

the overnight shutdown. If the filler operates at temperatures within the thermophilic range during actual packing operations, it should be emptied of its product every 4 hours and thoroughly flushed with water with all machinery kept in motion.

Canning ingredients

In recent years there has been a growing appreciation of the importance, as carriers of spoilage contamination, of certain ingredients commonly used in canning. Among these are sugar, starch, flour, and dried milk. Bacterial standards for sugar and starch are discussed on page 54.

SPECIFIC SOURCES OF SPOILAGE CONTAMINATION

In addition to the preceding general information on sources of contamination, canners of certain products upon which extensive investigations have been made will find the following additional information and suggestions of value.

Corn

PREHEATING SYSTEMS, MIXING AND BLENDING TANKS. The increasing use of mixing and blending equipment in which corn is handled while hot has demonstrated further need for contamination control. Such equipment while hot (180°F. or higher) does not act as breeding points for spoilage bacteria, but when in the range 100°F. to 180°F. there is opportunity for development of thermophilic organisms. Usually this development occurs overnight and during shutdowns, and the spores which develop during those times serve subsequently to contaminate the run. As a rule, it is best to hold the tanks empty over-night. However, there appears to be no objection to holding them full of cold water provided care is taken to ensure that there are no leaky valves in the line which might tend to warm the equipment. Care should be taken during the cleaning operation to blow out perforated steam supply pipes; otherwise they may hold food material that will serve as a bacterial medium. Flushing and cooling may be accomplished conveniently by tapping a cold water line into the steam supply line adjacent to the mixer and blending tank.

CIRCULATING SYSTEMS. Such systems represent another step in complexity from the preheating systems. The circulating feeder pipes should be thoroughly cleaned at night and preferably they should be so constructed that they may be dismantled and cleaned with brushes.

[fol. 870].

WHOLE KERNEL CORN. With this product special care should be taken to prevent contact with wood equipment and, after being cut, the corn should be subjected to an efficient wash. The use of warm water or hot water in flotation washers should be avoided since such practice may lead to the rapid development of spoilage bacteria. Failure to wash the cut corn properly may result in spoilage.

Peas

The recommendations made with respect to control of blancher contamination in the canning of peas apply also to other products that are blanched in a conventional pea blancher such as lima beans and green and wax beans.

BLANCHERS. Both rotary drum blanchers and tubular blancher systems may become contaminated with thermophilic spoilage bacteria. The contamination which occurs during shut-down periods can be minimized by prompt cooling of the blanchers after use, by thorough cleaning, elimination of steam leaks, and flushing of the blancher system before its next use. However, thermophilic contamination may also occur during operation of either type of blancher system.

In rotary drum blanchers the contaminating bacteria are able to grow on the inner surfaces, above the water line, where temperatures are reduced by cool air drawn into the blanchers under loose-fitting doors and other openings. Any surface in the blancher where the temperature ranges between 100°F. and 180°F. can be the site of bacterial growth from which heat-resistant spores will be washed by condensate into the blanch water, and there contaminate the peas.

Efforts to prevent contamination in rotary drum blanchers should be directed toward elevating inner surface temperatures above 180°F. Blancher doors should be closed and fastened at all times. Doors which are bent or otherwise out of shape should be repaired in order to exclude as much cool air as possible. Vent stacks should be eliminated from the shell of the blancher. The coldest sections within a drum blancher are at the feed end. The use of a spray or steam jet, inserted at the upper edge of the feed end, which delivers steam or hot water (190°F. or higher) over the inside surfaces has been found useful in preventing contamination. During operation the temperature of the blanch water should be as high as practicable (at least 180°F.) and the reels should be kept in motion continuously while the blanchers are being heated or

being held at operating temperature. A continuous overflow from the blancher should be maintained during operation.

The blancher water should be dumped as often as practicable since the number of bacterial spores in the water increases with time and use. The drain and water supply pipes should be of sufficient size to permit rapid draining and re-filling.

In tubular blanching systems a large percentage of the flat sour spore contamination occurs in the de-watering reel into which the peas are discharged from the blanchers. Thermophilic bacteria grow on the mesh of the screen and on the surfaces of the splash boards around the reel and the pan underneath. Spores produced by the bacteria are added to the peas as they pass through the reel or may be washed into the water and re-circulated in the blancher. This contamination can be reduced if sprays are installed to wash the surface of the reel with water which is preferably, but not necessarily, chlorinated. The use of cold water for this purpose is desirable to lower the temperature of the peas before they enter the quality grader. Sprays should also wash down the inner surfaces of the splash boards or canopy surrounding the reel. Tests have indicated that cold water is effective in reducing flat sour contamination when used in these sprays. The foam which accumulates on tanks supplying recovered water to tubular blanchers can be the growth site for thermophilic spoilage bacteria. A large, broad overflow should skim the surface of the tank. Top sprays delivering streams of water at a flat angle will help prevent the formation of foam and aid in skimming the tank.

It is important the peas be washed thoroughly after blanching. Adequate washing will remove large numbers of spoilage bacteria but cannot be depended upon to remove all of the bacteria added by a heavy contamination. Washing with cold water will reduce the temperature of the peas and thus help to minimize slime growth in subsequent equipment and prevent undesirable temperature increases in the quality grader brine.

Pumpkin

Practice in pumpkin canning is not standardized and the following suggestions are based upon a study of systems used by a majority of the pumpkin canners. Consideration of sources of contamination in pumpkin canning begins with the wilting equipment.

Wooden Box or Tower Wilters. As already noted, wooden equipment is objectionable, but it may be lined with metal if this is practicable.

[fol. 872]

CONTINUOUS METAL OR WOODEN BOX WILTERS. Both metal and wood boxes used as continuous wilters may be sources of contamination. They are difficult to clean and cool.

CONTINUOUS CONVEYOR PRESSES. There are various modifications in this type of equipment but the same principle is involved, that is, the pumpkin from the wilter is dropped into a hopper and carried between two moving belts. The distance between the belts gradually decreases toward the outlet end, and the pressure that is exerted squeezes the juice from the pumpkin. These presses are complicated mechanically and the parts vary in temperature. Where the temperature is favorable to thermophilic growth there may be some bacterial development. Some measure of control may be exerted by spraying the press "apron" with cold water, but this expedient is not fully satisfactory. From the viewpoint of contamination control the screw type press is much to be preferred. In this equipment the pumpkin is "wormed" through a tapering perforated screen. During operation, the temperature of all parts is so high (180°F. to 200°F.) that no growth is possible. The screw press is readily accessible for cleaning.

CONCENTRATION OF PUMPKIN JUICE. It is usual to discard the juice from the press, but in some cases it is the practice to concentrate this juice and add it to the pumpkin at the finisher. This system is satisfactory when the general packing procedure is such as to keep contamination at a low level. However, the concentration of contamination is increased as the volume of juice is reduced by evaporation, and such contamination as may be present is returned to the product when the juice is not discarded.

Spinach

WASHERS. Spinach washers include "immersion," "spray-rotary" and "spray-belt" types. They are used singly, in multiple, and in various combinations. Their primary function is to remove grit and adhering soil and concurrently the soil-borne bacteria which are present. In all types of equipment, the washing efficiency is determined, at least in part, by the amount of water used. Thorough washing is of primary importance and a large volume of water is required. Washers should not be overloaded because this reduces their efficiency. When both immersion and spray types are used in the same line, better results are achieved if the immersion washer is placed before the spray washer. The first washing should always be done with cold water. The use of warm water in the first wash may lead to increase of bacteria that come from

the field with the spinach, thus contaminating the equipment. Water should not be re-circulated where a single washer is used.

BLANCHERS. Blanching equipment may be a source of spoilage bacteria, particularly those of the thermophilic group. To minimize the hazards of spoilage from this source, the washing and cooling treatments previously discussed should be applied. Occasionally rotary drum pea blanchers have been used, but as this type of equipment is difficult to clean there is opportunity for the development of spoilage organisms, resulting in continuous contamination of the spinach. Spoilage has been traced to such a blancher and its use is therefore not recommended. The blanch water should be renewed at a reasonably rapid rate.

SIGNIFICANCE OF SUGAR AND STARCH CONTAMINATION

Sugar, both beet and cane in dry or liquid form, may carry spores of all three groups of thermophilic bacteria that are important as spoilage agents in low-acid canned foods. The sugar industry is aware of this condition and has taken steps to control thermophilic contamination in its products. In 1931 the National Canners Association formulated and published bacterial standards for sugar as a basis for its judgment regarding the suitability of sugar to be used in canning low-acid products. These standards have been applied by control laboratories connected with the canning industry, by the sugar industry, by Federal and State laboratories, etc. That part of the published statement referring to standards reads as follows:

TOTAL THERMOPHILIC SPORE COUNT: For the five samples examined, there shall be a maximum of not more than 150 spores and an average of not more than 125 spores per 10 grams of sugar.

FLAT SOUR SPORES: For the five samples examined, there shall be a maximum of not more than 75 spores and an average of not more than 50 spores per 10 grams of sugar.

THERMOPHILIC ANAEROBIC SPORES: These shall be present in not more than three of the five samples and in any one sample to the extent of not more than four of six tubes inoculated by the standard procedure.

SULFIDE SPOILAGE SPORES: These shall be present in not more than two of the five samples and in any one sample to the extent of not more than five spores per 10 grams.

Sugar that is certified as suitable for canning low-acid vegetables is produced by large manufacturers of both beet and cane sugar. It is recommended that canners of low-acid products specify that such sugar be provided, and it is suggested as an added safeguard that samples of delivery be submitted from time to time to a labora-

[fol. 874]

tory connected with the canning industry to determine whether deliveries conform to specifications. In collecting dry sugar samples, five individual 1/2 pound quantities should be taken from each of five bags or other containers of the shipment or lot in question. These samples should be sent to the laboratory in clean, sealed containers. If samples from more than one shipment or lot are submitted each container should be appropriately marked to distinguish the lot of its origin.

It is appreciated that the adequacy of this sampling will vary in relation to the size of the shipment or lot, but it is felt that where there is any significant variability in the shipment this fact will become evident in the majority of cases through individual tests on five samples.

For sampling liquid sugar, three individual samples of approximately 6 ounces each should be drawn from the tank or pumping line. The first sample should be taken at the beginning of the pumping operation, the second at the mid-point, and the third near the end of the pumping. Each sample should be sealed and marked with its number and the designation of the lot of its origin.

The significance of starch contamination has also been demonstrated and starch to be used in the canning of low-acid products should be purchased on specification. The standards for sugar contamination may also be applied to starch and other cereal ingredients, and periodic laboratory checks are desirable.

Minimum Drained Weights

Mushrooms

A maximum drained weight for each can size is specified in the process table which appears on page 32. It is desired here to emphasize again the importance of not exceeding this maximum drained weight. At the same time, it is necessary that the fill of container comply with the Standard of Fill of Container issued by the Food and Drug Administration. The minimum drained weight of mushrooms, in ounces, as contained in the Standard, is listed below for each can size for which processes are suggested:

Can name	Dimensions	Minimum drained weight Ozs.
2Z Mushroom	202x204	2 0
4Z Mushroom	211x212	4 0
8Z Mushroom	300x400	8 0
Jumbo	307x510	16 0
No. 10	603x700	68 0

[fol. 875]

Spinach

In the processes for spinach suggested on pages 38 and 39 a maximum drained weight of spinach and minimum net weight of the entire contents of the can are suggested for each size of can. It is desired here to emphasize again the importance of not exceeding this maximum drained weight and of securing at least the minimum net weight. At the same time it is, of course, important here, as elsewhere, to avoid slack fill. The Food and Drug Administration has announced that the weight of drained spinach should be at least 13.0, 19.0, and 60.0 ounces, respectively, in No. 2, No. 2½, and No. 10 cans. It is also stated by the Food and Drug Administration that a can of any other size should have a drained weight proportional to the weight stated above for the nearest size of can. Corresponding weights for other sizes of cans for which processes are given in this bulletin are shown in the tabular statement given below:

Can Name	Dimensions	Minimum drained weight
		Ozs.
8Z Tall	211x304	5 5
No. 1 (Picnic)	211x400	7 0
No. 300	300x407	9 7
No. 303	303x406	10 7
No. 2	307x409	13 0
No. 2½	401x411	19 0
No. 10	603x700	60 0

[fol. 877]

[fol. 878]

IMPORTANT POINTS FOR RETORT OPERATORS

1. Read carefully the entire introduction to NCA Bulletin 26-L in order that you may understand the significance of the tasks you perform.
2. Don't allow crates of cans to stand around before processing. Spoilage may result. See page 15.
3. Don't trust your memory on processes. Consult Bulletin 26-L.
4. Keep retort instruments and valves in good working order. Instruments need periodic testing.
5. Vent retorts thoroughly. Don't start timing process until temperature is up and pressure gauge and thermometer agree. See page 17.
6. Timing the process is only part of the job. Keep the retort temperature correct.
7. Keep permanent time and temperature records of every retort load processed. See opposite page.
8. Cool cans properly. Too little cooling may cause either stackburn or spoilage; too much may cause rusting.

[fol. 879] GOVERNMENT'S EXHIBIT 348

Owens-Illinois Glass Company

Study of Can Costs Versus 1-Way Bottle Cost to Brewer

The following study is based on the best costs and prices obtainable and in effect on May 1, 1956. The items compared are the 12 ounce Flat Top Beer can with a three color lithograph and the 12 ounce One-Way Beer bottle. Both items compared represent the standard container in their field. The comparison covers direct costs only and only those direct costs that are variable between can and bottle.

Requested by: Mr. M. A. Hellrung.
Prepared by: Glass Container Comptroller's.
Date: May 4, 1956.

[fol. 880]

	Cost Per Gross		
	Flat Top Can	One-Way Bottle	Bottle Cost Under/ (Over)
Cost of Container to Brewer	$4.80*	$3.70	$1.10
Carton Cost—Outers for Carriers**	.33	—	.33
Carrier Cost—6 Container Park	.72	1.20	(.48)
Labels	—	.12	(.12)
Crowns	—	.28½	(.28½)
Filling Costs—Labor & Fringe Benefits	.12	.15	(.03)
Direct Cost to Brewer at Dock	$5.97	$5.45½	$ .51½
Outbound Freight—Brewer to Distributor	.51	.67	(.16)
Total Cost Delivered to Distributor	$6.48	$6.12½	$ .35½

All outbound freight is calculated at minimum rates, averaging three hundred miles outbound from breweries.

* Includes average inbound freight on can.
** Cans based on 4 dozen outer, bottles on 2 dozen.

[fol. 881] Line labor and speeds were selected from the most modern lines obtainable. The summary is:

	Packed in 6-Pak Carriers	
	Flat Top Can	1-Way Bottle
Line Speed per Minute	600	400
Direct Line Labor per 2 Dozen Cases	$.020	$.025
Employees Per Line	12	10

The above is subject to individual practices and union restrictions. For example, quality minded brewers sometime have two inspectors on the glass line to make sure no

foreign matter appears in the beer after bottling. This would add ½¢ per 2 dozen case to the filling cost for glass.

The extra man hours needed on the can line is due to the higher filling speed—one man at the unscrambler and one line operator, this latter employee being a combined maintenance-inspector.

It is believed that a 1-way bottle line could approximate can speeds with sufficient capital investment. This is estimated at $150,000 per line to convert an existing line, or $300,000 for an all new line. However, there is some doubt as to whether glass business warrants this type of expenditure. It should also be noted that higher line speeds for bottles would mean adding line labor, so that glass filling cost per case at can speeds would be the same as filling costs for tin.

[fol. 882] An analysis of line labor for 1-way beer containers follows:

	12 Oz. Beer	
	Flat Top Can	1-Way Glass
Line Speed per Minute	600	400
2 Dozen Cases—per Hours	1,500	1,000
2 Dozen Cases—8 Hour Shift	12,000	8,000
Direct Line Labor—Employees		
Feed Empties to Line	2	2
Unscrambler*	2	1
Filler and Crowner	1	1
Closing Machine	1	—
Pasteurizer Discharge	1	1
Labeller	—	1
Casing	2	2
Handling—To Whse. or Loading Dock	2	2
Line Operator	1	—
Total Direct Line Employees	12	10
Man Hours per 8 Hour Shift	96	80
Cost per Shift @ $2.50 per man hour)**	$240.00	$200.00
Cost per Case—Direct Line Labor	$.020	$.025

* Includes rinser.
** Includes fringe benefits.

[fol. 883] The can price is a composite of prices obtained from several sources, none of which varied to any appreciable extent from the average. This can price covers cans only; carton cost is separate. The bottle price includes price of carton designed to handle 6 pack carrier. The carriers are purchased by the brewer.

Crown and label costs cover types of crowns and labels generally standard to the Industry.

On freight costs which are variable with location, the same rates and length of haul was used for both cans and bottles. The length of haul developed for both in and outbound freight represents the best estimate of the average for the industry.

Indirect costs and costs related to the maintenance of equipment, power used, etc., were excluded from the comparison. Reasonably exact estimates of such costs were not available, though indications are that no great variance exists between can and bottle costs for this type of expense.

In general the attempt was made here to show the fairest possible comparison using costs available from as many sources as possible. It should be understood that some variation in costs exists between locations, size and type of brewery operation, etc., while this could have some effect on overall costs for cans and bottles the ratios between the two should be approximately the same.

[fol. 884] GOVERNMENT'S EXHIBIT 348a

April 1, 1955.

Mr. M. A. Hellrung—14

Can vs. Glass Prices—Florida Fruit Packs

Following is approximate can advantage per gross vs. comparable glass items. These are for sizes and items selected as representative for packing fruit sections and crystals. No filling costs or outbound freight are included.

	8 oz.	16 oz.	32 oz.	1 Gallon
F.O.B. Mfg. (also Jacksonville, Fla.)	$1.32	$3.57	$4.23	$10.32
F.O.B. Bradenton, Fla.	1.42	3.86	4.57	11.34
F.O.B. Miami, Fla.	1.28	3.61	4.22	10.38

The attached schedule details the cost elements included, mold and can numbers, etc.

Note: Comparable item to gallon glass is #10 can—105% oz. capacity

Qualifications:

We are not sure the can prices used are those actually paid by the packer. There are three can companies operating eight can plants in the Florida fruit area, and what

the actual price situation is is not known. Parmalee was unable to get any area can prices—those used were secured from Nolde Norman in Indianapolis and some previous figures from Jack Thayer. They are close to can prices published in the 1954 "Canning Trade" almanac. Parmalee did advise can carton prices.

Can bags and label cost were not included. While the can wrap around label is probably more expensive than for glass, the differential in favor of glass is probably pennies per gross and wouldn't affect the total too much. The same is true of can bags—they are 12¢ each, and even where used would affect the largest size can (the No. 10) by only 14¢ per gross.

Another questionable figure is can weights used to calculate inbound freight—we had to estimate these, starting with a known weight in the 8 oz. size. We are getting a collection of packers cans together and will have actual weights later.

Comptroller's Department, Glass Container Division.

Owens-Illinois Glass Company
Study of Quart 1-Way Beer Containers

Glass vs. Tin

From figures developed under subject study, it is estimated that container and related costs for quart 1-Way beer shows:

1. An advantage per 1 dozen case of 36¢ in favor of glass vs. tin, or 32%.
2. A glass advantage after average estimated freight to distribution of about 32½¢ per 1 dozen case, or 27%.

Requested by: Mr. M. A. Hellrung.
Prepared by: Glass Container Comptroller's.
Date: June 4, 1956.

[fol. 887] This study has been developed in much the same manner as the 12 oz. 1-Way Beer study submitted on May 4th, 1956. Bottle and can prices are the most recent prices, and are on the most common item. As in the case of the 12 oz., the figures in this study are meant to be a composite of the Eastern Brewery Industry cost—they cannot be said to fit any one particular brewery. Quoting from a similar study made by the Stevenson, Jordan & Harrison firm for us in 1939, "Since (Brewery) management efficiency varies widely, comparison of these costs, segregated by packages, *between breweries* is not fruitful; this kind of comparison gives information which bears more on type of management than on type container used."

We have, through Packaging Research, used line speeds which can be attained when processed on equipment of an accepted efficiency available to all breweries, and under achievable good conditions of labor and expense controls. Freight rates, both inbound on cans and outbound to distribution, have been based on what our Sales people feel to be representative lengths of haul.

Prices of cans, crowns and labels were secured from the St. Louis branch through our Sales people. Only the in-

escapable costs of containers, crowns, labels, direct line labor, and freight have been included. No items of bottle house overhead, or Brewery general overhead have been considered—spread of such items would have little practical [fol. 888] effect in a given container's cost.

Detail of study follows in three sections:

Schedule 1—Cost Summary, showing breakdown of direct cost items used in determining glass-tin package differentials.

Schedule 2—Statistics, listing the various elements from which package costs and freight were developed.

Schedule 3—Direct Line Costs, or the detail of direct labor and filling speeds.

[fol. 889] Schedule 1

Cost

	Quart Beer—Cost per Gross

Sources of Information

Can vs. Glass Prices—1942-1946 vs. 1-1-57

Can Costs

1942-1946—Vegetable cans from "Canning Trade" almanac. Baby Food—secured verbally from Bob Graham in early 1954. Beer Can—from price lists furnished by Jack Thayer.

January 1, 1957—All cans from current lists.

Can Carton Costs—Developed from can sizes and packing by OI Comptroller—based on board market costs in periods involved.

Inbound Freight—Cans—At estimated 80¢ per cwt. (current) on weight of empty cans and cartons. This 80¢ converted to 1942-1946 period through use of freight tariff increases experienced by OI.

Bottle Costs, Cartons, Inbound Freight—From OI East lists.

Label Costs and Crowns—1-way Beer bottle—Current price from Swan in Milwaukee—his label figures were for

quarts but we converted to 12 oz. body and die cut. neck label. The 1942-1946 figures from 1939 study made by Stevenson, Jordan and Harrison.

Bottle Closures—Current figures from OI East lists. The 1942-1946 period from a White Cap price list for the vegetable jars (66 and 83 m/m for 303 and 2½). The baby food cap—48 m/m—was estimated in the base period from the other sizes.

Comptroller's Department, Glass Container Division,

Cans vs. Glass Prices

May 6, 1959.

Attached is proposed chart for use in Directing Committee meetings, and as suggested by Mr. Bensinger early this year. The can figures came from the Branches, and so far as is known are the most recent prices following the price war. We have included cartons, labels, closures, reshipper, and carriers in the cost per gross. On the Aersol, the valve or fitment is not included. Inbound freight on cans is included, but not outbound freight on customers shipment of filled package. Neither is filling cost included. All the can costs were for a specific customer that the Branches were able to get figures from—it is not known if this is a fair sample nationally. Attached schedule details the figures.

This is another addition to our growing list of charts. Would REG be interested in a review in the interest of weeding out some of them.

N. J. Laird, Comptroller's Department, Glass Container Division.

Detergent Containers

The purpose of this report is to indicate the pricing and customer cost differentials between glass, tin, and plastic packages for liquid detergents. The three sizes of containers used in the detergent industry are 12, 22, and 32 oz. Comparisons have been projected on a per M container basis, since tin and plastics are sold on this unit.

The Glass Container prices and costs have been projected on two styles of containers—List #2 covering rounds and List #4 covering special shapes other than rounds. Tin containers are all rounds. Plastic containers are priced by weight and, at the same weights, can be either rounds or special shapes. We have used the P & G prices and weights because of their representing the intermediate weight range. Recent quotations by Glass Container to P & G on the same shape glass containers we are now supplying in plastic are in line with the list for glass prices.

Customer's delivered cost of empty containers has been computed at distances of 50 and 100 miles. Note that although this delivery cost was computed on glass it was not added to the customer's cost because of glass being sold on a delivered basis. Tin and plastics are sold f.o.b. factory.

Labeling costs have been included on the glass and plastic containers but omitted from tin which is lithographed. Customer's cost of containers, empty freight for 50 to 100 miles, and filled freight for 100, 200, and 400 miles are projected.

We have excluded the cost of closures which would be the same for each type container and would not influence the comparison.

Comptroller's Department, Closure & Plastics Division, P. R. Kelsey.

[fol. 918] GOVERNMENT'S EXHIBIT 364

Mr. McManus
Mr. Greenberg

Emhart Manufacturing Company
333 Homestead Avenue
Hartford 2, Connecticut

Cable Address: Emhart Hartford, Conn.

October 21, 1958.

United States Department of Justice
Antitrust Division
Washington, D. C.

Attention Mr. Samuel V. Greenberg

Re: Inquiry Concerning Glassware Forming Machines and Related Subjects—Ref. VRH:GDR 60-0-37-129

Gentlemen:

In compliance with the requests of Mr. Samuel V. Greenberg presented at a conference held September 19 in the office of Cahill, Gordon, Reindel and Ohl, 63 Wall Street, New York, we are pleased to furnish the following information and material.

As stated at the conference, the following conditions apply to the material delivered herewith:

No material which is the property of a customer should be turned over to the Government without that customer's consent.

No material with respect to Continental Can or Owens-Illinois should be turned over to the Government unless simultaneously therewith copies of such material are furnished to those parties.

No material thus turned over should be introduced into court as evidence except pursuant to a subpoena.

The preparation of the material and the answers to questions has required much more time and effort than may be apparent. However, we are glad to answer the reasonable requests of the Government, and hope that the information

furnished will be helpful in developing the true facts concerning the production of glass containers.

(1) Hartford-Empire Forming Machines—Number at Each Company and Plant as of September 1, 1958.

The following lists are enclosed (in some cases the loca-
[fol. 919] tions of machines may not be up to date):

I. S. Machines:

Summary of leased and purchased machines.
Summary by company, showing number of machines and number of sections for each company.
List by plant, showing serial number, date of shipment, and number of sections.

"28" Machines:

List by plant, showing serial number and date of shipment.

"65" Machines:

List by plant, showing serial number, date of shipment, and number of sections.

(2) Forming Machines Shipped 1955-1957 to Owens-Illinois, Anchor Hocking, and Continental Can (Hazel-Atlas)

The following lists are enclosed:

Summary of I. S. Machine shipments to these three companies.
Individual lists for Owens-Illinois, Anchor Hocking, and Continental Can showing shipments by plant and other details.

Characteristics of Hartford-Empire Forming Machines.

The characteristics of Hartford-Empire I. S. Machines for making narrow neck and wide mouth ware and the "28" Machine for making paste mold ware are described in the following items, copies of which are enclosed:

The H-E I. S. Glass-Forming Machines—15-page brochure.

I. S. Machine and Conveyor—Questionnaire and Request for Estimated Price—Issue No. 2, March 26, 1954—26 pages.
Contains technical data supplementing above-mentioned brochure.
Specifications—HE-142 I. S. Press Attachment.
Hartford-Empire 28 Machine—4-page brochure.
Chart—Estimated Average Time for 6 Man Crew to Change Processes on a 6 Section I. S. Machine.

[fol. 920] The Hartford "65" Machine is similar to the I. S. Machine.

Characteristics of Machines Used by Owens-Illinois, Anchor-Hocking, and Continental Can.

All three companies make use of the convertible and versatile features of the I. S. Machine—that is, the double gob and the 62 Process for converting from blow and blow to press and blow or from press and blow to blow and blow.

Anchor Hocking and Owens-Illinois use the Hartford-Empire "28" Machine, but Continental Can does not.

(3) Other Companies' Machines

A list of such machines, showing characteristics, is enclosed.

Certain of the Lynch machines are equipped for double gob operation, and certain Lynch machines may be converted from narrow neck blow and blow to wide mouth blow and blow. But Lynch blow and blow machines cannot be converted to press and blow machines, nor is the converse true of Lynch press and blow machines.

The Knox WD machine is a blow and blow type which, so far as we know, is not convertible to press and blow or to double gob, but the Knox JK is convertible to double gob.

In general, machines of other companies are capable of producing merchantable glassware at economic speeds, but are not as versatile as to the range of weight and convertibility as is the Hartford-Empire I. S. Machine.

(4) Reconditioning of Machines

Although machines were occasionally reconditioned by Hartford-Empire years ago, substantially all reconditioning is now done, where necessary, by the users of the machines. When ordered by customers, Emhart furnishes parts and supervision service to assist in repairing, reconditioning, or modernizing machines.

(5) Continental's Plainfield Plant and Gallo's Plant

Emhart was not engaged to perform the engineering of Continental's Plainfield plant and has no data of the kind requested concerning it. It did furnish forming machines for this plant, as shown by the lists referred to in (1) and (2).

An estimate of plant costs furnished to Gallo is contained in Emhart's letter of December 4, 1956, copy of which is enclosed. Emhart designed the furnace and furnished the machines for this plant. It did not act as engineer for the plant and does not have final cost data.

[fol. 921] (6) Costs of New Plant or Plant Addition

For the reasons set forth below, there is no basic distinction between the cost of a new plant and the cost of a plant addition, nor is there any basic difference between the cost of a new plant of a new company and that of an established company. In each case, costs depend upon requirements and the particular circumstances.

No data concerning hypothetical costs of plants is available. Emhart does not attempt in practice to give hypothetical plant costs to manufacturers, but estimates costs of plants to produce specified types and volumes of ware on the basis of the following elements:

Batch system
Furnace
Feeders
Forming machines
Lehrs
Stackers
Factory buildings
Services—water, gas, fuel, electricity

Warehousing and equipment therefor
Excluding cost of land and cost of excavations

The elements upon which estimates are based all vary according to the requirements of volume and types of glassware to be produced and to variations in demand.

The Gallo letter referred to in (5) above is an example of the application of the foregoing.

(7) New Plants and Companies and Exits

The following lists are enclosed:

Glass Container Plants—New Companies Since 1950—Exits from Field Since 1950

Glass Container Plants—New Plants or Plant Additions Since 1950—Existing Companies

(8) Development of New Machines

Emhart's new forming machine development is subject to the reservation regarding trade secrets, except for such recent improvements in the I. S. Machine as

Quick Change Conversion (see Questionnaire and Request for Estimated Price referred to under (2)—page 2)

Seamless Mold Attachment (see same, page 4)

Press Attachment (see Specifications—HE-142—referred to under (2)

[fol. 922] Emhart carries on a continuous research and development program for the improvement of its machines. Information regarding new or recent forming machine developments by other companies is contained in the enclosed list etitled

"Publications Referring to New Types of Machines Being Developed for Use of Glass Container Makers."

(9) Activity of Hazel-Atlas

Any increased activity on the part of Hazel-Atlas in 1955 is revealed in the lists of shipments of forming machines referred to in (1) and (2).

(10) Relationship of Hazel-Atlas and Anchor Hocking Machines Before and After Merger

Here again, reference should be made to the lists of machine shipments, it being noted that Hazel-Atlas has at times employed large numbers of Lynch machines but that Emhart has no detailed information regarding these machines. Anchor Hocking has not been a substantial user of Lynch machines in recent years. See also comments under (2) above.

(11) Relationship of Machines for Cans, Glass, Plastic, Paper

So far as Emhart knows, the machines used for forming cans, glass, paper, and plastics, respectively, are separate and distinct and are in no way interchangeable.

(12) Breakdown of Machines by Makers

Emhart has no record of percentages of glass container machines of various types made by different makers.

(13) GCMI

Emhart is not a member of Glass Container Manufacturers Institute, Inc. It is assumed that the Department has communicated or will communicate directly with this association.

(14) Glass Container Business Requirements

It is Emhart's opinion based on its experience that an essential requirement in entering the glass business is to obtain the services of at least one good man of executive or managerial caliber, experienced in the art of manufacturing glassware. A great deal of know-how is required, but the glass technology and engineering services of Emhart and others specializing in this industry are available. Machine operators are usually obtained from the unions. A large amount of capital is required. A real problem exists in finding a market for new production in competition with established manufacturers.

[fol. 923] (15) Convertibility of Packers' Machinery

The subject of the convertibility of packers' machinery for filling and closing is one on which Emhart has very little knowledge, not being engaged in this branch of industry. It is known that a certain amount of convertibility exists, but the character and extent of it are not known. See Modern Packaging Encyclopedia for 1957, page 440, picture of Triangle Package Machinery Co. referring to the handling of any style container, and page 486, Pneumatic Scale Company advertisements of machines for handling of (1) boxes, cans, or jars and (2) 1-ounce to 1-gallon bottles or cans.

Very truly yours, Emhart Manufacturing Company,
By John R. Hobson, Secretary.

JRH/mel

CC: Mr. Jerrold G. Van Cise, Cahill, Gordon, Reindel & Ohl, 63 Wall Street, New York 5, N. Y.

[fol. 924] Hartford-Empire—I. S. Machines September 30, 1958.

Summary of: Hartford-Empire I.S. Machines in Domestic Plants as of September 1, 1958***

Prepared from Company Records which in some instances may not be up to date.

	Leased		Purchased		Total	
	No. of Machines	No. of Sections	No. of Machines	No. of Sections	No. of Machines	No. of Sections
1 Section	—	—	3	3	3	3
2 Section	—	—	2	4	2	4
4 Section	17	68	86	344	103*	412
5 Section	100	500	329	1645	429**	2145
6 Section	16	96	175	1050	191	1146
Total	133	664	595	3046	728	3710
		18% Leased		82% Purchased		Total 100%

* Includes 11—8 Section Machines.

** Includes 15—10 Section Machines.

*** The letter "L" before the serial number on the following tabulations indicates that the machine is leased at the present time; otherwise, machine is a purchased machine. Many of the purchased machines were originally leased but later purchased by the customer.

Air Mail

Mr. Ernest Gallo, President
Gallo Wine Company
Modesto, California

Subject: Estimated Cost of Glass Plant

Dear Mr. Gallo:

Attached are an estimate for the cost of constructing a four-shop glass plant capable of producing somewhat more than 40,000 tons of glass per year, and a preliminary layout drawing #703-D-4063. The estimate and the layout are based on our discussion of specifications November 27.

The drawing 703-D-4063 shows the main plant area. It consists of a corregated iron building 110 feet wide by 240 feet long. In addition to this building, there would be added a warehouse building of 53,000 square feet and general service and office space of 4,800 square feet. The office space and service building can be provided by a lean-to on one side of the manufacturing building. Other features not shown are a mezzanine for handling of cartons and a mezzanine charging platform at the rear of the glass melting furnace. At the rear or side of the furnace, there would be a batch plant of cylindrical shape for handling 200 tons of batch per day.

The melting furnace is 22 feet wide by 38 feet long making a melting area of 836 square feet. At a melting rate of six square feet per ton per day, this will provide almost 140 tons. It will be capable of producing at five square feet per ton per day, equivalent to 167 tons. Under very favorable conditions, it would be possible to produce 210 tons per day but this would depend on skill of operation and on control of raw materials and glass.

Fuel requirements for the furnace are conservatively estimated at 552,000 cubic feet per day plus 4,800 cubic feet for each ton of glass melted per day. At 140 tons the fuel consumption would be 1,223,000 cubic feet per day or a little less than 9,000 cubic feet per ton. On the basis of results obtained in furnaces designed by us during the last five years, the fuel consumption should be considerably below our estimate, possibly as much as fifteen per cent. Properly constructed, the furnace should operate at least three years before need of repair, and with good maintenance and operation, may be expected to last four years. After three years of operation, the repair costs would be estimated at approximately $250,000 making the furnace cost, based on 40,000 tons per year, approximately $2.00 per ton.

[fol. 955] The production equipment consists of four Type 144 Feeders, four 6-Section I. S. Machines, two of which are arranged for double gob operation, and the necessary stackers and lehrs. The following is a tabulation of production requirements and schedules based on the information which you gave us.

Bottle	Capacity	Weight	6-Section Speed	Tons/da.	Gross/da. 87% pack	Required Gr.	Days
1/10th Qt. D.G.	12.8 oz.	8¾ oz.	84	33	730	133,333	183
Pint (flask) S.G.	16 oz.	11 oz.	47	23	410	133,333	325
4/5th Qt. D.G.	25.6 oz.	13¼ oz.	58	35	500	202,083	405
Quart S.G.	32 oz.	14⅜ oz.	42	27	360	58,334	162
Half Gallon S.G.	64 oz.	29 oz.	31	41	270	57,500	213
Gallon S.G.	128 oz.	45¾ oz.	20	41	170	18,889	111

According to this tabulation, double gob operation amounts to 405 days for 4/5th quart plus 183 days for the 1/10th quart or a total of 588 days. Single gob operation amounts to 325 days for the pint plus 162 days for the quart plus 213 days for the half gallon, 111 for the gallon or a total of 811 days. The total machine days is 1399 which with 4 shops on the furnace accounts for 350 operating days.

Based on 350 operating days per year, the scheduling of jobs would be about as follows:

Shop #1	4/5th quarts D. G.	350 days	35 tons/day
Shop #2	Half Gallons	213 days	41 tons
	Gallons	111 days	41 tons
	Quarts	26 days	27 tons
Shop #3	Pints	325 days	23 tons
	Quarts	25 days	27 tons
Shop #4	4/5th Quarts D. G.	55 days	35 tons
	1/10th Quarts D. G.	183 days	33 tons
	Quarts S. G.	112 days	27 tons

The maximum tonnage with this scheduling would be 35 + 41 + 27 + 35 or 138 tons per day. Minimum tonnage would be 35 + 27 + 23 + 27 or 112 tons per day. If gallons and half gallons were made on separate shops, the maximum tonnage would be 152 tons.

With the addition of a 5th shop, the maximum tonnage could be 138 + 23 or 161 tons. If the 5th shop is used for additional production of gallons or half gallons, the maximum tonnage could be 138 + 41 or 179 tons. This would require furnace operation at 4.7 square feet per ton per day which should be easily attained.

[fol. 956] The general approach has been to design the plant so as to provide reasonable operating efficiency with the four shops needed in the beginning, and to provide also for melting an adequate supply of glass when the 5th shop is added.

For handling of cartons we propose a mezzanine floor equipped with carton sealers and delivery conveyors extending to the packing table on each lehr. Delivery of cartons to the mezzanines would be by service elevator or by high lift trucks.

Warehousing is based on 10,000 square feet per shop. This is small for normal commercial operation, but we be-

lieve it to be adequate considering the additional warehouse space available in your present operations.

We estimate that the work force for this size plant would be a minimum of 150 people and it might be as large as 200.

Hartford-Empire Company is equipped to supply all of the engineering, design, and specifications for this plant. In addition, Hartford can supply supervision of construction, installation and start-up of operation. Charges for engineering services, consisting of plant layout, general specifications, design of furnace and specifications of all auxiliary equipment would be $55,000 to $65,000 depending on the amount of detail required. An outline of the engineering services would be submitted in the form of a Letter Agreement.

Cost of supervision would be on the basis of man days at established rates, plus transportation and living expenses at cost. For installation of Hartford-Empire equipment, supervision is at the rate of $6.25 per hour, and for operating service the charge is $80.00 per day. For general supervision, involving construction of the furnace, and general plant work, the current rate is $80.00 per day. These figures are, of course, subject to change.

In addition to employing our engineering services, it would be advisable for you to employ a general engineering supervisor, who might be the ultimate Plant Manager, to organize drawings, confer with contractors and schedule purchasing and delivery of equipment.

Elapsed time for completing a project such as this is estimated at eighteen months. If plant location, layouts and requirements can be established quickly, it might be possible to shorten the time several months.

[fol. 957] We are indeed pleased that you have called on us for this preliminary information and trust that it is sufficient in detail to allow you to reach a decision and to establish budgets. Because our Glass Plant Engineering Section is very busy at present with the design of one complete new plant and with furnace designs and revisions for several others, there will be a problem in scheduling the work of our engineers. However, by the time all of the preliminary details are established, we should be in position to

schedule work for your plant without delay. If further information is needed, we shall be glad to supply it.

Sincerely yours, A. K. Lyle, Technical Manager.

Tin vs. Glass

United States and Canada
Commercial Research Dept.
Metal Container Section

December, 1954

[fol. 968] January 10, 1954.

Mr. R. G. Fisher

Tin Versus Glass—Fruit & Vegetable—Canada and the United States

Unfortunately there is a dearth of statistical data on the breakdown between tin and glass used in fruit and vegetable packing in Canada. On the other hand, published information on the United States is available. Thus, though this is a qualitative analysis, it seems quite clear that glass is more important as a fruit and vegetable packaging medium in the United States than in Canada. In this country, 90% of the major fruits and vegetables packed is in cans; in Canada, a rough estimate is that 95% is in tin. Although strict quantitative information is available just for tomato catsup in Canada, only two other products, chili sauce and grape juice, account for any quantity of glass in Canada. In neither Canadian nor United States figures has baby food been included in making the above comparisons. However, it is interesting to note that all Canadian baby food is in cans, while about 60% of the pack in this country is in glass.

Post-war trend data indicates that tin has been the F & V growth item in this country while both tin and glass have grown significantly in Canada. Glass usage in the United States for all packing purposes, however, has mushroomed. Since pre World War II the number of glass units used has increased 141% while can usage has gone up only 90%.

[fol. 970] Tin vs. Glass

United States and Canada

Growth of Glass Packages Far In Excess of Tin In United States

Although there are only about half as many glass containers presently used in packaging as metal cans, the glass industry has shown a much stronger growth than tin since 1940. Shipments of all glass containers (approximately 18 billion actual count) this year will show an increase of 141% above shipments for the year 1940. The same comparison shows that shipments of metal cans (#2 basis) will be about 37 billion units in 1954 or an increase of 85-90% over the 1940 level.

Greater Percentage of Tin Used For Food Products Than Glass In This Country

Slightly less than ½ of the glass containers produced are used in food products. The greatest portion of these are wide mouth jars (the type used for fruit and vegetable packs). Normally about 2/3 of the metal containers produced are used for food products. Fruit and vegetable packs require about 34% of the metal containers produced in the U. S.

10 Months '54 Food Packs In Glass Show Increase Over '53 While Tin Lags

Food Packs in glass for the first 10 months of 1954 lead the same period in '53 by about 7%. Total food packs in metal for 10 months of 1954 are about 2.5% behind the same period in 1953. Fruit and vegetable packs in tin as a group lag by 3%.

The above comparison on Canadian packs cannot be made because figures on glass and tin usage are not reported in such a form to permit the same comparisons. However, in the following portion of the report we have traced specific trends as far as figures and estimates will permit on the glass vs. tin pack of fruits and vegetables for both Canada and the U. S.

Tin Retains First Place In Fruit And Vegetable Packing In Both The United States And Canada

Tin remains the dominant package in both the United States and Canada in the processing of fruits and vegetables. [fol. 971] Growth since 1947 has gone into tin while glass has remained more or less static.

In 1947, when tin restrictions were being removed, the United States packed over 277 million cases of fruits, vegetables and juices (excluding citrus) in the tin container. This was 86% of the total pack (322 million cases). As tin restrictions became less and less, this percentage increased—to 90.2% in 1949. During the following years, tin continued to share about 90% of the U. S. fruit and vegetable packs. In 1953, the pack in tin amounted to 369.4 million cases (90.1%) while the glass pack was only 40.6 million cases (9.9%).

Canada leans even more to tin than does the United States. As for the basic fruit and vegetable packs, almost 100% is put up in the tin package. Items such as tomato catsup, chili sauce and grape juice, however, (this is also true in the U.S.) are heavier in glass. Tomato catsup, for instance, averages about 84% in glass and 16% in tin.

But Baby Food Favors Glass In U. S. And Tin In Canada

Baby food is one category in the United States packaging field where the pack is greater in the glass container than in tin. Prior to World War II very little baby food (fruits, vegetables, meat products, custards, puddings and soups) was placed in glass but by 1947 more than 61% of the pack was in glass. Since that year more than 53% of the baby food pack in the United States has been put up in glass. In Canada, however, all baby food packed to the present time has been placed in the metal container.

The following group of charts and tables give specific comparisons of the use of tin and glass in the U. S. and Canadian vegetable packs.

[fol. 979] GOVERNMENT'S EXHIBIT 400A

New York #43
November 24, 1947.

Mr. G. H. Muth

Competition—Glass vs. Tin

Attached are data sheets summarizing information received from our division offices on the comparative costs of tin and glass containers for the following products: Processed Foods, Baby Food, Insecticides, Soluble Coffee, Vacuum Packed Coffee, Ovaltine, Baking Powder, and Syrup.

It is our feeling that these figures should be considered only as an indication of price difference in the two types of containers because there are so many variables affecting the cost of each type to the individual packer.

Freight on the empty cans to the packer will differ according to the distance from his source of supply. The zone prices of glass, on the other hand, do not reflect actual freight costs from the source of supply.

The extent of a packer's market area will materially affect the comparative difference in cost to the packer or his delivered selling price because of the added weight in glass.

Costs of production, of course, will vary according to the efficiency of the equipment used on tin and that used on glass.

One packer of Insecticides pays over $9.00 per M for his quart bottle label, while another is content to pay only $3.00 per M. One packer of Baby Food spends but $1.70 per M cans for his reshipping cartons and another spends $2.12 per M cans.

However, we think that the following conclusions can be taken from these comparisons and from other information received with the reports from the division offices.

In general, the glass package is less expensive to the packer of Non-Processed Food items. *The closure cost of the jar makes the glass package more expensive for Processed Foods.*

Except for exceptionally high-speed operations, glass can be run at the same filling and closing speeds as tin with approximately the same investment.

Referring specifically to these attached comparisons:

Containers for Processed Foods—From a price standpoint, we are in a favorable position on Processed Food [fol. 980] items, and consumer preference will dictate the volume of these items packed in glass. Packers and distributors favor tin almost unanimously.

Containers for Baby Food—Our Baby Food can prices as compared to glass would seem to offer sufficient attraction to the packer to use tin, but here the consumer preference for glass controls the package used and the packer is somewhat indifferent because his price in glass more than compensates for the increased cost of that package. This probably will not change until the housewife becomes more price conscious.

Containers for Insecticides—The packer and distributor seem to prefer tin as a package for this product, but should our can prices further increase, the lower cost of glass may offer a saving which the buyer cannot afford to pass up.

Containers for Soluble Coffee—It would appear that we will have to guard against any material increase in the price of our Soluble Coffee can if we want to make inroads on the glass container volume. We have no definite statements as to packer, distributor or consumer preference, but it is indicated that consumers may favor the more positive reclosure of the glass jar.

Vacuum Packed Coffee—While the cost to the packer of the glass container is less, apparently packer, distributor, and consumer preference for tin outweighs this price consideration.

Container for Ovaltine—We have priced ourselves out of this $600,000 market.

Containers for Baking Soda—A further increase in the price of cans will price us out of the business with this particular packer, which is estimated at twenty million units per year. We received but one report on containers for this product and you will notice that it is only because of the extensive market area for the finished goods that cans now compare favorably with glass.

Containers for Syrup—Our New Orleans District Office has told us that we are not competitive with glass and are losing business because of the difference in cost in favor of

glass. However, it is also reported that there is substantial consumer preference for glass in the "table" sizes.

We hope to be able to gather further data on the comparative costs of cans and glass containers used for packing Prune Juice and Apple Juice but, as yet, have been unsuccessful. These will be passed along to you when they are received.

[fol. 981] We understand that you plan to incorporate this data with that which you have accumulated on comparative costs of containers for Beer, and will also develop further information on consumer and packer preference, as well as the total volume of business available in the respective fields.

If you require any more detailed information than is being furnished on these comparisons, please let us know and we will try to obtain it for you.

R. S. Hatfield.

The Packaged Syrups Market

An Appraisal of the Metal Container's Competitive Position

Commercial Research Department

April 1949

[fol. 989] Contents

Page

Summary .....
Introduction .....
I Size and Nature of the Market .....
II The Element of Price in Package Preference ...
III Continental's Competitive Position .....

[fol. 990] Summary

Our appraisal of the packaged syrups market and the competitive status of metal cans versus glass containers permits the following conclusions:

(1) The over-all packaged syrups market, for household and institutional consumption, is estimated to be around 750 million pounds per year. Of this total, corn syrups sold as such and blended in other syrups would normally average about 350 million pounds. Cane syrups, honey, molasses and maple syrup would make up the balance of the syrups or sweeteners.

(2) The market is logically divisible into two groups: (a) the small size market, packages smaller than 5 pounds, estimated at around 500 million pounds per year; and (b) the large size market, containers of 5 pounds or larger, estimated at about 250 million pounds per year. Of the latter group, roughly 100 million pounds are probably consumed by institutions, including restaurants, while the remaining 150 million go into household consumption, primarily in rural areas.

(3) In the small size market probably more than 90% of syrups consumed are packaged in glass containers. In this market package design is more important than the cost of the container. Glass predominates in these sizes primarily because of consumer preference, the glass jar currently being more acceptable for use on household tables and seemingly more adaptable for continued use in small amounts. The most common sizes are the 12 ounce and the 1½ pound (1 pint) jar.

(4) In the large size market the metal can retains its traditional overwhelming dominance, primarily because of preference among producers, wholesalers and retailers, due to the can's lower shipping, handling and breakage costs.

(5) The price of the container to the packager is not a dominant factor in the selection of either glass or metal. In the small sizes, metal cans are competitive costwise, but [fol. 991] currently lack consumer acceptance. In the large size market the glass jar has, up until the present, been unsuccessful in making any significant inroads at prevailing price ratios to metal. It, therefore, follows that a price reduction on metal cans in the 5 or 10 pound sizes would not result in any additional business. Likewise, price reduction alone on the smaller 1½ or 2½ pound capacity cans would probably not result in any additional business.

(6) However, there is apparently a critical area in between the small size market and the very large, where the cost of the container could be the deciding factor. Since the 5 pound size is logically the next size into which glass might make important inroads, if glass jars were priced sufficiently below the price of metal cans to more than offset higher handling, shipping and breakage costs, syrup packagers could probably be persuaded to shift to glass in this size. Thus, although a price reduction on metal cans in the 5 pound size would not be expected to increase materially the volume of business, it may well be a critical factor with respect to holding our present participation.

(7) At present there is a price differential in favor of glass jars in the 5 pound size amounting to nearly 20% of quoted delivered prices for glass containers. While this amounts to less than 1.4 cents per can for a product which would retail at around 60 cents or higher, it could well prove to be a significant cost advantage in favor of glass jars which might result in the loss of part of the large market for 5 pound containers. The 5 pound size accounts for around 48% of Continental's nearly $2 million volume of business in syrup cans. Furthermore, this is a size which is important to most of Continental's large customers, the top 5 of whom account for about 45% of Continental's syrup can business. The loss of one or more of these customers to glass would obviously be serious.

[fol. 992] (8) It is quite possible that the metal can could secure additional business—i.e., the lost business in the small container market—if it could be made sufficiently attractive and adaptable to be used on household tables with-

out increasing the retail price to the consumer. Here, however, package design would be the critical factor.

The foregoing conclusions appear to us to support the following recommendations:

1. That serious consideration be given to Sales Department recommendations for reducing the quoted price on #5 round single friction cans from the present price of $67.38 per thousand to a price in the neighborhood of $60, in order to reduce a potentially dangerous spread in favor of glass jars.
2. That consideration be given to the development and market testing of a small-sized metal container, sufficiently attractive and adaptable for continued use to compete effectively with glass jars for use on household tables. The cone-top beer can, adapted with a replaceable cap and attractively lithographed, appears to offer one possibility in this respect.

[fol. 993] GOVERNMENT'S EXHIBIT 402

The Market for Peanut Butter in Cans

I. The Peanut Butter Market

Peanut butter is a simple substance. Although requiring constant and critical control in its manufacture, it is little more than mashed peanuts. Raw peanuts are shelled, cleaned, roasted, blanched, cooled, inspected and ground, and the resultant butter is packaged, typically while it is still hot (145° or so) from the grinding. It is generally accepted that there is a weight loss, after shelling, of about 15% in the manufacturing process: thus 100 pounds of *shelled* peanuts will normally yield about 85 pounds of peanut butter. Currently popular is peanut butter to which small chunks of peanuts have been added.

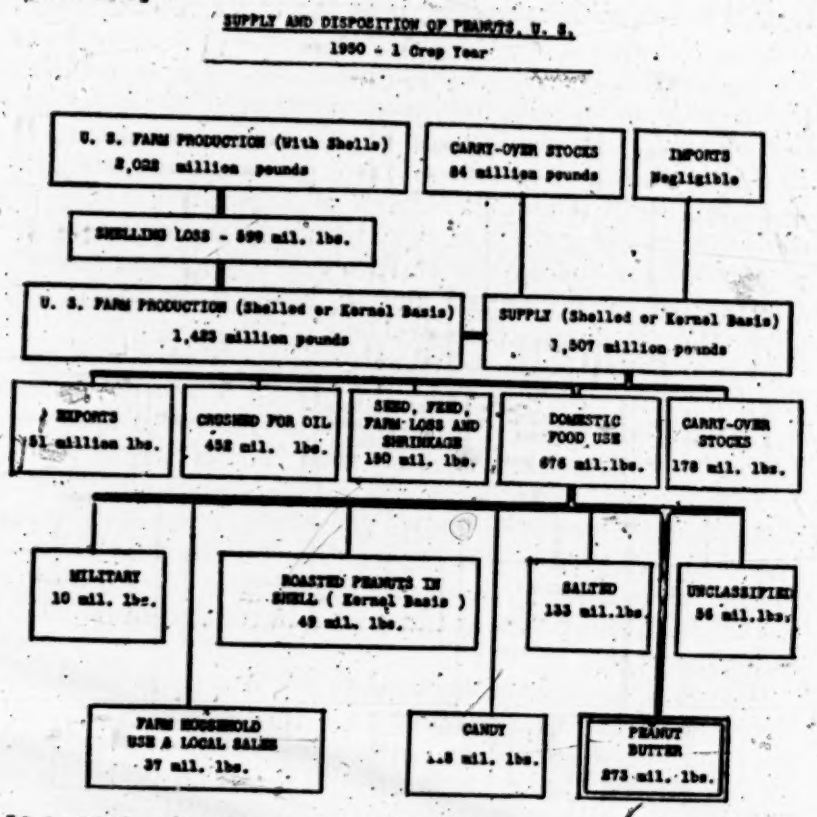
Because of its tendency to rancidity when exposed to air, peanut butter is packed in air-tight containers and a substantial portion of it is vacuum-packed. Shelf-life varies with the care used in manufacture and inversely to storage temperatures. At room temperatures typical shelf-life (in

terms of acceptable rancidity) is apparently about 300 days, although a range of 100 to 600 days was observed in one test. This undoubtedly does not apply to vacuum-packed peanut butter prior to its initial opening. Storage at 50° F or less not only retards rancidity and unpalatability, but also prevents separation of peanut oil from peanut solids. Protection from light similarly reduces oil separation and preserves flavor. In storage at room temperature finely ground peanut butter separates more than coarsely ground butter. Homogenization of peanut butter, however, seems to be eliminating this separation problem.

Peanut butter is the primary domestic food use of the United States peanut supply. In 1950-51 it accounted for nearly 20% of the total United States peanut supply and for over 40% of all peanuts used for food. Peanut butter made by candy manufacturers for use in their own candy (probably 25 million pounds or more) is excluded from the peanut butter figures used in this report. The relationship of peanut butter to total U. S. peanut supply and disposition in the 1950-1951 crop year is illustrated in the diagram on the following page.

Peanut butter was introduced to the American public at the close of the 19th Century as a food for invalids. Its popularity as a spread has grown to the point, where, according to one survey, it is used in 9 out of 10 homes, a higher proportion than that of any other single spread. As indicated in Chart I, per capita production has doubled in the last 25 years and rose to over 2 pounds per person during World War II, when other spreads, particularly butter, were scarce. In 1950, production per capita was 1.5 pounds or 4 to 5 pounds per family, while total production was 232 million pounds (85% of the 273 million pounds of peanuts used for this purpose).

[fol. 994]



[fol. 995] The 232 million pounds of peanut butter estimated to have been packed in 1950 represent a manufacturers sales value of $75-$80 million, and a retail value of $90-$100 million. On the basis of the relationships existing in 1947, this is about one-third the value of all jams, jellies and preserves produced in the U. S., and about one-fourth of the poundage of these competing spreads. In the post-War period, the price of peanut butter has averaged some 10% above that of jams and jellies and 20% below that of American cheese. However, in 1950, peanut butter was 20% above jams and jellies and but a shade below American cheese. Thus, the price pattern has recently tended to favor jams and jellies over peanut butter as a spread for bread and for similar uses.

Although no regional analyses of peanut butter consumption are available, it is probable that per capita consumption in the South is higher than in the rest of the nation. How-

ever, peanut butter is not a poor man's fare, for consumption shows a pattern of increase from lower to higher income groups. The leveling off in production per capita in the post-War period is attributable not only to the readjustment to wartime shortages of other spreads, but also to the decline in the consumption of bread and a consequent decline in the use of all spreads.

II. The Nature of the Peanut Butter Industry

Although 198 firms are reported as packers or private brand distributors of peanut butter in the United States and are indicated as such by location on the accompanying map, the actual number currently engaged in business is probably considerably less. The manufacture of peanut butter is not exceptionally complicated and the capital equipment involved is not extensive. Consequently, numerous packers of related products can enter or leave the market as its attractiveness warrants and marginal producers can similarly come and go. Thus, the number of operating packers or private brand distributors is probably closer to 150 or less.

As is common in many industries, a small percentage of the producers account for a majority of the sales. The leading manufacturers of peanut butter, separately indicated on the map, undoubtedly command over 50% of all peanut butter sales. These firms are:

Brand	Manufacturer	Location
Peter Pan	Derby Foods, Inc.: Sub. Swift & Co.	Chicago, Ill.
Skippy	Rosefield Packing Co.	Alameda, California
Swift's	Swift & Co.	Portsmouth, Va. Chicago, Ill.
Planters	Planters Nut and Chocolate Co.	Suffolk, Va.
Armour	Armour & Co.	San Francisco, Calif. Chicago, Ill. (Plant: Fort Worth, Texas)
Beech-Nut	Beech-Nut Packing Co.	Canajoharie, N. Y.
Ann Page, Sultana	Quaker Maid Co., Inc. (A & P)	New York, N. Y.
Beverly, Real Roast	Table Products, Inc. (Div.: Glenfield Food Co.)	San Francisco, Calif. (other plants)
Monarch or other	Reid, Murdoch Div., Consol. Grocers Corp.	Chicago, Ill.
Kroger	Kroger Co.	Cincinnati, Ohio
Laura Scudder	Scudder Food Products, Inc.	Monterey Park (L.A.), Calif.
Finast	First National Stores, Inc.	Somerville, Mass.
Tom's	Tom Huston Peant Co.	Columbus, Georgia
Sunny Jim	Pacific Food Products Co.	Seattle, Washington

[fol. 996] Peter Pan (Derby Foods) is reportedly the nation's leading seller and claims complete national distribution. Skippy is most likely second in sales, with the others taking position in unspecified order. Peter Pan claims to outsell the next 12 brands combined; if this is true, it is most likely that the 14 packers or distributors listed on the preceding page sold from 125 to 150 million pounds of the 232 million pounds of peanut butter packed in 1950. Even if 30 to 50 million pounds of this 232 million pound total were large-quantity sales to institutions and other manufacturers, these 14 packers would still have sold 100 to 125 million pounds of peanut butter for home consumption.

In either case, the remaining 125 to 150 packers believed to be in operation in 1950 would have shared a packaged market of but 50 to 100 million pounds, for an average of 300,000 to 800,000 pounds each. While this quantity range is not inconsequential, it is minor compared with the 50 million or so pounds probably attributable to Peter Pan, the estimated 25 million pounds sold by Skippy (Rosefield Packing) and the 4 to 6 million pound average of the other 12 major firms.

The locational pattern of the peanut butter manufacturing industry, as seen on the map, is partly market-oriented and partly drawn to the peanut-producing regions of the South. A majority of the principal cities of the nation have at least one firm reported to be a packer or private brand distributor of peanut butter. Skippy (Rosefield Packing) is an exception to the generalization that the important packers also offer products other than peanut butter.

III. Peanut Butter Containers

If it can be reasonably assumed that about 200 million of the 232 million pounds of peanut butter produced in 1950 were packaged for home use, then the quantity of containers required was probably from 200 to 250 million packages. Although peanut butter is offered in a variety of sizes, the most popular units are in the 12 ounce to 16 ounce range.

Virtually all peanut butter is packed in air-tight glass containers and not uncommonly under vacuum. The only packer of any consequence known to be using metal cans is Peter Pan (Derby Foods). This firm, prior to Korea, packed peanut butter in 12 ounce and 28 ounce Trutite cans sup-

plied by Continental but, because of the inconvenience of metal restrictions, has eliminated the use of cans for the small size and packs in metal in the 28 size only (except for #10 cans for bulk sales). In 1951 Peter Pan purchased 2.2 million Trutite cans from Continental (value: $143 thousand) but 1952 requirements are running at a lower rate. The Trutite can is a relatively expensive container for a product such as peanut butter but it is apparently popular in certain markets, such as insect-infested sections of the South, where its tight reclosure feature in combination with vacuum-packing is important.

The overwhelming popularity of glass containers for this product is largely attributable to their relative cost and the widespread acceptance of their reuseability. A one-pound glass jar today costs about $4.50 per gross ($31 per thousand) plus another $10 or so per thousand for caps. With labels, this would total something over 4¢ each for a one-pound (16 ounce) glass jar for vacuum packing. This com- [fol. 997] pares with the average of 6½¢ per 28 ounce Trutite peanut butter can supplied by Continental in 1951, and with an estimated 4½¢ to 5¢ per can for a 12 ounce Trutite in that year. It is probable that a one pound Trutite can today would cost close to 5½¢ per unit, which is some 20% higher than an equivalent glass jar at 4¢-plus per unit.

Also of major significance in this preference for glass containers is their popularity for reuse. One survey indicates that peanut butter jars are reused for storage, canning, deep freezing, and carrying food for lunches and picnics, while peanut butter *tumblers* are used for drinking, canning, storage and as gifts. This survey also revealed that most housewives prefer a *tumbler* with a pry-off lid to a *tumbler* with a screw cap, but that, for *jars*, the screw cap receives far stronger preference. Reasons given particular brand selection, with percentage importance, were:

1. Taste and flavor	67%
2. Previous usage	53
3. Keeping quality	47
4. Type of container	47
5. Cost	40
6. Appearance of quality	20
7. Carry-over of family brand	17
8. Type of cap	17
9. Advertising	14
10. Premiums	5
	5

(Total exceeds 100% due to duplicate-answers)

It is apparent that the type of container used by the packer is an important selling point in the marketing of peanut butter. On the other hand, vacuum-packing did not appear directly as a significant factor, although its effect on taste, flavor, keeping quality and appearance is not to be minimized.

Since Peter Pan (Derby Foods) is apparently the most important producer of peanut butter, its opinions in regard to packages are of value. This firm packs peanut butter under vacuum only and is not interested in anything other than a vacuum container. It is the only user of consequence of metal cans for retail packages and these are necessarily the Trutite or similar reclosure vacuum-pack can. Its only interest in metal cans at the moment is in regard to reduction of Trutite can costs (possibly through the use of a collar can), and even under such developments it does not anticipate a return to metal for smaller-than-28 ounce sizes. Peter Pan is relatively satisfied with present glass containers and, although it admits to considering new packages, expresses no desire to experiment with any new containers unless they can be vacuum-packed and compete effectively cost-wise with their existing packages.

Armour and Company is another major packer of peanut butter, although it does a volume considerably smaller than that of Peter Pan. Armour packs its retail sizes solely in glass but in both vacuum pry-off cap tumblers or jars, and in screw cap jars. Since the screw cap used has a gasket, the cooling of the hot butter after filling creates a partial vacuum in the screw cap jars. Armour points out, however, that the pry-off vacuum cap container is less expensive both in initial cost and in the filling operation. Speeds of 400+ units per minute are reported for pry-off caps, whereas a CT (Continuous Thread) screw cap line seldom exceeds 300 units per minute. Although Crown Cork and Seal has developed a vacuum screw cap (through the use of a more effective gasket), Armour is not interested because of its higher cost, the necessity for purchasing a Crown closing machine at $9-$12 thousand, and the fact that the line speed limit could still be no more than 300 per minute.

[fol. 998] IV. Conclusions and Recommendations

The peanut butter market of perhaps 250 million 12 to 16 ounce containers is not inconsequential, even though it is minuscule in comparison to that for beer packages, for example. Because of its tendency to rancidity, peanut butter for household consumption is now packed primarily in air-tight glass tumblers and jars, which are of considerable importance to consumers because of their reuse value. Furthermore, a significant proportion of all peanut butter is packed under vacuum. To date, the glass container has cost the packer less than a comparable can and has been readily accepted by both the industry and the public as the standard type of peanut butter container. Metal is used for institutional packaging and for a small quantity of consumer units. Although the major known packer of small sizes in cans used both 12 and 28 ounce Trutite cans for peanut butter prior to Korea, only the 28 ounce size is now being filled and this at a rate of about 2 million cans per year.

For these reasons it appears that many packers of peanut butter would not be interested in conversion to metal cans for retail packaging unless significant cost or marketing advantages could be shown. In addition, the multitude of sizes currently on the market could be a serious problem facing the introduction of a metal can. Sizes exist at almost one ounce intervals from 5 ounces to 16 ounces, and at wider intervals to 28 ounces or more. This use of many sizes is a method of varying price less obtrusively, particularly in an inflationary period. A peanut butter can would presumably have to be standardized on one or two sizes, such as a 10 or 12 ounce and/or a 14 or 16 ounce package, which would cover the range of the most popular sizes.

Under these circumstances, it appears *unlikely* that the mere offering of a new metal container to the widely scattered peanut butter industry would produce rewarding results, particularly in view of the industry's present dollar and market investment in glass containers and their filling and closing equipment. On the other hand, it is possible that one or more packers could be *sold* on the use of a lock top can, for example, as a means of product differentiation. Should such tactics prove successful, a volume of from 5

million to as high as 50 million cans might be expected, although the latter figure would be highly optimistic.

Thus, except for presently unforeseen cost savings to the packer, the novelty approach offers the only encouragement for putting peanut butter in metal. It is reported that, at one time, a packer did successfully merchandise a child's toy pail, with handle, filled with peanut butter. This relatively expensive type of premium package is a further thought in the direction of product differentiation. It is likewise possible that a Decoware canister or other novelty item might in some way be promoted by one or more packers desiring to improve their market position.

Another suggestion is that peanut butter be packed in wax or plastic lined paper cups or tubs. If the paper and lining could withstand the filling temperatures of 145°F, and if there were no problems such as leaking, a 16 ounce paper container, for example, would offer significant cost savings over both glass and metal. A 16 ounce tub at under 3¢ compares quite favorably with glass and closure of 4¢-plus, and with a Trutite can at perhaps 5½¢ each. A 10 or 12 ounce paper tub, which might be a more popular size, would probably have a proportionate cost advantage. [fol. 999] Such a paper container would admittedly not be capable of being vacuum packed with peanut butter nor would it be as air-tight as glass or metal, but temperatures below 50°F and darkness retard rancidity and oil separation. A paper tub, possibly fitted with a slip cover if that is technologically and economically feasible, might, if necessary, be sold from a refrigerated display case in conjunction with a promotional campaign built around a freshness or economy theme. If a container could be developed which is suitable from a technological stand-point, it might then be given a preliminary marketing test by attempting to sell one or more smaller packers on introducing his product as a *unique* product in an *economy* package

It is therefore recommended that:

1. Continental explore the periphery of the peanut butter packing industry in an attempt to interest one or more packers in the use of a metal container for product differentiation. Such a package might be a lock top can, a pail, a canister or some similar device which would also aid the sale of the product because of the desirability of the container

itself. This would not be expected to have any large volume prospects, but conceivably could be profitable business.

2. Continental's Paper Container Division evaluate the paper tub as a potential peanut butter package and, if warranted, attempt to interest certain packers in the use of paper containers for peanut butter, possibly as suggested above.

From: R. D. Cleaves — August, 1956.

Continental's New Savorlock Can

We have chosen the name Savorlock as a one-word description of an outstanding new metal container which Continental is now ready to supply to the packaging trade in two sizes.

These containers have been designed to meet the specific needs of many products now being marketed in glass or other packaging materials. They are lock-top metal cans for consumer convenience. They are light-weight to save shipping costs. They are sealed against moisture penetration for long shelf life. They are styled and well-proportioned to give excellent display characteristics.

All of the desirable features which have been built into these containers, and which are discussed in more detail in

this Bulletin, are expected to bring enthusiastic acceptance by packers, retailers and, most important, consumers. We believe that the Savorlock can will prove to be one of the most successful packages ever introduced by Continental Can Company.

Packaging For Impulse Buying

Package design today has an importance that was not the case in the days before the supermarket. Shopping habits have changed. Formerly the housewife did not "market" as we now understand the word. She would take a grocery list to the corner store and the clerk would select her "two cans of peas, one pound of coffee, etc." Or, she might telephone her list and have the items delivered.

Today, the same housewife goes to the supermarket, with or without a list, and wheels her cart up and down the aisles. She has been conditioned by brand advertising but most of her buying is done on impulse.

[fol. 1001] Impulse buying has brought about a revolution in packaging practices. Actual time studies made in supermarkets show that it takes a housewife an average of 4 seconds to choose an item from a grocery shelf, but it takes her 20 seconds not to buy something. The package itself either provides this impulse to buy, or lacks it.

The significance of impulse buying was not lost when the Savorlock cans were designed. Continental called upon an outside Industrial Designing firm, informed them of the approximate cubic capacities that were desired in these containers, and of manufacturing restrictions, and asked their recommendations on proportions and special features. To meet proper design criteria, the designers specified diameters of 204 and 305, which were accepted by Continental even though they were non-standard. Our two Savorlock cans are now 204 x 315 and 305 x 507. They represent one of the first "styled" metal cans ever offered by the industry, and with the other special features are a real Continental first.

Display

In the pleasing proportions of the Savorlock cans, we have provided the important element necessary for a su-

perior package display. A second requirement has been met in the stacking feature which enables the storekeeper to build up the display to the full height of the shelf.

Because metal cans are so compact, we have fulfilled another requirement of the retailer, which is to get as many units as possible per running foot of shelf. With all products competing for display space, this is an important merchandising consideration for the packer as well as for the retail storekeeper.

A final and conclusive element of the display needed to catch the eye of the "impulse buyer" is the decoration of the package.

[fol. 1002] On the Savorlock can, as contrasted to labeled jars, we provide not only excellent lithography but also a greater space for design and text. Continental is unsurpassed in the industry in the excellence of its lithography. Too, many of the outstanding lithographed designs on grocers' shelves today were created in Continental's Art Department.

The merchandiser who is looking for a new packaging vehicle to move his product off the self-service shelf will find much to appeal in the Savorlock cans. They have the attributes which will put his product in the "4 second" category and keep it out of the "20 second" category.

Container Costs

Our Savorlock containers are the first reclosure cans of this type ever to be produced on high speed lines. Thus, because our costs are reasonable, the containers can be priced advantageously in comparison with other containers with similar features. It is reasonable to state that there is no other container being offered today that combines so many advantages in one package and which is so low in price.

The big volume unit which our new container is expected to replace in large part is the glass jar. Glass jar prices are not consistent in that they are influenced by the potential volume of the product to be packed, and by the degree of competitive threat from cans and other types of packages. Also, glass is priced on a delivered zone basis. Nevertheless, the pricing level of Savorlock cans in reshippers is

generally competitive with glass jars in reshippers, although in certain locations the first cost will be greater. This latter point is not necessarily an argument in favor of glass, as the prime interest of the marketer is in a distinctive package that will sell his product. In that area, the Savorlock can is worth whatever additional cost is involved.

[fol. 1003] Shipping Costs

Prospects who are comparing the merits of Savorlock cans versus glass jars will find that the adoption of the Savorlock can will enable them to realize substantial savings in the shipment of filled containers to point-of-sale. This is brought about not only by the lighter gross weight of the metal container but also because many more cases of cans can be loaded in a railroad car. Glass is heavy and fragile and usually can be stacked only part way up in a railroad car, while cases of cans can be loaded right up to the roof.

Here are some significant data with typical comparisons, glass of average weight versus Savorlock cans. In establishing filled case weights we have assumed 2-oz. of product for the 204 x 315 size and 6-oz. of product for the 305 x 502 container. The comparative data given for glass jars assumes the same product weight:

	2-Oz. Size		6-Oz. Size	
		Savorlock		Savorlock
Wt. Per Case of Filler Containers	Jars 9#	Cans 6.6#	Jars 19#	Cans 15.6#
No. of Filled Cases Per Carload	4,500	7,300	1,800	2,700

The above will show that a packer buying Savorlock cans will realize major overall savings in the cost of getting the product to the retail outlet. This is a particularly important consideration for firms that pack at central locations and distribute over a wide marketing area.

Savings in Production

There are important savings realized in production that will benefit the packer who switches from glass jars to Savorlock cans.

[fol. 1004] Probably the one thing that gives most con-

cern to the packer of food products is broken glass. When a jar shatters in a filling line, production stops until all the glass is cleaned up. In addition, to assure that no particles will remain in any container, a certain number of jars, including product, both before and back of the broken container must be scrapped.

In the case of Instant Coffee, as many as 48 jars of product are thrown away every time one jar breaks. In a 6-oz. line, this would mean a loss of over $50.00 for each stoppage caused by a broken jar.

Savorlock cans do not break!

Product Protection

A packer giving thought to the adoption of the Savorlock can will want to know, "Will this container protect my product for a normal shelf life period?"

Obviously, each product candidate will have its own requirements, and in some cases test packs arranged through Customer Research will have to provide the answer. However, in the specific case of Instant Coffee, the answer is "Yes". Presumably the same answer will apply to other such products which are packed atmospherically and which must be protected against moisture or odor pick-up.

Metal R & D has a long test pack experience with the Savorlock can, employing many variables in structure and vapor-seal. The product used in their test was Instant Coffee, which is one of the most hygroscopic of food products being marketed today.

These test packs have been evaluated after both accelerated and long-term test conditions. The basic tests were made in the laboratory, but served to indicate what might be expected under commercial conditions of packing, shipping and storage.

More recently, in conjunction with a major market test of Instant Coffee in the Savorlock can, our Metal Research and Development Department has been able to confirm [fol. 1005] their original findings. Evaluations have been made of cans filled and sealed on a production basis and distributed in normal commercial channels. Accelerated laboratory tests of cans taken from the production line have demonstrated the efficacy of the vapor-seal. Also, cans taken

from retailers' shelves over four months after filling have demonstrated no appreciable moisture pick-up.

These comprehensive evaluations have given us the assurance that Continental's Savorlock containers can be offered for Instant Coffee and other hygroscopic products as a package that will offer the necessary protection for a normal shelf life period. From these tests, also, Metal R & D has developed information which will enable our Customer Research to recommend specific adhesives and adhesive applicators which the packer should use in commercial production to achieve the necessary vapor-seal.

Products

No attempt will be made here to list all of the product candidates for Savorlock cans, as almost any powdered or granulated product, food or non-food, is a possibility. We will list some of the more important categories, which should stimulate in the minds of our sales force the generation of a long list of specific items for which this container will answer a packaging need:

Instant Coffee

With over 30% of all coffee, cup for cup, marketed in the instant form, this product seems to represent the greatest potential for Continental's Savorlock can. In 1955, about 1.3 billion oz. of instant coffee, with a total retail value of $350 million, was consumed in the United States. The forecast of package usage in 1956 is 370 million 2-oz. containers, and 123 million in the 4-oz., 5-oz., and 6-oz. size, with the trend toward increased usage of the 6-oz. package.

[fol. 1006] As is well-known, practically all instant coffee is marketed in glass jars. The advantages of the Savorlock can over glass, plus the association by the consumer of coffee with tin, should enable us gradually to take over a sizeable portion of this market.

Tea, Soluble Tea and Tea Bags

This is another important area for potential Savorlock can sales. More than 160 million packages were used in the marketing of these products in 1955.

Chocolate and Cocoa

The Savorlock can affords many advantages over packages now considered standard for the marketing of chocolate and cocoa. Being metal it can be packed much faster than the paper-bodied oblong containers which tend to jam in the packing line. Full opening makes it easier for the housewife to spoon out the product, and the lock top of the Savorlock can is simple to open and reseal. The oblong can, with its plug reclosure, is very unhandy from the consumer standpoint.

The estimated unit market in this product category is 88 million packages.

Non-Fat Dry Milk

125 MM units of non-fat dry milk are sold annually. Most packers use a labeled cardboard box with an inner package, but one company is successfully merchandising the product in glass. The large Savorlock can should be very interesting to the concerns who are looking for a superior package to compete with the glass jars.

Dehydrated Soups

These items have had good acceptance by the consumer, with approximately 138 million packages sold annually. Our small Savorlock can is of a good size for a small serving of soup, and the larger container will make an "economy" serving for a large family, or several smaller servings. The [fol. 1007] reseal feature of the Savorlock can is important in connection with this latter use. As these products are sometimes gas packed, it may be necessary to arrange test packs through Customer Research.

Prepared Sweetened Chocolate Mix

Savorlock containers can be a powerful merchandising vehicle for those products which are now packed principally in glass. Prepared chocolate mixes are priced higher than unsweetened chocolate or cocoa and are merchandised agressively. The package cost is a relatively small part of total retail price.

The estimated usage in this product category is 75 million containers.

Baking Powder—Baking Soda

The principal package used for these products is the paper box, but some concerns are now using cans. Ordinarily, a product as inexpensive as this could not afford additional package costs. However, because the item is purchased infrequently by the housewife, and consumed over a relatively long period of time, a superior package offering additional consumer convenience should enable the product to be marketed at a price premium.

About 190 million packages of baking powder and baking soda are sold annually.

Laundry Starch and Powdered Bleach

These products are examples of potential non-food candidates for the Savorlock can. They have a potential of 90 million packages annually.

Spices and Vegetable Flakes

While the standard Savorlock can may not be presently suitable for spice and flavorings which must be sifted (such as ground pepper, paprika, etc.) there are other spices and [fol. 1008] flakes for which the container is exceptionally good. We are thinking of such products as peppercorns, whole cloves, dry mustard, parsley flakes, onion flakes, dehydrated garlic, Rosemary, Oregano, Anise Seed, Basil Leaves, etc. Many of these are now being marketed in round reclosure type cans.

Pharmaceuticals

Items of the general nature of Boric Acid (18 MM units) and Epsom Salts (16 MM units) are the types of pharmaceuticals for which these containers would be an excellent package. Aspirin tablets and vitamins are logical candidates.

Brown Sugar and Confectionery Sugar

These two products should be good candidates for the larger Savorlock container, as the standard paper box with overwrap being used does not protect the product. The housewife has a problem in keeping the product dry after the package is opened, and many times it picks up moisture

during normal shelf life periods and comes to the consumer in caked form.

Generally, one package of brown sugar or confectioner's sugar is used over an extended period of time in the home, and must be stored between uses. The convenience of the Savorlock can and its positive reseal feature should provide a merchandising advantage which will enable the packer to get a premium price for the product in the Savorlock can and still increase sales. These two products represent a potential for over 100 MM packages.

Peanut Butter

This is a "hard to hold" product, in that Peanut Butter will creep because of its oily texture. The Savorlock can has not been tested commercially with this product but it does seem to have possibilities of being an excellent retail package for Peanut Butter as a replacement for glass. Packers of Peanut Butter should be given an opportunity [fol. 1009] to see the can, with the thought that those who are interested will want to arrange for test packs and perhaps a retail market test.

Estimated potential of packages for Peanut Butter amounts to 150 million units annually.

Miscellaneous Products

Other candidates for Savorlock cans are represented in such product areas as: Instant Gravy Mix, Bouillon Cubes, Powdered Egg Whites, Dry Coconut, Prepared Dips for Fried Foods, Bread Crumbs, Hard Candy, Cookies, Dessert Powders, Dry Rice, Instant Potatoes, Banana Flakes.

Conversion of Glass Packing Lines

The filling and capping of Savorlock cans is essentially the same operation as the filling and capping of glass jars. Many potential customers in addition to those in the Instant Coffee field already have glass jar lines. The following general information will show that the conversion of a glass jar line to a Savorlock can line is relatively simple and inexpensive:

1—*Materials Handling*—There probably will be no changes necessary in the carton conveyor handling

system, either direct to an unscrambler, or through storage on pallets. A greater number of cans than jars can be handled per pallet.

2—*Unscrambler*—It may be necessary to make a slight adjustment on the unscrambler because of the top bead of the Savorlock can.

3—*Slat Chain Conveyor*—Usually, the conveyor is adjustable and thus adaptable to the conveying of cans.

4—*Cleaner-Blower*—This equipment may require a new twister to take care of the diameter and height of the can, which is different from that of a standard jar. It may be necessary to adjust the pusher to a different height.

[fol. 1010] 5—*Labeler*—Presumably, the cans will be lithographed and the labeler will not be used. It can stay in the line, operating as a conveyor. It may be necessary to make a slight adjustment of the V-belt to avoid running on the top bead of the can.

6—*Filler*—Change parts will probably be required for the filler. The cost, depending upon the type of filler used, should be approximately $850.00.

7—*Gluer*—Because the adhesive recommended for cans is different from that ordinarily used for glass, the type of adhesive applicator used on a jar line may not be suitable for cans. Information on the recommended adhesives and type of applicator will be furnished on request by Customer Research.

8—*Capper*—The cost of change parts for the capping machine should range from approximately $180.00 to $425.00 for a 4-spindle machine; from $270.00 to $1,125.00 for a 6-spindle machine; and from $360.00 to $1,500.00 for an 8-spindle machine.

9—*Caser*—A new grid may be required for the caser. The cost, depending upon the type of caser used, should be approximately $500.00.

The above figures are estimates, and are only to serve as a guide in indicating what may be involved in equipping a jar line to handle the Savorlock can.

The Division Can Handling Equipment Engineers should be called in as consultants and advisers on line change-overs from glass jars to cans.

[fol. 1011] General

The introduction of this excellent new container will open numerous doors to the Continental Can sales representatives. In the case of many prospective customers, we shall have an opportunity to make best use of the team approach.

Division and Head Office Sales will be available to assist Districts in developing the best sales story, or in making the actual sales presentation to important prospects. Customer Research should be called in with reference to test packs and container specifications for individual products, and should also be consulted concerning recommended adhesives. The Can Handling System Department can supply a great deal of assistance in connection with the conversion of a glass jar line, or in laying out a new line for Savorlock cans.

Because of the importance of the package as a merchandising vehicle, the creative ideas of the Art Department can be used effectively in providing a customer with a colorful package that will increase his sales, prestige, and profits.

District Sales Managers

Subject: Savorlock Cans

Re: Freight Allowance—Instant Coffee

Price Lists for the 204 x 315 and 305 x 507 Savorlock cans show selling prices f.o.b. Passaic, N. J.

For packers of instant (soluble) coffee *only*, a carload freight allowance will be made up to $1.03/cwt. ($1.00 plus 3% transportation tax). This pricing policy will hold until and unless specifically rescinded.

The purpose of this allowance is to provide an incentive for packers of instant coffee to switch from glass jars to cans. Jars for instant coffee are sold on a delivered basis, and the effect of the allowance on cans is to make our pack-

age competitive on a first-cost delivered basis in an area where many large instant coffee packers have plants.

For all products except instant coffee, Savorlock cans will be sold F.O.B. Passaic, New Jersey.

Continental's New Savorlock Can

The Product Bulletin which has just been issued on the Savorlock cans gives a considerable amount of general information concerning these containers. As a ready reference for sales representatives, we have tried to anticipate some specific questions which may be asked by prospects for the cans, and this New Development Letter is designed to provide the answers.

Q. How would one describe the Savorlock cans?

A. The Savorlock cans, which come in two sizes, can be described as: Round lock top cans, side seam soldered outside, with covers fitted with pulpboard liner and glassine tamper-proof seal.

Q. What sizes are available?

A. The standard sizes are the 204 x 315, and the 305 x 507.

Q. Can they be produced in other sizes?

A. These are the only sizes which we are tooled to make, or which we plan to make in the foreseeable future. Height change parts and diameter change parts are very costly for these particular containers, and consideration would be given to different dimensions only if firm requirements were to run into several millions of cans.

Q. Are samples available?

A. Yes. Savorlock samples in lithographed stock design are being supplied to each district sales office for presentation to prospects. Additional samples, lithographed or plain, may be secured from Passaic #30 on a regular sam-

[fol. 1014] ple order.

Q. What are the particular advantages of the Savorlock can which should be pointed out to prospects?

A. The Product Bulletin discusses the special characteristics of these containers at some length. In the actual sales presentation to prospects, it is suggested that several cans

of each size be shown in order to demonstrate the excellent display characteristics of the Savorlock containers as they would be stacked on a shelf. By itself, one can may not appear to be very large. However, a solid bank display makes the can seem much larger.

Q. Where are Savorlock cans being manufactured?

A. Both cans will be manufactured at Plant #30 Passaic, New Jersey.

Q. When will these lines be in operation?

A. Both lines are expected to be in commercial production about August 1, 1956.

Q. Are there any limitations on orders as to minimum quantities?

A. The minimum acceptable order for a lithographed 204 x 315 can is 100,000. On the 305 x 507, the minimum order for a decorated can is 50,000.

Q. Will minimum orders, as stated above, be run as soon as received?

A. It is expected that, as production gets under way, orders may have to be pooled to make a minimum run of 500,000 of either size. As orders are placed, the plant will give shipping promises.

Q. Can Savorlock cans be vacuum packed or gas packed? [fol. 1015] A. No. However, they are designed to prevent moisture pick-up in the product during normal shelf life periods.

Q. How is the moisture seal affected?

A. Inside the covers of the Savorlock cans is a disc of waxed paper backed up by a cardboard disc. In the filling line adhesive is applied to the top of the curl of the can body, and this causes a seal between metal and paper as the can is capped. After the seal has been removed by the housewife, the pressure of the cardboard disc affords continued protection against moisture absorption.

Q. How are the cans shipped?

A. Savorlock cans are shipped only in reshippers. The 204 x 315 can is packed 6 x 4 (one layer) and the 305 x 507 can is packed 4 x 3 x 2 (two layers). The plant is not equipped to ship bulk, in bags, in large returnable cartons or in throw-away cartons.

Q. In what form are the cans shipped; with covers

affixed and bottoms loose, or with bottoms double seamed on and covers shipped loose?

A. The 305 x 507 can is supplied only one way, which is with the bottoms double seamed on and with covers shipped separately. The smaller, 204 x 315 container can be supplied either way. However, we strongly recommend that they be ordered with bottoms double seamed on and covers shipped loose for capping at the customer's plant. We have found through actual shipping experience that there is considerable damage to lithography if the cans are shipped with the bottom end open. On such small containers where display is so important, much of the sales appeal is lost when the cans are badly scratched.

[fol. 1016] Q. Would the packer derive any production advantage if he were to take the 204 x 315 can with the caps affixed, with bottoms shipped loose to be double seamed at his plant?

A. We do not see that there would be any manufacturing advantage which would offset the problem of scratched lithography. There would be no increased line speed over a line with capper, as the bottleneck is in the filler. Also, from a standpoint of expense, the line with double seamer would probably be more expensive than a line with a capper. Most of the concerns who will be considering the Savorlock can probably will already have a jar filling and capping line. As pointed out in the Product Bulletin the cost of changing over to a can capping line is reasonable.

Q. I have a prospect who merchandises his own brand of Instant Coffee which is packed by a contract packer. Are there any contract packers who are equipped to fill cans?

A. American Home Foods (Freehold, N.J.) and Tenco, Inc. (Linden, N.J.) are equipping to fill and pack Savorlock cans.

Q. If additional information is needed, where shall inquiries be made?

A. Questions on price information not contained on the Price Lists should be directed to Contract & Price. Production Planning will be able to supply information on scheduling of cans out of Passaic #30. If test packs are required, or a recommendation for can specifications for a particular product, the assistance of Customer Research should be solicited. The services of C.H.S.D. should be used to assist

customers in planning equipment to fill and cap the Savorlock cans. Sales policies should be taken up with Division Sales Managers. Both Division and Head Office personnel [fol. 1017] can be called upon to assist in making the best possible sales presentation to major prospects.

[fol. 1018] GOVERNMENT'S EXHIBIT 405A

Packaging Engineering Report

Progress Report No. 1

November 21, 1956.

Test Pack Of American Home Foods' Soluble Coffee in Savorlock Cans

Test pack of soluble coffee in 2 oz. Savorlock cans to test the moisture-vapor transmission characteristics of various tamper-proof seal materials and adhesives.

Eight Week Examination

Purpose

The purpose of this test pack was to evaluate the performance of several tamper-proof seal materials and adhesives with respect to moisture-vapor transmission. These materials were used in making a test pack of American Home Foods' soluble coffee in two ounce Savorlock cans.

Summary of Results:

1. Results at this time indicate that the container giving the best performance with respect to moisture-vapor transmission is the Savorlock can with a tamper-proof seal of .00035 aluminum foil laminated to 25# super calandered pouch stock. This material is supplied by the Shelmar-Betner Division.
2. The performance of commercially packed American Can Company soluble coffee can appears to be

somewhat better than the performance of the commercially packed glass jar. The performance of the commercially packed American can, and the Savorlock can having a seal of .00035 aluminum foil laminated to a paper backing with Irving pressure-sensitive wax in place of adhesive were comparable with respect to moisture-vapor transmission.

3. The performance of the Savorlock can having a 57# glassine seal and EC-871 adhesive appears to be comparable to the commercially-packed glass jar.
4. All other variables appear to give poorer performance than the glass jar with respect to moisture-vapor transmission.

Recommendations

Further information will be available after the conclusion of the twelve week storage period. A report will be written giving a final evaluation of all of the variables with respect to moisture-vapor transmission at that time.

Introduction

The American Home Foods division of American Home Products Company which packs G. Washington instant coffee as well as private labels has been considering using the Savorlock can as a package for their product. At the present time their G. Washington label is being packed in a 2 oz. modified single friction can manufactured by the American Can Company.

[fol. 1019] In order to demonstrate the performance of the Savorlock can with respect to moisture-vapor transmission, and at the same time test some new tamper-proof seal materials and adhesives, a test pack was made at the American Home Foods soluble coffee manufacturing plant on September 14, 1956. Some of the containers were retained by American Home Foods for their own evaluation, while the majority of the cans were returned to Chicago for moisture-vapor transmission tests.

Materials

The variables tested include three adhesives and six tamper-proof seal materials. The codes which were packed are as recorded in Table I at the end of the report.

The EC-871 and EC-917 adhesives are made by the Minnesota Mining and Manufacturing Company. The XA-143-77-1044 adhesive is made by the Union Paste Company. The 57# glassine is supplied by General Felt, Inc. The papers with Irvington pressure-sensitive wax were samples obtained from the Irvington division of the Minnesota Mining and Manufacturing Company. The Marasafe paper was supplied by the Marathon Corporation, while the Rhinelander material came from the Rhinelander Paper Company.

The cans used were 2 oz. Savorlock cans with promotional lithography obtained from Passaic #30.

The cans were filled on a commercial filling machine with approximately 2 ounces of soluble coffee and then closed by hand.

The Union Paste Company, XA-143-77-1044 adhesive sample was curdled when opened, and the solid fraction would not go into solution upon vigorous shaking. Therefore the sample was used just as it was received.

Apparatus

The caps were applied to the cans and jars using a Spring Torque Tester manufactured by the Owens' Illinois Glass Company.

The humidity cabinet in which the cans were stored was an Aire Regulator Cabinet manufactured by Food Technology, Incorporated.

The can samples were weighed on a Gram-Matic balance manufactured by E. Mettler Company, Zurich. The jars were weighed on a high capacity pan balance.

Procedure

All of the Savorlock cans were closed by hand. Where adhesive was used, it was applied by means of a small rubber roller approximately one inch in diameter and six inches long. A thin layer of adhesive was poured into a shallow enamel tray, and the roller was coated by rolling it in the adhesive. The roller was then rolled over the top curl of the can leaving a ring of adhesive. The quantity of adhesive applied to the top of each unit was not determined.

Covers containing chipboard liners and tamper-proof discs were applied to the cans with a force of 30 pound-inches of torque.

[fol. 1020] The American Can Company cans and the glass jars were packed commercially, samples being removed directly from the closing line.

One addition sample was taken from each of the following codes: A, B, C, D, E, F, G, H, J, and L. These samples were used to determine the initial moisture content of the soluble coffee when packed.

The cans and jars were shipped to Chicago by truck. The percent moisture contents of the samples for initial moisture determination were obtained by drying samples of known weight at 65°C for five hours at 28 inches of vacuum. The remaining samples were weighed and placed in a humidity cabinet where the temperature was maintained at 100°F and relative humidity at approximately 93%. The containers were removed at two week intervals, reweighed, and returned to the cabinet. Moisture pickup was determined by subtracting the original weight of the container from the weight after storage. The moisture pickup of the cardboard liner and can was corrected for by subtracting the net pick-up of the empty Savorlock cans (code N) from the net pickup of the full cans. By this method it was possible to calculate the amount of moisture picked up by the soluble coffee. At the conclusion of the test, the moisture content of the coffee samples will be determined by drying samples of known weight. By comparing these figures with the initial moisture content figures already obtained, we will have a second method for determining the moisture pickup in the soluble coffee.

Data

The moisture pickup data are recorded in Table II at the end of the report. Data are recorded as the average, minimum, and maximum moisture pickup in milligrams per can for each variable. Cans which did not have complete seals (with the exception of codes B and C) were not included in the averages.

Analysis of Results

An analysis of the data at this point in the test permits one to point out several indicated results:

(1) The best variable with respect to moisture vapor transmission was the Savorlock can with the tamper-proof seal of .00035 aluminum foil laminated to 25# super calandered pouch stock supplied by Shelmar-Betner. These tests indicate that the shelf life of this variable should be several times that of any other variable.

(2) Neither of the new adhesives tested (codes D and E) appeared to be superior or even comparable to EC-871 in performance.

(3) Of the new tamper-proof seals tried, the Shelmar-Betner material (code J) is the best. The Irvington laminated aluminum foil with pressure-sensitive wax (code G) also appears to perform well. In contrast, the Irvington glassine with pressure-sensitive wax (code F), the 200 Marasafe with pressure sensitive wax (code H), and the Rhinelander 58# Silver Clarophane (code L), appear to be completely unsatisfactory with respect to moisture-vapor pickup.

H. P. Lankelma, Jr., Special Product Section.

Sales Information

Sales Information

CONTINENTAL CAN COMPANY

100 East 42nd Street New York 17, New York

[fol. 1024] possible after grinding. Continental Can Company offers its customers the last word in cans for packing coffee under a very high vacuum in ordar to remove the flavor-robbing oxygen. The coffee packer who uses Continental cans has a container that will support his advertising claims and guarantee "roaster-freshness" to his customers.

The Advantages of Vacuum Packing in Cans

During the war the coffee roasters were forced to use glass and paper containers for the packaging of their product. This gave the glass people the sole responsibility for handling the vacuum packed portion of the total. The glass manufacturers did an admirable job on this in producing jars and vacuumizing equipment but their heyday seems to have passed.

In spite of a price advantage arising from the use of glass, the vacuum coffee can has made a strong come-back. In almost all sections of the country and with all grades of coffee, the vacuum can has replaced glass to the full extent of their availability. The reason is obviously that the vacuum can is the ideal package for coffee.

The roaster sells flavor and aroma as well as coffee and this must be protected. The tamper-proof hermetically sealed can as free of oxygen as commercially feasible is the answer to their packaging problem. The can is strong, durable, light-weight, positive in its seal and convenient to use and handle from the roasters plant to the ultimate consumer.

Further, the can possesses many other advantages that are applicable to the roaster, wholesaler, retailer and consumer. They are as follows:

Advantages of Cans to the Roaster

1. Coffee is protected from light in cans. Light accelerates the rate of development of rancidity of coffee packed in glass jars.
2. Breakage is entirely eliminated and the extra care in handling to prevent breakage of the glass jar is not necessary.
3. Cans are lighter and more compact and thus are easier to handle in the roaster's plant.

4. Cans provide more area which can be lithographed to provide neat and distinctive labeling for brand name association.
5. Coffee in cans is less expensive to ship by common carrier because of less weight. The roaster pays the freight to destination in all instances, therefore, this is an important factor in overall costs.

[fol. 1025] Advantages of Cans to the Wholesaler

1. No loss through breakage.
2. Lighter to handle.
3. Less storage space required.
4. Delivery trucks can carry more cans due to weight and compactness.
5. Lower freight costs of shipments made by common carrier because of less weight.

Advantages of Cans to the Retailer

1. Cans stock on shelves better than jars.
2. No loss through breakage.
3. Larger variety of brands may be displayed in smaller shelf space.
4. Less care is needed in the handling of cans.
5. Neater appearance; distinctive lithographed labeling that won't come off.
6. The housewife will save glass jars, but then they clutter up her pantry and she won't buy any more coffee in glass.

Advantages of Cans to the Consumer

1. Coffee arrives at the home fresh and in better condition.
2. Cans are more easily opened than the Ultra-Vac glass jar without damage to tablespoon, which is the recommended method of opening the latter.
3. Easy to replace cover on can.
4. Opening the glass jar sometimes bends and dents the cover so it does not fit when replaced, or it cannot be replaced.
5. No loss through breakage.

[fol. 1026] Vacuum Packed Coffee—Glass Competition

The glass jar which is being offered most generally by the Owens-Illinois Glass Company is their Duraglas Ultra-Vac jar with a 66mm. press-on cap. The comparison shown below is made on this jar against our 1# can, size 5⅛" X 3⅝", lithographed 4 colors and varnished, packed in bags. This particular comparison is made on the basis of costs to a roaster in New York City.

	Can	Jar
Price	$47.79 Per M*	$43.46 Per M**
Label	—	1.30 Per M
Shipping Cartons (24s)	5.21 Per M cans Delivered***	Included in jar price Delivered
Freight on Empty Containers		
Extra Cost for Packing Glass Over Cans	—	5.10 Per M****
Extra Freight on Delivery of Coffee in Glass Jars—Carload	—	1.33 Per M*****
	$53.00 Per M	$51.19 Per M
Comparative Weights:		
Individual Unit Empty	6¼ oz.	13 oz.
Per M Containers Empty	418 lbs. in bags	1000 lbs. in cartons (approx)
Per Case (24s) Filled	36 lbs.	47 lbs.

All figures shown are based on quotations in effect May 15, 1948.

Explanation of Asterisks:

* The can price is subject to a sales and servicing differential depending upon the customer's total purchases. The maximum of the two differentials of 3% would reduce this price by approximately $1.46 Per M. The can price shown is our price f.o.b. Passaic for 4 color lithography based on the can made of .25 electrolytic tinplate throughout.

** This price includes jar caps at $9.08 Per M and is for delivery in Official Zone #1. In Zone #2, the Southern territory, the price of glass jars is $1.88 Per M higher and on the Pacific Coast it is $2.50 Per M higher than that shown.

*** If cans are shipped to a roaster who is not located at a basing or equalization point, it will be necessary to add the freight to the roaster's plant to make a fair comparison.

**** This figure represents the increased cost of handling, filling and closing Ultra-Vac jars over vacuum cans. This comparative cost was furnished us by one of the large users of both glass and cans at comparable speeds.

***** Coffee packed in glass jars weighs approximately 25% more than if packed in cans. This figure of $1.33 varies, of course, with the distance the filled packages are shipped. The $1.33 is the average on carload shipments to wholesale grocers within a radius of 300 miles of New York City. L.C.L. shipments are substantially more expensive in glass than in cans. Also, the extra freight costs for glass increase in direct proportion to the distance shipped.

[fol. 1027] In spite of the price advantage of glass, the majority of coffee roasters are anxious to use cans to as high a percentage as possible. In certain areas there is some slight consumer preference for coffee in glass jars. This preference in many cases, is for the screw top jar and not

the Ultra-Vac as the latter has no re-use value for home canning.

The Owens-Illinois Glass Company have a high-speed vacuum closing machine. Our 78-VDS vacuum closing machine is comparable in speed and closes the can under a higher vacuum.

Coffee Closing Machines

Continental Can Company has several types of coffee closing machines. These models are known as 350 VSC type 3, 38 DS and 78 VDS. We recommend their use as follows:

1. Coffee packers with an annual output of 1 to 2 million cans—350 VSC type 3
2. Coffee packers with an annual output of 2 to 6 million cans—38 DS
3. Coffee packers with an annual output of 6 million cans and over—78 VDS

The necessary information, pictures, diagrams and layouts are listed in the catalogue. However, for purposes of convenience and completeness we shall again supply all the data for the above mentioned closing machines.

Instant Coffee Packaging Lines Can Be Quickly, Economically Converted to Metal Cans .....

[fol. 1030] A New Chapter in the Story of Packaging

In the area of modern merchandising, today's big changes are taking place in the field of Packaging.

To Continental Can Company, the most diversified of all major manufacturers of containers, this creates an opportunity to be of increased service to packers with packaging that protects and moves their product. We constantly strive to meet newly developed products with the creation of the proper packages for them.

Thus, Continental's development of metal containers for instant coffee stems from recognition of the need for an improved package to hold this fast-growing product. We believe that the can is the proper package for instant coffee, just as it has already proved itself to be the proper package for ground coffee.

It is the aim of these pages to demonstrate that the metal container is the merchandising vehicle that will increase sales of Chase and Sanborn Instant Coffee, reduce packaging costs, and build up your profits on this product.

[fol. 1031] Coffee Packaging Costs Reduced With Metal Cans

In recent weeks, the competitive battle for the instant coffee market has become more intense. Each packer is trying to whet the consumer's appetite for his brand through such sales techniques as premiums, "specials", etc. This situation is likely to prevail for some time and the probable result will be a continuing trend toward a lower general price level for the product.

Thus, package costs are becoming most significant to your company as an instant coffee packer—not only first costs but the increments that affect the ultimate price to the consumer, and the profit margin realized.

Continental Can Company has an answer for the problem: packaging costs can be reduced through use of metal containers, affording you major savings.

1.) Container Costs

First costs are important, and we have recognized that the can in cartons must be competitive with jars in cartons, including cost of labels. Although we presently

manufacture instant coffee cans only at Passaic, New Jersey, we are providing a freight allowance of $1.00 per cwt., which will make your delivered cost at New Orleans reasonably close to the delivered cost of glass. [fol. 1032] The following prices are f. o. b. our Passaic, New Jersey plant, freight of $1.00/cwt. allowed on shipments to New Orleans, Louisiana.

	2-Oz. Size	6-Oz. Size
Cans (Max. quantities)—bodies lithographed 3 prints on a coat, and tops 1 print on a coat	$31.99/M	$ 50.37/M
Cartons, printed 3 colors, 10M and over, current. (125# for 2-oz.; 175# for 6-oz.)	$60.00/M	$111.00/M

Including cartons, we estimate that your delivered cost of cans at New Orleans, in carload lots, will be approximately 87¢ per case for the 2-oz. size and $1.43 per case for the 6-oz. container.

2.) Freight Savings

Substantial savings will be realized by Chase and Sanborn in the shipment of filled containers to point of sale. Obviously, cans weigh much less than even lightweight glass, and more cases of metal containers can be loaded per railroad car or truck. It should be noted that the freight rates shown are current, and do not include the recently-announced 7% increase which the railroads have filed with ICC, to take effect March 7, 1956.

[fol. 1033] The rates given below are based on a 30,000# minimum per car, and include the 3% transportation tax.

Other factors used are:

	2-Oz. Size		6-Oz. Side	
	Jars	Cans	Jars	Cans
Wt. Per Case of Filled Containers	9#.	6.6#	19#	15.6#
No. of Filled Cases Per c/l	4.300	7.300	1.800	2.700

The figures for shipment from New Orleans to two locations will show the comparative shipping costs, and indicated savings, realized through the lighter weight of cans.

	C/L Frt. Rate	Frt. Cost Per Filled Case			
		2-Oz. Glass	2-Oz. Can	6-Oz. Glass	6-Oz. Can
New Orleans-Memphis	.793	7.1¢	5.3¢	15.1¢	12.4¢
New Orleans-St. Louis	.876	7.9¢	5.8¢	16.6¢	13.7¢

[fol. 1034] Instant Coffee Can Design
Dictated By Merchandising Needs

When the instant coffee can was in the first stages of development, fullest consideration was given to the ideal size and style of can, and type of reclosure. Continental recognized that the criteria for an acceptable package would have to include the following elements:

1. Suitability for product.
2. Ease of opening and reclosure.
3. Good display characteristics.
4. Reasonable cost.

The services of an outside industrial designer were secured to advise on style and proportions of the container. His recommendations, together with those of Continental engineering and sales people, determined the final styling of our instant coffee cans, confirmed as to their high marketing qualifications by coffee merchandisers.

We knew that we would have to furnish a "family" of can sizes and that the proportions of the 2-oz. can would be dictated by the necessary proportions for the larger sizes. It was recognized that a short can with a wide diameter would create opening difficulties for the housewife, especially in the 6-oz. and larger sizes. This problem made necessary a can having a greater height than diameter.

Display requirements also pointed in the same direction. Because the can, when first introduced, will usually be displayed next to glass jars, it was important that its propor-
[fol. 1035] tions be such that the consumer would recognize that its capacity was as great as that of the jar.

It was found that none of our standard can diameters would give us the desired "tall" look while still maintaining a pleasing visual appearance. Design requirements dictated that we adopt a non-standard 204 diameter for the 2-oz. can, and a non-standard 305 diameter for the 6-oz. size. The result you see—nicely proportioned containers with excellent display characteristics.

[fol. 1036] Retailers and Consumers Favor
Metal Cans for Instant Coffee

There are two principal groups who must be sold on any packaged product offered for sale through retail stores.

The first of these is the retail merchant and the second is the consumer. We have approached both groups for their opinions on instant coffee packaging. Both favor the can!

To secure the storekeepers' reaction, Continental approached managers of stores where instant coffee is now being sold in cans. Their comments, for the most part, are typical of those which are almost always expressed when glass and metal packages are compared. Preference for cans is stated in such terms as: greater area for design and selling label, better mass display possibilities, less shelf space required, no breakage, lighter weight and easier handling of cases. With specific reference to Continental instant coffee cans, retailers are pleased that their display problems have been considered, and that we have made the can so that it will stack easily on the shelf.

We also know a great deal about consumer views of the can as a package for instant coffee, through two consumer reaction evaluations which were made for our 2-oz. can. The first of these surveys was conducted by National Family Opinion in 1954, and a more recent test by W. R. Simmons & Associates during the month of November, 1955.

The National Family Opinion report confirmed some points which we had anticipated, but it also brought some pleasant surprises. It was expected that the glass-packed [fol. 1037] product (controlling virtually all of the present market) would take the edge here—which it did—44% of the respondents preferred it. However, 29% stated their strong preference for the tin-packed product. Also significant was the fact that 25% stated they had no particular preference. This means that this sizeable group could be influenced to come into either camp. Therefore, it can be assumed that no prejudice would have to be overcome to influence slightly over half—or 54%—of the respondents to buy their instant coffee in tin.

The Simmons & Associates test was conducted in stores where instant coffee is now being offered for sale in cans as well as in glass. There were some very significant findings which are interpreted to be even more favorable to the can than were the reactions obtained through the National Family Opinion test.

The salient point brought out by the more recent test is that the consumer, as represented by the respondents, has

very little reticence concerning purchasing instant coffee in tin. When given the specific opportunity to voice a *dislike* for the tin container, 73% had nothing at all to say against it, or, in effect, said they saw no difference between the glass and the tin.

On the *positive* side, when they were asked what they liked about the tin, the following types of answers were given:

(1) Can't break it (49%)
(2) See no difference (25%)
(3) Stays fresh longer or holds flavor better (13%)
(4) "Lighter", "easier to store", "handles well", etc.

[fol. 1038] These reactions signify that there is no basic resistance on the part of the consumer to a can for instant coffee.

Other reactions, however, brought out the fact that the consumer must be alerted to the fact that a new type of container is being offered. It was amazing that only 11% of the instant coffee users interviewed had ever heard of the fact that some brands are being packed in tin; this, in spite of the fact that brands in tin were present on the shelf in plain sight. The metal package will sell the product; but it must be merchandised and supported by promotion, if the housewife is to be aware of its existence. Then, her impulse will be to select her favorite brand in a can, or to switch to a new, but well-known brand because she has read about it in printed advertisements or learned of its availability through radio or television.

This situation is an opportunity for a hard-selling *brand* promotion. Many of the factors for successful promotion are present:

A new package.

A readiness to accept the package on the part of the consumer.

Availability of sales themes, derived from the reactions already *voiced* by consumers—"unbreakable"; "protected from light"; "re-use of container"; "easy to store"; "lighter"; "nice for travel"; "easy to dispose of"; "easier to spoon out"; etc.

With a "family" of instant coffee cans in the two most popular sizes, a merchandising job with a new twist can be done in promoting Chase & Sanborn Instant Coffee to the public.

[fol. 1039] Metal Cans Offer Complete Product Protection to Instant Coffee

Any packer of instant coffee who is considering the metal can would have uppermost in mind the question, "In a can, will the product have a shelf life comparable to that in a jar"? The answer is "Yes".

The only qualification is that the packer must follow the capping and sealing practices recommended by the Continental Can Research and Development Department as providing the best finished package with the greatest resistance to moisture penetration. Specific comments as to equipment and adhesives will be found in the next section of this presentation.

A long period of experimentation, with many variables, is behind our determination of the best can structure, the sealing methods and the type of adhesives to be used. Numerous test packs were evaluated, after both accelerated and long-term test conditions. These basic tests were made in the labofatory, but served to indicate what might be expected under commercial conditions of packing, shipping and storage.

More recently, in conjunction with a major market test of the instant coffee can, our Metal Research and Development Department has been able to confirm their original findings. Evaluations have been made of cans filled and sealed on a production basis and distributed in normal commercial channels. Accelerated laboratory tests of cans taken from the production line have demonstrated the efficacy of the vapor seal. Also, cans taken from retailers' shelves [fol. 1040] over four months after filling have demonstrated no appreciable moisture pick-up.

These comprehensive evaluations have given us the assurance that Continental's metal containers can be offered to instant coffee packers as a package that will meet all the requirements of the product itself and offer the complete protection needed during normal shelf life periods.

[fol. 1041] Instant Coffee Packaging Lines can Be Quickly, Economically Converted to Metal Cans

The conversion of a glass jar line to an effectively operating instant coffee can line is relatively simple. The costs will vary, depending upon the type of equipment used and the line layout, but in most cases such costs will not be excessive. Once the change parts have been received, the change-over from jars to cans and the change-back from cans to jars can be made with very little interruption of production.

Listed below are the various operations of an instant coffee line, with comments concerning adaptability to the handling of cans:

1.) Materials Handling

There probably will be no changes necessary in the carton conveyor handling system, either direct to an unscrambler, or through storage on pallets. A greater number of cans than jars can be handled per pallet.

2.) Unscrambler

It may be necessary to make a slight adjustment on the unscrambler because of the top bead of the instant coffee can.

3.) Slat Chain Conveyor

Usually, the conveyor is adjustable and thus adaptable to the conveying of cans.

[fol. 1042] 4.) Cleaner—Blower

This equipment may require a new twister to take care of the diameter and height of the can, which is different from that of a standard jar. It may be necessary to adjust the pusher to a different height.

5.) Labeler

Presumably, the cans will be lithographed and the labeler will not be used. It can stay in the line, operating as a conveyor. It may be necessary to make a slight adjustment of the V-belt to avoid running on the top bead of the can.

6.) Filler

Change parts will probably be required for the filler. The cost, depending upon the type of filler used, should be approximately $850.00.

7.) Gluer

Because the adhesive recommended for cans is different from that ordinarily used for glass, the type of adhesive

applicator used on a jar line may not be suitable for cans. Information on the recommended type of applicator will be furnished on request, as will brand names of recommended adhesives.

8.) Capper

The cost of change parts for the capping machine should range from approximately $180.00 to $425.00 for a 4-spindle machine; from $270.00 to $1,125.00 for a 6-spindle machine; and from $360.00 to $1,500.00 for an 8-spindle machine.

[fol. 1043] 9.) Caser

A new grid may be required for the caser. The cost, depending upon the type of caser used, should be approximately $500.00.

The above figures are estimates, and are only to serve as a guide in indicating what may be involved in equipping a jar line to handle the instant coffee can.

We recommend the services of our can handling equipment engineers as consultants and advisers on line changeovers from glass jars to cans.

[fol. 1044] Continental Can Company is proud to offer its "family" of metal cans to Chase & Sanborn.

These containers, now available to the instant coffee industry, should result in lower packaging costs, increased profits for the packer, and, potentially, a broadening of the Instant Coffee market through making possible a lower retail price level.

[fol. 1045] GOVERNMENT'S EXHIBIT 408

New Development
. . . for immediate sales action

Soluble Coffee Cans
204 x 315 2-Oz. Container

July 21, 1955.

From: R. D. Cleaves

Passaic #30 has now successfully completed the first production run of the 204 x 315 lock top soluble coffee can. The line will not operate during the last two weeks in July while Passaic plant is on vacation, but will be back in production about the middle of August.

Because of the anticipated heavy demand for the can, the available line production has been put on an allocation basis. Your Division has received its allocation and the distribution will be by the Division Sales Manager.

The Division Sales Manager will also determine sales policy within the Division and each District Office should direct questions concerning allocation and policy to him.

Inasmuch as this office is responsible for coordinating among the three Divisions, it is requested that we be kept informed, through copies of correspondence, of negotiations with your customers concerning the sale of our 2-oz. soluble coffee can.

The following information will be of value to you in discussing our soluble coffee container with your prospects.

Prices

Contract & Price is issuing a price bulletin on the 2-oz. soluble coffee can.

Manufacturing

The preferred method of manufacturing is to have the bottom end seamed on and caps shipped loose. The caps will have the waxed cardboard disc and the glassine vaporproof seal already inserted, and cans will be glued and capped by the customer.

[fol. 1046] There are several reasons for recommending to customers that the factory seam on the bottom end. In most cases, customers will have their own glass jar lines, or their product will be supplied by a contract packer who has a glass jar line. The cost of changing a jar line to a can line is relatively simple and inexpensive as contrasted to the building of a line for cans only, which would require a double seamer and other equipment.

Cans shipped with bottoms seamed on will not suffer flange damage and the incidence of scratched lithography will be kept to a minimum.

Cartons

The first commercial shipments from Passaic were made in 175# test reshippers, packed 24 to a carton. The cost of

these cartons, printed three colors, is approximately $62.50/M cartons in lots of 10,000.

Presently, we are making some test shipments in 125# cartons which we believe will be sufficiently strong for 24 2-oz. cans of soluble coffee. If, as expected, the 125# cartons prove satisfactory, additional savings will be realized in carton costs.

Shipping Weights

The 2-oz. can, packed in 175# test cartons weighs approximately 150# per M cans. About 175M cans in cartons can be loaded in a 40′ car and a 35′ truck trailer will take approximately 100,000 cans.

Samples

Orders for plain tin samples may be placed with Passaic #30. If the cans are to be used by a prospect for a test pack, the order should state, "For test pack—Include adhesive."

Conversion of Jar Lines

The cost of converting customers' lines from jars to cans will depend upon the type of equipment used and the line layout. The services of Continental's Can Handling Equipment Engineers should be employed to assist customers in planning the change over. Once the change parts have been received, the change over from jars to cans and the change back from cans to jars can be made with very little interruption of production.

Listed below are the various operations of a soluble coffee line, and comments concerning adaptability to the handling of cans.

1) *Materials Handling*—There probably will be no changes necessary in the customers carton conveyor handling system, either direct to an unscrambler, or through storage on pallets.
2) *Unscrambler*—It may be necessary to make a slight adjustment on the unscrambler because of the top bead of the soluble coffee can.
3) *Slat Chain Conveyor*—Usually the conveyor is adjustable and thus adaptable to the conveying of cans.

[fol. 1047] 4) *Cleaner, Blower*—This equipment may require a new twister to take care of the diameter and height of the can, which is different from that of a standard jar. It may be necessary to adjust the pusher to a different height.

5) *Labeler*—Presumably, the cans will be liothographed and the labeler will not be used. It can stay in the line, operating as a conveyor. It may be necessary to make a slight adjustment of the V-belt to avoid running on the top bead of the can.

6) *Filler*—Change parts will probably be required for the filler. The cost, depending upon the type of filler used, should be approximately $850.00.

7) *Gluer*—Because the adhesive recommended for cans is different from that ordinarily used for glass, the type of adhesive applicator used on a jar line may not be suitable for cans. Information on the recommended type of applicator will be furnished on request, as will brand names of recommended adhesives.

8) *Capper*—The cost of change parts for the capping machine should range from approximately $180.00 to $425.00 for a 4 spindle machine, from $270.00 to $1,125.00 for a 6 spindle machine, and from $360.00 to $1,500.00 for an 8 spindle machine.

9) *Caser*—A new grid may be required for the caser. The cost, depending upon the type of caser used, should be approximately $500.00.

The above figures are estimates, and are only to serve as a guide in indicating to prospects what may be involved in equipping a jar line to handle a 2-oz. soluble coffee can.

6-Oz. Soluble Coffee Can—305 x 509

Equipment is now being built for the manufacture of a 305 x 509 soluble coffee can. The line will be installed at Passaic #30 and is expected to be in production during the first quarter of 1956. Because the 6-oz. can will be the companion container to the 2-oz. can, the sales pattern will parallel that of the 2-oz. container. In other words, the customers buying the 2-oz. soluble coffee can will automatically participate in the production of the 6-oz. line.

General

The advantages of the soluble coffee can over the glass jar are obvious. The can has been designed specifically for this product, and our evaluation of the can over a long period of time shows that it compares favorably with the jar in such important respects as attractiveness, ease of opening, reclosure feature, and vapor seal.

From this point of equality, the specific advantage to the packer is the lighter weight which affords freight savings up to approximately 40% in the filled and cased product. A further saving is realized in the elimination of the separators now used by most packers in shipping jars.

[fol. 1048] We expect to gain a real sales advantage with our soluble coffee containers and believe that in a relatively short time the Continental soluble coffee container will be a major factor in this product field.

Subject: Soluble Coffee Can

Re: 204 x 315 2-Oz. Container

It is now general knowledge in the Coffee Industry that J. A. Folger & Company, Kansas City, Missouri, is making a major market test of their soluble coffee in Continental's 2-oz. can. The test is being made in twelve cities in the Middle-West with Waterloo, Iowa as the key test area. At Waterloo, an independent market research organization is

securing detailed consumer reactions which will be used as a basis for interpreting data in all test cities.

Folger is interested in a can for soluble coffee because they recognize the strong sales features of the can as compared to the glass jar. The following are particularly compelling.

1) The consumer associates coffee with the metal can

This is best demonstrated by what happened after World War II when metal was again available to pack ground coffee which had been merchandised in glass jars during the metal shortage. Even though the glass manufacturers had been afforded a real opportunity to entrench themselves in this field, and were quite confident that the key opening coffee can was a dead issue, the consumer proved that wrong. It is expected that this same association, and preference, will eventually make itself felt in the case of soluble coffee.

2) The can dominates the food container field.

A glance at any grocery store shelf will support this statement and the reasons for the dominance of cans are not hard to find.

Packers prefer cans over glass because of lower filling and closing costs and easier handling.

The Retailer prefers cans for reasons of easier handling, better display and no breakage.

The Consumer prefers cans for convenience, ease of storage and no risk of breakage. The latter point is very important to the housewife, particularly one with small children. In every market study we have undertaken, where we have sought consumer reaction to cans vs. glass, a preponderance of the replies have mentioned the danger of breakage of glass containers. Disposal of glass after use has also been emphasized as a problem.

[fol. 1050] 3) The lithographed can displays more advantageously than the labeled glass jar.

Samples of the Folger 2-oz. can have been ordered from Passaic #30 for all District Sales Offices for showing to customers. In comparing this lithographed can with any

labeled jar, one will see that the can has greater display space. The stacking feature on the can and the overall lithography enables the retailer to make a solid eye-catching display of our package.

4) The can costs less than the glass jar.

This statement is generally true although exceptions can be found for the reason that glass jars for soluble coffee are sold on a delivered price basis and we now sell f.o.b. the plant location at Passaic.

Nevertheless, in comparing basic costs of lithographed cans in cartons and jars plus cartons and labels, we find that the cans can be delivered at a price lower than the jars in a shipping area even greater than normal. This is because the basic price of the container at the plant is less, the cartons are smaller, and it is not necessary to use separators in the cartons.

As can lines are established in the future in the major soluble coffee packing areas, the above statement should prove to be 100% accurate.

5) The can protects the product

Any coffee expert will agree that light will cause flavor deterioration in packaged coffee. This is not as true with soluble coffee as with the ground product, but the consumer believes it to be the case. This fact was brought out in the National Family Opinion consumer survey which was undertaken late in 1954 where a substantial number of questionnaires developed the fact that consumers preferred the can because it protected the product from light.

6) Glass is expensive to ship

Generally, soluble coffee is packed at a central location and shipped into a fairly large market area. The weight of filled cans in cartons is about 40% less than that of filled glass in cartons.

For example, a carton of 24 2-oz. filled cans weighs about 7 pounds. The same number of filled glass units in cartons weighs from 11 to 12 pounds.

It is estimated that if all soluble coffee were in cans rather than in glass, the freight savings which would be enjoyed

by the entire Industry would be approximately three million dollars annually. This could represent added profits to the Industry if they switched to cans or could stimulate sales of soluble coffee through being passed on as savings to the consumer.

[fol. 1051] The following information supplements that in the "New Development" letter of July 21, 1955.

National Family Opinion Consumer Test

As stated above, in 1954 N.F.O. made a consumer reaction test of glass vs. tin containers for soluble coffee. This survey developed a great deal of detailed findings and comment and the report is summarized below to bring out some of the salient reactions.

It may be well just to briefly recount the way this job was carried out. Two containers, (one our test can, the other a regular glass jar) each having 2-oz. of identical soluble coffee, were sent out to 450 families. These families had previously been determined to be instant coffee users and in the 431 questionnaires returned (93.9% of those sent out) only 25 respondents said they did not use soluble at all. The dispersion of the test families was controlled by census data to get the proper balance as to 1) population by geographic regions, 2) city size, 3) age groups of homemakers and 4) income groups.

The panel was told to use each product for a few days and then return the completed questionnaire. Care was taken not to direct too much attention to the container, thereby enabling the panel to give an unbiased response whether related to the coffee or the container. The panel was not told that the two coffees were identical.

Overall Preference

It was expected that the glass packed product (controlling virtually all the present market) would take the edge here —which it did—44% of the respondents preferred it. However, 29% chose the tin-packed product. But, also significant was the fact that 25% stated they had no particular preference. This means that this sizeable group could be influenced to come into either camp. Therefore, it can be assumed that no prejudice would have to be overcome to

influence slightly over half—or 54%—of the respondents to buy their soluble coffee in tin.

Preferences on Specific Characteristics of the Test Packs

In addition to being asked their overall preference for use of the two products (not the packages themselves), the respondents were asked specifically what their preferences were on taste, freshness, attractiveness of container and convenience of package. Some reactions to the taste and freshness questions appeared definitely psychological in nature. Although it seems possible, after reviewing the pattern of the comments made, that taste and freshness of the product in tin could have been affected either by the metal container or the repacking operation, it is felt unlikely that the strong differences which showed up in consumer preference were based on true product differences. Here is the way the respondents answered on these four charactristics:

[fol. 1062]

	% Pref. Glass	% Not Pref. Glass	% Pref. Tin	% Having No Spec. Pref.	% No Answers	Total
Taste	46	54	31	22	1	100%
Freshness	24	76	16	60	1	100%
Attractiveness of Container	46	54	23	30	1	100%
Convenience of Package	28	72	31	40	1	100%

Taste is one characteristic of soluble coffee that is probably most important (of the above 4) to the consumer. This is emphasized when we note that 77% had a specific preference on this point, but in spite of these firm opinions, more than half of all respondents failed to show preference for the familiar traditional glass container. Contrast with this the large percentage (60%) who had no preference on *freshness*. One big reason for this heavy "no preference" on freshness is that soluble has no aroma (probably the point on which freshness is judged particularly in the case of kitchen coffee) in the powdered state. In view of the very plain white can used in this test (not to mention the unpainted side seam, bottom seam and bottom) we did very well to get 23% to choose the can. A good job of color and design should put us right back in the race here.

This panel of housewives ran true to form on the *convenience* angle. Here, we were convinced, was a very strong

point in favor of our container and our conviction was right. The large group (40%) who had "no preference" on the convenience angle would be in our favor since Mrs. Consumer has had plenty of time to be convinced on the convenience factor of soluble coffee in glass jars in the years that glass has had a virtual monopoly in the soluble coffee market.

Considering the odds that were against tin in this test, we can say our batting average is very high—certainly good enough to show that the tin container for soluble coffee is probably destined to replace, to a great extent, the glass jar.

Samples from Passaic

The July 21st letter provided that only plain samples could be supplied from Passaic. It is now possible to secure lithographed samples which will be in the Folger design. It is preferred that these be shown to prospects rather than plain tin samples because of their excellent appearance.

Cans for Test

Recently, Metal R & D has been evaluating moisture pick-up in test cans which have been manually sealed as against cans which have been mechanically sealed. The results indicate that manually sealed cans do not reflect what will be realized under commercial packing conditions as the moisture pick-up averaged about 10 times that experienced with mechanically sealed cans.

This should be made known to any packers who are now making their own evaluation tests with our 2-oz. can. In the future, it is suggested that test cans from Passaic be supplied with seal and caps applied, with bottoms to be seamed on after filling at the packer's plant. Local Customer Research Representatives can secure seaming heads for the 204 diameter 2-oz. can from Metal R & D which can be used in making test packs.

[fol. 1053] Conversion of Jar Lines

The only automatic gluer now approved by Continental for use in the soluble coffee can line is the Filma-Seal Automatic Adhesive Applier manufactured by Ferdinand Gutt-

man & Company, 36th Street and 14th Avenue, Brooklyn, New York.

This applicator is equipped with a 1/20 H.P., 110-V, AC motor, and sells for about $450.00 f.o.b. Brooklyn. Delivery can be made in about two to three weeks after order. If new adhesives are developed, other types of applicators may be recommended.

Adhesives

The adhesive which is now recommended for gluing the tamper-proof seal to the soluble coffee can is made by the Union Paste Company, 1605 Hyde Park Avenue, Hyde Park, Massachusetts. It is identified as Code #XA-143-77-613.

Other adhesives are now being evaluated by Metal R & D and additional types made by other manufacturers may be approved in the near future.

General

The interest in soluble coffee cans on the part of both larger and medium size packers is continuing to grow. The whole Industry is following the Folger market test and many soluble coffee packers have picked up filled Folger samples at retail. Two concerns, one a large grocery chain and the other a major packer of ground coffee, are now negotiating with contract packers with the thought that they may put their product in cans even before the completion of the Folger test.

A word on the potential market for our 2-oz. and 6-oz. cans. It is estimated that in 1954, over one billion ounces of soluble coffee were consumed. If all of this consumed product had been packaged in cans, the requirements would have utilized the output of eight soluble coffee can lines operating on a two-shift basis.

This great potential market provides Continental with an opportunity to grow in sales and profits. If we can succeed in getting two or three strong brands in our cans, competition will force the rest of the Industry to follow.

[fol. 1054] GOVERNMENT'S EXHIBIT 411

Container Requirements for Coffee, Soluble

Prepared 6/15/55
Revised 5/1/56

Introduction

During the last 20 years there has been a large increase in the use of soluble coffee. Up to this time the product has been packed almost exclusively in glass. The Continental Can Company has felt that a considerable portion of this market could be obtained by metal containers, provided a suitable container meeting all technical and economic requirements could be developed. A metal container would have many advantages, the most important being lower initial cost, considerable savings in weight and, therefore, freight charges, and elimination of breakage.

(a) Market Potential and Competitive Situation

During 1955, 18,813,000 bags of coffee were roasted in this country, 2,323,000 of these bags, or 12.3% being used in making soluble coffee. This soluble coffee accounted for some 30% of the sales volume of all coffee in 1955. The total number of packages of soluble coffee used in 1955 consisted, approximately, of the following:

2 ounce glass jars—250,000,000
4, 5, and 6 ounce glass jars—150,000,000

There were also a comparatively small number of 2-ounce can units packed.

Continental's competitive position should be excellent. We now enjoy a substantial share of the ground coffee container business. Since many of our present customers are major producers of soluble coffee, we are in a good position to become the major supplier of the soluble coffee can.

(b) Containers Presently Used

As indicated above, this product is being packed almost entirely in glass jars. The jars are equipped with a glassine paper seal affixed to the top of the jar by means

of an adhesive. This paper seal acts as a primary moisture-vapor-barrier, and also provides a tamper-proof feature. A metal screwcap with waxed paperboard liner completes the closure.

(c) Previous Trial Containers

1. Lock-top with drumhead seal—Mennen side seam. This can was used commercially for several years for Nescafe. Both the Mennen side seam and closure allowed too much moisture pick-up.
2. Single Friction. Used to some extent commercially but reclosure inconvenient.
3. Trutite. Reclosure found unsatisfactory.

[fol. 1055] Product Description

(a) Composition

Soluble coffee is produced from roasted and ground coffee having a blend composition of 60-80% Santos and 20-40% Milds. A medium roast is used. A water extraction of a pulverized roast is prepared by a counter-current extraction system.

(b) Physical and Chemical Characteristics.

The product is extremely hygroscopic. It has a moisture content of about 2% when made, and as little as 0.5% additional moisture will cause it to cake. Chemically the product is quite stable. It does not have the delicate aromatic character of ground coffee, and is not subject to oxidation deterioration. The product is not corrosive to metal since it is neither extremely alkaline nor acid in nature, and is a dry powder with a very low moisture content.

Analysis of Competitive Containers

The only competitive container now used is a modified, single friction can made by American Can Company for American Home Foods Company. This can has a locking feature in the friction plug and has a fiber gasket in the chime of the plug.

In all other respects, it is a standard single friction can holding 2 ounces of soluble coffee and has dimensions of

.208 X 306. We understand it is more expensive than the commonly used 2-ounce glass jar.

No information is available concerning the performance of this container. It is being used by only one packer, and apparently meets his particular requirements satisfactorily in spite of its cost.

Container Requirements (Tentative)

(a) Structure

A container for soluble coffee must provide a nearly perfect moisture-vapor barrier sufficient to prevent moisture pick-up greater than 0.5% during the shelf-life of the product. Although we have no definite information, we would expect the shelf-life of soluble coffee in glass to be at least one year. The container must have a reclosure feature such that when reclosed, a good moisture-vapor barrier is provided. It must be of convenient size to permit removal of small amounts of the product with a teaspoon. No vacuum or pressure resistance is necessary except for vacuum resistance in the vacuum filling procedure. In some cases, customers may be interested in vacuum or pressure packs for advertising purposes. A tamper-proof feature on unused cans will probably be required by most customers.

(b) Materials

Since the product is dry, there is no corrosion problem but the materials used must be flavor-free and have sufficient strength to withstand many openings and reclosings.

[fol. 1056] (c) Shelf-Life

The container should provide a satisfactory moisture-vapor barrier for a period of at least one year at room temperature before opening.

Interim-Container Specifications

(a) Structure

The proposed structure (STK-422) which Continental believes will meet all the requirements except for vacuum or pressure packing is as follows:

The can is essentially a slip cover can, except that the cover is threaded to engage threads on the upper portion of the body. A waxed, chip-board lining is incorporated in the cover to serve as a reclosure moisture-vapor barrier in a manner similar to that used in glass jars. A glassine disc is cemented to the top curl of the can body to serve as a primary moisture-vapor barrier, and as a tamper-proof feature. The side seam is soldered, and the bottom end compound lined and double seamed. Provision is made so that the customer will have the option of assembling the disc and cover onto the can after filling, or double seaming the bottom onto the preassembled can. Sizes are 204 X 315 (2-ounce) and 305 X 507 (6-ounce). Tooling exists for the 2-ounce size, and is being set up for the 6-ounce size.

(b) Materials

Plain #25 plate throughout will be used with provision for outside lithography on bodies and covers, where desired. Except for special fittings mentioned above, all other specifications will follow the Choice of Container Manual for the product and can sizes involved.

(c) Shelf-Life

It is estimated that this container will provide a shelf-life of approximately one year under ordinary conditions.

(d) Capacities

No can capacities have been run as yet on either the 2-ounce or 6-ounce container.

(e) Filling and Closing

The customer will have the option of filling through either end. If he wishes to fill through the bottom and double seam the bottom end, he can receive cans which have the covers attached and glassine discs glued to the top curl of the can. If, on the other hand, he wishes to fill through the top end, he will then attach the covers and glassine seals after filling the cans as is presently done with jars. Most present packers of soluble coffee

will probably prefer the latter method, as they can convert their present equipment to can packing with a minimum of expense. However, a new packer might consider the former method to be easier.

This product is filled on a vacuum filler drawing approximately 15 inches of vacuum. As yet, we have had little experience with filling equipment but one machine which has been used to fill both 2-oz. and 6-oz. cans is [fol: 1057] the sixteen station Vacuflow Filler manufactured by the Pneumatic Scale Corporation, Ltd., Quincy, Massachusetts. This machine is capable of running at speeds up to 150 cans per minute.

If the covers are to be applied, the cans pass under a roller which applies a layer of adhesive to the top curl. The cans then are capped on a machine such as an 8 station CaPeM machine manufactured by the Consolidated Packaging Machine Corporation, Buffalo, New York.

Other Possible Container Types

(a) Cemented Side Seam Cans

A screw cap cemented side seam can would provide a wrap-around lithography and a less expensive can. However, so far, these cans have been inferior to soldered cans in moisture-vapor transfer. More work is needed on this can to perfect a good moisture seal.

(b) Inside Soldered Cans

An inside soldered can would provide a wrap-around lithography similar to that of a cemented side seam can, and would provide a better moisture-vapor barrier. However, this can would cost more to manufacture than a cemented side seam can, and might also present some manufacturing problems.

(c) Screw Cap Can With Drawn Body

Such a can would eliminate problems of moisture transmission through the side seam and simplify the sealing of the glassine disc at the top curl. However, manufacturing and lithographing this type of can would present many problems.

(d) Conoseal Type Closure

A soluble coffee can with a Conoseal closure would eliminate the need for sealing a glassine disc to the top of the can as well as eliminating the screw cap. It is questionable whether this structure could provide a satisfactory moisture seal upon reclosure. Up to this time, development of this can has not proceeded far enough to consider any particular proposed structure for soluble coffee.

(e) Trutite Can

This type of can has been considered by a large food chain as a possible 5 or 6 ounce size soluble coffee package. This type structure would permit vacuum packing for advertising purposes, as well as provide an excellent moisture-vapor barrier before opening. However, the moisture-vapor barrier provided upon reclosure might not be satisfactory. Also, manufacture of a 2 ounce package would create difficulties.

[fol. 1058] (f) Lug-Type White Cap Closure

A container now under development, consisting of a can with a lug-type White Cap closure, would appear to be an excellent possibility for use as a soluble coffee can. Such a can should provide an excellent moisture-vapor barrier, with vacuum packing for advertising purposes being possible. It should also provide convenient reclosure and a good moisture-vapor barrier upon reclosure. However, as this can is still in the early stages of development, it is unlikely to be available on a commercial scale for some time.

Work In Progress

(a) Adhesives

Tests are now being run evaluating new adhesives for use in sealing the glassine discs to the cans. An adhesive manufactured by Minnesota Mining and Manufacturing Company, code EC-871, seems to be the most promising.

(b) Structures

Modifications of the existing top structure of the proposed structure (STK-422) are under way in order to provide a more nearly level surface at the top curl. The modified 2-oz. cans should be available for evaluation within the near future.

(c) Colored Side Stripes

It has been requested that some samples of Folger 2-oz. cans be made up with a colored side stripe in order to show their appearance. It is hoped that these cans will approach the wrap-around lithography in appearance.

Foreword

The results of a blind Product Test of two different kinds of Instant Coffee Containers are herewith presented. This study was conducted for the Continental Can Company, New York City, New York, by National Family Opinion, Inc., of Toledo, Ohio, during the months of January and February, 1955.

Purpose

It was the purpose of this study to gather information on consumer acceptance of a metal versus a glass container for instant coffee products.

Procedure

On December 29, 1954, test products, questionnaires and letters of instructions were mailed to a selected national panel of 459 instant coffee using families.

All participants in the study had previously agreed to cooperate voluntarily and without remuneration in the activities of National Family Opinion, Inc. The panel was built to represent instant coffee using families by United States Census geographic division, population density, family income and age of homemaker controls.

The test products differed only in the material used for packing and were identified only by the code letters "L" and "V" (for "tin can" and "glass" respectively) the testing period was set at a few days for each product.

On February 2, 1955, the survey was closed for editing, coding and tabulating. As of that date, a total of 431 questionnaires, or 93.9% of the original mailing, had been returned.

[fol. 1062] A detailed copy of the sample distribution can be found in the Historical Section of this report, while a copy of the questionnaire and coding list used has been included in the Appendix of this Final Report.

Note: Percentages shown in the findings section of this report have been rounded off to the nearest full percent (.5-.9 to the nearest higher, .1-.4 to the nearest lower full percent). No attempt has been made at adjustments where, due to this procedure, individual percentage columns do not add to 100%.

[fol. 1063] GOVERNMENT'S EXHIBIT 413

Folger Soluble Coffee Can Investigation in Kansas City
November—1955

In Store Interviewing Conducted by W. R. Simmons &
Associates

New York, N. Y.
Commercial Research Dept.
December—1955

[fol. 1064] Method of Conducting Test

On November 17, 18 and 19 a series of personal interviews on instant coffee was conducted in three Kansas City super markets (Prairie Village Pay Less, Thriftway Super Market and Cascio) selected by the Folger Company. All of these stores stocked the 2 oz. Folger tin of instant (which had been on the shelf but not consistently for about two months) as well as Folger's instant in glass.

A total of 372 interviews were conducted. Prime emphasis was placed on interviewing all persons who bought soluble coffee by having the interviewer approach persons immediately after they had made a purchase. When interviewers were not occupied with persons just having purchased soluble, they confronted people shopping in the vicinity of the soluble counter to determine whether or not they were users of soluble in spite of the fact they were not buying it that day. Interviews were conducted with only those in this non-buyer group who were regular users of instant coffee. Of the 372 total interviews, 208 purchased on the day of the interview while 164 did not.

The test was conducted by W. R. Simmons and Associates of New York City—using one of their most capable field supervisors on the scene in Kansas City. Objective methods were used and it is believed the conclusions are sound within the limits of the test design.

[fol. 1065] GOVERNMENT'S EXHIBIT 415B

Promotion of Baby Food in Cans
Structural Changes in Cans and Advertising Programs

[fol. 1066] Baby Food Advertising Program
—Past & Present

The history of our advertising department's program to promote baby food in cans started back in 1940. During that year, a series of advertisements were placed in such media as Parents Magazine, New York Sunday Tribune, New Yorker Magazine, and Baby Talk. These media were chosen and suggested to us by Gerber's Advertising Agency. Our budget on this series was $8,348.00.

In 1945, a baby food survey was conducted by our Market Analyses Department. This survey indicated a preference for glass packed baby food where both tin and glass packages were available. As a result of this survey, it was decided to have BBD&O conduct a Baby Food Depth Survey, which would result in specific reasons for the preference of glass packed baby food. The Depth Survey was conducted in New York and Los Angeles. The Depth Survey gave us the following results.

1. Question: Whether or not mothers are prejudiced against the use of canned baby food because of fear that left-over food stored in a can will spoil.
   Results: The results point out that this is one of the major obstacles to the acceptance of canned baby food.

2. Question: Whether or not a plastic cap, to be used to cover the unused portion of food stored in the can for future use, would remove the fear of food spoilage.
   Results: The study points out that a plastic cap for the opened can, would not remove the fear of food spoilage in an open can.

3. Question: What other factors are involved which operate against mothers using canned baby food in preference to jarred food?
   Results: The Survey points out these additional objections to the can:
   A. Can hard to open;
   B. Cannot feed directly from cans;
   C. Can not sanitary;

D. Cannot heat food in cans;
E. Product not visible in cans.

4. Question: Is there any solution to the problem, which would persuade mothers to use canned rather than jarred baby food?
Results: A. Eliminate structural disadvantages of the can;
B. Conduct an advertising campaign stressing the cans advantage over glass;
C. Conduct advertising campaign to convince mothers their objections to canned food are unfounded.

Using the market survey and the Baby Food Depth Survey as a basis, a concentrated campaign to promote baby food in cans was started in Philadelphia early in April of 1946.

The campaign was conducted in cooperation with Gerber, Clapps, CMI, and Continental Can Company. This campaign consisted of the following efforts:

[fol. 1067] 1. Testimonial advertisements in two local Philadelphia newspapers once each week.
2. Plastic covers for opened cans and folders on "How to Feed Your Baby" were sent to mothers that had children between five months and one year of age.
3. Baby food in cans was promoted by the CMI on a morning radio show.
4. Continental Can Company promoted baby food in cans using cut-in announcements on their, then existant, network radio program.
5. Direct mailing pieces were sent to Doctors and Food Editors to publicize the campaign.
6. The Clapp and Gerber salesmen carried out a point of sale promotional campaign.

This campaign was carried on for six months. At the end of the six months, glass packed baby food was still gaining in sales. The campaign did not increase the sales of canned baby food, therefore, it was dropped.

The present advertising campaign was started in 1949. This program is designed to combat any prejudices that the

Doctors might have against baby food in cans. It is aimed at convincing the Doctors of the following five points in favor of the canned baby food:

1. Economical: Baby food in cans is usually priced as low or lower than baby food packed in other containers.
2. Sterile: Processing sterilizes the inside, and light, dust, and germs cannot get into a hermetically sealed can.
3. Extra Safety: Cans are sealed to stay sealed until they are opened.
4. Shatterproof: Steel and tin will not break or chip.
5. Safe for Left-overs: Food can be safely left in the can; just keep it covered and under refrigeration.

These ads also contain a statement from the Council on Foods and Nutrition of the American Medical Association: "The wholesomeness and nutritional value of canned baby foods has been repeatedly demonstrated. Furthermore, cans offer a high degree of protection against contamination."

Our present campaign consists of advertisements in the following monthly periodicals:

1. Journal of American Medical Association
2. American Journal of Nursing
3. Journal of Pediatrics

Copies of the type advertisement that is used for this campaign are attached.

July 1952—American Journal of Nursing; Journal of Pediatrics;
August 23—Journal of the American Medical Association.

5 REASONS WHY CANS ARE AN IDEAL CONTAINER FOR BABY FOODS

1. **ECONOMICAL.** Baby food in cans is usually priced as low or lower than baby food packed in other containers.

2. **STERILE.** Processing sterilizes the inside, and light, dust and germs can't get into a hermetically sealed can.

3. **EXTRA SAFETY.** Cans are

you look at it—

BABY FOOD BELONGS IN CANS

The only fully suitable container for baby foods is one that is shatterproof, light- and dust-proof, and constructed with a positive seal. All these requirements are met by the economical tin can. Processing sterilizes the inside of a can as thoroughly as the instruments you use. And baby foods can be safely left in opened cans – just keep the food covered and under refrigeration.

Says the Council on Foods and Nutrition of the AMA: "The wholesomeness and nutritional value of canned baby foods has been repeatedly demonstrated. Furthermore, cans offer a high degree of protection against contamination." Continental Can Company, New York 17, N. Y.

5 REASONS WHY CANS ARE AN IDEAL CONTAINER FOR BABY FOODS

1. **ECONOMICAL.** Baby food in cans is usually priced as low or lower than baby food packed in other containers.
2. **STERILE.** Processing sterilizes the inside, and light, dust and germs can't get into a hermetically sealed can.
3. **EXTRA SAFETY.** Cans are sealed to stay sealed until the consumer opens them.
4. **SHATTERPROOF.** Steel and tin won't break, shatter or chip.
5. **SAFE FOR LEFT-OVERS.** Food can be safely left in the can, just keep it covered and under refrigeration.

Vitamins—

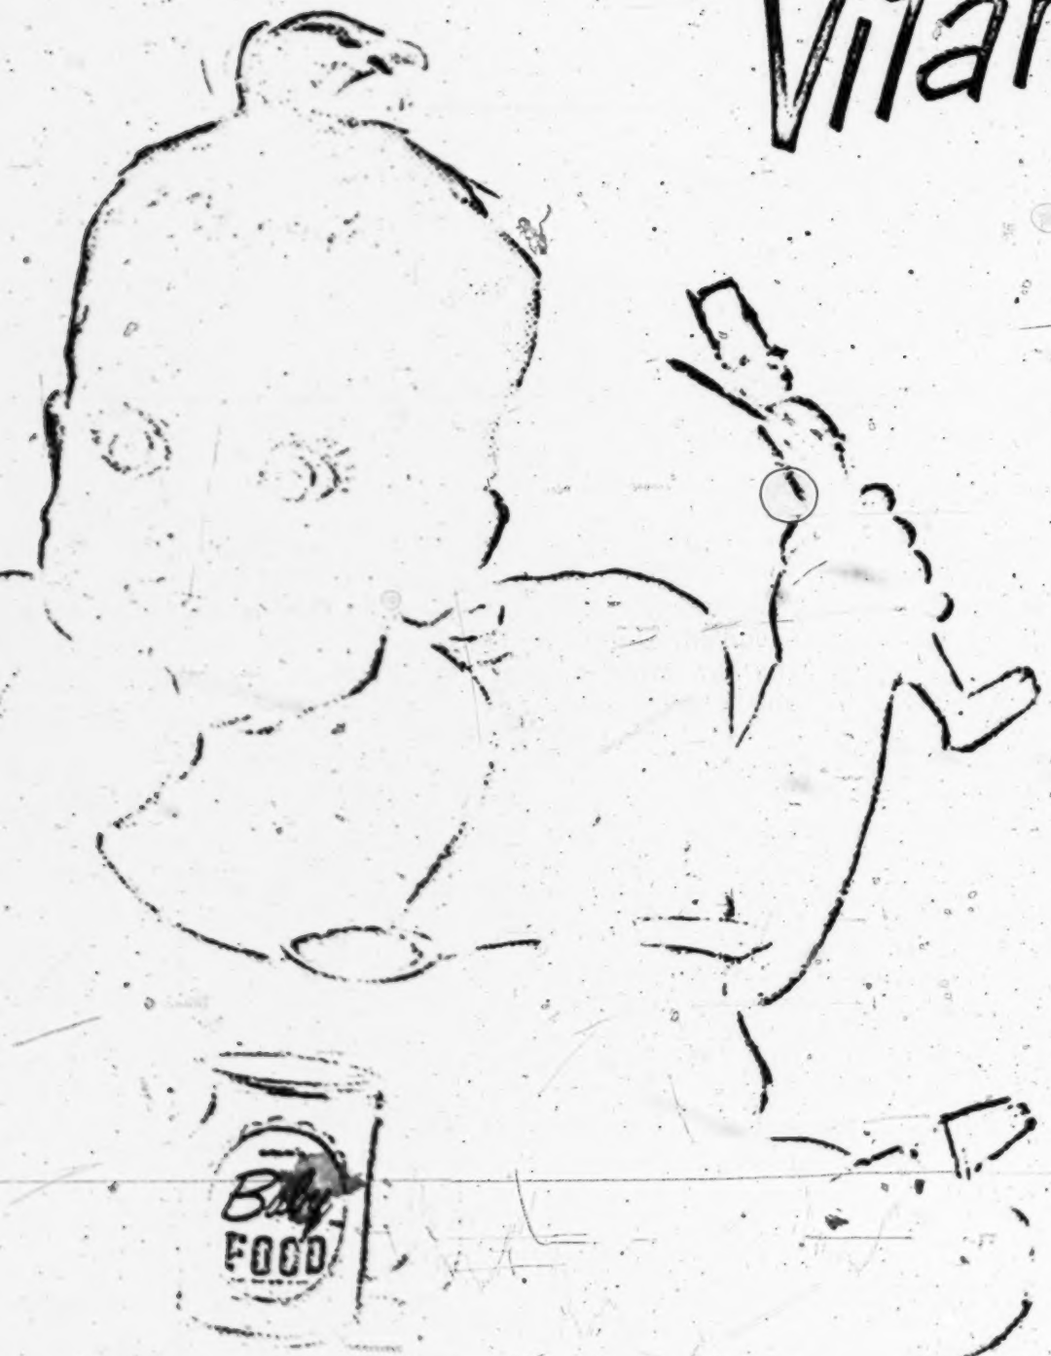
PRESENT AND ACCOUNTED FOR



Continental research has helped canners preserve vitamins in canned vegetables, fruits and fruit juices

This may surprise you. However, it's a fact that canned foods are just as high in vitamin content as the same foods bought in the market and cooked at home by the housewife.

That's because fruits and vegetables used for canning are picked at their prime and "pressure-cooked" in sealed cans—often within the hour. There's little time for vitamins to escape as they do during the days it usually takes to deliver raw foods to the market.

To make sure that more and more vitamins reach your table, Continental's research scientists have pioneered in studies of the vitamin content and nutritive value of canned foods. They have suggested many specific improvements in canning equipment and procedures to the canning industry. And each year they visit canning plants all over the country to help individual food packers do a better job.

Today when you serve a canned food, you can be sure that the food contains most of the nutritive qualities and vitamins that nature put into it. Continental research has helped bring more food and better food to more people!

If it's a packaging problem—it's our baby!

If you are a food packer, you will find that the quality and scope of our research service are major reasons why so many people like to do business with Continental Can Company. Our one goal is to [illegible] packing problems of all kinds.

[fol. 1070] Baby Food Advertising—Plans

On June 4 Del Johnson had lunch with Mr. Ken Plumb, Vice President of the D'Arcy Advertising Agency, which organization handles the Gerber account. This meeting was for the purpose of getting Mr. Plumb's suggestions for any changes in our advertising copy, as well as to discuss direct mail as an alternative for space advertising, since we were faced with a good deal of waste circulation in areas where baby food in cans are not available.

Mr. Plumb said that they were completely satisfied with our advertising copy and would suggest no changes. He did admit that the problem of waste circulation was realistic, but in a communication after his visit to Fremont, pointed out that direct mail to a selected list of doctors probably would be just as expensive as our present campaign. Therefore, he suggested no changes in copy or media selection.

In this meeting, and in subsequent correspondence, he indicated that the Gerber people would look with favor upon our doing a mailing to young mothers on the subject of baby food *in cans*. This list of young mothers, which Gerber's compiles, would be made available to us at $10 per thousand names, the names being supplied on gummed label's. Gerber's estimate that the number of names in areas in which they now sell in cans is about one million, so that the total mailing list costs about $10,000 over a year's time.

At the present writing, Mr. Johnson feels that we should continue our space program in the Journal of the American Medical Association, the Journal of Pediatrics and the American Journal of Nursing through the balance of the year, but in the meantime launch a direct mail campaign to young mothers, using the Gerber list. If we take this approach, we will have a chance to study the results of our direct mail effort, and then decide whether to use both space and direct mail together, or confine our efforts to one or the other.

During the week of July 13, Mr. Johnson will review these plans separately with Mr. Dave Danforth of BBD&O, and then again with Mr. Ken Plumb.

Structural Changes In The Baby Food Can

The need for more basic structural improvements in our baby food can was evident from a Baby Food Depth Survey made by BBD&O during 1945.

This study showed that the greatest need for structural improvement was in the ease of opening and to provide for reclosure. Our efforts to accomplish these improvements have been directed toward manufacture of a key opening Trutite style reclosure can. The problems encountered with this style structure and some of the Trutite style's inherent disadvantages for processed foods have to date prevented a successful fulfillment of this development. As a result, we have recently decided to go all out on attempting to develop a reclosure style baby food can based on the "Conoseal" type structure.

If the "Conoseal" type structure proves feasible and economical, it will overcome the two major objections to the present baby food can.

Another improvement contemplated for the present baby food can is to provide it with a more sanitary appearing interior by the use of a white enamel. The Research Department is currently making test packs with baby food cans for meat with recently developed white inside enamels. The initial evaluations of these test pack cans indicate a good possibility of success for a commercial white inside enamel for baby food meat cans.

Experimental inside white enameled baby food cans are being fabricated for test packing fruits and vegetables. These cans will be ready for shipment early in July.

If white enamels can be successfully used for the inside of baby food cans for meats, fruits and vegetables, they will greatly enhance the internal appearance of the cans and help overcome some of the present sales disadvantages of the can compared to the glass jar.

A minor objection to the can was that the consumer could not see the contents of the package. This probably could be overcome by improved labeling and the use of lithographed cans.

Some work on lithographed versus labeled cans is now

being done and should provide the answer to the effectiveness of this approach from a cost as well as consumer acceptance angle.

The other inherent disadvantages to canned baby foods are basic fallacies on canned foods such as food spoiling in opened cans, tin tastes imparted to foods, "Cannot heat food in cans", which can be overcome only by direct consumer education advertising.

The Advertising Department has prepared a summary of past, present and future programs for baby food can promotions which is attached.

New Style Baby Food Can With Drawn One Piece Body and Pry Off Compound Lined—Snap on Reclosure Cover

We have received a sample of the above style container from Mr. Pearson and have made the following notes comparing the new container with the 4¾ ounce glass jar currently used for baby food as they might be evaluated by the packer or baby food buyer.

From Packers Point of View

(1) Does container and closure provide a safe and suitable package for the product, which is baby food?

(2) Is it a package which will have universal buyer acceptance and does it have competitive advantages over the glass jar and can now used?

(3) What is Cost—Compared to standard open top can now used?—Compared to standard glass jar—4¾ ounce size and 7½ ounce size?

(4) Is equipment available to perform handling, filling,

capping, processing and cooling, labeling and casing operations? Is changeover equipment cost excessive?

(5) What problems and expenses will be incurred in introducing and merchandising a new style container?

From Consumers Point of View

On the attached page we have tabulated a list of indicated consumer preferences for baby food containers and have endeavored to interpret these as they might apply to the 4¾ ounce jar and the new style can.

Retail Prices of Product

An important point in favor of the present open top can for baby foods from the consumer point of view is its cheaper retail price. While there are also certain convenience factors in its favor, the price differential seems to be the main incentive. If this differential were eliminated, the selling would be on a container basis with a well known style of glass jar vs. a new and untried style of metal container.

[fol. 1073] Shelf Appeal to Consumer

The glass jar with its visible contents retains the see-what-you buy advantage over the new style metal can. The jar's taller height may also give the impression of greater net content. This eye appeal comparison could be made more readily when sample cans are available complete with labels and perhaps with outside gold enameled covers similar to the jar caps.

Container Sizes

If at any time it should be decided to make a consumer preference or opinion test it might be advisable to consider using both the can sizes which would normally compete with the 4¾ ounce and 7½ ounce jar.

Baby Food Containers

Tabulation of Possible Favorable and Unfavorable Consumer Preferences—4¾ oz. Glass Jar vs. 210 x 114—Drawn Body, Reclosure Cover Can Enameled White Inside.

Specific Consumer Preferences, Prejudices and Opinions	4¾ Oz. Glass Jar	Reclosure Cover Can
Style, Shape and Closure		
Consumers frequently associate products with specific styles, shapes and closures. At first glance the buyer might question the safety of the slip cover style of closure, as it has been largely used in the past for non-processed items and the buyer is accustomed to an open top style can for processed foods.	This attitude favors the glass jar closure. Mothers hesitate to take risks where baby food is involved.	From a "safe" seal point of view we believe the consumer would prefer the present open top can.
